Table of Contents

1 Calling Conventions 1

1.1 Introduction 1
1.2 Processor Background 1
1.3 Calling Mechanism 2
1.4 Register Usage 2
1.5 Parameter Passing 2
1.6 User-Provided Routines 2

2 Memory Model 3

2.1 Introduction 3
2.2 Flat Memory Model 3

3 Interrupt Processing 5

3.1 Introduction 5
3.2 Vectoring of Interrupt Handler 5
3.3 Interrupt Stack Frame 6
3.4 Interrupt Levels 6
3.5 Disabling of Interrupts by RTEMS 7
3.6 Interrupt Stack 7

4 Default Fatal Error Processing 9

4.1 Introduction 9
4.2 Default Fatal Error Handler Operations 9

5 Board Support Packages 11

5.1 Introduction 11
5.2 System Reset 11
5.3 Processor Initialization 12

6 Processor Dependent Information Table 13

6.1 Introduction 13
6.2 CPU Dependent Information Table 13

7 Memory Requirements 17

7.1 Introduction 17
7.2 Data Space Requirements 17
7.3 Minimum and Maximum Code Space Requirements 17
7.4 RTEMS Code Space Worksheet 18
7.5 RTEMS RAM Workspace Worksheet 18

8 Timing Specification 21

8.1 Introduction 21
8.2 Philosophy 21
8.2.1 Determinancy 22
8.2.2 Interrupt Latency 23
8.2.3 Context Switch Time 24
8.2.4 Directive Times 24
8.3 Methodology 25
8.3.1 Software Platform 25
8.3.2 Hardware Platform 25
8.3.3 What is measured? 25
8.3.4 What is not measured? 26
8.3.5 Terminology 26

9 Timing Data 29

9.1 Introduction 29
9.2 Hardware Platform 29
9.3 Interrupt Latency 30
9.4 Context Switch 30
9.5 Directive Times 31
9.6 Task Manager 32
9.7 Interrupt Manager 33
9.8 Clock Manager 33
9.9 Timer Manager 34
9.10 Semaphore Manager 35
9.11 Message Manager 36
9.12 Event Manager 37
9.13 Signal Manager 37
9.14 Partition Manager 37

9.15 Region Manager 38
9.16 Dual-Ported Memory Manager 38
9.17 I/O Manager 38
9.18 Rate Monotonic Manager 39
