

# RTEMS - 5.0.0-m2004 Release Notes

02 April 2020

RTEMS 5 Series Release Notes			
These notes cover the dot relea	ses:		
5.1			
5.0			

RTEMS 5.1 Release Notes 1/112

## 5.1 (open)

#### **Statistics**

Total 768 Fixed 676 Invalid 12 Works for me 8 Duplicate 12 Won't fix 33

#### Distribution

```
defect
                               438 / 461
enhancement
                  200 / 203
    task 78 / 79
    infra 16 / 16
   project 9/9
```

```
Summary
  #1247 RTEMS does not implement locks needed by multithreaded newlib
  #1394 scandir() fails due to MAXNAMELEN is incorrect
  #1662 termios.c: semaphore not deleted, consequently resulting in failure of rtems_termios_open
 #1747 Heap extend allows discontinuous memory regions #1971 Memory leak in tmpfile()
  #2132 <rtems/score/basedefs.h> superfluously includes limits.h>
  #2133 <rtems/score/basedefs.h> superfluously includes <string.h>
  #2135 times() and _times() are subject to integer overflows
  #2173 Potential integer overflow problem in EDF scheduler
  #2176 fishy behavior in termios tx task mode
  #2198 Automate doxygen build
  #2207 RTEMS tar does not overwrite
  #2213 Decreased performance for whetstone benchmark using GCC >=4.5
  #2261 Add coverage report generation support to rtems-tools
  #2266 Move bsp_pretasking_hook() into files named bsppretaskinghook.c
  #2284 h8300 gets error linking dl0* tests
  #2289 rtems_ada_self is broken on SMP
  #2305 sp07 needs to be split into an user extensions and a notepad test
  #2306 powerpc/mvme5500/vectors/exceptionhandler.c uses task variables
  #2308 Change uniprocessor INIT task mode to preempt.
  #2325 Broken console driver infrastructure for SPARC
  #2344 Second argument of ualarm() is ignored
  #2350 One watchdog ticks header per scheduler instance
  #2354 Replace red-black tree implementation, change API
  #2355 SPARC: Several shared drivers are not SMP ready
  #2363 SPARC: Silent FP context corruption possible
  #2366 Create a Public API for the Atomic Operations #2367 Documentation of User Extensions needs more information
  #2377 rtems_waf: Tools without a version are not supported
  #2385 Warning from commit "bsps/arm: Do not use __ARM_ARCH_7A__"
  #2407 Enable function and data sections
  #2408 Linker set based initialization
  #2412 Improved priority inheritance implementation
  #2420 RSB %source file fails
  #2423 rtems_iterate_over_all_threads lacks user callback private pointer pass through
  #2428 Add 4.12 Tool Target Configurations to RSB #2441 lpc1768 variants fail to build with error in gpio.c
  #2442 Remove avrtest BSP
  #2443 Remove AVR Architectural Port
  #2444 Remove m68k/mvme136 BSP
  #2445 Remove m68k/sim68000 BSP
  #2446 Remove M32R Architectural Port
  #2447 Remove m32r/m32rsim
  #2448 Remove mips/mongoose BSP
  #2449 Remove arm/gba BSP
  #2450 Remove arm/nds
  #2451 Remove arm/gp32 BSP
  #2452 Remove H8300 Architectual Port
  #2453 Remove h8300/h8sim BSP
  #2454 Warning in threadqops.c
#2455 Warning in spsimplesched02
  #2457 Remove powerpc/ep1a BSP
  #2458 Remove powerpc/score603e BSP
  #2459 Add rtems_chain_get_first_unprotected() to chain API #2464 RSB: Tool patches use the RTEMS version #2468 Add Thread Local Storage (TLS) support on x86
  #2477 Remove <rtems/debug.h>
  #2487 Should https://devel.rtems.org/wiki/TBR/Delete/SpecBuilder be Deleted?
  #2488 Vagrant Scripts
  #2490 RSB: Use SHA512 instead of MD5
  #2493 Remove notepads
  #2494 Remove task variables
  #2503 mvme5500 BSP: Exception Handler uses deprecated Notepads
  #2509 Should "https://devel.rtems.org/wiki/TBR/Delete/BSP Template" be replaced?
  #2513 Remove m68k/idp BSP
  #2514 Make POSIX API mandatory (except signals and the sporadic server)
  #2515 i386 score/libcpu API Layering Violation
  #2527 Move pc386/tools/bin2boot to rtems-tools
  #2529 BSP for the Atmel SAM V71/V70/E70/S70 chip platform
  #2536 RSB allows use of insecure hash algorithms like MD5 and SHA1
  #2537 Use Newlib exec*() variants and remove RTEMS versions
  #2542 Review cxx_iostream size change per function-section changes
  #2543 Obsolete gen68302 BSF
  #2544 Osolete m68k/ods68302
  #2545 Obsolete mbx8xx BSF
```

```
#2546 Obsolete idn BSP
#2553 [mvme3100] boot_card() broken by 37030e38
#2554 New watchdog handler implementation
#2555 Eliminate the Giant lock
#2556 Implement the O(m) Independence-Preserving Protocol (OMIP)
#2557 Add word splitting to print output
#2559 Delete the EXTERN pattern
#2560 smdk2410 is broken due to gp32 removal
#2562 RSB Docs Quick Start version number
#2576 arm/lpc176x: linker script update (add KEEP() sections)
#2606 alarm() uses seconds watchdog and thus is affected by clock changes
#2608 POSIX Condition Variables Clock Attribute Support
#2617 rtems_heap_allocate_aligned_with_boundary() body and prototype inconsistent
#2624 Fix the year 2038 problem
#2625 Use one lookup tree per-thread for the POSIX keys #2626 Unify thread cancel/join and delete
#2627 Fix CPU time used for threads on SMP
#2628 Avoid home-grown condition variable implementation in the Classic Regions
#2631 Use an ISR lock to protect the state of Classic Rate Monotonic objects
#2632 rtems-tester failure
#2633 waf build failed for rtems-libbsd
#2634 New warning in pc386 VESA driver
#2638 pc386: ld -r issue with per function sections
#2641 configure: enable-rtemsbsp doesn't warn if bsp does not exist
#2644 sis does not run on gdb 7.11 but does on gdb 7.9
#2649 RSB remove 4.11, 4.10 and 4.9 from the master branch.
#2663 pc386 BSP has complex dependencies
#2664 spclock_err02
#2669 Update OpenRISC toolchain in 4.12
#2672 After latest patches with Objects_Get_by_name rtems-master not compiling without --enable-posix
#2674 CORE spinlock implementation is next to be useless
#2676 Obsolete clock_get() directive
#2680 Add pthread_setconcurrency() and pthread_getconcurrency()
#2683 Configuration table's smp_enabled conditional on RTEMS_SMP
#2684 rtems/c/src/lib/libbsp/sparc/leon3/clock/ckinit.c:122: duplicate if
#2685 c/src/lib/libbsp/arm/atsam/network/if_atsam.c:409: possible bad if statement
#2689 POSIX key destructors must be called during thread restart
#2692 User extensions execution order must be clarified
#2693 Update doc to reflect obsoleting rtems_clock_get()
#2694 linking issue for htonl, etc when using -std=c99
#2695 Add libatomic for RTEMS
#2696 Unpredictable errno value returned by sem_wait() in case of semaphore deletion
#2698 GCC 6.1 is broken for microblaze
#2700 cpukit/libfs/src/nfsclient/src/rpcio.c:524]: (style) Suspicious condition
#2701 Rename asm file with .S(upper case) ext. name
#2702 Remove descriptor objects for POSIX message queues
#2706 Buffer allocation of capture engine is broken on SMP configurations
#2707 Unsafe use of current processor index in capture engine
#2714 A pthread_detach() does not lead to a resource reclamation
#2718 Blocking CORE_message_queue_Submit() may lead to unpredictable results
#2722 SEM_VALUE_MAX is unusually small on RTEMS
#2723 CPUINFO command to report per-processor information
#2725 Classic binary semaphores without a locking protocol can be released by everyone
#2726 grascs.c: Questionable use of binary semaphore
#2727 FAT file systems use wrong semaphore for mutual exclusion
#2728 Pipes use wrong semaphore for mutual exclusion #2729 TFTP client uses wrong semaphore for mutual exclusion
#2732 Add clock_nanosleep()
#2734 pthread_setschedprio() is missing
#2735 pthread_setschedparam() sets the priority not according to POSIX
#2736 pthread getschedparam() returns wrong priority values
#2737 Add CLOCK_DRIVER_USE_ONLY_BOOT_PROCESSOR
#2740 Suboptimal type for Timestamp_Control
#2741 New warning from printf plugin changes
#2742 New warning in SHM driver
#2745 Use clock from pthread condattr in pthread cond timedwait
#2748 Move RTEMS-specific socket wake-up to RTEMS-specific <rtems/rtems_bsdnet.h>
#2749 rtems_task_set_scheduler() has insufficient parameters
#2750 Compile Error When Multiprocessing Enabled
#2751 Thread dispatch via interrupt is broken at least on ARM and PowerPC
#2752 Relax execution environment for thread begin extensions
#2754 no .strtab section
#2765 Application level deadlocks may lead to SMP lock level deadlocks
#2768 untar does not keep permissions correctly. #2769 rtems-syms does not clean up temp files.
#2770 Missing documentation for RTEMS_LINKER_ROSET_CONTENT and RTEMS_LINKER_RWSET_CONTENT
#2771 Empty C++ file with just <rtems.h> does not compile with HEAD.
#2775 ARM CP15 arm_cp15_set_translation_table_entries fails if TTB in read-only memory
#2776 SPI Framework
#2777 Remove librtems++
#2784 Add function to get the current priority of a task by scheduler instance
#2788 RTEMS I2C API only defines Standard-mode (Sm) speed as a default.
#2790 Linker sets broken with GCC 7
#2795 Overrun Handling for general real-time models
#2797 Add ability to add/remove processors to/from a scheduler instance
#2798 Fix POSIX timer interval
#2800 qoriq variants failing to build
#2802 Test "libdl (RTL) 5" fails on SPARC targets
#2803 Get rid of CPU_BIG_ENDIAN and CPU_LITTLE_ENDIAN
#2805 Use SPRG0 on PowerPC for current per-CPU control (SMP only)
#2806 Undocumented confdefs.h Configure Options
#2807 rtems-docs repository is not known to trac
#2808 Conditionally provide rtems_interrupt_frame
#2809 Reduce interrupt latency on SMP configurations during thread dispatch
#2810 Remove sparc/sis BSP variant
#2811 More robust thread dispatching on SMP and ARM Cortex-M
#2816 Many ARM BSPs have Static Assert
#2817 All Blackfin BSPs do not Compile on Master
#2818 NIOS2 Does Not Compile on Master
#2819 powerpc-ss555 does not compile on master
```

```
#2820 All SPARC64 BSPs do not Build on master
#2821 No BSPs Build on Master
#2822 m32csim does not build on master
#2823 Nearly all m68k BSPs do not Build on Master
#2824 arm/lpc23xx_tli800 no longer links tar01
#2825 Improve the fatal error handling chapter of the user manual
#2026 arm_cp15_get_translation_table_base_control_register warning.
#2029 xz git URL in README is broken
#2835 Ada support is broken on SMP configurations
#2836 Add posix_devctl()
#2838 Termios task driven mode should use mutex for device operations
#2839 Add new interrupt server driven Termios mode
#2840 Use self-contained mutexes for Termios framework
#2841 Add NXP SC16IS752 serial device driver
#2843 Use self-contained objects instead of Classic API for drivers and support libraries
#2844 JFFS2: Add IO controls to get filesystem instance information and force a garbage collection
#2845 Add I2C framework documentation
#2849 ATA/IDE support in RTEMS is out-dated
#2850 Driver manual covers non-existent Analog Driver
#2851 Driver manual covers non-existent Discrete Driver
#2853 Driver manual covers non-existent Non-Volatile Memory Driver
#2858 Add user defined thread names
#2859 Implement POSIX Shared Memory Objects
#2862 docs.rtems.org Add support to ReST format releases.
#2863 Update POSIX 1003.1 Compliance Guide for ReST
#2864 docs.rtems.org Automatic update of branches content when a rtems-doc.git change is made.
#2865 Coverpage installed when building the docs repeats catalogue.xml entrie
#2867 Fix exclude rule in rtems-test-check
#2868 src/c/src/lib/libbsp/arm/smdk2410/smc/smc.c: 3 * pointless local variables ?
#2873 src/c/src/lib/libbsp/arm/raspberrypi/i2c/i2c.c:320: defective error checking?
#2874 src/c/src/lib/libbsp/powerpc/beatnik/marvell/gt_timer.c: 4 * pointless check ?
#2877 DHCP client fails on complex networks
#2878 src/c/src/lib/libbsp/sparc/shared/can/occan.c:1573: broken error checking?
#2879 src/cpukit/libdebugger/rtems-debugger-server.c: four problems
#2880 src/cpukit/libfs/src/jffs2/src/readinode.c:189: faulty logic
#2883 src/c/src/lib/libbsp/arm/tms570/console/tms570-sci.c:248: strange expression ?
#2885 Fix rtems_rate_monotonic_postponed_job_count() prototype #2889 RTEMS_STACK_CHECKER_EXTENSION has incomplete definition
#2890 _RBTree_Initialize_node generates warnings
#2893 Remove CONFIGURE_SMP_APPLICATION
#2894 Rename CONFIGURE_SMP_MAXIMUM_PROCESSORS to CONFIGURE_MAXIMUM_PROCESSORS
#2895 Prefix the confdefs.h internal defines with an underscore
#2896 RSB requirements are missing pax
#2897 Update termios.h to match the latest FREEBSD definitions
#2905 Merge LEON
#2906 rtems-doc waf configure does not detect sphinxcontrib.bibtex status
#2909 xz: Support for 64-bit CRC is build although XZ_USE_CRC64 is not defined
#2912 libdebugger: control reaches end of non-void function
#2916 termios: Change receive callback invocation to enable select() and poll() support
#2917 termios: Make write POSIX compatible
#2922 libdl unresolved externals that use more than one block or multiple entries corrupts.
#2923 Questionable Code in resource_snapshot.c
#2924 Warnings in SPARC BSPs
#2925 Warnings in rtl-obj-cache.c on some targets
#2930 Coverity Reports Out of Bounds Read in drvmgr_print.c
#2933 Flexibleassignto is broken on new ticket page.
#2935 Termios task driven mode not compatible with SMP
#2941 building rsb freezes
#2942 rtems building error
#2943 rtems building error
#2945 Many failures on LEON3 with SMP disabled
#2946 Add a top level global testsuite configuration file (.tcfg) and a 'user-input' test state.
#2949 Questionable patch organization in RTEMS tools and RSB
#2951 Error path in rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg
#2954 ARM: Optimize context switch
#2957 Shared memory support internal locking is broken
#2958 Add some popular benchmark programs to the testsuite
#2959 arm/libdl: C++ exception index tables may not be ordered correctly
#2962 Set test configurations to reflect test results.
#2963 Add a testsuite top level confguration file that is common to all tests.
#2965 bootstrap sort inconsistent with sb-bootstrap for acinclude
#2967 ARM: Change ABI to not use short enums
#2968 newlib inttypes.h is missing some methods
#2969 qoriq BSPs depend on mkimage which is not always available
#2976 warnings in rtems-debugger-server.c
#2977 warnings in Dhrystone Benchmark
#2980 pc586-sse does not compile fsjffs2gc01
#2981 testdata excludes on included tcfg files does not work #2982 LibBSD broken with GCC+RTEMS changes
#2983 Create <rtems/inttypes.h> to consolidate extensions to <inttypes.h>
#2984 Changing Trac milestone page fails.
#2990 RTEMS Source Builder Fails on Windows Builds
#2992 Long path crashes the RSB when listing a directory.
#2993 SMP assert in _Thread_Executing in libdebugger
#2994 tar01 XZ error
#2995 Missing bsets
#2997 Monitor config command does not handle unlimited objects.
#2998 RTEMS User Manual Quick Start does not cover releases
#2999 sb-check on Cygwin
#3000 Setting interrupt level in the mode arg on SMP returns RTEMS_UNSATISFIED
#3001 SMP build of RTEMS Testsuite does not set CONFIGURE_MAXIMUM_PROCESSORS
#3003 FAT does not support clusters bigger than 32K #3006 SPARC LEON3 BSP SMP build is broken.
#3007 ARM caching issues
#3008 missing pax causes install failures
#3009 Provide invalid link handler for docs.rtems.org so old docs can be removed.
#3010 src/cpukit/posix/src/mmap.c:189]: (style) Suspicious condition
#3011 Error compiling xilinx_zynq_zedboard.
 #3012 Global C++ IO streams are broken (cout, cin, cerr)
#3013 ProgrammingError: (1064, "You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near
```

```
sid='nikolaykomashinskiy' AND authenticated=1 AND name='force_change_passwd'' at line 1"'
#3014 interrupt vector indexing is assuming BSP_INTERRUPT_VECTOR_MIN = 0 for this code.
#3015 Add support for IBM PPC 750 chip
#3016 missing a couple register names + a #ifndef _ASM_ around serial.h inclusion
#3017 improvement in pci.h
#3018 RSB cannot compile tool chain in CentOS 7.
#3023 Parameter of CPU_COPY() are in wrong order
#3025 m32c/m32csim does not build linpack-pc.c
#3027 RTEMS source builder fails when building gcc documentation with newer versions of gcc
#3032 CPU_NAND_S() implementation is not in line with FreeBSD
#3036 CPU CMP() implementation is not in line with FreeBSD
#3040 Cannot use RTEMS mailing list archive for patches
#3043 4.11/rtems-nios2 does not build on Windows
#3046 4.12/rtems-moxie missing release number.
#3047 Remove docs directory from the RSB
#3049 Warnings in libdebugger
#3052 RSB: powerpc GDB build broken on Apple Darwin
#3054 gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux
#3056 Add EDF SMP scheduler
#3057 Add a workaround for the LEON3FT store-store errata
#3059 Add a simple processor affinity support to the EDF SMP scheduler
#3061 including 'unistd.h' in C++ does not build.
#3063 Make the EDF scheduler the default SMP scheduler
#3069 Add rtems_scheduler_ident_by_processor()
#3070 Add rtems_scheduler_ident_by_processor_set()
#3071 Create an interrupt server for every processor in the system
#3072 Declaration of global functions in driver source files
#3076 Test suite failures due to floating point usage
#3077 SPARC: Add lazy floating point context switching
#3079 Ada tests do not build
#3080 Infinite loop in SPARC rtems_invalidate_multiple_instruction_lines()
#3082 Add 64-bit support for PowerPC
#3083 parallel make not working
#3084 Makefile recipe override warning has returned
#3085 Add hypervisor support for QorlQ BSPs
#3087 RSB rtems-gdb-7.12-1.cfg MD5 value is ERROR
#3088 shell test in testsuites\samples\fileio many COMMANDs is Lost
#3089 Inconsistent blocking addressing in RFS
#3090 Add BSP for i.MX 7
#3091 Core Dump in powerpc-rtems4.12-ld
#3096 Shell internal commands should be public.
#3098 Add new RTEMS repos to github.
#3099 Add RTEMS FDT wrapper and shell command to libmisc
#3100 Add Xilinx AXI I2C driver
#3101 Add I2C Drivers for LM25066A, TMP112, ADS1113 and ADS1115
#3102 rtems-exeinfo does not decode ARM static constructors.
#3103 rtems-tools on CentOS 7 Build Failure
#3109 Add RISC-V support
#3111 Newlib: Change time_t and clock_t integer types to 64-bit
#3112 POSIX: Make pthread_mutex_t self-contained
#3113 POSIX: Make pthread_cond_t self-contained
#3114 POSIX: Make pthread barrier t self-contained
#3115 POSIX: Make pthread_rwlock_t self-contained
#3116 POSIX: Make sem_t self-contained
#3117 score: Optimize _Thread_queue_Enqueue() timeout handling
#3121 clock() implementation in Newlib is broken
#3122 Simplify and unify BSP output char
#3123 GDB 8.0.1 is broken on FreeBSD 11
#3124 Ignore pshared attribute for POSIX semaphores
#3125 Accept PTHREAD_PROCESS_SHARED for POSIX mutexes #3126 Accept PTHREAD PROCESS SHARED for POSIX barriers
#3127 MIPS tool build on Darwin (MacOS) fails.
#3128 RTEMS Tools corvar does not build on Windows
#3129 RTEMS Tools covoar build fails on Windows
#3130 RTEMS Doxygen.in latex output does not build
#3132 Add reference counting to file descriptors
#3133 Remove rtems_libio_t::driver
#3134 Remove LIBIO_FLAGS_CREATE
#3135 Devel mailing list doesn't work and Git push impossible due to disk full
#3136 Use FIFO for file descriptor free list
#3137 Accept PTHREAD PROCESS SHARED for POSIX condition variables
#3139 Remove old ISR parameter from Clock_driver_support_install_isr() and make it optional
#3140 CPU Kit broken with --enable-rtems-debug
#3141 Change the BSP Howto's name to something smaller.
#3142 POSIX: Reduce size of othread once t and make it zero-initialized
#3148 PSXRDWRV Test failure on Beaglebone Black
#3152 Beaglebone Black crashes on u-boot master build
#3153 Accept PTHREAD_PROCESS_SHARED for POSIX rwlocks
#3157 PowerPC tools don't build on 32-bit hosts
#3158 Examples v2 does not build
#3159 Examples v2 trace linker ini files reference non-existing dump-on-error
#3160 Trace linker score support is broken
#3163 Add I2C device driver for temperature sensor LM75A
#3166 New default ticket assignee: NeedsReview
#3167 Internal status codes must not depend on RTEMS_POSIX_API
#3168 Simplify POSIX_API_Control
#3170 Use BSP_output_char via RTEMS printer or simple console driver for test output by default #3171 RSB GCC does not build on High Sierra and APFS #3172 i386 PC BSP does not reset when bsp_reset is called.
#3173 XIIinx AXI I2C driver IP race condition causes clock glitch.
#3174 Remove rtems_pthread_attribute_compare()
#3175 Merge FreeBSD timecounter changes from 2015-01-20 to now
#3176 __getreent in libc.a and generated by confdefs.h
#3177 Replace/update POSIX Compliance Guide
#3178 Update sh-rtems4.12 bset to use rtems-default (using old gcc)
#3179 New warnings from Time Changes
#3180 ar warning: 'u' modifier ignored since `D' is the default (see `U')
#3181 Various cc1plus warnings for "valid for C/ObjC but not for C++"
 #3182 CLOCK_REALTIME timeout implementation is not POSIX compliant
#3185 Change uptime seconds to int32_t
```

RTEMS 5.1 Release Notes #3187 smptests/Makefile am Issues #3188 Add C11 Threading Examples #3189 MUTEX\_INITIALIZER missing braces warning #3190 RTEMS Tester covoar does not link on MacOS #3191 RTEMS Tester covoar dies with no arguments #3198 Add lazy update of line control and baud divisor to NS16550 serial driver #3200 m32c tests don't build -- test\_context too large #3201 epiphany tools checksum error #3202 or1k tools build error #3203 Upgrade trac to fix numerous problems #3204 Exception in rtems-test #3205 Relative timespec timeouts are subject to integer overflows #3207 Supported Architectures Page is out of date #3209 RSB should fail on this error #3210 Improve the RSB build email message #3211 Fix pthread\_create() with user provided stack #3212 Qemu Fails to Build, RSB Gives Odd Traceback #3213 Move erc32, leon2, leon3, psim and jmr3904 to Tier 2 #3215 Configuring a System Still Includes Notepads and Has Wrong Heading #3216 Replace vprintk() implementation #3217 Add RTEMS version, build and tools details to tests #3218 Termios canonical mode (ICANON) does not return input line by line #3219 Zynq BSP missing linker option --gc-sections #3220 Change RTEMS release number scheme from 4.12 to 5 #3221 RSB wiki page duplicates documentation #3224 Upgrade or1k and m32c to Binutils 2.29 #3225 Upgrade m32c to GDB 8.0.1 #3226 gdb: pr 16827, fix sim on Mavrick #3227 sb-check fails on Msvs2 64-bit #3228 aarch64 missing from 5/rtems-all build set #3229 Add index to all documents. #3231 RTEMS Top level README needs updating. #3232 Use of `.. include::` in the User Manual should be changed #3234 Quick Start Instructions Inconsistent #3235 Fix rtems\_semaphore\_flush() for priority inheritance semaphores #3236 Fix thread queue owner priority update in \_Thread\_queue\_Flush\_critical() #3237 Fix priority ceiling updates #3238 Git push to Trac with more than one commit does not update tickets. #3239 Add getentropy() implementation provided by each BSP #3240 cpukit/libmisc/stackchk/check.c stack addresses formatted incorrectly. #3242 Workarounds for UT699, UT700, and GR712RC errata #3243 Simplify global construction #3244 Change rtems\_panic() implementation and document this function #3245 Replace BSP\_panic() with rtems\_panic() #3246 Remove \_BSP\_Fatal\_error() #3247 Remove BSP-specific defaults for RTEMS\_BSP\_CLEANUP\_OPTIONS()
#3248 Add BSP\_VERBOSE\_FATAL\_EXTENSION to RTEMS\_BSP\_CLEANUP\_OPTIONS #3249 imx7 does not link getentropy01 test on master #3254 Reorganize header files to avoid "make preinstall" #3255 Warnings on 64-bit targets #3256 Ada run-time needs support for self-contained POSIX synchronization objects #3260 libpci depends on BSP-specific header files #3261 A couple of documentation typos #3264 Add monotonic watchdog based on uptime #3265 Use second one based uptime for CLOCK\_MONOTONIC for FreeBSD compatibility #3266 cpukit/libpci references BSP headers #3267 rtems/status-checks.h calls printk without including the needed header. #3268 PowerPC BSP include naming mess. #3270 Remove unused support for MPC505 **#3273** RSB removed used tools configuration files. **#3277** QorlQ: Add MAC-less DPAA driver to libbsd #3278 bsp-builder has incorrect print (%s in output) #3281 Add epiphany support to GDB 8.0.0 #3283 Bad URL in OpenOCD/Xilinx\_Zynq Wiki Page #3284 RSB uses hard coded GCC binary paths #3285 Reorganize BSP source directory #3290 Add device tree support to Altera/Intel Cyclone V BSP #3294 gcc version report for released tools is wrong. #3298 dlerror non-conformance #3305 Add paravirtualization support to ARM #3306 Add paravirtualization support to PowerPC #3307 PowerPC linkcmds.base missing wildcards on some sections #3309 rtems\_task\_create's initial\_mode SMP update #3312 RSB macro calls such as define fail on unicode keys. #3315 Move expat's home site to github from SF. #3318 Improve INTERNAL\_ERROR\_THREAD\_EXITTED to show the id and thread name #3320 Add a simple task console driver #3323 mhttpd's http etag can result in invalid caching in a browser. #3325 Simplify clustered scheduler configuration #3327 Eliminate score/cpu/\*/.../types.h #3328 bootstrap uses non-POSIX compliant echo -e #3329 Trac Login Failure (bad password) Causes Internal Error #3334 deadlock in \_once() #3339 Several PowerPC linker commands do not support constructors/destructors with priority #3340 gen83xx warning for macros redefined #3341 sparc64: Macro Redefined #3342 pthread\_setschedparam() has incorrect prototype #3343 pthread\_mutex\_getprioceiling() has incorrect prototype #3344 mcf5272/mcf5272.h Timer3 Duplicate Definition #3345 mvme3100 spaces needed around quote in macro definitions in bsp.h #3346 bf533.h #3348 beatnick:spaces needed around quote in macro definitions in bsp.h #3349 pc386 edid.h invalid macro name #3350 sptimecounter02 warning due to defining \_KERNEL and disabling part of <sys/time.h> #3352 Warning in all lpc176x variants #3354 PowerPC BSPs duplicate PAGE\_MASK, etc redefinition #3358 Deprecate rtems\_disk\_create\_phys(), etc. #3374 rtems-test does not honor --mail-from argument #3375 Remove command line pre-processor defines #3376 Remove cklength program

```
RTEMS 5.1 Release Notes
      #3377 Remove eolstrip program
      #3378 Remove unhex program
      #3379 Remove packhex program
      #3380 Move rtems-bin2c program to rtems-tools
      #3381 rtems-test command line documentation appears to be out of date
     #3382 Testsuite Makefile merge to one per group of tests
      #3383 Require --enable-rtemsbsp with --enable-smp or --enable-multiprocessor
      #3384 Prefer int for int32 t
      #3385 Generate an error if RTEMS's gcc is not found when the user runs configure
      #3386 Trac's git changeset browsing is suspect.
      #3387 Add subdir-objects to automake flags
      #3388 rtems-tester: possible parsing error for qemuprep-altivec on exclude SMP configuration
      #3389 Warning flags have disappeared with recent autoconf changes
      #3390 NFS: Remove support for cexp
      #3392 infinite loop in RSB's path when a prefix path is not writable #3395 rtems-ld does not remove executable when there is an output error
      #3396 rtems-Id does not handle R_ARM_V4BX relocation records
      #3397 The register keyword is deprecated in C++11
      #3401 dl06: tms570* Mixed LSB/MSB Error
      #3402 dl06: mips hurricane Mixed Endian Error
      #3403 RSB RTEMS tool set build is irreproducible
      #3407 Move Gaisler.org and Gaisler.se hosted RSB patches to rtems.org
      #3409 Strip down configure checks to the bare minimum
      #3410 Remove bin2boot program used by i386 BSPs
      #3411 gemuppe does not install linkernds.base
      #3413 examples-v2 both_hello and triple_period fail to build
      #3415 Add examples and tests as components
      #3416 Update Ubuntu RSB Instructions for 17.10
      #3417 Add libdwarf to elftoolchain and provide a C++ wrapper
      #3418 Remove difftest and sorttimes test tools
      #3419 Always build network services (tftpfs, ftpfs, ftpd, telnetd, libdebugger)
      #3421 New Trac components for Coverage and Trace
     #3423 examples-v2: m68k/powerpc BSPs undefined reference to _Thread_Life_action_handler #3424 examples-v2: no MIPS BSPs pass configuration step
      #3425 examples-v2: PowerPC fails to build fat_ramdisk
      #3432 Remove Simple SMP Priority Scheduler
      #3433 Add SMP support for RISC-V
#3434 Add CONFIGURE_MINIMUM_POSIX_THREAD_STACK_SIZE configuration option
      #3435 Add test case for CONFIGURE_BSP_PREREQUISITE_DRIVERS configuration option
      #3436 Remove clock driver Clock_driver_support_shutdown_hardware() hook
      #3437 Replace use of printk() in free() with a fatal error
      #3443 Remove shgen program
      #3444 Remove nios2gen program
      #3445 Remove multigen script
      #3446 Remove cvsignore-add.sh script
      #3447 Remove rtems-testsuite-autostuff script
      #3451 Remove size rtems script
      #3452 Update RISC-V tool chain to support standard 64-bit chips
      #3453 Add RISC-V GDB
      #3454 Tracing Framework Documentation in User Manual
      #3455 Remove install-if-change script
      #3458 rtems-test should not use the env PATH to find covoar
      #3459 Rework initialization and interrupt stack support
      #3460 GDB 8 SIS LEON2 LEON3 Patches
      #3461 Canadian cross compilation of RTEMS tools not supported for x86_64-w64-mingw32
      #3463 Convert covoar to use DWARF function data
      #3465 Integrate all changes from Linux v3.11 to v4.17 made in the JFFS2 sources
      #3471 Update libfdt as of date 2018-07-09
      #3472 Update of libbsd to a version close to the FreeBSD 12 release
      #3475 Add RTEMS_PREDICT_TRUE() and RTEMS_PREDICT_FALSE() for static branch prediction hints
      #3478 RISCV BSP Tester Cleanup Needed
      #3480 CONFIGURE_MINIMUM_TASK_STACK_SIZE may affect CONFIGURE_INTERRUPT_STACK_SIZE
      #3482 Relax the buffer alignment required by rtems_partition_create()
      #3484 RFS: Remove stray call of rtems_disk_release() in rtems_rfs_buffer_sync()
      #3486 Use uintptr_t and size t instead of uint32 t in rtems_partition_create()
#3488 Remove CONFIGURE_HAS_OWN_MOUNT_TABLE
#3489 Obsolete CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
      #3490 Remove CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
      #3491 Align mprotect() prototype with POSIX
      #3496 Remove superfluous interrupt enable in _Thread_Dispatch_enable()
      #3498 Command and Variable Index is empty
      #3499 The "Index" chapter is empty
      #3500 Change rtems_waf's RTEMS path check from `bin` to share/rtems<version>`
      #3501 MSR_RI defined multiple places
#3502 PL111 LCD CONTROL LCD BPP 16 Redefined
      #3503 PDF Documentation is missing an index
      #3504 Warning and formatting in bsps/powerpc/mpc55xxevb/dev/dspi.c
      #3505 powerpc/virtex redefined warning
      #3506 waf for building RTEMS applications needs updating
      #3507 Add flexible per-CPU data
      #3508 Add support for thread to processor pinning
      #3510 ATA driver uses deprecated rtems_blkdev services
      #3511 int/pointer size warnings in powerpc-qoriq_e6500_64
#3512 sb-check:No python command with Python 2 and Python 3 installed
      #3513 Convert tqm8xx console driver to new Termios API
      #3516 sb-set-builder should report disk usage of build
      #3517 RSB Ubuntu Host Requirements Missing Some
      #3518 RSR MacOS Nits
      #3519 RSB does not strictly check args
      #3520 Remove CONFIGURE_HAS_OWN_FILESYSTEM_TABLE
      #3522 Update mDNSResponder to Apple version v878.30.4
      #3523 Add FEC network interface driver for TQM8XX
     #3525 Add MMC/SDCard support for i.MX 7Dual BSP
      #3526 Convert PTY driver to new Termios API
      #3528 Remove undocumented and untested CONFIGURE_MAXIMUM_PTYS
      #3529 Fix issues raised by Coverity Scan for Telnet serve
      #3530 Fix issues raised by Coverity Scan for FTP server
      #3531 Add POSIX Attribute Reports for More Than Scheduler (examples-v2)
      #3532 RSB source only download is host specific
      #3533 Add rtems_task_exit()
```

```
#3535 Remove stdin, stdout, stderr convenience routines for CEXP
#3536 Move RTEMS configuration data to a common `config` directory
#3537 RSB and RTEMS Tools Support for python2 and python3
#3538 Classic API Barrier Wait Section Title Has Wrong Name
#3539 Remove CPU_PROVIDES_IDLE_THREAD_BODY
#3542 Remove keep_stdio feature from Telnet service
#3543 Change Telnet server to allocate most resources during initialization
#3545 Support O_DIRECTORY open() flag
#3546 Support O_NOFOLLOW open() flag
#3547 Support O_CLOEXEC open() flag
#3549 Obsolete powerpc/virtex BSP
#3551 Move default configuration to separate library
#3552 cpu usage error in SMP mode
#3553 rtems-libbsd Missing waf in Top Directory
#3554 rtems-libbsd README, waf Needs an Update Sweep
#3555 IRC bots need to be registered to join #rtems
#3557 Test ticket
#3558 Update TracSpamFilter
#3559 Fix NavAdd plugin.
#3560 Fix FlexibleAssignTo
#3561 Migrate to CommitTicketUpdater
#3562 Use a short paths for the RSB temporary build path on Windows
#3568 RSB: UnboundLocalError: local variable 'build_max_size_human' referenced before assignment
#3569 waf version in various rtems-repositories incompatible with python 3.7 #3576 gdb 8.0.1 sis does not build on Cygwin
#3577 Avoid CLooG and ISL host depencencies for target GCC
#3579 testsuite's rtems-test-check.py python version support
#3583 Add rtems_malloc() and rtems_calloc()
#3585 Deprecate proc_ptr
#3587 Deprecate rtems_context
#3589 Deprecate rtems_context_fp
#3591 Deprecate region_information_block
#3593 Deprecate rtems_thread_cpu_usage_t
#3595 Deprecate rtems rate monotonic period time t
#3598 Move internal types of API objects to separate header file
#3599 Remove m32c architecture port
#3600 Update or1k tools to use GCC master
#3602 Update or1k tool chain to use the upstream GCC
#3603 Remove support for 16-bit object identifiers
#3604 RTL Unresolved Symbols from common section on i386/pc686 (cloned)
#3605 RTL Allows Unloading a Module other Modules Depend Upon (cloned)
#3609 Update Spike Version in RSB (RISC-V simulator)
#3612 RTL unresolved compaction does not update string indexes after removing a string
#3620 CommitTicketUpdater does not process commits in order
#3621 Statically initialize object information structures
#3622 Remove cache routines working with a processor set
#3623 rtems-syms invoking m68k-rtemsundefined-gcc
#3624 MSYS2 builds appear to ignore tcfg file
#3625 RTL Allows Unloading a Module other Modules Depend Upon (cloned)
#3626 sigtimedwait() needed when POSIX is disabled
#3629 Add RSB reporting section to the documentation. #3630 Build of rtems-tools fails with i686-w64-mingw32
#3636 Add rtems_scheduler_get_maximum_priority()
#3637 Fix rtems_task_restart() argument type
#3649 Error with IRC anouncing in examples-v2 commits.
#3651 Sphinx 1.8 PDF (latex) on FreeBSD does not build
#3664 RSB config parsing slow on python3
#3665 Add low level event recording infrastructure
#3666 Add support for C++17 std::aligned_alloc
#3667 Support data cache disable on ARMv7-AR
#3669 rtems-docs git does not build with Sphinx 1.8.2 and 1.8.3
#3670 examples-v2 uses deprecated or obsolete RTEMS interfaces
#3671 rtems-test needs a --version option or similar
#3672 No i386 BSP can link all tests after cache manager changes
#3673 xilinx_zynq_a9_qemu - fails to link psxconfig01
#3674 Raspberry Pi Fails to Build
#3675 RSB: Change default prefix to OS prefix + "rtems" + $rtems_version
#3677 ARM BSP contains ARM code in THUMB only build
#3678 Add RISC-V BSP with support for the grlib
#3682 Add BSP for Xilinx Zynq UltraScale+ MPSoC platform
#3683 Git clone via HTTPS does not give much interactive feedback
#3684 rtems_print_buffer is broken
#3685 Add large memory support to libdl
#3686 Add library searching and loading to libdl
#3687 Add architecture section support to libdl and support PowerPC's small data.
#3688 rtems-docs fails to build with python3
#3692 libdl does not honour write unlock/lock for sections
#3693 libdl incorrectly handles MIPS16hi/lo relocs
#3694 shm_open has logically unreachable code (Coverity ID: 1399706, 1399714)
#3696 Basic Support for Trace Compass
#3699 Wrong system register specified for ARM virtual timer value retrieval
#3720 mfill shell command uses the wrong arguments for the memset()
#3724 bsp/lpc24xx: Convert SSP driver to Linux API
#3725 bsp/lpc24xx: Convert I2C driver to Linux API
#3728 Set small data seciton to max size for mvme5500 and motorola_powerpc BSPs
#3731 Add rtems_scheduler_get_processor()
#3732 Add rtems_scheduler_get_processor_maximum()
#3733 Add general reg support to libdebugger #3734 Add RTEMS CONST attribute
#3735 Remove CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE
#3736 PowerPC Beatnik BSP C++ exceptions broken
#3741 libdl loading ELF objects from libbsd NFS file system ends in a deadlock
#3742 T_config conflicting type qualifiers for 'config'
#3743 RSB os and arch config logic is broken
#3746 libdl test dl05.exe failing
#3747 Address Cortex-M3 Errata 602117
#3748 libdl uses a linear symbol search on object file symbols
#3751 No documentation on Region Get Information Directives
#3753 Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORS
#3754 Users Guide Ubuntu Instructions Have Typo
```

RTEMS 5.1 Release Notes 8/112

#3756 Condition codes in PSR are destroyed by lazy FP context switch #3760 BBB MMU update crashes #3762 Return the current handler from ARM cp15 set exception call #3763 RSB SIS build fails on FreeBSD #3768 Add staging support to Makefile.inc #3769 RSB BSP Buildsets #3770 RSB 3rd party packages failing to build #3773 RPi fails to boot #3774 RPi2 SMP does not build #3775 libdl does not handle ARM mode reloc tramp parsing #3776 libdl ARM does not support ARM mode trampolines. #3777 libdl object unload debugger delete support is broken #3781 RSB crashes in case the host as an unreadable directory in "/" #3783 MSYS2 RSB build error #3785 Add RISC-V BSP with support for the Freedom E310 Arty A7 FPGA #3789 TMS570 application build error #3792 RSB fails to build on MSYS2 #3793 trace record tool does not build on Windows #3794 Initial POSIX Signals Mask Incorrect #3796 docs/develenv directory structure bitrot #3797 Add LLVM as a package #3798 Add sockatmark to libbsd #3800 termios - Add Capability to Generate SIGINTR and SIGQUIT #3802 RSB Build of Spike Fails on Second Time (bug in upstream spike) #3803 RSB ssl context error fetching gemu patches #3804 sb-get-sources: Error repo\_mail referenced before assignment #3805 libdebugger build error on atsamv #3806 Add fatal error for heap errors #3808 Fix gemu-couverture-git RSB download file name #3809 Fix epiphany-rtems5-gdb-7.8 RSB download file name #3810 Use the release details in the release build docs #3811 Release source path on ftp.rtems.org is wrong **#3812** Released RSB has no source set for rtems-tools **#3813** RSB does not handle --rsb-file in releases #3814 Releasing creates 2 copies or the kernel and tools. #3815 Improve SMP EDF scheduler configuration #3817 RSB fails on FreeBSD 12.0 (32bit and 64bit) #3821 Port NVMe support from FreeBSD to libbsd #3822 Release created VERSION file in rtems-tools-.\*.tar.xz is wrong #3823 Untar\_ family doesn't handle nested directories #3826 top on SMP shows invalid priorities #3830 Build problems with user names which contain space characters #3831 Duplicate description of Tiers and Rules #3833 Simplify RTEMS semaphore configuration #3834 Simplify clock driver #3835 Support statically allocated threads #3836 Specify the application configuration options #3837 Rename CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTORS #3838 Rework work area initialization #3839 RTEMS revision does not handle #3840 Add CONFIGURE\_IMFS\_ENABLE\_MKFIFO #3841 Add rtems\_object\_get\_local\_node() #3842 RSB RTEMS version message string is fixed to the git hash #3843 Add CONFIGURE DIRTY MEMORY #3844 Remove CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE **#3845** Remove Ada-specific configuration options **#3848** Libdebugger test in libbsd should depend on libdebugger.a #3849 Fix PSIM memory map #3856 posix\_devctl - Add support for SOCKCLOSE #3857 Use EAGAIN for POSIX mq wait in ISR error #3859 No output from joel scripts in telnet #3861 Add CONFIGURE\_VERBOSE\_SYSTEM\_INITIALIZATION #3862 Canonicalize CONFIGURE\_ZERO\_WORKSPACE\_AUTOMATICALLY #3863 Remove support for the BSP\_ZERO\_WORKSPACE\_AUTOMATICALLY BSP option #3864 rtems-tester does not work with gdb simulators #3865 Fix linker set item declarations for small data area targets #3868 newlib links breaks mingw build #3871 Remove rtems\_configuration\_get\_posix\_api\_configuration() #3873 Remove CONFIGURE\_HAS\_OWN\_INIT\_TASK\_TABLE #3874 Remove CONFIGURE\_POSIX\_HAS\_OWN\_INIT\_THREAD\_TABLE #3875 Split up confdefs.h in component based header files #3876 Remove CONFIGURE\_DISABLE\_SMP\_CONFIGURATION #3881 Add API functions to map a task priority to/from a POSIX thread priority #3882 Add POSIX user environment pointer to TCB #3885 Context switch extension is broken in SMP configurations #3886 Fail an RSB build with --mail option if a repo is not clean #3887 Do not report remotes in RSB build log if --mail is used #3888 Update rtems\_waf in libbsd #3889 Test needed for timer\_create with CLOCK\_MONOTONIC

## **Details**

Ticket A	Created	Resolution	Component	Reporter	Owner	Modified	
#1247	13 years ago	fixed	fs	strauman	Chris Johns	2 years ago	
	RTEMS does not implement locks needed by multithreaded newlib						

RTEMS 5.1 Release Notes 9/112

Summa multi-threaded newlib protects a number of internal data structures (as of newlib-1.15 these comprise global list of FILE objects stdio FILE object initializer individual FILEs (since FILEs with the exception of stdin/stdout/stderr are per-process entities) global hash table used by telldir/seekdir individual DIR structures (opendir/readdir) atexit list list of environment variables Descripti · global timezone variable ) using mutexes. It expects the OS to implement these locks but defaults to not using locking if the OS does not provide an implementation. Currently, RTEMS does \*not\* provide its own implementation of 'sys/lock.h' and therefore vital data structures in newlib are currently \*unprotected\* (with the exception of environment variables -- 'envlock.c' had been added to RTEMS a while ago but since then, newlib has introduced more locks and a general OS interface which - once implemented - will obsolete 'envlock.c'). Note that while semantics of having no protection for individual FILE objects may be tolerable, having no protection for global newlib data structures such as lists of FILEs is not I am currently working on an implementation which should be available shortly. 11 years ago fixed tool/newlib Daniel Hellstrom Chris Iohns 2 years ago scandir() fails due to MAXNAMELEN is incorrect Summar I have been trying to use scandir() however the newlib one does not work due to MAXNAMLEN and NAMLEN differ, scandir in libcsupport seems to have a fix for this, however my libcsupport\_a-scandir.o is empty, I'm guessing because HAVE\_SCANDIR is defined. It is used in scandir() (newlib-1.17.0/newlib/libc/posix/scandir.c:117) by the macro DIRSIZ. Where DIRSIZ uses the MAXNAMELEN define which is set incorrectly. It does not match the sizeof(struct dirent) which makes the DIRSIZ return a negative number, then malloc(DIRSIZ(d)) will try to allocate 4GB which fail. My guess is that MAXNAMELEN should be defined in newlib-1.17.0/newlib/libc/sys/rtems/sys/dirent.h or newlib-1.17.0/newlib/libc/sys/rtems/include/limits.h or in a new file. I tried to run the code below on my FAT filesystem, taken directly from the scandir(3) man page. /\* print files in current directory in reverse order \*/ #include <dirent.h> main(){ struct dirent namelist; int n; Descripti n = scandir(".", &namelist, 0, NULL); if (n < 0)perror("scandir"); else { while(n--) { printf("%s\n", namelist[n]->d name); free(namelist[n]); } free(namelist): } #1662 10 years ago fixed fs Bharath Suri Chris Johns 2 years ago termios.c: semaphore not deleted, consequently resulting in failure of rtems\_termios\_open Summar The semaphore osem is still in use in rtems termios close while an attempt to delete it is made and hence is not deleted. Consequently, it results in a RTEMS TOO MANY on Descripti rtems\_semaphore\_create, which further results in failure of rtems\_termios\_open. #1747 fixed score Sebastian Huber 2 years ago 9 years ago Chris Johns Heap extend allows discontinuous memory regions Summar The check in (cpukit/ChangeLog) states: 2010-06-07 Sebastian Huber <sebastian.huber@...> score/src/heapextend.c: Implemented support for scattered heap areas. The heap cannot support scattered blocks because the \_Heap\_Is\_block\_in\_heap assumes the region is continuous between the first and last blocks of the heap. Making the gaps in the regions passed to the heap extend call used is guestionable and makes the Heap Is block in heap test not really perform the task it's name states. This is an issue because it is this check that determines if a heap free of NULL should proceed. This issue is covered in another PR. Descripti I also wonder about a heap free call to an address that maps to one of the "in-use" gap regions. The previous heap code knew if an address was in the heap and therefore it was kind of safe to probe for a valid block. This assumption is now not valid The former heap extend code: http://www.rtems.org/viewvc/rtems/cpukit/score/src/heapextend.c?revision=1.7&view=markup clearly states the type of memory that can be added to an existing heap. The current code has no restrictions. The user manual is not great in this area. It would also be useful if comments are added to the heap extend code. The heap extend code is used by the rtems\_region\_extend call and this call clearly states in the manual that the memory region must be continuous. If this has changed we should discuss the API change and make better note of it. I also suspect the testsuite will need additions to test any API changes. #1971 8 years ago fixed fs nopscmn Chris Johns 2 years ago Memory leak in tmpfile() Summar Hello. I use tmpfile() in my RTEMS application, and found that it has memory leak. I wrote small test application (see attachment), that output memory usage: Memory usage before: Number of used blocks: 12 Largest used block: 1288 Total bytes used: 3628 on Memory used after: Number of used blocks: 1013 Largest used block: 1288 Total bytes used: 112064 By 1000 iteration, each call tmpfile() cause memory leak about 108 bytes. <del>#2132</del> 7 years ago fixed score Sebastian Huber Sebastian Huber 2 years ago <rtems/score/basedefs.h> superfluously includes <limits.h> Summar In older RTEMS versions <rtems.h> provided <limits.h> indirectly. No. For this, I think we need to use "deadline folding" which is just modulo arithmetic void Scheduler EDF Release job( Thread\_Control \*the\_thread, uint32\_t deadline Priority Control new priority; Descripti if (deadline) { /\* Initializing or shifting deadline. \*/ new\_priority = (\_Watchdog\_Ticks\_since\_boot + deadline) & ~SCHEDULER\_EDF\_PRIO\_MSB; } else {  $the\_thread-> real\_priority = new\_priority; \_Thread\_Change\_priority(the\_thread, new\_priority, true);$ \_Watchdog\_Ticks\_since\_boot us uint32\_t and overflows after 49 days with a one millisecond clock tick. #2176 6 years ago wontfix Jeffrey Hill Joel Sherrill 2 years ago Summar I have a look around in the drivers in the various BSPs and I notice that none of the termios drivers appear to transmit characters at task level even if they are running in termios task mode. Maybe all (most) of them send characters in the ISR. If there was a large frame of characters to send then this could lock out task activity for too long FWIW, I had a closer look at this today, and maybe something is fishy in the termios code when the TX part of termios runs in task driven mode. It seems that in task mode if the UART can accept characters immediately in the write routine then we wouldnt need to turn on any interrupts at all. The write routine would need to somehow tell termios how many characters it sent; presumably this would occur by calling rtems\_termios\_dequeue\_characters in the driver's write function. I see in the code that this tries to work, rtems\_termios\_dequeue\_characters posts the semaphore of termios tx and increases the characters sent count of termios. However after the write routine returns it goes badly If the transmitter runs in termios TASK mode and the driver's write routine does not immediately enable an interrupt, then it returns to the code below in rtems\_termios\_puts and it sets the transmitter to rob\_busy. After that the termios tx daemon proceeds to step through all of the characters remaining (I think that I see this in the debugger) and discards them because the transmitter stays in rob\_busy state. It's also probably odd that termios calls the write function with interrupts disabled when it is in task driven mode; we could loop outputting a large frame of characters in the write routine at task level with interrupts globally disabled if (tty->rawOutBufState == rob idle) { /\* check, whether XOFF has been received \*/ if (!(tty->flow ctrl & FL ORCVXOF)) { (\*tty->device.write)(tty->minor, (char \*)&tty->rawOutBuf.theBuf[tty->rawOutBuf.Tail],1); } else { /\* remember that output has been stopped due to flow ctrl\*/ tty->flow\_ctrl |= FL\_OSTOP Descripti } tty->rawOutBufState = rob\_busy; [debuq]#0 rtems termios puts ( buf=0x9ca60, len=1, tty=0x11509c) at /home/hill/nios2-rtems/rtems-qit/rtems-4.10/c/src/.../../cpukit/libcsupport/src/termios.c:677 [debuq]#1 0x00015c68 in oproc (c=99 'c', tty=0x11509c) at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/../../cpukit/libcsupport/src/termios.c:748 [debug]#2 0x00015d9c in rtems\_termios\_write (arg=0x9cad8) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/.../../cpukit/libcsupport/src/termios.c:770 [debug]#3 0x00002ef0 in console\_write (major=0, minor=0, arg=0x9cad8) at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/lib/libbsp/nios2/altera-sys-config/./console/console.c:171 [debug]#4 0x0006c328 in rtems\_io\_write (major=0, minor=0, argument=0x9cad8) at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/.../.cpukit/sapi/src/iowrite.c:47 [debug]#5 0x00068044 in device\_write (iop=0x114988, buffer=0x3366d4, count=44) at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/.../.cpukit/libfs/src/imfs/deviceio.c:160 [debug]#6 0x00017ef4 in write (fd=1, buffer=0x3366d4, count=44) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../cpukit/libcsupport/src/write.c:51 [debug]#7 0x0007f078 in \_write\_ (ptr=0.004638, fd=1, buf=0.00336644, pbytes=44) at /home/hill/nios2-rtems/rtems-qit/rtems-4.10/c/src/.../cpukit/libcsupport/src/write r.c:38 [debug] +8 0.00066488 in fflush r (ptr=0x9d638, fp=0x9d98c) at ../../../../inios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/fflush.c:214 [debug]#9 0x000754e8 in stywrite\_r 4.1/newlib/libc/stdio/printf.c:52 [debug]#13 0x00057de0 in bootpc\_init (update\_files=false, forever=true) at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/../../cpukit/libnetworking/nfs/bootp\_subr.c:997 [debug]#14 0x0002960c in rtems\_bsdnet\_do\_bootp () at /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/../../cpukit/libnetworking/rtems/rtems\_bootp.c:23 [debug]#15 0x0002b218 in rtems\_bsdnet\_initialize\_network () at /home/hill/nios2-rtems/rtems/rtems-git/rtem  $4.10/c/src/.../../pukit/libnetworking/rtems/rtems_glue.c:980 \ [debug] \frac{\#16}{4} 0x00001528 \ in \ Init \ (ignored=565432) \ at \ init.c:47 \ [debug] \frac{\#17}{4} 0x0006ccb0 \ in \ _Thread \ _Handler \ () \ at \ /home/hill/nios2-rtems/rtems-git/rtems-4.10/c/src/.../..cpukit/score/src/threadhandler.c:145 \ [debug] \frac{\#18}{4} 0x0006cc28 \ in \ _Thread \ _Is heir \ (the \ _thread=0x6cc28) \ at \ _Is heir \ (thread=0x6cc28) \ at \$ ./../cpukit/../../altera-sys-config/lib/include/rtems/score/thread.inl:82 [debug]Backtrace stopped: frame did not save the PC #2198 5 years ago fixed Gedare Bloom Chris Johns 22 months ago Automate doxygen build Summar The doxygen builds are no longer being generated nightly. Descripti 5 years ago #2207 unspecified Chris Johns Chris Johns 2 years ago fixed RTEMS tar does not overwrite. Summar A host tar by default will overwrite the contents of a directory. A sort of refresh. The RTEMS tar requires you remove the existing files rather than overwrite. This is dangerous because you have to remove files yet you do not know if the tar will be successful and moving and saving files assumes you know the contents of the tar file before hand. Descripti Tar should be changed to overwrite and so allow files to be refreshed. Consistence of files should be managed outside of tar via hashes or checksums. #2213 5 years ago fixed tool/gcc daniel.cederman **Daniel Hellstrom** 2 years ago Decreased performance for whetstone benchmark using GCC >=4.5 Summar Moving from GCC 4.4.2 to 4.9.2 increases the execution time of the whetstone benchmark on both SPARC and x86. The cause seems to be a single commit. I have submitted a bug Descripti report to the GCC bugzilla: on https://gcc.gnu.org/bugzilla/show bug.cgi?id=64193 #2261 5 years ago fixed unspecified Ioel Sherrill 2 years ago Add coverage report generation support to rtems-tools

RTEMS 5.1 Release Notes 11/112

This ticket is to capture the current state of the project started by Krzysztof Mięsowicz <krzysztof.miesowicz@...>. The goals of the project were to:

- replace the existing shell scripts in rtems-testing with Python code integrated into rtems-tools
- add the capability to generate a report per directory. This is important because a large body of code with low coverage negatively impacts the overall coverage area and
  makes reports harder to read. Breaking the reports down by functional area lets us do coverage reporting on more code even when some of the areas are in need of testing
  improvement.

Descripti

The remaining effort in conjunction with other activity related to coverage such as inclusion of gcov generated reports is a good "summer of code" type project. This is an important capability to add to the rtems-tools.

The attached tar file krzy-patches.tar.bz2 contains the current code. There may be other issues to resolve but writing from memory, the following are the highest priority ones:

- no default setting for coverage enable/disable
- configuration file has hard coded paths. This should be able to be a template which is adjusted by the tools at run-time.
- · variable naming and coding style does not match that used in other Python code in rtems-tools

Krzysztof wrote some in his blog about this (http://kmiesowicz.blogspot.com/p/esa-socis-2014.html). Ensure that your base RTEMS tools are built with the RTEMS Source Builder and check on the development list if it builds a qemu with coverage support. This may have changed since he blogged. Joel Sherrill <del>#2266</del> invalid unspecified Move bsp\_pretasking\_hook() into files named bsppretaskinghook.c Summar Over the past few years, we have split out the BSP required methods into their own files with consistent names. bsp\_pretasking\_hook() is next on the list. Descripti \$ grep -rl bsp\_pretasking\_hook . ./sparc/shared/bsppretaskinghook.c ./powerpc/score603e/startup/bspstart.c ./powerpc/beatnik/startup/bspstart.c ./powerpc/virtex5/startup/bspstart.c ./powerpc/virtex5/start/start.5./powerpc/ep1a/startup/bspstart.c./powerpc/virtex4/startup/bspstart.c./powerpc/ep1a/startup/bspstart.c./powerpc/ep1a/startup/bspstart.c./powerpc/ep1a/startup/bspstart.c./prin/TLL6527M/startup/bspstart.c./bfin/DLL6527M/startup/bspstart.c./bfin/DLL6527M/startup/bspstart.c./prin/DLL6 ./shared/include/bootcard.h ./shared/bsppretaskinghook.c ./shared/bootcard.c #2284 5 years ago unspecified loel Sherrill Chris Iohns 2 years ago h8300 gets error linking dl0\* tests Summar rtems-syms -e -c "-mh -mint32 -O2 -g -Wall -Wmissing-prototypes -Wimplicit-function-declaration -Wstrict-prototypes -Wnested-externs" -o dl-sym.o dl01.pre h8300-rtems4.11-gcc -B././././h8sim/lib/ -specs bsp\_specs -qrtems -mh -mint32 -02 -g -Wall -Wmissing-prototypes -Wimplicit-function-declaration -Wstrict-prototypes -Wnested-externs -mh -mint32 \ Descripti -o dl01.exe init.o dl-load.o dl-tar.o dl-svm.o dl-sym.o: In function `rtems rtl base global syms init': rld--gTgaaa.c:(.text+0xa): undefined reference to `rtemsrtl base globals size' rld--gTgaaa.c:(.text+0x10): undefined reference to `rtemsrtl\_base\_globals' collect2: error: ld returned 1 exit status <del>#2289</del> fixed Sebastian Huber tool/acc Needs Funding 5 years ago 2 years ago rtems\_ada\_self is broken on SMP Summar The global variable rtems ada self is broken on SMP (similar to the task variables) and should be replaced with a function call or thread specific data. <del>#2305</del> 5 years ago unspecified Joel Sherrill 2 years ago sp07 needs to be split into an user extensions and a notepad test Summar I was reviewing all code in the tree which uses deprecated methods. I will fix most of the cases. This is going to take a little more time. This test needs to be split apart. I think the notepad usage can go into a new test spnotepad02. It is primarily ensuring that two threads can exchange values through notepads Descripti The remaining use of notepads in sp07 can probably just be a count down on the priority. I am starting to move code to spnotepad02 from sp07 that is not related to the tasks counting down. Hopefully I can resolve this without much feedback. #2306 5 years ago fixed arch/powerpc Joel Sherrill 2 years ago powerpc/mvme5500/vectors/exceptionhandler.c uses task variables Summar I am addressing almost all uses of deprecated methods. They are mostly calls to rtems\_clock\_get() which can be easily corrected or test code which will be removed when the deprecated feature is removed. Descripti This BSP however has what appears to be a unique feature -- the ability for a thread to add a unique exception fault handler. My inclination is to rip this out but I am not doing it now. I am just turning off deprecated warnings for the file. #2308 5 years ago fixed unspecified Chris Johns 2 years ago Change uniprocessor INIT task mode to preempt. Summar The current INIT task mode for a uni-processor build is NO\_PREEMPT. This is not possible on an SMP system and so the default mode is PREEMPT. Both system should be the same and Descripti so the uniprocessor mode should be changed. fixed #2325 5 years ago arch/sparc Sebastian Huber Daniel Hellstrom 2 years ago Broken console driver infrastructure for SPARC The stuff in "c/src/lib/libbsp/sparc/shared/uart/cons.c" should get removed and the new Termios device API should be used instead (see also rtems termios device install()). Descripti #2344 5 years ago fixed unspecified Sebastian Huber Sebastian Huber 2 years ago Second argument of ualarm() is ignored Summar Descripti I don't think this is in line with POSIX.

Currently there is one watchdog header for all ticks based watchdogs. This is not scalable. For example on the Freescale T4240 platform with 24-processors we observe in the smptests/smpwakeafter01 test a maximum thread dispatch disabled time of 3.8ms on processor 0 and 1.7ms on the other processors.

To get rid of this bottleneck we should move the watchdog context into the scheduler context to use one watchdog context per scheduler instance. Take care that active watchdogs move in case of a scheduler change of a thread. #2354 5 years ago unspecified Sebastian Huber fixed 2 years ago Replace red-black tree implementation, change API Summar The RTEMS red-black tree implementation is not as good as the BSD implementation which performs guite well in a benchmark: https://github.com/sebhub/rb-bench Proposal: Descripti https://github.com/sebhub/rb-bench/blob/master/test-rbtree-bsd-for-rtems.c One benefit is that the search/insert is done inline and the red-black tree fixup is done in a general purpose \_BSD\_RBTree\_Insert\_color() function (similar to the Linux red-black tree This makes it possible to get rid of the red-black tree implementation used by the JFFS2 support. #2355 5 years ago fixed arch/sparc Sebastian Huber Daniel Hellstrom 2 years ago SPARC: Several shared drivers are not SMP ready Summar Several drivers in c/src/lib/libbsp/sparc/shared/ use interrupt disable/enable for low-level mutual exclusion. This is not enough on SMP configurations Descripti #2363 5 years ago duplicate arch/sparc Sebastian Huber 2 years ago SPARC: Silent FP context corruption possible On uni-processor configurations the post-switch actions (e.g. signal handlers) and context switch extensions may silently corrupt the floating point context. Set test Descripti sptests/spcontext01. This problem exists for many years and might be working as intended. It is possible to fix this issue using the SPARC\_USE\_SAFE\_FP\_SUPPORT option. This is already used for the SMP configurations. The disadavantage is that this disables the deferred floating point support. wontfix #2366 5 years ago score loel Sherrill 2 years ago Create a Public API for the Atomic Operations Summar Ticket #2364 regarded use of a pthread mutex in three graphics driver as basically an atomic flag to ensure only one open() was active at a time. This created an unnecessary dependency on the POSIX API being enabled. I changed the code to use score Atomic flags. Descripti This highlighted the need for a public Atomic API. The existing tests could be converted to the public API, a macro wrapper written for Classic API Atomics, and documentation added. This may be enough to be a small GSOC project. #2367 fixed Sebastian Huber <sebastian.huber@...> 5 years ago doc mw 2 years ago Documentation of User Extensions needs more information Summar The documentation for User Extension sets in the C User's Guide could use some clarification. It discusses the multiple sets of extensions, but it is unclear as to whether or not the Descripti extensions are added or replaced when rtems extension create() is called. There is a section - 22.2.4 (Order of Invocation) that does discuss the operation of the sets, but it only makes sense once the reader understands that the sets are, in fact, additive. tool #2377 5 years ago wontfix Sebastian Huber 2 years ago rtems waf: Tools without a version are not supported waf configure --prefix=/opt/rtems --rtems=/opt/rtems --rtems-tools=/opt/rtems --rtems-bsps=i386/pc686 Setting top to : /scratch/git-rtems-libbsd Setting out to : /scratch/git-rtems-libbsd Setting o Descripti libbsd/build Could not find any architectures (complete log in /scratch/git-rtems-libbsd-upstream/build/config.log) #2385 fixed arch/arm 5 years ago Chris Johns 2 years ago Warning from commit "bsps/arm: Do not use ARM ARCH 7A" Summar This change https://git.rtems.org/rtems/commit/?h=4.11&id=d0733bb8 generate a warning in user code. The warning is: .../arm-errata.h:45:1: warning: 'in line' is not at beginning of declaration [-Wold-style-declaration] Descripti static bool inline arm\_errata\_is\_applicable\_processor\_errata\_764369(void) #2407 5 years ago fixed build Sebastian Huber loel Sherrill 2 years ago Enable function and data sections Summar In order to reduce the size of executables it is beneficial to put all global functions and data into separate sections. This enables the linker to perform a garbage collection which removes all items not directly referenced. The following steps are necessary

RTEMS 5.1 Release Notes 13/112

1. Modify the build system to use the following compiler and linker flags: Descripti CFLAGS += -ffunction-sections -fdata-sections LDFLAGS += -WI,--ac-sections 2. Review all linker command files and ensure that linker sets and global constructor sections are not affected by the garbage collection (e.g. use the KEEP() directive of GNU ld). fixed Sebastian Huber #2408 5 years ago unspecified Sebastian Huber 8 weeks ago Summar Linker set based initialization Linker sets are used for example in Linux, FreeBSD (they are used in the RTEMS port of the FreeBSD network stack, e.g. libbsd), eCos and for global C++ constructors. They provide a space efficient and flexible means to initialize modules. A linker set consists of • dedicated input sections for the linker (e.g. .ctors and .ctors.\* in the case of global constructors), a begin marker (e.g. provided by crtbegin.o, and
 an end marker (e.g. provided by ctrend.o). A module may place a certain data item into the dedicated input section. The linker will collect all such data items in this section and creates a begin and end marker. The initialization code can then use the begin and end markers to find all the collected data items (e.g. function pointers). Lets look how this works using a simple example. For this we need three files myset.h, #ifndef MYSET\_H #define MYSET H /\* The linker set items \*/ typedef struct { void (\*func)(void); } item: \* Macro to create a linker set item. The first parameter is \* the designator of the item. It must be unique within the \* module scope. The second parameter is the desired function. #define MYSET ITEM(i, f) \ \_\_attribute\_\_((used)) \
\_\_attribute\_\_((section(".rtemsroset.myset.content"))) \
static item i = { f } #endif /\* MYSET\_H \*/ module.c #include "myset.h" #include <stdio.h> \* Some global function that needs a module specific \* intialization done by f(). void g(void) printf("a()\n"): /\* The module constructor \*/ static void f(void) printf("f()\n"); \* This registers the module constructor f() \* in the linker set "myset" MYSET ITEM(i, &f); and init.c. #include "mvset.h" #include <stddef.h> /\* Should be in a proper header file \*/ void g(void); /\* Define the start marker \*/ \_\_attribute\_\_((used))
\_\_attribute\_\_((section(".rtemsroset.myset.begin"))) static volatile const item begin[0]; /\* Define the end marker \*/ \_attribute\_\_((used)) \_attribute\_\_((section(".rtemsroset.myset.end"))) static volatile const item end[0]; int main(void)  $size_t n = \&end[0] - \&begin[0];$ size t i; /\* Call all functions of the linker set \*/ (\*begin[i].func)(); \* This will pull in the module.c and register its item in the \* linker set "myset". So g() can rely on f() being called first. g(); In the linker command file of the GNU linker we need the following statement.

RTEMS 5.1 Release Notes 14/112

.rtemsroset : {
KEEP (\*(SORT(.rtemsroset.\*)))

The KEEP() ensures that a garbage collection by the linker will not discard the content of this section. This would be normally the case since the linker set items are not referenced directly. The SORT() directive sorts the input sections lexicographically. Please note the lexicographical order of the begin, content and end section name parts in the previous example which ensures that the position of the begin and end markers are right. The interesting part of linker map file of the previous example may look like this.

 .rtemsroset
 0x000000001001990
 0x4 load address 0x00000000002268c

 \*(SORT(.rtemsroset.\*))
 .rtemsroset.myset.begin
 0x0000000000001001990
 0x0 init.o

 .rtemsroset.myset.content
 0x000000001001990
 0x4 module.o

 .rtemsroset.myset.end
 0x000000001001994
 0x0 init.o

So what is the benefit of using linker sets to initialize modules? Currently in RTEMS all available managers (semaphore, message queue, barrier, etc.) are initialized since the initialization code doesn't know what is actually used by the application. With the linker set approach we need to initialize only those managers that are used by the application. In case an application uses message queues, then it must call rems\_message\_queue\_create(). In the module implementing this function we can place a linker set item and register the message queue handler constructor. Otherwise, in case the application doesn't use message queues, then there will be no reference to the rems\_message\_queue\_create() function and the constructor is not registered, thus nothing of the message queue handler will be in the final executable.

#2412 5 years ago fixed score Sebastian Huber Sebastian Huber 2 years ago

Improved priority inheritance implementation 2 years ago

## **Problem**

The RTEMS mutexes implement only a very simple approximation of the priority inheritance protocol. The real priority of a thread is only restored once it releases its last mutex. Lets consider this scenario. We have a file system instance protected by one mutex (e.g. JFFS2) and a dynamic memory allocator protected by another mutex. A low priority thread performs writes some log data into a file, thus it acquires the file system instance mutex. The file system allocates dynamic memory. Now a high priority thread interrupts and tries to allocate dynamic memory. The allocator mutex is already owned, so the priority thread is raised to the priority of the high priority thread. The memory allocation completes and the allocator mutex is released, since the low priority thread still owns the file system instance mutex it continues to execute with the high priority (the high priority thread is not scheduled). It may now perform complex and long file system operations (e.g. garbage collection, polled flash erase and write functions) with a high priority.

## **Functional requirements**

- The mutex shall use the priority inheritance protocol to prevent priority inversion. On SMP configurations OMIP shall be used
- The mutex shall allow vertical nesting (a thread owns multiple mutexes).
- The mutex shall allow horizontal nesting (a thread waits for ownership of a mutex those owner waits for ownership of a mutex, and so on).
- Threads from one scheduler instance shall wait in priority order. The highest priority thread shall be dequeued first.
- The highest priority waiting thread of each scheduler instance shall wait in FIFO order.
- The mutex shall provide an acquire operation with timeout.
- In case a mutex is released, then the previous owner shall no longer use the priorities inherited by this mutex.
- In case a mutex acquire operation timeout occurs, then the current owner of the mutex shall no longer use the priorities inherited by the acquiring thread.
- The order of the mutex release operations may differ from the order of the mutex acquire operations
- Priority changes not originating due to the priority inheritance protocol shall take place immediately
- Deadlock shall be detected. In case a deadlock would occur an error status shall be returned or a fatal error shall be generated.
- Deadlocks at application level shall not lead to a deadlock at operating system level.

## **Performance requirements**

- The mutex acquire operation shall use only object-specific locks in case the mutex is not owned currently.
- The mutex release operation shall use only object-specific locks in case no threads wait for ownership of this mutex.

Descripti on

Invariants

- A mutex shall be owned by at most one thread.
- A thread shall wait for ownership of at most one mutex.

## Possible implementation

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

typedef struct Thread\_Priority\_node {
 Priority\_Control current\_priority;
 Priority\_Control real\_priority;
 struct Thread\_Priority\_node \*owner;
 RBTree\_Node Node;
 RBTree\_Control Inherited\_priorities;
} Thread\_Priority\_node;

typedef struct {
 ...
Thread\_Priority\_node \*priority\_nodes; /\* One per scheduler instances \*/
 ...
} Thread\_Control;

Initially a thread has a priority node reflecting its real priority. The Thread\_Priority\_node::owner is NULL. The Thread\_Priority\_node::current\_priority is set to the real priority. The Thread\_Priority\_node::lnherited\_priorities is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in Thread\_Priority\_node::Inherited\_priorities of the mutex owner.

Jakob Viketoft

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in Thread\_Priority\_node::Inherited\_priorities of the previous mutex owner (ownership transfer) or the current mutex owner (acquire timeout).

In case the minimum of Thread\_Priority\_node::real\_priority and Thread\_Priority\_node::lnherited\_priorities changes, then Thread\_Priority\_node::current\_priority is updated. In case the Thread\_Priority\_node::owner its not NULL, the priority change propagates to the owner, and so on. In case Thread\_Priority\_node::current\_priority changes, the corresponding scheduler is notified.

The biggest issue is the locking on SMP configurations in case of recursive minimum updates.

Somehow we must connect this to the scheduler helping protocol for OMIP. We may have to replace the return value based scheduler operations with a pre-context-switch action. Due to some recent implementation changes the run-time of the \_Thread\_Dispatch() function is no longer average-case performance critical.

Summar RSB %source file fails

#2420 5 years ago

RTEMS 5.1 Release Notes 15/112

It seems that the method for accessing an existing file repository both isn't covered much in the "manual", but it also fails to find it. Looking at the python code in download.py, it requires the format file:// to identify the local file protocol, but then tries to access the actual file/directory using that the entire url (including file://) This unfortunately fails and I'm not familiar enough with Python to correct this, although it appears that the "file://" part should be cut from the URL before calling the "return path.isdir(url)" in the \_file\_downloader function. #2423 5 years ago fixed unspecified Jeffrey Hill rtems iterate over all threads lacks user callback private pointer pass through Summar Typically when designing an API that calls a user callback there is a user private "void \*" pointer transparently passed through to the user callback so that the user can access his private state inside of his callback without being forced to employ a global variable. A global variable doesnt work very well if there are multiple objects instances created each of them using the same method with rtems\_iterate\_over\_all\_threads. This type of "void \*" private pointer is of course a standard approach allowing the users callback to behave much the same way as a virtual method in C++, but nevertheless retaining a compatible C based API An enhanced version of the API might look like this Descripti void rtems iterate over all threads xxx( rtems per thread routine routine, void \* const pUserPrivatePassThrogh ):  $typedef\ void\ (*rtems\_per\_thread\_routine\_xxx)(\ Thread\_Control\ *the\_thread,\ void\ *\ const\ pUserPrivatePassThrogh\ );$ The pUserPrivatePassThrogh is not used by the library; it is retained for the duration of the rtems iterate over all threads xxx function only so that it can be passed through to the user's callback. thanks for your consideration of this matter #2428 Joel Sherrill fixed 4 years ago tool/rsb Chris Johns Add 4.12 Tool Target Configurations to RSB Summar Even though so far the 4.11 and master tools don't need to be different, 4.12 configurations need to be added. RTEMS 5.1 Release Notes 18/112

# Background

Descripti on The watchdog handler uses delta chains. The insert operation has a O(n) worst-case time complexity with n being the count of watchdogs in the delta chain. In each step of the insert operation, the SMP lock of the corresponding watchdog header is acquired and released. The profiling data obtain by test program smptests/smpwakeafter01 showed that the current implementation leads to unacceptable latencies, thus it should be replaced by something else.

The use cases for the watchdog handler fall roughly into two categories.

- Timeouts used to detect if some operations needs more time than expected. Since the unexpected happens hopefully rarely, timeout timers are usually removed before they expire. The critical operations are insert and removal. They are important for the performance of a network stack.
- Timers used to carry out some work in the future. They usually expire and need a high resolution. An example user is a time driven scheduler, e.g. rate-monotonic or EDF.

One approach is to use a red-black tree with the expiration time as the key. This leads to O(log(n)) worst-case insert and removal operations. For each operation it is sufficient to acquire and release the lock only once. The drawback is that a 64-bit integer type must be used for the intervals to avoid a potential overflow of the key values. With a system tick interval of 1ns the system could run more than 500 years before an overflow happens. The EDF scheduler would also profit from a 64-bit interval representation, see #2173.

An alternative is the use of a timer wheel based algorithm which is used in Linux and FreeBSD for example. A timer wheel based algorithm offers O(1) worst-case time complexity for insert and removal operations. The drawback is that the run-time of the watchdog tick procedure is somewhat unpredictable due to the use of a hash table or cascading.

Which approach should we choose? Since the watchdog serves the timeout and timer services in RTEMS we have to make some trade-offs. We recommend to use the red-black tree approach which offers a more predictable run-time behaviour and sacrifice the constant insert and removal operations offered by the timer wheel algorithms, see also <a href="https://www.kernel.org/doc/ols/2006/ols/2006/1-pages-333-346.pdf">https://www.kernel.org/doc/ols/2006/ols/2006/1-pages-333-346.pdf</a>. We can reuse the red-black tree support already used for the thread priority queues.

 $The \ new \ watchdog \ handler \ implementation \ is \ a \ prerequisite \ to \ eliminate \ the \ Giant \ lock \ in \ the \ Classic \ Timer \ manager$ 

RTEMS 5.1 Release Notes 19/112

## **Implementation**

Change the Watchdog\_Ticks\_since\_boot to a 64-bit integer type. Keep the Watchdog\_Interval at 32-bit for backward compatibility. Replace the delta chains with a red-black tree. Use the ticks for timers with a relative expiration time. Use struct timespec or struct bintime for timers with an absolute expiration time. This has the benefit that we do not have to adjust the data structures in case the absolute time changes, e.g. due to NTP. It simplifies the POSIX timer services, since no conversion to ticks is necessary

fixed Sebastian Huber #2555 4 years ago 2 years ago Eliminate the Giant lock Summar

## Background

The standard approach to turn a uni-processor operating system into an SMP-capable operating system is to encapsulate virtually the complete operating system state and protect it by one global recursive lock - the Giant lock. Thus, at most one processor can modify the operating system state at a time. Under Giant lock protection interrupt disable/enable critical sections still work. This approach is easy to realize and leads to something that runs on SMP with a minimal effort. Unfortunately, such an operating system does processor count and offers very poor performance. It is quite useless for real applications.

The first steps to get rid of the Giant lock are tackled with the introduction of fine grained locking for the scheduler, watchdog handler, timestamps, thread queues, events, semaphores and message queues. The Giant lock is still used in a couple of places, e.g. all other objects using thread queues, thread life cycle changes (termination, restart) and scheduler changes. It is a straight forward task to eliminate it entirely, but it is also somewhat labour intensive since a lot of code must be changed.

## **Implementation**

Eliminate all remaining code areas that use

- ISR Disable()
- ISR\_Enable(), and
- \_ISR\_Flash()

Direct users of these macros are

- Chain Append()
- Chain Extract() Chain Get()
- Chain\_Insert(), and
- Chain\_Prepend()

Each spot must be dealt with individually. Once this is done, delete these macros since they are now superfluous. Rename ISR\_Disable\_without\_giant() into ISR\_Locale\_disable(). Rename \_ISR\_Enable\_without\_giant() into \_ISR\_Locale\_enable()

Eliminate all remaining code areas that use

Descripti

- Thread Disable dispatch() and
- \_Thread\_Enable\_dispatch()

A prominent user of this functions is Objects\_Get(). The following components are affected by these functions

- Classic barrier handler,
- Classic dual-ported memory handler,
- Classic message queue handler,
- Classic partition handler,
- Classic rate-monotonic handler,
- Classic region handler,
- Classic semaphore handler.
- Classic timer handler,
- extension handler.
- IO manager,
- multi-processing management,
- objects management.
- POSIX barrier handler POSIX condition handler.
- POSIX key handler,
- POSIX message queue handler, POSIX mutex handler,
- POSIX rwlock handler
- POSIX semaphore handler,
- POSIX spinlock handler,
- POSIX timer handler,
- signals,
- thread cancellation.
- thread life-cycle changes, and
- thread scheduler changes

Once this is done, delete Thread\_Disable\_dispatch() and Thread\_Enable\_dispatch(). As a side-effect the Giant lock will be removed.

Implement the O(m) Independence-Preserving Protocol (OMIP) Summar

## Background

The O(m) Independence-Preserving Protocol (OMIP) is a generalization of the priority inheritance protocol to clustered scheduling which avoids the non-preemptive sections present with priority boosting. The m denotes the number of processors in the system. Its implementation requires an extension of the scheduler helping protocol already used for the MrsP semaphores. However, the current implementation of the scheduler helping protocol has two major issues, see Catellani, Sebastiano, Luca Bonato, Sebastian Huber, and Enrico Mezzetti. Challenges in the Imple- mentation of MrsP. In Reliable Software Technologies - Ada-Europe 2015, pages 179-195, 2015. Firstly, the run-time of some scheduler operations depend on the size of the resource dependency tree. Secondly, the scheduler operations of threads which don't use shared resources must deal with the scheduler helping protocol in case an owner of a shared resource is somehow involved.

2 years ago

To illustrate the second issue, let us look at the following example. We have a system with eight processors and two L2 caches. We assign processor 0 to a partition P for latency sensitive real-time tasks (e.g. sensor and actuator handling), processors 1, 2 and 3 are assigned to a cluster CA and the remaining processors are assigned to a cluster CB for soft realtime worker tasks. The worker tasks use a shared resource, e.g. a file system for data storage. Let us suppose a task R of partition P sends a message to the workers. This may make a waiting worker ready, which in turn pre-empts the owner of a shared resource. In this case the scheduler helping protocol takes action and is carried out by the task R. This contradicts the intended isolation of scheduler instances

The reason for this unfortunate coupling is a design issue of the scheduler helping protocol implementation. Some scheduler operations may return a thread in need of help. For example, if a thread is unblocked which pre-empts an owner of a shared resource, then the pre-empted thread is returned. Once a thread in need of help is returned, the ask for help operation of the scheduler is executed. An alternative to this return value based approach is the introduction of a pre-emption intervention during thread dispatching. Threads taking part in the scheduler helping protocol indicate this with a positive resource count value. In case a thread dispatch occurs and pre-empts an owner of a shared resource, the scheduler ask for help operation is invoked. So, the work is carried out on behalf of the thread which takes part in the scheduler helping protocol.

To overcome the first issue, an improved resource dependency tracking is required. One approach is to use a recursive red-black tree based data structure, see #2412.

## Implementation

There are several steps necessary to implement OMIP.

- Introduce per-scheduler locks
- Enable context switches with interrupts enabled.
- Add a pre-emption intervention to the thread dispatch.
- Add a table for priority nodes to the thread control block. For each scheduler instance there is one priority node.
- Update the table in case the thread blocks on a resource, a timeout while waiting for a resource occurs, or ownership of a resource is transferred to the thread.
- Use this table in the pre-emption intervention.
- Update the MrsP implementation to the new infrastructure.

RTEMS 5.1 Release Notes 20/112

Currently, only one scheduler lock for all scheduler instances is used. This simplified the MrsP implementation and due to the presence of a Giant lock, this was not an issue. With the elimination of the Giant lock, however, we need one scheduler lock per scheduler instance to really profit from a decoupled system due to clustered scheduling.

The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress.

If we add pre-emption intervention to the thread dispatch sequence, then there is an even greater need to avoid this issue with the interrupt latency. Interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame.

Descripti on The pre-emption intervention should be added to Thread Do dispatch() before the heir is read and perform the following pseudo-code actions.

pre\_emption\_intervention(executing):
if executing.resource\_count > 0:
executing.lock()
if executing.is\_ready():
for scheduler in executing.schedulers:
scheduler.lock()
if !executing.is\_scheduled():
for scheduler in executing.schedulers:
scheduler.ask\_for\_help(executing)
for scheduler in executing.schedulers:
scheduler.in executing.schedulers:
scheduler.in executing.schedulers:
scheduler.unlock()
else if executing.active\_help\_level > 0:
idle.use(executing.scheduler\_node)
executing.unlock()

The scheduler help operation affects multiple scheduler instances. In terms of locking we have only two options,

- · use a global scheduler lock, or
- obtain multiple per-scheduler locks at once

A global scheduler lock is not an option. To avoid deadlocks obtain the per-scheduler locks in a fixed order. However, in this case the per-scheduler locks will observe different worst-case and average-case acquire times (depending on the order).

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

typedef struct Thread\_Priority\_node {
Priority\_Control current\_priority;
Priority\_Control real\_priority;
struct Thread\_Priority\_node \*owner;
RBTree\_Node Node;
RBTree\_Control Inherited\_priorities;
} Thread\_Priority\_node;

typedef struct {
...
Thread\_Priority\_node \*priority\_nodes; /\* One per scheduler instances \*/
...
} Thread\_Control;

Initially a thread has a priority node reflecting its real priority. The Thread\_Priority\_node::owner is NULL. The Thread\_Priority\_node::current\_priority is set to the real priority. The Thread\_Priority\_node::Inherited\_priorities is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in Thread\_Priority\_node::Inherited\_priorities of the mutex owner.

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in <a href="https://documents.org/">https://documents.org/<a href="https://doc

In case the minimum of the Thread\_Priority\_node::real\_priority and the Thread\_Priority\_node::Inherited\_priorities changes, then Thread\_Priority\_node::current\_priority is updated. In case the Thread\_Priority\_node::owner its not NULL, the priority change propagates to the owner, and so on. In case Thread\_Priority\_node::current\_priority changes, the corresponding scheduler is notified.

Use the thread lock to protect the priority nodes #2557 4 years ago fixed Amar Takhar Amar Takhar 2 years ago doc Add word splitting to print output Summar <del>#2559</del> Sebastian Huber Sebastian Huber fixed 2 years ago 4 years ago score Delete the EXTERN pattern Change the following pattern: some.h: #ifndef SOME XYZ EXTERN #define SOME\_XYZ\_EXTERN extern #endif SOME\_XYZ\_EXTERN type xyz; some xyz.c: #define SOME XYZ EXTERN #include <some ha Descripti into: some.h: extern type xyz; some xyz.c: #include <some.h> See discussion: https://lists.rtems.org/pipermail/devel/2016-January/013506.html Update Developer/Coding/Conventions accordingly. #2560 fixed Sebastian Huber 4 years ago arch/arm 2 years ago smdk2410 is broken due to gp32 removal The smdk2410 BSPs use files of the removed gp32 BSP Descripti [f2a228b2cb5ce376c56ae8d767084b92f2822af0/rtems] #2576 4 years ago fixed arch/arm Joel Sherrill Joel Sherrill <joel@...> 19 months ago

arm/lpc176x: linker script update (add KEEP() sections)

RTEMS 5.1 Release Notes 21/112

This BSP's linker script does not include KEEP() directives and thus cannot have per-function and per-data element section support enabled. Descripti The preferred solution is to convert the BSP to use a shared base linker script. The acceptable solution is to add the proper KEEP directives to the existing linker script(s) Shared linker scripts for the arm, m68k, and sparc have the proper KEEP sections and can serve as example lyears ago fixed posix Sebastian Huber Sebast Sebastian Huber <del>#2606</del> 4 years ago 2 years ago alarm() uses seconds watchdog and thus is affected by clock changes Summar alarm() uses \_Watchdog\_Insert\_seconds() and thus is affected by clock changes, e.g. via \_TOD\_Set(). This is wrong. The POSIX documentation is not that clear since it talks only about "realtime seconds". However, the FreeBSD implementation uses the uptime. This is also in line with the RTEMS ualarm() and nanosleep(). #2608 loel Sherrill 4 years ago posix 2 years ago POSIX Condition Variables Clock Attribute Support Summar I am beginning to add support for the clock attribute to POSIX condition variables. http://pubs.opengroup.org/onlinepubs/9699919799/functions/pthread condattr getclock.html Since the clock can't be a CPU time clock, that leaves CLOCK\_MONOTONIC and CLOCK\_REALTIME. The thread queue is based on CLOCK\_MONOTONIC and does not have an option to Descripti use CLOCK\_REALTIME. Threads and timers waiting on CLOCK\_REALTIME should be impacted by time of day changes. https://docs.google.com/document/d/1GsGer0t84p-nUfZFim4Ty0LTDYNhgKBvlwip\_gLQjTY/edit?usp=sharing is a Google doc with my notes so far in it on POSIX clocks. I will move it to the Wiki as it turns into something more concrete than notes and reflects plans/code. So the first issue is how best to alter the thread queue to support using either clock source? And what does that do to the current ticks based API since you proposed different time representations for the ticks (relative/monotonic) and seconds (absolute/realtime) structures? Joel Sherrill #2617 4 years ago fixed score Sebastian Huber 2 years ago rtems heap allocate aligned with boundary() body and prototype inconsistent The first parameter is size t in the .h and uintptr t in the body. This resulted in a compiler error on the m32c. But it is an inconsistency which should be fixed even if no architecture The malloc.h header file has this: void \*rtems\_heap\_allocate\_aligned\_with\_boundary( size\_t size, uintptr\_t alignment, uintptr\_t boundary Descripti ): malloc deferred.c has this: void \*rtems heap allocate aligned with boundary( uintptr t size, uintptr t alignment, uintptr t boundary #2624 fixed Sebastian Huber **Needs Funding** 4 years ago tool/newlib 19 months ago Fix the year 2038 problem Summar RTEMS uses currently a signed 32-bit integer for time ton Newlib. Thus, it is affected by the year 2038 problem. There are only 22 years left and this time span is within the realistic time frame of some RTEMS applications that are developed now The time t should be changed to int64 t in Newlib. To make sure that all integer operations are carried out properly I suggest to temporarily do this {{{#include <sys/ stdint.h> typedef struct { int64 t val; } time t; static inline time\_t \_time\_add(time\_t a, time\_t b) {  $time_t r = { a._val + b._val }; return r;$ } Descripti static inline time\_t \_time\_sub(time\_t a, time\_t b) {  $time_t r = { a._val - b._val }; return r;$ static inline time t time mul(time t a, time t b) {  $time_t r = \{ a._val * b._val \}; return r;$ static inline time\_t \_time\_div(time\_t a, time\_t b) {  $time_t r = \{ a.val / b.val \}; return r;$ } }}} Make sure that RTEMS and Newlib build with this. Add test cases to highlight the time\_t integer limits 4 years ago fixed posix Sebastian Huber 2 years ago Use one lookup tree per-thread for the POSIX keys Summar Currently a global lookup tree is used for all the POSIX key/value pairs. On SMP configurations this is a bottleneck. Use one lookup tree per thread instead. Descripti Sebastian Huber #2626 4 years ago Sebastian Huber 2 years ago Unify thread cancel/join and delete Summar The rtems\_task\_delete() is basically a pthread\_cancel() plus pthread\_join(). Unify the implementation and introduce a \_Thread\_Cancel() and \_Thread\_Join() to be used by both APIs. Descripti Get rid of the Giant lock for thread delete. 2 years ago #2627 4 years ago fixed Sebastian Huber Sebastian Huber score Fix CPU time used for threads on SMP Summar The CPU time used of a thread is currently maintained per-processor mostly during \_Thread\_Dispatch(). However, on SMP configurations the actual processor of a thread is difficult to Descripti figure out since thread dispatching is a highly asynchronous process (e.g. via inter-processor interrupts). Only the intended processor of a thread is known to the scheduler easily. Do the CPU usage accounting during thread heir updates in the context of the scheduler operations. Provide a function to get the CPU usage of a thread using proper locks to get a on consistent value. #2628 4 years ago wontfix Sebastian Huber Sebastian Huber Avoid home-grown condition variable implementation in the Classic Regions Summar The Classic Region manager enables users to wait until memory is available to satisfy an allocation request. This is done through special purpose code that basically implements a Descripti condition variable. #2631 4 years ago fixed Sebastian Huber Sebastian Huber 2 years ago score Use an ISR lock to protect the state of Classic Rate Monotonic objects

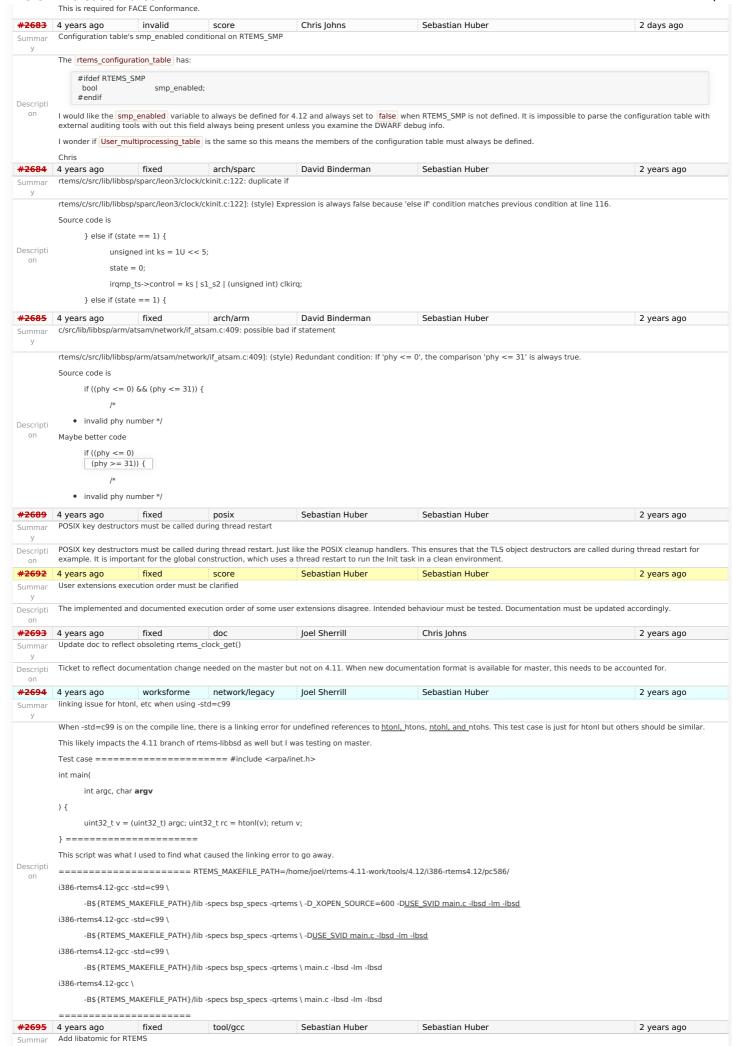

RTEMS 5.1 Release Notes 22/112

y The state of Classic Rate Monotonic is currently protected by the Giant lock and ISR disable sections. Use a per-object ISR lock to protect state changes instead. #2632 fixed tool/rsb Joel Sherrill Chris Johns 2 years ago rtems-tester failure Summar CentOS 7 on master \$../rtems-tools/tester/rtems-test --rtems-tools=/home/joel/rtems-4.11-work/tools/4.12 --rtems-bsp=sis | find . -name "\*hello.exe" | RTEMS Testing - Tester, 4.12 (a5d243d3f8e2) Command Line: ../rtems-tools/tester/rtems-test --rtems-tools=/home/ioel/rtems-4.11-work/tools/4.12 --rtems-bsp=sis ./sparcrtems4.12/c/sis/testsuites/samples/hello/hello.exe Python: 2.7.5 (default, Nov 20 2015, 02:00:19) [GCC 4.8.5 20150623 (Red Hat 4.8.5-4)] [1/1] p:0 f:0 t:0 i:0 | sparc/sis: hello.exe Traceback (most recent call last): File "../rtems-tools/tester/rtems-test", line 40, in <module> Descripti File "/data/home/joel/rtems-4.11-work/rtems-tools/tester/rt/test.py", line 287, in run File "/data/home/joel/rtems-4.11-work/rtems-tools/tester/rt/test.py", line 123, in reraise raise (self.result[0], self.result[1], self.result[2]) TypeError?: init() takes exactly 2 arguments (1 given) #2633 4 years ago fixed network/legacy Sebastian Huber joguin 2 years ago waf build failed for rtems-libbsd The rtems-libbsd failed when building with waf.                Empty C++ file with just <rtems.h> does not compile with HEAD.
Summar
               I have an application that does not build.
               The following C++ file:
                     $ cat t1.cpp
                     #include <rtems.h>
                does not compile with git head 5fe6d07ad5690e3d9c6445ca3a465a700a5a5015 on Zynq ARM. Build with:
                     -B/opt/work/rtems/4.12/arm-rtems4.12/xilinx zyng zc706/lib
                       -B/opt/work/bsps/rtems/4.12/arm-rtems4.12/xilinx_zynq_zc706/lib \
                       -specs bsp_specs -qrtems \
-march=armv7-a -mthumb -mfpu=neon -mfloat-abi=hard -mtune=cortex-a9 \
                       -g -O2 -DNDEBUG -std=c++11 \
                       -Werror -Wall -Wextra \
                       -o t1.o \
                       -c t1.cpp
                Some (too much to post) of the output is:
                     In file included from /opt/work/bsps/rtems/4.12/arm-rtems4.12/xilinx_zynq_zc706/lib/include/rtems/score/thread.h:36:0,

Descripti #2809 Sebastian Huber 2 years ago 3 years ago fixed score Sebastian Huber Summar Reduce interrupt latency on SMP configurations during thread dispatch Currently we have this situation: https://docs.rtems.org/doc-current/share/rtems/html/c\_user/Symmetric-Multiprocessing-Services-Thread-Dispatch-Details.html#Symmetric-Multiprocessing-Services-Thread-Dispatch-Details.html "On SMP systems, scheduling decisions on one processor must be propagated to other processors through inter-processor interrupts. So, a thread dispatch which must be carried out on another processor happens not instantaneous. Thus several thread dispatch requests might be in the air and it is possible that some of them may be out of date before the corresponding processor has time to deal with them. The thread dispatch mechanism uses three per-processor variables, the executing thread, the heir thread, and • an boolean flag indicating if a thread dispatch is necessary or not. Updates of the heir thread and the thread dispatch necessary indicator are synchronized via explicit memory barriers without the use of locks. A thread can be an heir thread on at most one processor in the system. The thread context is protected by a TTAS lock embedded in the context to ensure that it is used on at most one processor at a time. The thread post-switch actions use a per-processor lock. This implementation turned out to be quite efficient and no lock contention was observed in the test suite The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the Descripti boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress. It is difficult to avoid this issue with the interrupt latency since interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame. This issue needs further investigation. The problematic situation occurs in case we have a thread which executes with thread dispatching disabled and should execute on another processor (e.g. it is an heir thread on another processor). In this case the interrupts on this other processor are disabled until the thread enables thread dispatching and starts the thread dispatch sequence. The scheduler (an exception is the scheduler with thread processor affinity support) tries to avoid such a situation and checks if a new scheduled thread already executes on a processor. In case the assigned processor differs from the processor on which the thread already executes and this processor is a member of the processor set managed by this scheduler instance, it will reassign the processors to keep the already executing thread in place. Therefore normal scheduler requests will not lead to such a situation. Explicit thread migration requests, however, can lead to this situation. Explicit thread migrations may occur due to the scheduler helping protocol or explicit scheduler instance changes. The situation can also be provoked by interrupts which suspend and resume threads multiple times and produce stale asynchronous thread dispatch requests in the system." Add an interrupt frame to the per-CPU control which can be used during context switches on SMP configurations #2810 3 years ago Joel Sherrill arch/sparc Joel Sherrill 2 years ago Remove sparc/sis BSP variant Summar As discussed in the following thread, the sparc/sis BSP variant is no longer necessary and can be removed. Descripti https://lists.rtems.org/pipermail/devel/2016-November/016383.html This ticket is to track that removal. fixed Sebastian Huber Sebastian Huber #2811 3 years ago score 2 years ago More robust thread dispatching on SMP and ARM Cortex-M Summar On SMP configurations, it is a fatal error to call blocking operating system with interrupts disabled, since this prevents delivery of inter-processor interrupts. This could lead to executing threads which are not allowed to execute resulting in undefined behaviour The ARM Cortex-M port has a similar problem, since the interrupt state is not a part of the thread context. Add a new CPU port function: \* @brief Returns true if interrupts are enabled in the specified ISR level, \* otherwise returns false Descripti \* @param[in] level The ISR level. \* @retval true Interrupts are enabled in the ISR level. \* @retval false Otherwise RTEMS INLINE ROUTINE bool CPU ISR Is enabled( uint32 t level ) return false; Use this function to ensure that \_Thread\_Do\_dispatch() is called with an interrupt level with enabled interrupts, otherwise call \_Terminate(). <del>#2816</del> fixed 3 years ago Joel Sherrill arch/arm Sebastian Huber 2 years ago Many ARM BSPs have Static Assert With the recent commits, many BSPs on the master do not build. This doesn't work on SMP configurations. The Ada support in GCC should be changed to use a function call or C11 Descripti thread-local storage 3 years ago **#2836** Joel Sherrill Joel Sherrill score 2 years ago Add posix\_devctl() Summar The posix\_devctl() method is defined in POSIX 1003.26 and required by the FACE POSIX profiles. The only use case that needs to be supported is FIONBIO on sockets per the FACE Technical Standard. ioctl() is not a standardized method per POSIX and is not included in the FACE Profiles Descripti Making operations non-blocking can also be done with fcntl() but due to RTOS qualification concerns, fcntl() is not included in the more stringent FACE profiles. Specifically, it is not in the Safety Base profile which matches the RTEMS POSIX capabilities. This requires adding the <devctl.h> file to newlib. That has been done. I am testing my implementation but a tool update will be needed before this can be pushed to the community. This is OK because we have other reasons to move to a new gcc and newlib version soon. #2838 3 years ago fixed score Sebastian Huber Sebastian Huber Termios task driven mode should use mutex for device operations Summar Termios has a task driven mode (TERMIOS\_TASK\_DRIVEN). This mode aims to avoid long sections with disabled interrupts. This is only partly implemented since the device level state Descripti is still protected by disabled interrupts. Use a mutex to protect the device level state in task driven mode to fix this issue. fixed #2839 3 years ago Sebastian Huber Sebastian Huber 2 years ago Add new interrupt server driven Termios mode

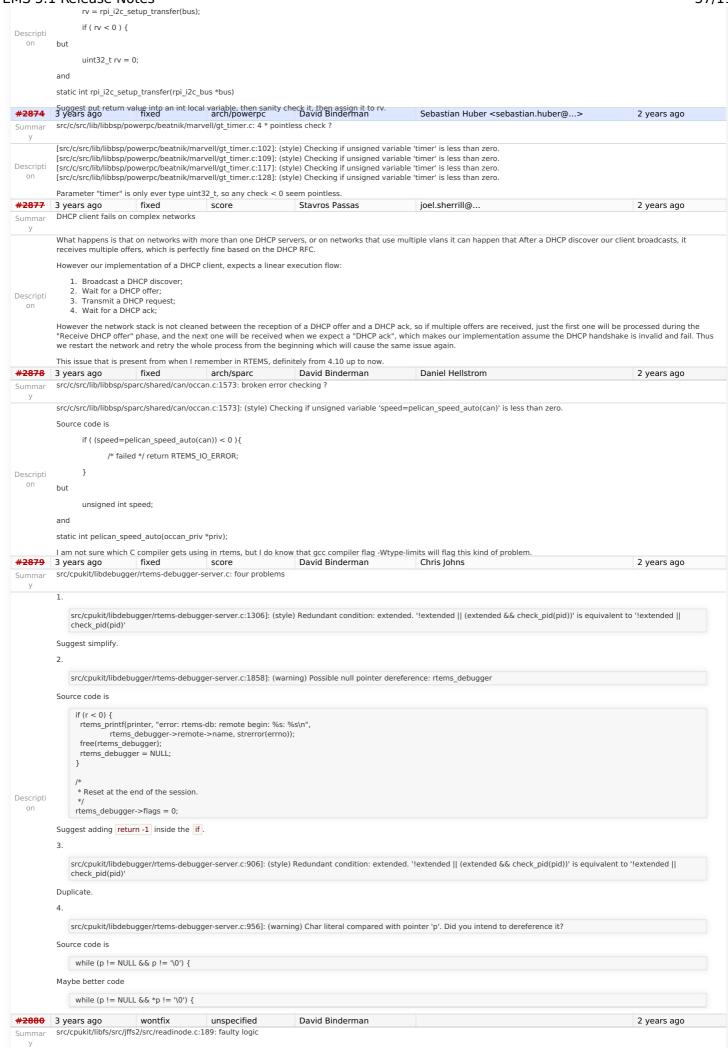

RTEMS 5.1 Release Notes 35/112

Add a new new interrupt server driven Termios mode (TERMIOS\_IRQ\_DRIVEN). This mode is identical to the interrupt driven mode except that a mutex is used for device level locking. The intended use case for this mode are device drivers that use the interrupt server, e.g. SPI or I2C connected devices. Descripti fixed <del>#2840</del> 3 years ago dev/serial Sebastian Huber Sebastian Huber 2 years ago Use self-contained mutexes for Termios framework Use C11 mutexes instead of Classic semaphores as a performance optimization and to simplify the application configuration. A performance of Classic semaphores vs. C11 mutexes was measured on the arm/atsam BSP. A NXP SC16IS752 was connected via SPI. The RTEMS application used one task to read from the device and write it immediately back (look back via task). A development system constantly transmitted data at 115200 bits per second. CPU usage by function with Classic semaphores: \_|ratio\_\_\_|1%\_\_\_\_2%\_\_\_ \_\_5%\_\_\_10%\_\_\_20%\_ 50% 100| CPU Thread Idle body atsam\_spi\_setup\_transfer 6.767%|============ -Obiects Get | 5.859%|============ atsam\_spi\_interrupt | 4.483%|========= | 3.867%|========= Event Seize | 3.804%|========= rtems\_termios\_enqueue\_raw\_characters Timecounter\_Binuptime Scheduler\_priority\_Block | 3.715%|========= | 3.104%|========== rtems\_semaphore\_release | 3.018%|======= Scheduler\_priority\_Unblock rtems\_termios\_read\_tty ARMV7M\_NVIC\_Interrupt\_dispatch rtems\_semaphore\_obtain 1 | 2.027/0|-| 2.351%|======== Thread\_Do\_dispatch | 2.086%|====== ARMV7M\_Interrupt\_service\_leave 1 | 1.919%|===== ı CPU Context switch CPU usage by function with C11 mutexes: Descripti 5% 10% 20% 50% 1001 |ratio |1% 2% name CPU\_Thread\_Idle\_body | 33.395%|============== atsam\_spi\_setup\_transfer atsam\_spi\_interrupt | 6.061%|=========== 1 | 4.690%|========== 3.011%|======== Mutex\_recursive\_Release | 2.955%|======== | 2.771%|======= rtems\_termios\_read\_tty Timecounter Binuptime | 2.240%|======= | 2.112%|======= Thread\_Do\_dispatch Scheduler\_priority\_Block ARMV7M\_Interrupt\_service\_leave | 2.100%|====== Scheduler\_priority\_Unblock | 1.919%|====== | 1.876%|===== Mutex\_recursive\_Acquire | 1.773%|===== CPU\_Context\_switch The change resulted in 10% more total idle time on the system. #2841 3 years ago fixed score Sebastian Huber Sebastian Huber 2 years ago Summar Add NXP SC16IS752 serial device driver Add Termios device driver for NXP SC16IS752 (RS232/RS485 over SPI or I2C). Descripti #2843 3 years ago unspecified Sebastian Huber fixed Sebastian Huber 2 years ago Use self-contained objects instead of Classic API for drivers and support libraries The Classic API has some weaknesses Dynamic memory (the workspace) is used to allocate object pools. This requires a complex configuration with heavy use of the C pre-processor. Objects are created via function calls which return an object identifier. The object operations use this identifier and map it internally to an object representation. The objects reside in a table, e.g. they are suspect to false sharing of cache lines. The object operations use a rich set of options and attributes. For each object operation these parameters must be evaluated and validated at run-time to figure out what to do exactly for this operation. The overhead for Classic API mutexes used for example in Termios and the SPI framework is significant, see discussion: https://lists.rtems.org/pipermail/devel/2016-December/016543.html There are some API options available 1. Use C11 mutexes and condition variables. Turn the POSIX synchronization objects into self-contained objects and use them. 3. Use FreeBSD synchronization objects like MUTEX(9) or CONDVAR(9) Add RTEMS-specific self-contained synchronization objects and use them Option 1, and 2, lack support for binary semaphores which are used for task/interrupt synchronization, e.g. Termios, Option 2. needs run-time evaluation to figure out the actual object variant, e.g. non-recursive, recursive, ceiling, error-checking, robust POSIX mutex. Option 3. uses hash tables, thus it is not suitable for real-time systems. Option 1. and 2. lack support for user-defined object names that may help for system diagnostic, tracing and debugging. Option 4. could be used to avoid all shortcomings of options 1-3. It would be trivial to implement, test and document. In order to enable user-defined object names one option is to add a const char \*name member to Thread\_queue\_Queue. 3 years ago fixed fs Sebastian Huber JFFS2: Add IO controls to get filesystem instance information and force a garbage collection Summar Some applications need to control the garbage collection of the JFFS2 filesystem. For example during bootloader to application transitions with execute in place flashes (XIP). Descripti 3 years ago doc Sebastian Huber Add I2C framework documentation Descripti The new I2C framework lacks documentation.

RTEMS 5.1 Release Notes 37/112

RTEMS 5.1 Release Notes 38/112

src/cpukit/libfs/src/iffs2/src/readinode.c:1891: (style) Condition 'tn.fn.ofs>=offset' is always true Source code is if (tn->fn->ofs < offset)next = tn->rb.rb right; else if (tn->fn->ofs >= offset) next = tn->rb.rb\_left; else Descripti break; on Maybe better code if (tn->fn->ofs < offset) next = tn->rb.rb right; else if (tn->fn->ofs > offset) next = tn->rb.rb\_left; else break; #2883 3 years ago fixed arch/arm David Binderman Pavel Pisa 2 years ago src/c/src/lib/libbsp/arm/tms570/console/tms570-sci.c:248: strange expression ? Summar src/c/src/lib/libbsp/arm/tms570/console/tms570-sci.c:248]: (style) Same expression on both sides of '|'. Descripti Source code is uint32\_t flr\_tx\_ready = TMS570\_SCI\_FLR\_TX\_EMPTY | TMS570\_SCI\_FLR\_TX\_EMPTY; fixed Sebastian Huber Sebastian Huber 2 years ago #2885 3 years ago Summar Fix rtems rate monotonic postponed job count() prototype rtems\_rate\_monotonic\_postponed\_job\_count() should return an RTEMS status code. It should be renamed to rtems\_rate\_monotonic\_get\_postponed\_job\_count() or Descripti  $rtems\_rate\_monotonic\_get\_postponed\_jobs() \ (similar \ to \ rtems\_rate\_monotonic\_get\_statistics()).$ fixed score #2889 3 years ago Stavros Passas Stavros Passas <stavros.passas@...> 2 years ago RTEMS\_STACK\_CHECKER\_EXTENSION has incomplete definition Summar The extension for the stack checker defines 8 entries, while the structure for RTEMS extensions gets 9 arguments. This causes warnings to appear on applications compiled with -Descripti Werror, or similar flags. The handler that is missing is for the terminate callback, so a 0 entry would be enough to fix this error. #2890 3 years ago fixed Sebastian Huber <sebastian.huber@...> score Stavros Passas \_RBTree\_Initialize\_node generates warnings Summar Currently, when \_RBTree\_Initialize\_node is used, it generates warnings of unused variables. I traced the issue down to the variable being used only if RTEMS\_DEBUG is set. Descripti on Thus, the argument should be marked as RTEMS UNUSED, if RTENS DEBUG is not set. 2 years ago #2893 3 years ago fixed config Sebastian Huber Sebastian Huber Remove CONFIGURE\_SMP\_APPLICATION Summar SMP support must be enabled with the CONFIGURE\_SMP\_APPLICATION configuration option. Remove this option and enable the SMP support if Descripti CONFIGURE SMP MAXIMUM PROCESSORS > 1. fixed config #2894 Sebastian Huber 3 years ago Sebastian Huber 2 years ago Rename CONFIGURE\_SMP\_MAXIMUM\_PROCESSORS to CONFIGURE\_MAXIMUM\_PROCESSORS Rename CONFIGURE\_SMP\_MAXIMUM\_PROCESSORS to CONFIGURE\_MAXIMUM\_PROCESSORS since the SMP part is superfluous. Descripti #2895 3 years ago fixed config Sebastian Huber Sebastian Huber 2 years ago Prefix the confdefs.h internal defines with an underscore Summar Prefix the confdefs h internal defines with an underscore to simplify the review of this extremely complex header file Descripti on #2896 3 years ago wontfix tool/rsb Joel Sherrill 2 years ago RSB requirements are missing pax Summar Loading a new VM. I noticed that pax is needed. It isn't mentioned in the RSB manual at all. Descripti I can only accurately fix this for Centos 7 but we can safely assume that advice applies to Centos 6, Fedora, and RHEL. Can users of other distributions check about pax. Please 3 years ago #2897 fixed score Kevin Kirspel Needs Funding 2 years ago Update termios.h to match the latest FREEBSD definitions Summar The FREEBSD struct termios separates out the input and output baud rates into individual speed t variables. It also supports more flag options. The big benefit is that the rtems-Descripti libbsd tty code can be ported cleanly without the need to fixup the input and output baud rates. This should be a transparent change unless someone was manipulating the baud rates directly through the c\_cflags (not using the cfgetispeed, cfgetospeed, cfsetispeed, cfsetospeed functions). <del>#2905</del> 3 years ago fixed arch/sparc Tanu Hari Dixit **Daniel Hellstrom** 2 years ago Merge LEON Summar Merge LEON Students: Past, Present, and Potential Students Status: Some work may be done. Introduction: Merge Leon RTEMS and mainstream RTEMS merge the Leon DriverManager, samples, and LEON-RTEMS into mainstream RTEMS. Goal: Concise statement of the overall goal of the project. Refine this initial statement to include: project deliverables (code, docs, testing), required/suggested methodology, standards of quality, possible goal extensions beyond the main objective. Requirements: List the requirements and level of expertise you estimate are required by the developer tackling this project will have to have: Required level of programming language(s), specific areas of RTEMS or tools, level of familiarity with RTEMS, cross-development, GNU/Linux, etx., development/documentation/testing tools, mathematical/algorithmic background, other desirable skills. Descripti Resources: Current RTEMS developers, papers, etc that may help you in this project Acknowledgements

## Miscellaneous Sections

As the project progresses, you will need to add build instructions, etc and this page will evolve from a project description into a HOWTO.

## References

• TRD

Other sections: If you have more to say about the project that doesn't fit in the proposed sections of this template, feel free to add other sections at will.

fixed doc 2 years ago Chris Johns rtems-doc waf configure does not detect sphinxcontrib.bibtex status Summar The rtems-docs requires the Sphinx contribution extension for bibtex to build Descripti A configure check should be added to see if the extension is installed and an error raised or the documentation conditionally built. It is not clear to me if bibtex needs Tex Alive. Requiring Tex on all hosts to build the documentation is a regression so the extension will need to be removed or a fall back position taken where degraded quality documentation in HTML is created. Sebastian Huber #2909 fixed score 3 years ago Chris Johns 2 years ago xz: Support for 64-bit CRC is build although XZ USE CRC64 is not defined This leads to: ../../../rtems/c/src/../../cpukit/libmisc/xz/xz\_crc64.c:21:16: warning: no previous prototype for 'xz\_crc64\_init' [-Wmissing-prototypes] ../../../rtems/c/src/../../cpukit/libmisc/xz/xz\_crc64.c:40:20: warning: no previous prototype for 'xz\_crc64" [-Wmissing-prototypes] Descripti We should enable the 64-bit CRC or remove this file from the build. #2912 fixed Sebastian Huber 2 years ago 3 years ago score Chris Johns libdebugger: control reaches end of non-void function ../../../../tems/c/src/../../cpukit/libdebugger/rtems-debugger-server.c:393:1: warning: control reaches end of non-void function [-Wreturn-type] Descripti ../../.rtems/c/src/../..cpukit/libdebugger/rtems-debugger-server.c:405:1: warning: control reaches end of non-void function [-Wreturn-type] on fixed #2916 3 years ago score Sebastian Huber Sebastian Huber 2 years ago termios: Change receive callback invocation to enable select() and poll() support Summar Call the receive callback in case a read will succeed without to block. This enables the use of the receive callback for a poll() and select() support. Increase raw input buffer size to Descripti allow buffering of one line. fixed #2917 3 years ago score Sebastian Huber Sebastian Huber 2 years ago termios: Make write POSIX compatible Summar Currently only blocking read/write operations are implemented. A blocking write must transfer at least one character. It should not wait for the device for the second character and so Descripti on. #2922 3 years ago fixed lib/dl Chris Johns Chris Johns 16 months ago libdl unresolved externals that use more than one block or multiple entries corrupts. If there are lots of unresolved externals the unresolved block structure get confused and the can lock up looking for a new slot to add an unresolved external. on #2923 wontfix Ioel Sherrill Sebastian Huber 3 years ago score 2 years ago Ouestionable Code in resource snapshot.c Summar Coverity URL: https://scan5.coverity.com/reports.htm #v29808/p10069/fileInstanceId = 108958257&defectInstanceId = 30877219&mergedDefectId = 1399703148/2009.Coverity Scan doesn't like taking the address of a single uint32\_t and then treating it as an array pointer. I think the code is likely doing what is intended but there is an implicit linkable between the order of the fields in the structure here and the class numbers used in the object IDs. Is there a way to improve this code and reduce the linkage? 1. address of: Taking address with &snapshot->active posix keys yields a singleton pointer. 2. assign: Assigning: active = &snapshot->active\_posix\_keys. Descripti 142 active = &snapshot->active\_posix\_keys; 143 3. Condition i < 19U /\* sizeof (objects info table) / sizeof (objects info table [0]) \*/, taking true branch. 144 for (i = 0; i < RTEMS\_ARRAY\_SIZE(objects\_info\_table); ++i) { 145 const Objects\_Information \*information; 146 147 information = \_Objects\_Get\_information(148 objects\_info\_table[i].api, 149 objects\_info\_table[i].cls 150 ); 151 4. Condition information != NULL, taking true branch. 152 if (information != NULL) { CID 1399703 (#1 of 1): Out-of-bounds access (ARRAY\_VS\_SINGLETON) 5. ptr arith: Using active as an array. This might corrupt or misinterpret adjacent memory locations. 153 active[i] = \_Objects\_Active\_count(information); #2924 3 years ago fixed arch/sparc Joel Sherrill Daniel Hellstrom 2 years ago

ummar Warnings in SPARC BSPs

Descripti

As of today, the following warnings exist for SPARC BSPs.

RTEMS 5.1 Release Notes 40/112

function 'printk' [-Wimplicit-function-declaration] log/sparc-ngmp.log:../../.../rtems/c/src/lib/libbsp/sparc/leon3/.././sparc/shared/irg/genirg.c;244:3: warning: nested extern declaration of 'printk' [-Wnested-externs] log/sparc-leon3.log:../../../../.rtems/c/src/lib/libbsp/sparc/leon3/../../sparc/shared/spw/grspw\_router.c:213:4: warning: implicit warning: implicit declaration of function 'printk' [-Wimplicit-function-declaration] log/sparcngmp.log:../../.../.tems/c/src/lib/libbsp/sparc/leon3/../../sparc/shared/spw/grspw\_router.c:213:4: warning: nested extern declaration of 'printk' [-Wnested-externs] log/sparcleon3.log:.../.../tems/c/src/lib/libbsp/sparc/leon3/.../sparc/shared/uart/apbuart.c:574:21: warning: format "%x' expects argument of type 'unsigned int', but argument 2 has type 'apbuart\_priv \* {aka struct <anonymous> \*}' [-Wformat=] log/sparc-ngmp.log:../.../../rtems/c/src/lib/libbsp/sparc/leon3/.../.sparc/shared/uart/apbuart.c:574:21: warning: format "%x' expects argument of type 'unsigned int', but argument 2 has type 'apbuart\_priv \* {aka struct <anonymous> \*}' [-Wformat=] #2925 Joel Sherrill 3 years ago fixed score Chris Iohns 18 months ago Warnings in rtl-obj-cache.c on some targets These warnings are on m68k but not sparc, mips powerpc, or arm. Looks like inttypes.h should be used. ../.././rtems/c/src/../../pukit/libdl/rtl-obj-cache.c:175:47: warning: format '%d' expects argument of type 'int', but argument 3 has type 'long unsigned int' [-Wformat=] Descripti ../.../.rtems/c/src/..../cpukit/libdl/rtl-obj-cache.c:175:85: warning: format '%d' expects argument of type 'int', but argument 7 has type 'long unsigned int' [-Wformat=] ../.../../rtems/c/src/../.cpukit/libdl/rtl-obj-cache.c:81:67: warning: format '%d' expects argument of type 'int', but argument 7 has type 'long unsigned int' [-Wformat=] ../.../../rtems/c/src/../.cpukit/libdl/rtl-obj-cache.c:81:81: warning: format '%d' expects argument of type 'int', but argument 9 has type 'long unsigned int' [-Wformat=] ~ fixed Joel Sherrill Daniel Hellstrom <del>#2930</del> 3 years ago score Coverity Reports Out of Bounds Read in drvmgr\_print.c Summar https://scan5.coverity.com/reports.htm #v29808/p10069/fileInstanceId = 109359850 & defectInstanceId = 30967449 & merged DefectId = 1399730 (a.g., a.g., a.354 printf(" DRIVER ID: 0x%llx\n", drv->drv id); 1. Summar
Many failures on LEON3 with SMP disabled

RTEMS 5.1 Release Notes 42/112

There are approximately ~100 failures, timeouts, etc on the LEON3 BSP. See this thread for some discussion where liri notes it is broken on his checkout from December. https://lists.rtems.org/pipermail/devel/2017-March/017277.html Passed: 458 Failed: 20 Timeouts: 73 Invalid: 3 Total: 554 Failures:  $cdtest. exe\ spintrcritical 20. exe\ di 105. exe\ spintrcritical 01. exe\ spintrcritical 04. exe\ spintrcritical 101. exe\ spintrcritical 102. exe\ spintrcritical 102. exe\ spintrcritical 103. exe\ spintrcritical 104. e$ spintrcritical16.exe spintrcritical23.exe psxfile01.exe spintrcritical05.exe spintrcritical02.exe spintrcritical08.exe psxgetrusage01.exe spcpucounter01.exe spintrcritical03.exe psxtimes01.exe Descripti Timeouts: nsecs.exe sptask err02.exe spprivenv01.exe psxkev03.exe psxsignal01.exe psx06.exe psx10.exe sp04.exe mrfs fstime.exe ticker.exe psxmsgq03.exe psxkev09.exe psx07.exe sptimerserver01.exe psxusleep.exe psxstack02.exe psxkey07.exe psxkey10.exe stackchk.exe sp01.exe fileio.exe spsimplesched01.exe sp03.exe psxcond01.exe sp65.exe sp62.exe psx11.exe psx12.exe psx02.exe imfs\_fstime.exe crypt01.exe psxstack01.exe spcbssched01.exe termios.exe mimfs\_fstime.exe psxsignal02.exe psx08.exe top.exe psxrwlock01.exe sp22.exe psxsignal04.exe psxkey04.exe mouse01.exe sp24.exe psx04.exe spedfsched01.exe uid01.exe mdosfs\_fstime.exe psx16.exe psxaio03.exe sp19.exe psxtime.exe psx09.exe psxkey06.exe psxclock.exe cpuuse.exe psx05.exe sp66.exe psxsignal03.exe capture.exe sp30.exe psxcleanup.exe psxcancel.exe jffs2 fstime.exe psxsignal06.exe spstdthreads01.exe psxbarrier01.exe sp31.exe sp73.exe psxualarm.exe spfifo03.exe psxtimer01.exe monitor.exe cxx iostream.exe spinternalerror01.exe sptimecounter01.exe unspecified joel.sherrill@... fixed Chris Johns #2946 3 years ago 2 years ago Add a top level global testsuite configuration file (.tcfg) and a 'user-input' test state. Summar Adding a top level testsuite configuration file lets us specify tests that have a common test state across all BSPs. Descripti Adding the test state 'user-input' clearly tags the test as needing user input and test result tools can correctly determine the test result. The current practice of passing a test needing user input is actually hiding the real result of the test. 3 years ago wontfix tool/rsb Sebastian Huber Questionable patch organization in RTEMS tools and RSB Summar Patches for RTEMS tools are available via the RTEMS tools repository: https://git.rtems.org/rtems-tools/tree/tools They are organized using subdirectories. Descripti The RSB uses these patches. It removes the subdirectories and collects everything in a "patches" directory, e.g. download: https://git.rtems.org/rtems-tools/plain/tools/4.11/newlib/ARM-Optimize-IEEE-754-sqrt-implementation.diff -> patches/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff -> patches/newlib-ARM-Optimize-IEEE-754-sqrt-i implementation.diff This works only in case the patch file names are unique. So, the use of subdirectories in the RTEMS tools is questionable. #2951 3 years ago fixed build alexgerbor 2 years ago Error path in rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg  $newlib-ARM-Optimize-IEEE-754-sqrt-implementation. diff in path \ \ https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/ \ not found \ \ https://git.rtems.org/rtems-tools/plain/tools/arm/ \ not found \ \ https://git.rtems.org/rtems-tools/plain/to$ In rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg there error: %patch add newlib %{rtems\_newlib\_patches}/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff Descripti Log from execute /source-builder/sb-set-builder: download: (full) https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sgrt-implementation.diff -> patches/newlib-ARM-Optimize-IEEE-754-sgrt-implementation.diff -> patches/newlib-ARM-Optimi implementation.diff download: https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff -> patches/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff -> patches/newl IEEE-754-sqrt-implementation.diff download: no ssl context download: https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: HTTP Error 404: Not found error: downloading https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: HTTP Error 404: Not found error: downloading https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: HTTP Error 404: Not found error: downloading https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: HTTP Error 404: Not found error: downloading https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: HTTP Error 404: Not found error: downloading https://git.rtems.org/rtems-tools/plain/tools/4.12/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff: error: https://git.rtems.org/rtems-tools/plain/tools/arm/newlib/arm/newlib/arm/newlib/arm/newlib/arm/newlib/arm/newlib/arm/newlib/arm/newlib/arm/ne implementation.diff: all paths have failed, giving up 3 years ago fixed arch/arm #2954 Sebastian Huber Sebastian Huber 2 years ago ARM: Optimize context switch Summar Set CPU\_ENABLE\_ROBUST\_THREAD\_DISPATCH to TRUE. In this case the interrupts are always enabled during a context switch even after interrupt processing (see #2751). Remove Descripti the CPSR from the context control since it contains only volatile bits. on Sebastian Huber Gedare Bloom 2 years ago Shared memory support internal locking is broken Summar The top level lock is an ISR lock (interrupt disable/enable or SMP lock) and the low level lock is potentially a mutex. The problem is exposed by test psxshm02: #0 \_Terminate (the\_source=INTERNAL\_ERROR\_CORE, the\_error=31) at ../../.../rtems/c/src/../../cpukit/score/src/interr.c:35 #1 0x00111654 in \_Internal\_error (core\_error=INTERNAL\_ERROR\_BAD\_THREAD\_DISPATCH\_ENVIRONMENT) at ./../../rtems/c/src/../../cpukit/score/src/interr.c:52 #2 0x00117010 in \_Thread\_Do\_dispatch (cpu\_self=0x2035c0 <\_Per\_CPU\_Information>, level=1611071955) at ../../../rtems/c/src/../../cpukit/score/src/threaddispatch.c:190 #3 0x0011a568 in \_Thread\_Dispatch\_enable (cpu\_self=0x2035c0 <\_Per\_CPU\_Information>) at ../../cpukit/../..//realview\_pbx\_a9\_qemu/lib/include/rtems/score/threaddispatch.h:227 #4 0x001lb6c4 in \_Thread\_Change\_life (clear=THREAD\_LIFE\_PROTECTED, set=THREAD\_LIFE\_PROTECTED, ignore=(unknown: 0)) at ...../.../rtems/c/src/..../cpukit/score/src/threadrestart.c:684 #5 0x0011b6ea in \_Thread\_Set\_life\_protection (state=THREAD\_LIFE\_PROTECTED) at .../.../../rtems/c/src/../../cpukit/score/src/threadrestart.c:691 Descripti #8 0x00105442 in rtems\_heap\_allocate\_aligned\_with\_boundary (size=10004, alignment=0, boundary=0) at ./../../rtems/c/src/.../.cpukit/libcsupport/src/malloc\_deferred.c:89 #9 0x001055a6 in malloc (size=10004) at ./.././../rtems/c/src/../../cpukit/libcsupport/src/malloc.c:39 #10 0x0011e820 in realloc (ptr=0x0, size=10004) at ../../../.rtems/c/src/.../rtems/c/src/.../cpukit/libcsupport/src/realloc.c:62 #11 0x0010b1a2 in POSIX\_Shm\_Object\_resize\_from\_heap (shm\_obj=0x204870, size=10004) at ......../.ttems/c/src/.../.cpukit/posix/src/shmheap.c:59

This may help to evaluate compiler settings, compiler versions and processors. Descripti 3 years ago fixed Chris Johns Chris Johns 2 years ago arm/libdl: C++ exception index tables may not be ordered correctly Summar The ARM EXIDX sections have the SHF\_LINK\_ORDER flag set and this is not honored by libdl which means the section order in the ELF file needs to be the correct order of the  ${\sf Descripti} \quad \text{functions in the address map.}$ Add support to libdl to follow the link-to order. #2963 3 years ago unspecified fixed Chris Johns Chris Johns 2 years ago Add a testsuite top level confguration file that is common to all tests.

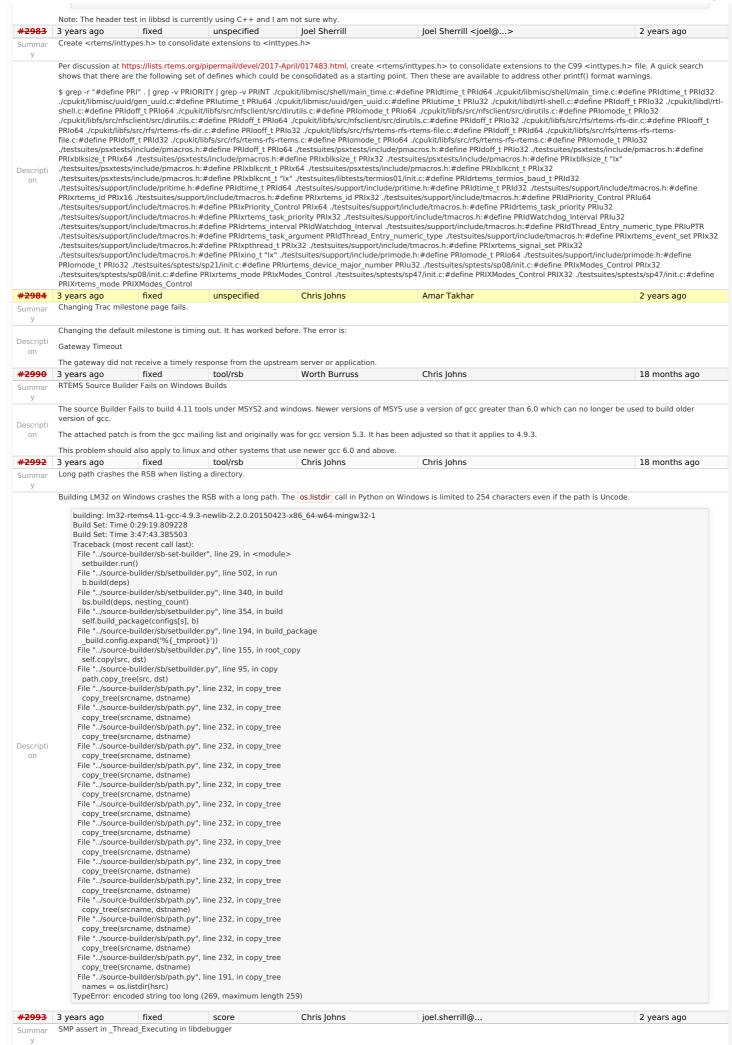

RTEMS 5.1 Release Notes 43/112

Add the file testsuites/rtems.tcfg to hold test states common to all BSPs. This lets us globally set a test state. Descripti For example fileio is user-input. on Note, user-input will be added a test state to test this file. <del>#2965</del> unspecified 3 years ago fixed Gedare Bloom Gedare Bloom < gedare@...> 2 years ago bootstrap sort inconsistent with sb-bootstrap for acinclude Summar The output of bootstrap does not use a consistent sort order with sb-bootstrap. The difference appears to be in the default behavior of the sort command versus Python's sorted. By Descripti forcing the locale to C, sort should have a consistent behavior. <del>#2967</del> fixed 3 years ago tool/gcc Sebastian Huber Sebastian Huber 2 years ago ARM: Change ABI to not use short enums Summar Whether enums are short or not is left open in the ARM EABI. On Linux and FreeBSD no short enums are used. Otherwise short enums are enabled by default. Short enums may cause hard to find issues with 3rd party software, since the are quite unusual in general, e.g. https://git.rtems.org/rtems-libbsd/commit/freebsd/include/rpc?id=9880635f2e642380b69b85e00271649b3a2fc2de Descripti The data and structure layout may suddenly change in case enumeration values are added/removed. The benefit of short enums is probably not worth the trouble, since the packed compiler attribute can be used to individually make an enum short. The reason for not choosing no short enums during the ARM EABI introduction was an issue with Newlib. This is addressed with the following patch: https://sourceware.org/ml/newlib/2017/msg00238.html #2968 3 years ago fixed unspecified Joel Sherrill 2 years ago newlib inttypes.h is missing some methods Summar inttypes.h defines some methods which are not present but required for POSIX compliance. They are also included in the FACE General Purpose Profile. intmax\_t imaxabs(intmax\_t); imaxdiv\_t imaxdiv(intmax\_t, intmax\_t); intmax\_t strtoimax(const char \*restrict, char restrict, int); uintmax\_t strtoumax(const char \*restrict, char restrict, int); intmax\_t wcstoimax(const wchar\_t \*restrict, wchar\_t restrict, int); uintmax\_t wcstoumax(const wchar\_t \*restrict, wchar\_t restrict, int); This was originally discussed here (https://sourceware.org/ml/newlib/2013/msg00626.html) with follow up discussion here (https://sourceware.org/ml/newlib/2017/msg00240.html). The consensus seems to be that the methods as currently implemented in FreeBSD address the concerns raised in that email thread. Descripti This ticket is complete when: • source for these methods is merged into newlib methods are documented in newlib RSB is updated appropriately tests are added to RTEMS • RTEMS POSIX Compliance spreadsheet ( https://goo.gl/AXrnxO) is updated fixed Sebastian Huber #2969 3 years ago unspecified Joel Sherrill 2 years ago qoriq BSPs depend on mkimage which is not always available Summar The following BSPs do not successfully build on the master because they use UBoot's mkimage which is not part of the standard RTEMS tools Descripti on qoriq\_core\_0 qoriq\_core\_1 qoriq\_p1020rdb <del>#2976</del> unspecified 3 years ago fixed Joel Sherrill Chris Iohns 2 years ago warnings in rtems-debugger-server.c This should be present on any ARM or x86 build. RTEMS 5.1 Release Notes 45/112

RTEMS 5.1 Release Notes 46/112

The target code in libdebugger has support to recover from exceptions related to invalid memory accesses. GDB may request the server access memory on the target that results in an exception. The exception occurs on the server's remote connection thread and the server needs to recover and return and error to GDB. Running the debugger01 test with an SMP build of RTEMS and libbsd for xilinx zedboard and issuing bt in GDB results in: \*\*\* LIBBSD DEBUGGER 1 TEST \*\*\* [144/1950] shell:cannot set terminal attributes(/dev/console) RTEMS Shell on /devn/ecxounss0o:l e<.R TUEsMeS 'Nheexlups' dteov ilcies>t ccogmemma0n:d s<.0 adence CGEM Gigabit Ethernet Interface> on nexus0 miibus0: <MII bus> on cgem0 [/] # e1000phy0: <Marvell 88E1512 Gigabit PHY> PHY 0 on miibus0 e1000phv0: none, 10baseT, 10baseT, 10baseT, 100baseTX, 100baseTX, 100baseTX, 1000baseT, 1000baseT, 10baseT, 10b cgem0: Ethernet address: fa:69:35:9e:04:2f zv7 slcr0: <Zvng-7000 slcr block> on nexus0 [zone: udpcb] kern.ipc.maxsockets limit reached notice: cgem0: link state changed to DOWN add host 10.10.5.1: gateway cgem0 add net default: gateway 10.10.5.1 rtems-db: remote running rtems-db: tcp remote: listing on port: 1122 notice: cgem0: link state changed to UP rtems-db: tcp remote: connect host: 10.10.5.2 rtems-db: arm debug: (v3.0) ARMv7 [v7, all CP14 registers] breakpoints:5 watchpoints:3 assertion "cpu\_self->thread\_dispatch\_disable\_level != 0 || \_ISR\_Get\_level() != 0" failed: file "../../cpukit/../../xillinx\_zynq\_zedboard/lib/include/rtems/score/percpu.h", line 630, function: Per CPU Get If I enable TARGET\_DEBUG in libdebugger and apply the attached patch I can create the assert with DIE\_ON\_ASSERT set to 1. Summar Error compiling xilinx_zynq_zedboard.
                                                    arch/arm
                                                                           Arturo Pérez
                                                                                                              Gedare Bloom
                                                                                                                                                                          2 years ago
            encountered an error compiling the xilinx_zynq_zedboard BSP. I am using a built of the RSB that I compiled in December. With that built of the RSB I could built this BSP several
           times until I did a git pull of the RTEMS repo two weeks ago. Today I updated my repos of the RTEMS and RSB sources, I rebuilt the RSB and I tried to built again the xilinx_zynq_zedboard BSP, encountering the same error:
Descripti

                                                                                                                                                                           2 years ago
           Global C++ IO streams are broken (cout, cin, cerr)
Summar
           The global C++ IO stream objects are initialized here
           https://gcc.gnu.org/viewcvs/gcc/trunk/libstdc%2B%2B-v3/src/c%2B%2B98/ios_init.cc?view=markup#I85
           via a placement new. The "stdout" etc. is thread-local in Newlib
               #define stdout ( REENT-> stdout)
           Using this for a global object like std::cout is quite broken. Which FILE object should be used instead? Potential fix:

Summar Someone implement bsp\_interrupt\_handler\_index() forgot to update this delta in rtems\c\src\lib\libbsp\shared\src\irq-generic.c:bsp\_interrupt\_allocate\_handler\_index(). See Descripti on #3015 3 years ago fixed arch/powerpc phongvanpham joel.sherrill@... Add support for IBM PPC 750 chip Summar Currently MPC750 chip is supported. However, PPC750 (from IBM) is very close to MPC750 except minor differences. Enclosed is the delta to support PPC750. Descripti on #3016 3 years ago fixed bsps phongvanpham joel.sherrill@... 2 years ago missing a couple register names + a #ifndef ASM around serial.h inclusion Summar In rtems\c\src\libchip\serial\ns16550\_p.h, need to add a couple register and #ifndef around serial.h Descripti joel.sherrill@. #3017 3 years ago worksforme score phongvanpham 2 years ago improvement in pci.h Summar In pci.h, there are references to BSP\_pci\_configuration data structure which is in pci.c. However, in this file, there are also references to detect\_host\_bridge () in detect raven bridge.c. For folks that are just interested in pci read config dword() + its brothers, all they need is to include pci.h and content for where BSP pci configuration is defined. The rest of the stuff in pci.c should be separate. Or in another word, data structures and #defines involving with BSP\_pci\_configuration needs to be in separate files rather all Descripti stuffed in pci.c I currently do not need this functionality for my BSP (nor do I able to test it), so I cannot modify code and submit. It is best someone who can test the code to make the code change. Or else, just shelf it under the table and/or close this ticket. #3018 3 years ago fixed tool/rsb phongvanpham Chris Johns 2 years ago RSB cannot compile tool chain in CentOS 7. Summar In CentOS 6.8, everything works fine. But in CentOS 7, it does not. Initial investigation (I did a while back around New Year time) looks like later version of texinfo has an issue with autoconf. Enclosed is the email Chris Johns replied but I didn't follow through since I switched to CentOS 6.8 for my work. "Looks to me like the RSB is trying to download autoconf 2.69-1 and from https://bugs.debian.org/cgi-bin/bugreport.cgi?bug=711297 Descripti Looks like this autoconf version has a bug. I also noticed my autoconf version is 2.69-11; however, from what I am reading, RSB will download its own version independent of what user has. Chris John replies: "I guess a recent texinfo version has exposed the issue. I suggest you get the patch from the link in the bug report, create a patch for rtems-tools.git to add the autoconf patch, then create a patch to the RSB adding the patch to the autoconf build, finally 'git send-email' the patches to devel@... for review.' <del>#3023</del> 3 years ago fixed tool/newlib Sebastian Huber Sebastian Huber Parameter of CPU\_COPY() are in wrong order Summar According to the FreeBSD man page we have: https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports CPU COPY(cpuset t \*from, cpuset t \*to): Descripti However, in Newlib we have: static \_\_inline void CPU\_COPY( cpu\_set\_t \*dest, const cpu\_set\_t \*src ) { \*dest = \*src; #3025 3 years ago fixed unspecified Chris Johns joel.sherrill@... 2 years ago m32c/m32csim does not build linpack-pc.c 1 tests m32c/m32csim build:  $configure:/opt/work/chris/rtems/kernel/rtems.git/configure --target \\ = m32c-rtems4.12 --enable-rtemsbp=m32csim --prefix=/opt/rtems/4.12 \\ \\ --enable-rtemsbp=m32csim --prefix=/opt/rtemsbp=m32csim --pref$ tests Descripti  $error:\ test suites/benchmarks/linpack/linpack-pc.c: 253: 33:\ error:$ storage size of 'a' isn't constant error: testsuites/benchmarks/linpack/linpack-pc.c:253:21: error: storage size of 'aa' isn't constant fixed #3027 3 years ago tool/rsb Worth Burruss Chris Johns 2 years ago RTEMS source builder fails when building gcc documentation with newer versions of gcc Originally discovered with MSYS2 on windows. Building the gcc compiler fails for older versions of gcc (ie 4.8.3) when building bfin and m32c architectures. The gcc maintainers Descripti recommend the use of MISSING=texinfo switch during configuration. A possible solution is attached. #3032 3 years ago fixed Sebastian Huber Sebastian Huber 2 years ago

RTEMS 5.1 Release Notes 50/112

```
Summar CPU NAND S() implementation is not in line with FreeBSD
                     According to the FreeBSD man page we have:
                     https://www.freebsd.org/cgi/man.cgi?query=cpuset\&sektion=9\&apropos=0\&manpath=FreeBSD+11.0-RELEASE+and+Portsection (Application of the Control of the Contr
                     The CPU_NAND() macro removes CPUs in src from dst. (It is the cpuset(9) equivalent of the scalar: dst \&= \sim src.)
                             static inline void CPU NAND S(size t setsize, cpu set t *destset,
                                const cpu_set_t *srcset1, const cpu_set_t *srcset2)
Descripti
                                cpu set word t *wdest = &destset-> bits[0];
                               const cpu_set_word_t *wsrc1 = &srcset1->_bits[0];
const cpu_set_word_t *wsrc2 = &srcset2->_bits[0];
                                size_t n = setsize / sizeof(*wdest);
                               size ti;
                               for (i = 0; i < n; ++i)
                                  wdest[i] = \sim(wsrc1[i] \& wsrc2[i]);

                                                                                                                                                                                                                  joel.sherrill@...
                                                                                                                                                                                                                                                                                                                                  2 years ago
                     CPU_CMP() implementation is not in line with FreeBSD
Summar
                      According to the FreeBSD man page we have:
                      https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports
                      The CPU_CMP() macro returns true if cpuset1 is NOT equal to cpuset2.
Descripti However, in Newlib we had:
                             /* return 1 if the sets set1 and set2 are equal, otherwise return 0 */
                             static __inline int CPU_CMP( const cpu_set_t *set1, const cpu_set_t *set2 )
                                return CPU EQUAL(set1, set2);

                                                                                                     unspecified
                                                                                                                                                  Chris Iohns
                                                                                                                                                                                                                                                                                                                                  2 years ago
                     4.11/rtems-nios2 does not build on Windows.
Summar
                      The attached RSB report details the failure.
Descripti
                     The path to ranlib is the cwd (see make[5] path) plus the relative path (see the report) which is 308 characters in length and this exceeds the max path length for the Win32 API
                      and binutils reports this as a No such file .

                     Warnings in libdebugger
Summar
                      I started fixing the warnings in libdebugger with the latest tools but apparently some of the variables can't be changed to const char *const. So filing as a ticket so Chris can fix them
                      more accurately.

                 gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux
Summar
                  7.12.1 does not compile with latest guile As already stated here: https://sourceware.org/bugzilla/show_bug.cgi?id=21104 GDB in version 7.12.1 fails when trying to compile on
Descripti Archlinux. GDB uses deprecated functions of libguile which were gone in version 2.2 of libguile. As GDB states in its configure script to support version 2.2 of libguile it fails compiling.
                  Tested with the latest rtems source builder on master.

                 Add EDF SMP scheduler
                 The current SMP schedulers are all fixed-priority schedulers. Add a job-level fixed priority scheduler (EDF).

                                                    fixed
                                                                                     score
                                                                                                                           Sebastian Huber
                                                                                                                                                                               Sebastian Huber
                                                                                                                                                                                                                                                                             2 years ago
                  Add a simple processor affinity support to the EDF SMP schedule
Summar
                 Add support to the EDF SMP scheduler to honour one-to-one and one-to-all thread processor affinities. Use one ready queue for threads with a one-to-all affinity. Use one ready
Descripti
                  queue for each of the one-to-one threads for each processor. Since a red-black tree is used for the ready queues, the space overhead of one pointer per ready queue is small.
                 3 years ago

Via a single 32bit block number (bno) 2. Via a group number(gno) and a bit offset (bit) They should be fully convertible (1-1 mapping). In other words, the equation to convert 1 to 2 should be unique within the RFS implementation. The bug The RFS implementation contains two different conversions between 1 and 2 Details 1. In rtems\_rfs\_group\_bitmap\_alloc (rtems-rfs-group.c, line 172) bno = gno \* group blocks + bit 2. In rtems rfs group bitmap alloc (rtems-rfs-group.c. line 228) bno = gno \* group blocks + bit + 1 (via rtems rfs group block() function) 3. In rtems rfs group bitmap free (rtems-rfs-group.c, line 283) bno = gno \* group\_blocks + bit + 1 (RTEMS\_RFS\_SUPERBLOCK\_SIZE) 4. In rtems\_rfs\_group\_bitmap\_test (rtems-rfs-group.c, line 332) bno = gno \* group blocks + bit To summarize, the implementation contains two ways of converting a bno to a (gno, bit) pair: Descripti bno = gno \* group blocks + bit bno = gno \* group\_blocks + bit + 1

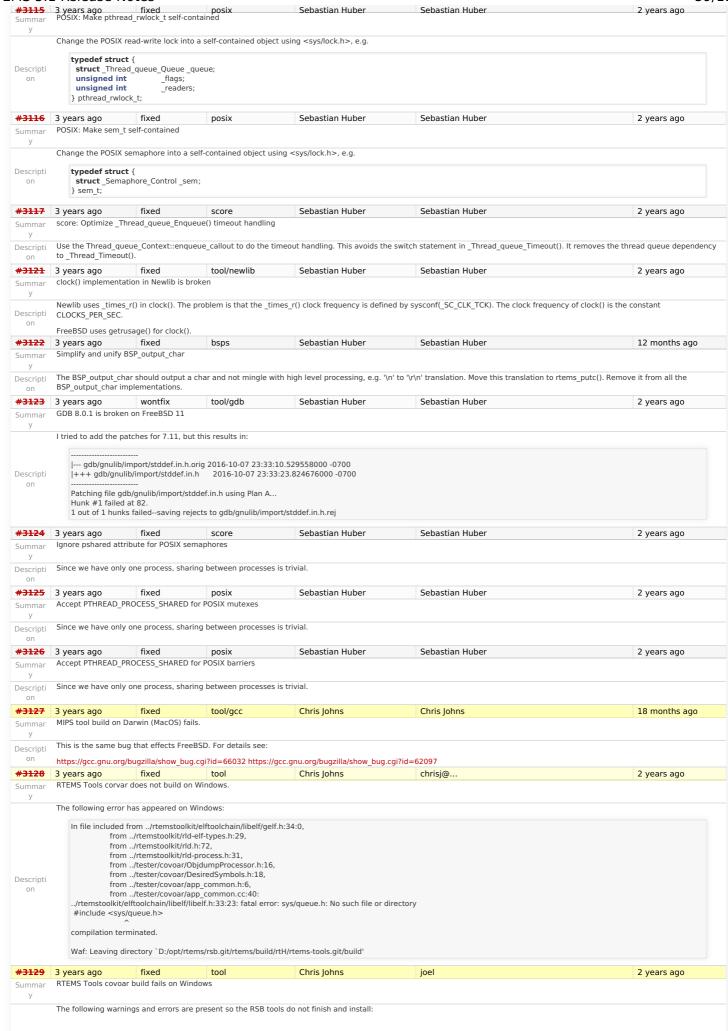

RTEMS 5.1 Release Notes 57/112

The Fix The RFS implementation should consistently convert a bno to a (qno, bit) pair with: bno = gno \* group blocks + bit + RTEMS RFS SUPERBLOCK SIZE This is because the superblock is not accounted for in the block bitmaps. So places to change: 1. rtems-rfs-group.c: all references to the conversion must be updated to use RTEMS RFS SUPERBLOCK SIZE explicitly. 2. rtems\_rfs\_group\_block converts the pair to bno via: #define rtems\_rfs\_group\_block(\_g, \_b) (((\_g)->base) + (\_b)) ( g)->base is calculated via rtems-rfs-format.c from:  $\label{eq:define_state} $$\#define\ rtems_rfs_fs_block(_fs, _grp, _blk) \setminus ((((_fs)->group_blocks)*(_grp)) + (_blk) + 1)$$ The "+ 1" part should really be "+ RTEMS\_RFS\_SUPERBLOCK\_SIZE" to be logically correct. As RTEMS\_RFS\_SUPERBLOCK\_SIZE itself has a comment saying: \* Number of blocks in the superblock. Yes I know it is a superblock and not \* superblocks but if for any reason this needs to change it is handled. #define RTEMS\_RFS\_SUPERBLOCK\_SIZE (1) #3090 Sebastian Huber Sebastian Huber 3 years ago fixed bsps 2 years ago Add BSP for i.MX 7 Summa #3091 fixed Joel Sherrill Sebastian Huber 2 years ago 3 years ago tool Core Dump in powerpc-rtems4.12-ld Summar This appears to have been introduced by the new binutils.                                                                                                                                                                                             2 years ago
            Add reference counting to file descriptors
            The use of a file descriptor after or during a close() operation may result in a use after free. Finding such errors in applications is difficult. Especially in SMP systems using the highly
            dynamic libbsd network stack
            The file descriptor objects reside in a table with a application configuration defined size. So, the storage of a file descriptor object is always present, only the referenced file system
            node may change over time. The file system nodes may use an internal reference counting, which is independent of the file descriptors.
            To implement reference counting for the file descriptors add a bit field for the reference count to the rtems libio t::flags and use atomic operations to maintain the flags.
            Each operation using a file descriptor should perform a sequence like this:
                int op( int fd, ... )
                  rtems libio t *iop;
                  unsigned int flags;
                  if ( (uint32 t) fd >= rtems libio number ions ) {
                   rtems_set_errno_and_return_minus_one( EBADF );
Descripti
                  iop = rtems_libio_iop( fd );
                  flags = rtems_libio_iop_hold( iop );
                  if ( ( flags & LIBIO FLAGS OPEN ) == 0 ) {
                   rtems_libio_iop_drop( _iop );
                   rtems_set_errno_and_return_minus_one( EBADF );
                  do_op( iop, ... );
                  rtems_libio_iop_drop( iop );
                  return 0:
            A close() should return -1 with EBUSY in case the file descriptor is referenced. In this case, no close operation will be performed.

I assume this is a side-effect of recent checksum changes. Otherwise, there is a serious problem. ownload: (full) https://git.rtems.org/rtems-tools/plain/tools/4.12/gdb/gdb-7.11-sis-leon2-leon3.diff -> patches/gdb-7.11-sis-leon2-leon3.diff download: https://git.rtems.org/rtems-Descripti tools/plain/tools/4.12/gdb/gdb-7.11-sis-leon2-leon3.diff -> patches/gdb-7.11-sis-leon2-leon3.diff checksums: gdb-7.11-sis-leon2-leon3.diff: 0b8b2a23c7d1592315fe0130188f457c80f8b1e26645535bed091a5e0671682dc44a1987d00e6939a1b1c562c7579404db43183e666c29c2b479446aa61ca4f6 => 4c44afec9c00a45b9322d787da3796f3294f207ddae9fe9faab3327b6991ac75 warning: checksum error: gdb-7.11-sis-leon2-leon3.diff error: checksum failure file: patches/gdb-7.11-sisleon2-leon3.diff #3203 2 years ago Amar Takhar Amar Takhar admin 18 months ago Upgrade trac to fix numerous problems. Summar There are a ton of issues going on with trac that need to be resolved. The two major ones are: • The ticket commenter emails people who aren't a trac user. This may require a custom modification. • The always\_email setting is taking things too literally and always sending emails even if it shouldn't. The Git plug-in consistently spins, floods the jail with processes then the site dies. Descripti Frequent, strange and random crashes. on This one is not a huge deal since it's just that request process users won't even notice when this happens. Upgrading trac is a weeklong project usually I will start preparing for it and update here. If anyone has any feature requests now is the time to do it! worksforme tool Joel Sherrill Chris Johns #3204 2 years ago 4 months ago Exception in rtems-test Summar Note: No category for rtems-tools My first attempt to send run logs didn't go so well. This was a weird failure mode. It didn't exit but had to be killed by hand. I dropped off the options related to mailing the log and it still failed. This is on an up to date CentOS 7 (rtbf64c 7.4) as well as my 7.3 VM. + /home/joel/rtems-work/rtems-tools//tester/rtems-test --rtems-tools=/home/joel/rtems-work/tools/4.12 --rtems-bsp=erc32 --log=run.log --mail --mail-from=joel@rtems.org -mail-to = build@lists.rtems.org./sparc-rtems 4.12/c/erc32/testsuites/samples/ticker/ticker.exe./sparc-rtems 4.12/c/erc32/testsuites/samples/minimum/minimum.exe./sparc-rtems 4.12/c/erc32/testsuites/samples/fileio/fileio.exe./sparc-rtems 4.12/c/erc32/testsuites/samples/fileio/fileio/fileio.exe./sparc-rtems 4.12/c/erc32/testsuites/samples/fileio/fileirtems4.12/c/erc32/testsuites/samples/capture/capture.exe./sparc-rtems4.12/c/erc32/testsuites/samples/nsecs/nsecs.exe./sparc-rtems4.12/c/erc32/testsuites/samples/cdtest/cdtest/cdtest/cd  $rtems 4.12/c/erc 32/test suites/samples/base\_sp/base\_sp.exe\_/sparc-rtems 4.12/c/erc 32/test suites/samples/unlimited/unlimited.exe\_/sparc-rtems 4.12/c/erc 32/test suites/samples/unlimited/unlimited.exe\_/sparc-rtems 4.12/c/erc 32/test suites/samples/unlimited.exe\_/sparc-rtems 4.12/c/erc 32/test suites/sparc-rtems 4.12/c/erc 32/test suites/sparc-r$ RTEMS Testing - Tester, 4.12 (52513610668b) [5/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: hello.exe [6/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: cxx\_iostream.exe [ 3/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: cdtest.exe [ 9/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: paranoia.exe [ 7/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: minimum.exe [ 1/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: base\_sp.exe Descripti [11/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 | sparc/erc32: unlimited.exe [ 4/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: fileio.exe [10/11] p:0 f:0 u:0 e:0 l:0 B:0 t:0 i:0 | sparc/erc32: ticker.exe [ 2/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 | sparc/erc32: capture.exe [ 8/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 | sparc/erc32: nsecs.exe Traceback (most recent call last):

RTEMS 5.1 Release Notes 68/112

As discussed here https://lists.rtems.org/pipermail/devel/2017-October/019169.html it was agreed to use version 5.1 with the new number scheme for the next RTEMS release. Most important items of this release: SMP support 64-bit time\_t (year 2038 problem) the network stack header consolidation and the move to Newlib self-contained POSIX synchronization objects (impacting the configuration) improved Ada support (however, not all Ada tests pass currently) Descripti The following steps are necessary to carry out the number change: Change version of RTEMS Change version of RSB Change version of RTEMS 4. Documentation repo. Easy. 5. Documentation website repo. Easy. Release procedure repo. Easy Trac tickets. Not sure. 8. Trac wiki. Medium(?). A 9. rtems.org website. That needs loel. 10. Make announcement on the devel and user mailing list fixed Sebastian Huber #3224 2 years ago tool/binutils Sebastian Huber 2 years ago Upgrade or1k and m32c to Binutils 2.29 Summar #3225 2 years ago fixed tool/qdb Sebastian Huber Sebastian Huber 2 years ago Upgrade m32c to GDB 8.0.1 Summar #3226 2 years ago tool/gdb Sebastian Huber Sebastian Huber 2 years ago gdb: pr 16827, fix sim on Mavrick Summar Joel Sherrill #3227 2 years ago Chris Johns 2 years ago worksforme admin sb-check fails on Msys2 64-bit There must be a recent change to msys2 which is breaking things. I installed the 64-bit version from https://msys2.github.io/ per the instructions at https://docs.rtems.org/branches/master/user/hosts/index.html#microsoft-windows \$ ./source-builder/sb-check error: no hosts defaults found; please add After adding some prints, I learned this \$ ./source-builder/sb-check posix made it MSYS NT-10.0 error: no hosts defaults found; please add I filled in options.py and windows.py to recognize this as MSYS2. I was then able to run sb-check. But it wasn't happy. Apparently the pacman command in the User's Guide is missing some packages based on newer versions: \$ ./source-builder/sb-check posix MSYS NT-10.0 RTEMS Source Builder - Check, 5 (8b30eb3f440a modified) error: exe: not found: (\_ar) ar error: exe: not found: (\_as) as error: exe: not found: (\_cc) x86\_64-w64-mingw32-gcc error: exe: not found: (\_cxx) x86\_64-w64-mingw32-g++ error: exe: not found: (\_ld) ld error: exe: not found: (\_nm) nm Descripti error: exe: not found: (\_objcopy) objcopy error: exe: not found: (\_objdump) objdump error: exe: not found: (\_ranlib) ranlib Environment is not correctly set up I installed binutils explcitly with pacman and then sb-check is complaining about gcc. I did a find to locate the gcc's installed: \$ find / -name "\*qcc.\* /home/jrs007/.ssh/id\_rsa\_gcc.pub /mingw64/bin/gcc.exe /mingw64/bin/x86\_64-w64-mingw32-gcc.exe /mingw64/lib/gcc/x86\_64-w64-mingw32/6.2.0/include/stdint-gcc.h /mingw64/lib/gcc/x86\_64-w64-mingw32/6.2.0/libgcc.a /mingw64/share/info/gcc.info.gz /mingw64/share/man/man1/gcc.1.gz /usr/share/vim/vim80/compiler/gcc.vim find: failed to read file names from file system at or below '/': No such file or directory jrs007@JRS-OAR-Laptop MINGW64 /c/opt/rtems/rsb/source-builder \$/mingw64/bin/x86\_64-w64-mingw32-gcc.exe --version x86\_64-w64-mingw32-gcc.exe (Rev2, Built by MSYS2 project) 6.2.0 Copyright (C) 2016 Free Software Foundation, Inc. #3334 2 years ago fixed Stavros Passas Sebastian Huber 14 months ago posix deadlock in once() Summar RTEMS threads getting locked up when using certain c++ functionality. Issue happens for example when std::future is combined with std::async. Investigating deeper, seems like this happens if std::async executes before std::future gets scheduled to run. Both of these create a pthread once instance Descripti once() uses a common semaphore for all calls, thus the first function (async.get usually) gets the lock, calls its "init" function (which blocks until the second function has completed. After this, std::future also uses pthread\_once to execute, but because the lock is already taken, it also blocks, casing a deadlock. Attached you can find a test application that reproduces the deadlock. #3339 2 years ago fixed arch/powerpc Joel Sherrill Sebastian Huber <sebastian.huber@...> 3 months ago Several PowerPC linker commands do not support constructors/destructors with priority Summar This BSP shouldn't have trouble linking any of the tests so I was surprised at this failure. gmake[6]: Entering directory `/data/home/joel/rtems-work/rtems-testing/rtems/build-powerpc-qemuppc-rtems/powerpc-rtems5/c/qemuppc/testsuites/sptests/spglobalcon02' powerpc-rtems5-gcc -mcpu=603e -Dppc603e -O2 -g -fno-keep-inline-functions -mcpu=603e -Dppc603e -B/home/joel/rtems-work/rtems-testing/rtems/build-powerpc-qemuppc-rtems/powerpcrtems5/c/qemuppc/lib/libbsp/powerpc/qemuppc -B/home/joel/rtems-work/rtems-testing/rtems/rtems/c/src/lib/libbsp/powerpc/qemuppc/startup/ -specs bsp\_specs -qrtems - L.../.../.qemuppc/lib -L/home/joel/rtems-work/rtems-testing/rtems/c/src/lib/libbsp/powerpc/shared/startup -WI,--wrap=printf -WI,--wrap=puts -WI,--wrap=putchar -o Descripti spglobalcon02.exe init.o /data/home/joel/rtems-work/tools/5/bin/../lib/gcc/powerpc-rtems5/7.3.0/....../powerpc-rtems5/bin/id: section .ctors.64535 LMA [00000000ffc19780,00000000ffc19783] overlaps section .sdata LMA [00000000ffc19780,00000000ffc19780] collect2: error: ld returned 1 exit status gmake[6]: \* [spglobalcon02.exe] Error 1 gmake[6]: Leaving directory \data/home/joel/rtems-work/rtems-testing/rtems/build-powerpc-qemuppc-rtems/powerpcrtems5/c/qemuppc/testsuites/sptests/spglobalcon02' gmake[5]: \* [spglobalcon02] Error 2 #3340 2 years ago fixed arch/powerpc Joel Sherrill Sebastian Huber 2 years ago gen83xx warning for macros redefined Summar log/powerpc-hsc\_cm01.log:/home/joel/rtems-work/rtems-testing/rtems//bsps/powerpc/gen83xx/include/bsp/hwreg\_vals.h:244:0: warning: "FPGA\_START" redefined log/powerpc $hsc\_cm01.log:/home/joel/rtems-work/rtems-testing/rtems/bsps/powerpc/gen83xx/include/bsp/hwreg\_vals.h: 246:0: warning: "FPGA\_SIZE" redefined for the properties of the proper$ Looking at the code, it is pretty clear that the macros are redefined. This conflicts and results in this warning: /home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/arm/lpc176x/include/bsp.h:42:0: warning: "OPERATION COUNT" redefined I understand why this is lowered by the BSP but the mechanism used is not good. And if the include file order is different between tests, you could get the BSP value or the autoconf generated value based on the order. This warning needs to be fixed and a safer mechanism for a BSP to override OPERATION COUNT defined. My first suggestion is to use BSP\_OPERATION\_COUNT and add logic to one of the common test .h files to undef OPERATION\_COUNT and redefine it to BSP\_OPERATION\_COUNT if it is A safer option might be to change the name of the autoconf generated variable to OPERATION\_COUNT\_DEFAULT and rely on logic in a common test support .h to define OPERATION COUNT to OPERATION COUNT DEFAULT or BSP OPERATION DEFAULT.

RTEMS 5.1 Release Notes 76/112

arch/powerpc #3354 2 years ago fixed Joel Sherrill Joel Sherrill 2 years ago PowerPC BSPs duplicate PAGE MASK, etc redefinition Summar powerpc-beatnik powerpc-mcp750 powerpc-mtx603e powerpc-mvme2100 powerpc-mvme2307 powerpc-mvme5500 powerpc-qemuprep-altivec powerpc-qemuprep use bsps/powerpc/include/libcpu/page.h which defines ALIGN, PAGE MASK, and PAGE SIZE. These are defined by <machine/param.h>. I think the solution is to delete the versions in libcpu/page.h. It was created to have an easy SMP scheduler to debug. This was especially important when all of the SMP modifications and support were new. A Simple Scheduler has a use case as a low resource alternative for small uniprocessor systems. But the SMP variant just doesn't seem to have a good use case. If you have an SMP system, the application is almost certain to have enough resources where the more complicated data structures used by the other schedulers wouldn't be a burden. Descripti The Deterministic Priority Scheduler uses ~3K for FIFO with 256 priorities. This should not be an issue for an SMP system. This ticket is a proposal to remove this as no longer having a use case. #3433 23 months ago fixed arch/riscv Sebastian Huber Sebastian Huber 15 months ago Add SMP support for RISC-V Summar The project includes the following tasks: add CPU counter support add context validation code Descripti add BSP support for Qemu on add support for device tree provided by Qemu fix all unexpected test suite failures running on Qemu add build system support to enable an SMP build add SMP implementation #3434 23 months ago config Sebastian Huber Sebastian Huber 20 months ago Add CONFIGURE\_MINIMUM\_POSIX\_THREAD\_STACK\_SIZE configuration option Summar #3435 23 months ago fixed config Sebastian Huber Sebastian Huber 19 months ago Add test case for CONFIGURE BSP PREREQUISITE DRIVERS configuration option Summar This configuration option is untested Descripti #3436 23 months ago fixed Sebastian Huber Sebastian Huber 4 months ago dev Remove clock driver Clock driver support shutdown hardware() hook Most applications use a clock driver and most BSPs use the clock driver framework provided by clockimpl.h. This framework offers a Clock\_driver\_support\_shutdown\_hardware() hook which is used like this #ifdef Clock driver support shutdown hardware \* @brief Clock\_exit This routine allows the clock driver to exit by masking the interrupt and disabling the clock's counter. void Clock\_exit( void ) Clock driver support shutdown hardware(); Descripti /\* do not restore old vector \*/ #endif #ifdef Clock\_driver\_support\_shutdown\_hardware atexit( Clock\_exit ); #endif The aim is to stop clock tick interrupts at some late point in the exit() procedure. The use of atexit() pulls in malloc() which pulls in errno. It is incompatible with the intention of the CONFIGURE\_DISABLE\_NEWLIB\_REENTRANCY configuration option. The exit() function must be called from thread context, so accompanied clock tick interrupts should cause no harm. On the contrary, someone may assume a normal operating system operation, e.g. working timeouts. Remove the superfluous Clock\_driver\_support\_shutdown\_hardware() hook. #3437 23 months ago fixed unspecified Sebastian Huber Sebastian Huber Replace use of printk() in free() with a fatal error Summar An invalid heap usage such as a double free is usually a fatal error. Replace the use of printk() in free() with a fatal error. Introduce a new fatal error source for heap errors.                                                                                                                                                     Sebastian Huber
                                                                                                                                                                                                                                    20 months ago
               PL111_LCD_CONTROL_LCD_BPP_16 Redefined
Summar
               The constant PL111_LCD_CONTROL_LCD_BPP_16 is defined twice in the file bsps/arm/include/bsp/arm-pl111-regs.h:
Descripti
               #define PL111_LCD_CONTROL_LCD_BPP_16 0x04U #define PL111_LCD_CONTROL_LCD_BPP_24 0x05U #define PL111_LCD_CONTROL_LCD_BPP_16 0x06U #define
               PL111_LCD_CONTROL_LCD_BPP_12 0x07U
               Given the context, I am guessing the first one should be BPP_32 but since Sebastian added the file, I am assuming he has docs and can answer this question for sure

If the --rtems-tools and --rtems directories are different, the sanity check by waf configure for \${rtems}/bin fails. See examples-v2. + ./waf configure -v --rtems=/home/joel/rtems-work/bsp-install --rtems-tools=/home/joel/rtems-work/tools/5 --rtems-bsps=powerpc/qemuppc Descripti Setting top to : /home/joel/rtems-work/examples-v2 : /home/joel/rtems-work/examples-v2/build Setting out to RTEMS path is not valid. No bin directory found. (complete log in /home/joel/rtems-work/examples-v2/build/config.log) 19 months ago fixed score Sebastian Huber Sebastian Huber 14 months ago Add flexible per-CPU data Summar Add means to declare, define and get custom per-CPU data. The API should cover the APIs defined by the Linux < linux/percpu.h> and FreeBSD < sys/pcpu.h> header files. Descripti #3508 19 months ago Sebastian Huber Sebastian Huber score Add support for thread to processor pinning Summar FreeBSD started to use lock-free data structures (Concurrency Kit) with epoch based reclamation (EBR) in May 2018. The goal of this synchronization approach is to avoid atomic read-modify-write operations in the fast path. The algorithms need highly efficient access to per-processor data. This gives raise to add a new feature to RTEMS: thread to processor pinning. Thread pinning is orthogonal to thread processor affinity and overrules the processor affinity settings of a thread. It is intended for temporary use in short critical sections Descripti on which allow preemption. #3510 19 months ago fixed Joel Sherrill Sebastian Huber 19 months ago ATA driver uses deprecated rtems\_blkdev services Summar This shows up building fileio on the following BSPs. RTEMS 5.1 Release Notes 87/112

 $%if %{download_only} || %{\_build_os} == freebsd || %{\_build_os} == darwin$ %patch add gcc foobar-bsd.patch %else %patch add gcc foobar-gnu.patch %endif We negligible to fixed the wift True remarks and the welse pSebastian Huber Add rtems\_task\_exit() #3533 Sebastian Huber 18 months ago Summar The rtems task delete(RTEMS SELF) function does not return. In order to aid compilers and static analysis tools provide an rtems task exit() function which can be specified as a no return function void rtems\_task\_exit(void) RTEMS\_NO\_RETURN; Descripti on This is similar to the POSIX equivalent. void pthread\_exit (void \*\_\_value\_ptr) \_\_dead2; #3535 fixed Sebastian Huber Sebastian Huber 18 months ago 18 months ago lib Remove stdin, stdout, stderr convenience routines for CEXP Summar Descripti These functions should be moved to a general CEXP support. on #3536 18 months ago fixed tool Chris Iohns Chris Johns 18 months ago Move RTEMS configuration data to a common config directory Summar Move the rtems-bsp-builder configuration files to a common area in the RTEMS Tools project and create an rtems.py module to handle the configuration. This allows a number of Descripti tools access to the arch/bsp data. In time this directory of data can move into the rtems.git repo. #3537 18 months ago fixed tool Chris Iohns Chris Iohns 15 months ago RSB and RTEMS Tools Support for python2 and python3 Upstream python does not create a python command any more and creates python2 and python3. Distributions and operating systems are starting to ship without the python Descripti on The RSB and RTEMS Tools python commands need to be updated and tested so they run on Python2 and Python3 and support added to use the available commands. 18 months ago fixed #3538 doc Joel Sherrill Ioel Sherrill 18 months ago Classic API Barrier Wait Section Title Has Wrong Name Summar The section title says obtain not wait. Descripti on Likely also applies to 4.11. fixed <del>#3539</del> 18 months ago Sebastian Huber 18 months ago Sebastian Huber score Remove CPU\_PROVIDES\_IDLE\_THREAD\_BODY Summar Remove the CPU PROVIDES IDLE THREAD BODY option to avoid unnecessary conditional compilation. Descripti on #3542 18 months ago fixed Sebastian Huber Sebastian Huber 18 months ago Remove keep stdio feature from Telnet service Summar The Telnet service started via rtems\_telnetd\_start() has a keep\_stdio feature. This just a task and executes the command function in a loop. For this kind of service we do not library Descripti support. This can be done by an application task on its own. Remove this functionality and provide only the real Telnet services. on #3543 fixed lib Sebastian Huber 18 months ago Change Telnet server to allocate most resources during initialization Summar The Telnet server currently creates the resources needed for a client connection on demand. Allocate most resources during initialization to avoid sporadic resource shortage issues. Descripti #3545 18 months ago lib Sebastian Huber Sebastian Huber fixed 18 months ago Support O\_DIRECTORY open() flag Summar Use this flag in opendir() Descripti #3546 18 months ago fixed lib Sebastian Huber Sebastian Huber 18 months ago Summar Support O\_NOFOLLOW open() flag Descripti #3547 18 months ago lib Sebastian Huber Sebastian Huber 18 months ago fixed Support O\_CLOEXEC open() flag This is a POSIX flag. Make sure its use causes no open failure. Descripti arch/powerpc #3549 18 months ago fixed Sebastian Huber Sebastian Huber 18 months ago Obsolete powerpc/virtex BSF Summar This BSP is guite old (was added 1995), unmaintained and likely without users: Descripti https://lists.rtems.org/pipermail/users/2018-September/032557.html <del>#3551</del> 18 months ago fixed lib Sebastian Huber Sebastian Huber 17 months ago Move default configuration to separate library Summar An RTEMS application default configuration is contained in cpukit/libmisc/dummy/default-configuration.c. This default configuration is contained in librtemscpu.a. This has at least two 1. Application configuration errors may pull in the default configuration which in turn leads to multiply define symbols error. This is quite confusing. You have to consult the linker Descripti map file to figure out what cased the pull in of the default configurations. You need to know what a linker map file is and how you generate it with your build system. This is not very user friendly. 2. It prevents the use of default configuration items for each subsystem in librtemscou.a. This can be used to reduce the size of the configuration itself. Proposed change: Move the default configuration to a separate library, e.g. librtemsdefaultconfig.a. #3552 18 months ago shell 3 months ago fixed Chris Iohns jameszxj cpu usage error in SMP mode Summar CPU load dispaly error in SMP mode

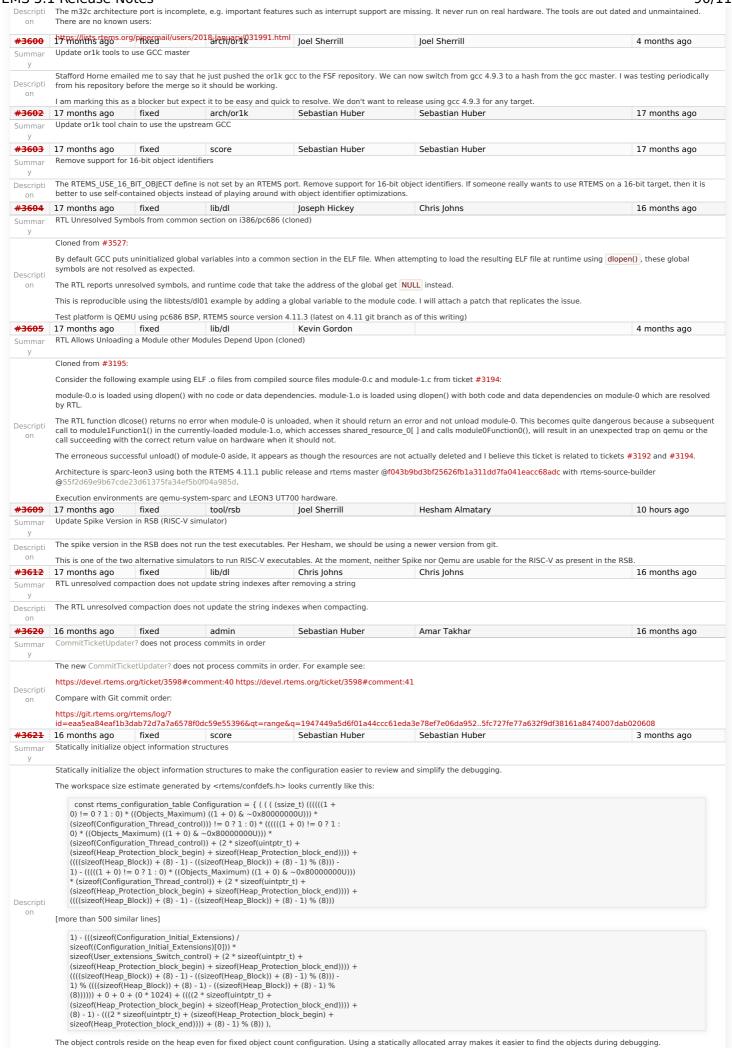

RTEMS 5.1 Release Notes 88/112

Load Average: 100.510% Load: 100.966% Idle: 99.033% In fact, CPU is doing nothing. Descripti on priority display unreadable in SMP mode in diffrent Schedulers priority is map to a core priority, I think unmap maybe reasonable when display the infomation I create a patch about this, see the attachment #3553 18 months ago 17 months ago fixed Joel Sherrill rtems-libbsd Missing waf in Top Directory Summar At least examples-v2 and rtems-libbsd use waf to build, examples-v2 has a copy of waf known to work for the users' convenience, rtems-libbsd is missing one. Add one to rtems-libbsd. Descripti Also (if there are other repos using waf), make sure they have a copy of waf also. #3554 Sebastian Huber 18 months ago fixed network/libbsd Joel Sherrill 15 months ago rtems-libbsd README.waf Needs an Update Sweep Summar It is out of date at least by mentioning 4.12 instead of 5. If there are other nits or issues, they need to be addressed while updating the release info Descripti #3555 admin 18 months ago fixed Amar Takhar Amar Takhar 18 months ago IRC bots need to be registered to join #rtems Summar Due to the spam on Freenode only registered users can join #rtems. The bots both need accounts now. Descripti admin #3557 18 months ago fixed Amar Takhar Amar Takhar 18 months ago Test ticket Descripti Using this as a test ticket to test out my fix. #3558 18 months ago fixed admin Amar Takhar Amar Takhar 18 months ago Update TracSpamFilter? Summar У Updated to the latest Trac Spam Filter and upgraded captcha to v2 to avoid any errors. This was reported a while back and should fix any issues. Descripti There are more please open a new ticket. <del>#3559</del> fixed Amar Takhar 18 months ago 18 months ago admin Amar Takhar Fix NavAdd? plugin. Summar I had no idea but this had gotten removed in the last upgrade I've re-added it. This makes a few changes to the navigation: Descripti "New Ticket" now goes to /wiki/NewTicket There is a new button "New Ticket (direct)" in the upper right for those who want to directly go to creating a ticket. on • "My Tickets" used to go to a query but now goes to the new wiki:MyTickets page. These changes existed years ago when NavAdd? was working I opened this ticket in case anyone has complaints about it coming back if not I will close it in a few days. #3560 18 months ago fixed admin Amar Takhar Amar Takhar 18 months ago Fix FlexibleAssignTo? Summar When we first went to trac we had restrictions on the 'owner' to developers only. When track was upgraded this broke completely but all the code to handle this was already in place. I took the time to fix it today so we have dropdowns again. Descripti I've created this ticket to see if anyone has an issue with this should we keep it? Drop it? I know it's been years but it was our original choice. See any ticket the 'reassign to' and on a new ticket the 'assign to' is now a dropdown. These are based on trac permissions so we can always add more if we need it but it really should be restricted to having a project member be the owner so we can ensure tickets are closed and sorted properly. #3561 18 months ago fixed admin Amar Takhar 17 months ago Summar Migrate to CommitTicketUpdater? The old script was ancient and outdated. I've now killed it off and moved to the internal system described here: Descripti https://trac.edgewall.org/wiki/CommitTicketUpdater This should handle all scenarios if it does not please let me know. I will leave this ticket open for a week or so. Chris Johns #3562 18 months ago fixed tool/rsb 17 months ago Use a short paths for the RSB temporary build path on Windows Summar The %{ tmproot} path is currently based on a BuildRoot setting in the build configuration files. The line is: BuildRoot: %{ tmppath}/%{name}-root-%(%{ id u} -n) Descripti This is for a shared \$TEMP path plus the name is not shortened so on Windowss these paths become long. Remove the BuildRoot from all configuration files and add support for a shortened temporary path. Windows needs short paths due to the 256 max. path length issue. tool/rsb #3568 18 months ago fixed Sebastian Huber Chris Johns 15 months ago RSB: UnboundLocalError?: local variable 'build\_max\_size\_human' referenced before assignment Summar ../source-builder/sb-set-builder --prefix=/build/rtems/5 5/rtems-or1k config: tools/rtems-gcc-4.9.3-newlib-08eab6396f678cf5e5968acaed0bae9fd129983b.cfg package: or1k-rtems5-gcc-4.9.3-newlib-08eab6396f678cf5e5968acaed0bae9fd129983b-x86\_64-linux-gnu-1 warning: gcc-4.9.3-or1k.patch: no hash found building: or1k-rtems5-gcc-4.9.3-newlib-08eab6396f678cf5e5968acaed0bae9fd129983b-x86\_64-linux-gnu-1  $error: building \ or 1 k-r tems 5-g cc-4.9.3-new lib-08e ab 6396 f678 cf 5e 5968 acaed 0 ba e 9 fd 12998 3 \bar{b}-x 86\_64-linux-g nu-1 temperature for the second of the s$ Build FAILED See error report: rsb-report-or1k-rtems5-gcc-4.9.3-newlib-08eab6396f678cf5e5968acaed0bae9fd129983b-x86\_64-linux-gnu-1.txt error: building or1k-rtems5-gcc-4.9.3-newlib-08eab6396f678cf5e5968acaed0bae9fd129983b-x86\_64-linux-gnu-1 Descripti Mailing report: build@rtems.org Traceback (most recent call last): File "../source-builder/sb/cmd-set-builder.py", line 26, in <module> setbuilder.run() File "/scratch/git-rtems-source-builder/source-builder/sb/setbuilder.py", line 619, in run b.build(deps, mail = mail) File "/scratch/git-rtems-source-builder/source-builder/sb/setbuilder.py", line 530, in build body += 'Maximum build usage: ' + build\_max\_size\_human + os.line UnboundLocalError: local variable 'build\_max\_size\_human' referenced before assignment #3569 18 months ago waf version in various rtems-repositories incompatible with python 3.7

RTEMS 5.1 Release Notes 89/112

RTEMS 5.1 Release Notes 90/112

RTEMS 5.1 Release Notes 91/112

#3622 16 months ago fixed it unspecified Sebastian Huber Sebastian Huber 16 months ago The following cache manager API functions are exotic, complex, very hard to use correctly, not used in the RTEMS code base, and apparently unused by applications (https://lists.rtems.org/pipermail/users/2018-November/032764.html). Remove these functions \* @brief Flushes multiple data cache lines for a set of processors \* Dirty cache lines covering the area are transferred to memory \* Depending on the cache implementation this may mark the lines as invalid. \* This operation should not be called from interrupt context. \* @param[in] addr The start address of the area to flush. \* @param[in] size The size in bytes of the area to flush. \* @param[in] setsize The size of the processor set. \* @param[in] set The target processor set void rtems\_cache\_flush\_multiple\_data\_lines\_processor\_set( const void \*addr. size t size, const size t setsize const cpu\_set\_t \*set \* @brief Invalidates multiple data cache lines for a set of processors st The cache lines covering the area are marked as invalid. A later read \* access in the area will load the data from memory. \* In case the area is not aligned on cache line boundaries, then this \* operation may destroy unrelated data. \* This operation should not be called from interrupt context. \* @param[in] addr The start address of the area to invalidate. \* @param[in] size The size in bytes of the area to invalidate. \* @param[in] setsize The size of the processor set. \* @param[in] set The target processor set. Descripti void rtems\_cache\_invalidate\_multiple\_data\_lines\_processor\_set( const void \*addr, size\_t size, const size t setsize const cpu\_set\_t \*set \* @brief Flushes the entire data cache for a set of processors \* This operation should not be called from interrupt context. \* @see rtems\_cache\_flush\_multiple\_data\_lines(). \* @param[in] setsize The size of the processor set. \* @param[in] set The target processor set void rtems\_cache\_flush\_entire\_data\_processor\_set( const size\_t setsize, const cpu\_set\_t \*set ); \* @brief Invalidates the entire cache for a set of processors \* This function is responsible for performing a data cache \* invalidate. It invalidates the entire cache for a set of \* processors. \* This operation should not be called from interrupt context. \* @param[in] setsize The size of the processor set. \* @param[in] set The target processor set. void rtems\_cache\_invalidate\_entire\_data\_processor\_set( const size\_t setsize const cpu set t \*set #3624 16 months ago wontfix Joel Sherrill build 5 months ago MSYS2 builds appear to ignore tcfg file Building m68k/mrm332 on Linux and MSYS2 to compare results. Builds with all tests on Linux. Multiple build failures on MSYS2. Some appear to be because on MSYS2, tests are being build which are marked as exclude in the .tcfg file. For example, https://git.rtems.org/rtems/tree/bsps/m68k/mrm332/config/mrm332-testsuite.tcfg#n11 says that fsdosfsname01 should be excluded but it is being built as shown below: m68k-rtems5-gcc -mcpu=cpu32 -Os -g -fomit-frame-pointer -Wall -Wmissing-prototypes -Wimplicit-function-declaration -Wstrict-prototypes -Wnested-externs -B./../../lib/libbsp/m68k/mrm332 -B/home/jrs007/rtems-work/rtems/bsps/m68k/mrm332/start -specs bsp specs -grtems -L./../../cpukit -L/home/jrs007/rtemswork/rtems/bsps/m68k/shared/start -WI,--wrap=printf -WI,--wrap=puts -WI,--wrap=putchar -o fsdosfsname01.exe fsdosfsname01/fsdosfsname01-init.o support/fsdosfsname01-ramdisk\_support.o ./../../lib/libbsp/m68k/mrm332/librtemsbsp.a ./../../cpukit/librtemscpu.a Descripti c:/msys64/home/jrs007/rtems-work/tools/5/bin/../lib/gcc/m68k-rtems5/7.3.0/.../../m68k-rtems5/bin/ld.exe: region `rom' overflowed by 874128 bytes and the state of the statecollect2.exe: error: ld returned 1 exit status make[5]: \*\*\* [Makefile:1910: fsdosfsname01.exe] Error 1 #3625 16 months ago fixed lib/dl Kevin Gordon Chris Johns 16 months ago RTL Allows Unloading a Module other Modules Depend Upon (cloned) Summar Consider the following example using ELF to files from compiled source files module-0.c and module-1.c from ticket #3194; module-0.0 is loaded using dlopen() with no code or data dependencies. module-1.0 is loaded using dlopen() with both code and data dependencies on module-0 which are resolved

RTEMS 5.1 Release Notes 92/112

The RTL function dicose() returns no error when module-0 is unloaded, when it should return an error and not unload module-0. This becomes guite dangerous because a subsequent call to module1Function1() in the currently-loaded module-1.o, which accesses shared resource 0[] and calls module0Function0(), will result in an unexpected trap on gemu or the call succeeding with the correct return value on hardware when it should not. The erroneous successful unload() of module-0 aside, it appears as though the resources are not actually deleted and I believe this ticket is related to tickets #3192 and #3194. Architecture is sparc-leon3 using both the RTEMS 4.11.1 public release and rtems master @f043b9bd3bf25626fb1a311dd7fa041eacc68adc with rtems-source-builder Execution environments are qemu-system-sparc and LEON3 UT700 hardware. #3626 fixed Joel Sherrill Sebastian Huber 16 months ago 16 months ago posix sigtimedwait() needed when POSIX is disabled When POSIX is disabled, psxmsgq01 does not link. Should we enable sigtimedwait() when POSIX is disabled or disable this test? /data/home/joel/rtems-work/tools/5/bin/../lib/gcc/powerpc-rtems5/7.3.0/../../powerpc-rtems5/bin/ld: psxmsgq01/psxmsgq01-init.o: in function `wait\_for\_signal': Descripti /home/joel/rtems-work/rtems-testing/rtems/build-powerpc-ss555-rtems/powerpcrtems5/c/ss555/testsuites/psxtests/.../.../.rtems/c/src/..../testsuites/psxtests/psxmsgq01/init.c:932: undefined reference to `sigtimedwait' and the state of t16 months ago #3636 16 months ago fixed rtems Sebastian Huber Sebastian Huber Add rtems scheduler get maximum priority() The maximum task priority depends on the scheduler instance. It is a configuration parameter. Add a function to get it at runtime \* @brief Gets the maximum task priority of the specified scheduler instance. \* @param[in] scheduler\_id Identifier of the scheduler instance. \* @param[out] priority Pointer to a task priority value Descripti \* @retval RTEMS\_SUCCESSFUL Successful operation.
\* @retval RTEMS\_INVALID\_ADDRESS The @a priority parameter is @c NULL. \* @retval RTEMS\_INVALID\_ID Invalid scheduler instance identifier. rtems\_status\_code rtems\_scheduler\_get\_maximum\_priority rtems\_id scheduler id. rtems\_task\_priority \*priority #3637 16 months ago fixed Sebastian Huber Sebastian Huber 16 months ago rtems Fix rtems task restart() argument type Summar The argument type must be rtems\_task\_argument in rtems\_task\_restart() similar to rtems\_task\_start(). This is a severe issue on 64-bit targets since it prevents to pass pointer values to the task. Descripti #3649 16 months ago fixed Ioel Sherrill Amar Takhar 14 months ago Error with IRC anouncing in examples-v2 commits Summar remote: 1: mail vc@rtems.org remote: 2: update github remote: 4: IRC Descripti remote: usage: <file with rev-list> <repo name without .git> remote: 5: Buildbot To ssh://joel@dispatch.rtems.org/data/git/examples-v2.git ced6542..276a025Â am -> master #3651 16 months ago fixed doc Chris Johns 4 months ago Sphinx 1.8 PDF (latex) on FreeBSD does not build Summar The build fails with pdfindex complaining on an Undefined Control Sequence: ! Undefined control sequence. <argument> \spxpagem I.88 ...ecture}, \hyperindexformat{\spxpagem}{183} The Tex is: \item[{Architecture\index{Architecture@\spxentry{Architecture}|spxpagem}\phantomsection\label{\detokenize{glossary/index:term-architecture}}}]\leavevmode And the IDX entry from makeindex is: \item \spxentry {Architecture}, \hyperindexformat{\spxpagem}{183} #3664 16 months ago fixed tool/rsb Chris Johns Chris Johns 15 months ago RSB config parsing slow on python3 Summa The execute support on python3 is slow and this slows the config file parsing. Descripti #3665 fixed lib 4 months ago 16 months ago Sebastian Huber Sebastian Huber Add low level event recording infrastructure Add low level event recording infrastructure for system and user defined events. The infrastructure should be able to record high frequency events such as interrupt entry/exit, thread switches, UMA zone allocate/free. Ethernet packet input/output, etc. It should allow post-mortem analysis in fatal error handlers, e.g. the last events should be in the record buffer, the newest event overwrites the oldest event. It should be possible to detect record buffer overflows for consumers that expect a continuous stream of events, e.g. to display the system state in real-time. The framework should support high-end SMP machines (more than 1GHz processor frequency, more than four processors). The existing capture engine tries to solve this problem, but its performance is not good enough for high-end production systems. The main issues are the variable-size buffers and the use of SMP locks for synchronization. To fix this, the API would change significantly. Add a new API instead. The implementation should use per-processor data structures and no atomic read-modify-write operations. It is pretty much a per-processor ring buffer for

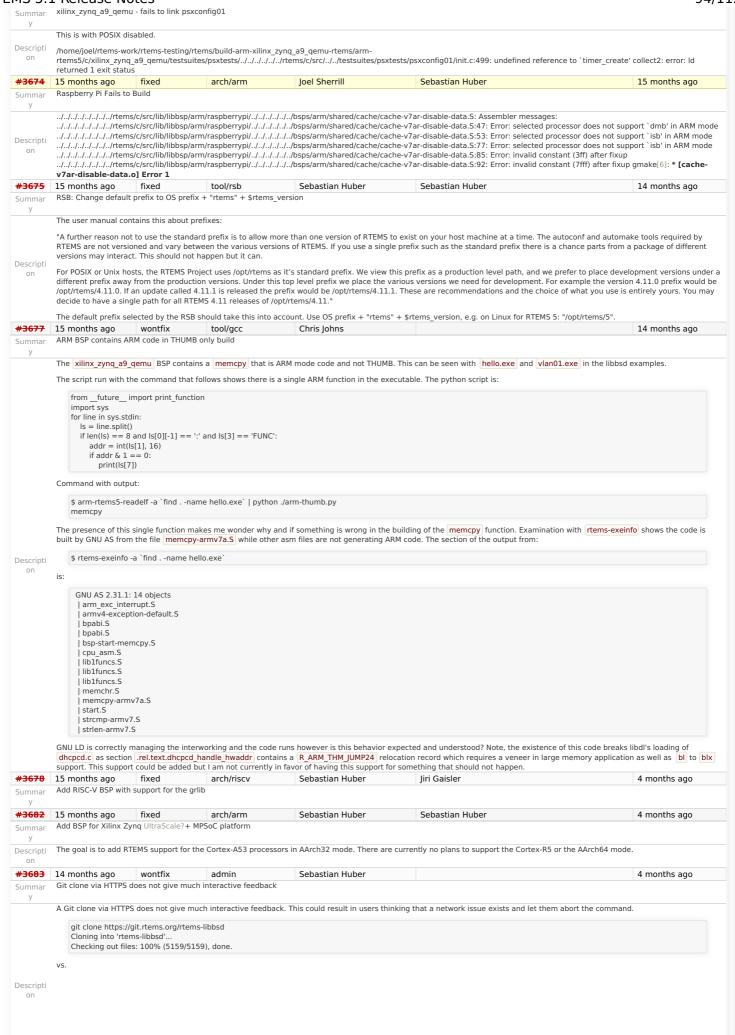

Here is an example of the

Use the CPU counter to get the time of events. Combine it with periodic uptime events to synchronize it with CLOCK REALTIME.

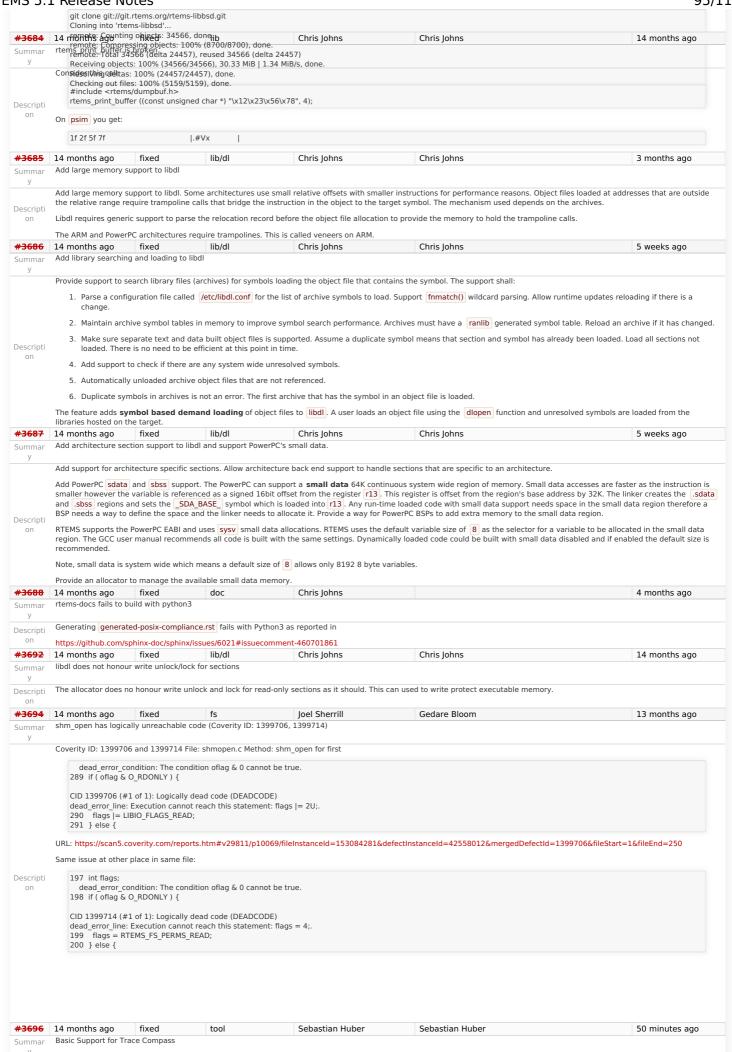

RTEMS 5.1 Release Notes 93/112

```
* @brief Produces a record item.
                           * @param event The record event without a time stamp for the item.
                           * @param data The record data for the item.
Descripti
                          void rtems record produce( rtems record event event, rtems record data data );
                   function PowerPC machine code generated by GCC:

                                                                                                                                   Chris Johns
                                                                                                                                                                                            Amar Takhar
                                                                                                                                                                                                                                                                                                14 months ago
                                                       fixed
                   rtems-docs.git does not build with Sphinx 1.8.2 and 1.8.3
Summar
                   The docs do not build with Sphinx 1.8. Recent posts indicate some changes to support unicode indexes via xindy have caused this and the solution being discussed is to use the
                   generate Makefile
                   https://github.com/rtfd/readthedocs.org/issues/4454
                   The need to use the Makefile is debatable however what it contains is important as it defines what needs to happen.
                   This recent issue can be seen in the Tex generated file for the User Manual (user.tex). It contains:
                          Waf build system. For more information see \sphinxurl{http://www.waf.io/}
Descripti
                   Our current build uses pdflatex directly and there is an error as spxpagem is not defined
                   If you inspect a version 1.8 generated Makefile the command latexmk is used. This wraps the PDF generation so the correct number of passes are performed. Using this tool should
                   be considered.
                   The Makefile contains:
                         export XINDYOPTS = -L english -C utf8 -M sphinx.xdy
                   The sphinx.xdy contains the needed spxpagem. I can only conclude sphinx needs to be built with xindy because the reference is always generated.
                   The problem for building FreeBSD is xindy is not an available command.

RTEMS 5.1 Release Notes 94/112

RTEMS 5.1 Release Notes 95/112

RTEMS 5.1 Release Notes 96/112

The Trace Compass is a tool to analyse and display trace data. Trace data can be gathered from RTEMS applications via various means, for example:

- RTEMS Trace Linker
- **Event Recording**
- Capture Engine

The goal of this project is to enable the Trace Compass to analyse and display some basic information using the Event Recording infrastructure. Basic information is defined by the Linux kernel trace support (Ittng) and includes (see Trace Compass project explorer Tracing -> Traces -> Something):

- kernel
  - - CPU usage
    - CPU usage
    - IRQ Analysis IRQ Statistics
      - IRQ Table
      - IRO vs Count
      - IRQ vs Time
    - Linux Kernel Control Flow
      - Resources

Example data can be obtained from the Trace Visualization Labs.

Summar

Descripti

#3733

Descripti Advanced support for Trace Compass could include dynamic memory traces, stack usage, network packet flow, etc.

- 1. Generation of sufficient trace events, currently the interrupt entry/exit events are not available for example.
- 2. The trace data must be transferred from the target system running the RTEMS application to a host computer running the Trace Compass (transfer via TCP is available, for UDP
- 3. The Trace Compass must be able to analyse and display the information obtained from the Event Recording.
- 4. The RTEMS user must be able to use this infrastructure. This requires that it is easy to use, availability of tutorials and documentation.

To tackle problem 3. there are two approaches possible. You can extend the Trace Compass to work with the trace data provided by RTEMS as is. Alternatively, the RTEMS trace data could be converted to Linux kernel trace data (Ittng) which Trace Compass already understands.

Related topics are Common Trace Format, Babeltrace, barectf, #2961 and #3028.

You need good C and C++ skills with a proven record. You need to show socket level and networking programming skills. In case Trace Compass needs to be extended this requires Java skills and familiarity with the Eclipse framework. Knowledge of YAML and XML is helpful. High end RTEMS targets can generate a huge number of events per second (10MiB/s trace data is 1310720 events per second; on a 4GHz host processor this is 3051 instructions per event under real-time processing conditions) which imposes a considerable work load to modern host computers, so the host programs must work efficiently.

	We consider this an advanced project.

MULTILIB\_REQUIRED += mthumb

Descripti

To avoid the issues, you have to compile everything with -mfix-cortex-m3-ldrd. This option is enabled by default, if you use -mcpu=cortex-m3.

I think we have to change our GCC multilibs to account for this errata. For example:

diff --git a/gcc/config/arm/t-rtems b/gcc/config/arm/t-rtems index 026a5895662..e276b4f3e57 100644 -- a/gcc/config/arm/t-rtems +++ b/gcc/config/arm/t-rtems @@ -1,7 +1,7 @@ # Custom RTEMS multilibs for ARM -MULTILIB\_OPTIONS = mbig-endian mthumb march=armv6-m/march=armv7-a/march=armv7-r/march=armv7-m/mcpu=cortex-m7 mfpu=neon/mfpu=vfp/mfpu=vfp/s d16/mfpu=fpv4-sp-d16/mfpu=fpv5-d16 mfloat-abi=hard -MULTILIB\_DIRNAMES = eb thumb armv6-m armv7-a armv7-r armv7-m cortex-m7 neon vfp vfpv3-d16 fpv4-sp-d16 fpv5-d16 hard  $+ MULTILIB\_OPTIONS = mbig-endian \ mthumb \ march=armv6-m/march=armv7-a/march=armv7-r/mcpu=cortex-m3/mcpu=cortex-m4/mcpu=cortex-m7/mfpu=neon/mfpu=vfpv3-d16/mfpu=fpv4-sp-d16/mfpu=fpv5$ +MULTILIB\_DIRNAMES = eb thumb armv6-m armv7-a armv7-r cortex-m3 cortex-m4 cortex-m7 neon vfp vfpv3-d16 fpv4-sp-d16 fpv5-d16 hard # Enumeration of multilibs @@ -16,7 +16,8 @@ MULTILIB\_REQUIRED += mthumb/march=armv7-a/mfpu=neon/mfloat-abi=hard MULTILIB REOUIRED += mthumb/march=armv7-a  ${\tt MULTILIB\_REQUIRED} += {\tt mthumb/march=armv7-r/mfpu=vfpv3-d16/mfloat-abi=hard}$ MULTILIB\_REQUIRED += mthumb/march=armv7-r -MULTILIB\_REQUIRED += mthumb/march=armv7-m/mfpu=fpv4-sp-d16/mfloat-abi=hard +MULTILIB\_REQUIRED += mthumb/mcpu=cortex-m3 +MULTILIB\_REQUIRED += mthumb/mcpu=cortex-m4 +MULTILIB\_REQUIRED += mthumb/mcpu=cortex-m4/mfpu=fpv4-sp-d16/mfloat-abi=hard  $\label{eq:multilb_required} $$ MULTILIB_REQUIRED += mthumb/mcpu=cortex-m7/mfpu=fpv5-d16/mfloat-abi=hard-MULTILIB_REQUIRED += mthumb/march=armv7-m$ 

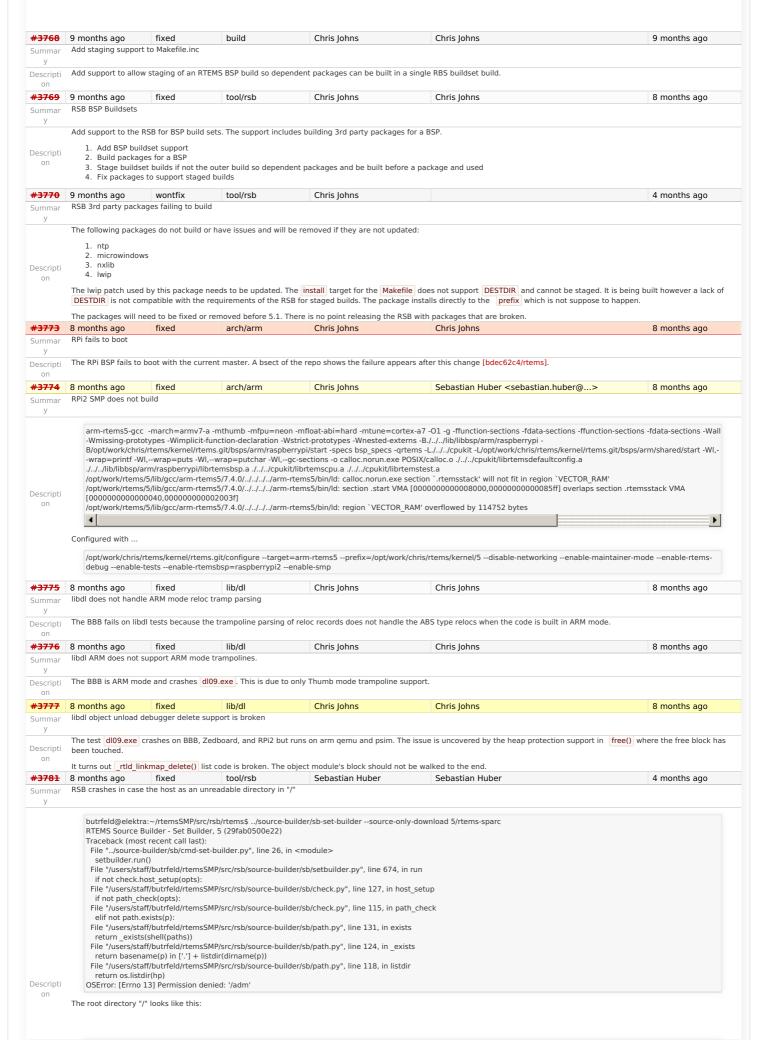

#3748 11 months ago lib/dl Chris Johns Chris Iohns <chrisi@...> libdl uses a linear symbol search on object file symbols Summar Symbol searching has two parts, searching the object file and searching the global symbol table. Currently the object file search is linear and the global table search uses a hash Descripti A large incrementally linked object file can have a large local and global set of symbols and this can slow the loading process. This issue does not show up for small object files with a few symbols which is typically how our libraries are made. Change the object file symbol search to a binary search (bsearch). A hash table for each object file would increase the in memory object file footprint by a significant amount and would harm the small object file use case that only have a few symbols. A binary search is a suitable compromise. Joel Sherrill doc #3751 11 months ago fixed Joel Sherrill <joel@...> 4 months ago No documentation on Region Get Information Directives Summar rtems\_region\_get\_information and rtems\_region\_get\_free\_information are not documented in the Classic API Users Guide. Summar Initial POSIX Signals Mask Incorrect

#3794

RTEMS initial signal mask for the "process" does not match the behavior of Linux, FreeBSD, and Cygwin.

There are some subtle rules which need to be followed for the value of the created thread's signal mask. Because signals are part of C99 and enhanced by POSIX, both Classic API tasks and POSIX threads have to have them enabled.

1. Internal system threads should have no signals enabled. They have no business executing user signal handlers -- especially IDLE.

Joel Sherrill

2. The initial signal mask for other threads needs to follow the implication of a pure C99 environment which only has the methods raise() and signal(). This implies that all signals are unmasked until the thread explicitly uses a POSIX methods to block some. This applies to both Classic tasks and POSIX threads created as initalization tasks/threads (e.g. before the system is up).

Joel Sherrill

6 months ago

3. After the initial threads are created, the signal mask should be inherited from the creator. This can be done based on system state.

RTEMS behavior was incorrect by blocking all signals initially and for Classic API tasks.

# Notes:

• The default signal mask does not matter for any application that does not use POSIX signals.

RTEMS 5.1 Release Notes 103/112

• It is assumed that Classic API tasks should provide a compliant C run-time environment. Hence the defalt signal mask state matters. Descripti Impact on Applications and Tests ============================ In general, an application should always explicitly block or unmask any signals that it intends to process. If there is concern about which thread may process it, then it should be blocked in all threads that are not intended to process it. The following code can be used to block all signals. This method can be used in the initialization task/thread to mimic historical behavior: static void block\_all\_signals(void) int sc; mask; sigset\_t sc = sigfillset( &mask ); // check sc == 0 sc = pthread sigmask( SIG BLOCK, &mask, NULL ): #3796 7 months ago Gedare Bloom Joel Sherrill <joel@...> 4 months ago docs/develenv directory structure bitrot Summar The directory structure described in the Development Environment Guide is outdated and does not reflect changes made in relocating BSPs to the bsps/ directory and refactoring the Descripti #3797 7 months ago fixed tool/rsb Chris Johns Chris Johns 4 months ago Summar Add LLVM as a package Descripti Add 5/rtems-llvm to build LLVM for supported hosts. on This can used to help resolve the dependency the recent trace changes have created by using LLVM symbol/dwarf support. **#3798** 6 months ago fixed network/libbsd 3 months ago Joel Sherrill Sebastian Huber Add sockatmark to libbsd Summar Descripti Now that pselect() is in libbsd, sockatmark() is the only method called out by any of the four POSIX profiles in the FACE Technical Standard (http://opengroup.org/face) which is not provided by rtems-libbsd. #3802 6 months ago fixed Joel Sherrill tool/rsb Hesham Almatary 4 months ago RSB Build of Spike Fails on Second Time (bug in upstream spike) Summar See https://github.com/riscv/riscv-isa-sim/issues/348 Descripti When this is fixed in the upstream, bump the hash in the RSB.                          Add fatal error for heap errors
Summar
                           Currently, the following fatal error is generate in case of heap errors:
                                       static void Heap Protection block error default(
                                         Heap_Control *heap,
                                         Heap Block *block
Descripti
                                         /* FIXME */
                                          _Terminate( INTERNAL_ERROR_CORE, 0xdeadbeef );
                          Replace this with a dedicated fatal error source and a context structure (similar to assert()).
                                                                                                                                                                                Chris Johns

Summar

RTEMS 5.1 Release Notes 105/112

RTEMS 5.1 Release Notes 106/112

Currently the FP context and the TLS area are separately allocated from the workspace. This complicates the workspace size estimate. Add the FP context and TLS size to the stack size and place them in the stack area. This makes it also possible to move the stack area allocation out of \_Thread\_Initialize(). Use a hook to get the thread queue heads which is configured depending on the unlimited objects option of the configuration.

Statically allocate the stacks for internal threads (e.g. idle and MPCI receive server) in a dedicated linker section (similar to the interrupt stacks). Mention this in the Classic API Guide

configuration chapter. #3837 4 months ago duplicate config Sebastian Huber Sebastian Huber 4 months ago Rename CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTORS Summar Rename CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTORS in CONFIGURE\_MAXIMUM\_FILE\_DESCRIPTORS. Issue a C preprocessor warning if Descripti CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTORS is used and map it to CONFIGURE\_MAXIMUM\_FILE\_DESCRIPTORS. #3838 4 months ago fixed bsps Sebastian Huber Sebastian Huber 58 minutes ago Rework work area initialization Summar The work area initialization is done by the BSP through bsp\_work\_area\_initialize(). This approach predates the system initialization through the system initialization linker set. The workspace and C program heap are unconditionally initialized. With the availability of statically initialized threads a system without workspace and C program heap is feasible. Change the work area initialization so that components are initialized on demand. To achieve this: Descripti 1. Add a Memory Handler which provides support for low level handling of memory areas which are handed over to the higher level Heap Handler. 2. Add an implementation of \_Memory\_Get() to each BSP (basically a restructuring of the bsp\_work\_area\_initialize() implementations). See optimization opportunity in #3925 #3839 4 months ago fixed build Chris Johns Chris Johns 4 months ago RTEMS revision does not handle -Summa RTEMS configure logic that takes a version number and splits it into major, minor and revision values. The current release snapshots have a version number of 5.0.0-m1912 and this Descripti is not correct parsed. #3840 fixed 4 months ago config Sebastian Huber Sebastian Huber 4 months ago

Add CONFIGURE IMFS ENABLE MKFIFO Summar Obsolete undocumented configuration options CONFIGURE MAXIMUM FIFOS and CONFIGURE MAXIMUM PIPES. Replace them with a new option: CONFIGURE IMFS ENABLE MKFIFO. Descripti

RSB RTEMS version message string is fixed to the git hash Summar Descripti

The version embedded in the RTEMS version message is currently the git hash. This breaks in a release where the version is reported as no-repo. The RTEMS version message is embedded in the gcc version string.

#3843 4 months ago fixed config Sebastian Huber Sebastian Huber Add CONFIGURE\_DIRTY\_MEMORY Summar

Change the BSP\_DIRTY\_MEMORY BSP option (build-time configuration) into a CONFIGURE\_DIRTY\_MEMORY application configuration option (link-time configuration).

#3844 4 months ago fixed config Sebastian Huber Sebastian Huber Remove CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE Summar

Chris Johns

Remove the CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for Descripti implementation changes. The CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE configuration option had no test case. There was an attempt to get user feedback about this option.

https://lists.rtems.org/pipermail/users/2019-April/033131.html #3845 4 months ago fixed Sebastian Huber Sebastian Huber 4 months ago confia Remove Ada-specific configuration options Summar

We have currently three Ada related configuration options:

- CONFIGURE GNAT RTEMS
- CONFIGURE MAXIMUM ADA TASKS
- CONFIGURE\_MAXIMUM\_FAKE\_ADA\_TASKS

The CONFIGURE MAXIMUM FAKE ADA TASKS option has no effect. The CONFIGURE\_GNAT\_RTEMS is mandatory to use the CONFIGURE\_MAXIMUM\_ADA\_TASKS option. So, if you just

#define CONFIGURE MAXIMUM ADA TASKS 123

then you get a re-definition warning and hopefully pay attention to it. This is not very user friendly from point of view.

The CONFIGURE\_MAXIMUM\_ADA\_TASKS just adds the configured count to CONFIGURE\_MAXIMUM\_POSIX\_THREADS.

Descripti The original purpose of these was to:

CONFIGURE GNAT RTEMS - add in resources required by Ada run-time independent of the number of Ada tasks (e.g. POSIX threads)

 ${\tt CONFIGURE\_MAXIMUM\_ADA\_TASKS-add\ in\ POSIX\ threads,\ condition\ variable,\ and\ mutex\ required\ for\ each\ Ada\ task}$ 

CONFIGURE MAXIMUM FAKE ADA TASKS - add in condition variables and mutex required by Ada run-time for a task/thread created outside the Ada run-time which invokes Ada code and is thus a user of the run-time

Given that you can turn on unlimited threads now and condition variables and mutexes are static, I don't think they have a need any longer. Plus it sounds like they bit rotted. If we needed them still, they would have to be fixed.

We still need documentation that Ada tasks are POSIX threads and must be accounted for in configuring the system. So when moving documentation around, please make that point clear in the CONFIGURE MAXIMUM POSIX THREADS description.
