

RTEMS - 5.0.0-m2005-1 Release Notes

02 May 2020

RTEMS 5 Series Release Notes

These notes cover the dot releases:

5.1

5.0

5.1 (open)

Statistics

Total	774
Fixed	706
Invalid	13
Works for me	8
Duplicate	12
Won't fix	33

Distribution

Summary

- #1247 RTEMS does not implement locks needed by multithreaded newlib
- #1394 scandir() fails due to MAXNAMELEN is incorrect
- #1662 termios.c: semaphore not deleted, consequently resulting in failure of rtems_termios_open
- #1747 Heap extend allows discontinuous memory regions.
- #1971 Memory leak in tmpfile()
- #2132 <rtems/score/basedefs.h> superfluously includes <limits.h>
- #2133 <rtems/score/basedefs.h> superfluously includes <string.h>
- #2135 times() and _times() are subject to integer overflows
- #2173 Potential integer overflow problem in EDF scheduler
- #2176 fishy behavior in termios tx task mode
- #2198 Automate doxygen build
- #2207 RTEMS tar does not overwrite.
- #2213 Decreased performance for whetstone benchmark using GCC >=4.5
- #2261 Add coverage report generation support to rtems-tools
- #2266 Move bsp_pretasking_hook() into files named bsppretaskinghook.c
- #2284 h8300 gets error linking dl0* tests
- #2289 rtems_ada_self is broken on SMP
- #2305 sp07 needs to be split into an user extensions and a notepad test
- #2306 powerpc/mvme5500/vectors/exceptionhandler.c uses task variables
- #2308 Change uniprocessor INIT task mode to preempt.
- #2325 Broken console driver infrastructure for SPARC
- #2344 Second argument of ualarm() is ignored
- #2350 One watchdog ticks header per scheduler instance
- #2354 Replace red-black tree implementation, change API
- #2355 SPARC: Several shared drivers are not SMP ready
- #2363 SPARC: Silent FP context corruption possible
- #2366 Create a Public API for the Atomic Operations
- #2367 Documentation of User Extensions needs more information
- #2377 rtems_waf: Tools without a version are not supported
- #2385 Warning from commit "bsps/arm: Do not use __ARM_ARCH_7A__"
- #2407 Enable function and data sections
- #2408 Linker set based initialization
- #2412 Improved priority inheritance implementation
- #2420 RSB %source file fails
- #2423 rtems_iterate_over_all_threads lacks user callback private pointer pass through
- #2428 Add 4.12 Tool Target Configurations to RSB
- #2441 lpc1768 variants fail to build with error in gpio.c
- #2442 Remove avrttest BSP
- #2443 Remove AVR Architectural Port
- #2444 Remove m68k/mvme136 BSP
- #2445 Remove m68k/sim68000 BSP
- #2446 Remove M32R Architectural Port
- #2447 Remove m32r/m32rsim
- #2448 Remove mips/mongoose BSP
- #2449 Remove arm/gba BSP
- #2450 Remove arm/nds
- #2451 Remove arm/gp32 BSP
- #2452 Remove H8300 Architectual Port
- #2453 Remove h8300/h8sim BSP
- #2454 Warning in threadqops.c
- #2455 Warning in spsimplsched02
- #2457 Remove powerpc/ep1a BSP
- #2458 Remove powerpc/score603e BSP
- #2459 Add rtems_chain_get_first_unprotected() to chain API
- #2464 RSB: Tool patches use the RTEMS version
- #2468 Add Thread Local Storage (TLS) support on x86
- #2477 Remove <rtems/debug.h>
- #2487 Should https://devel.rtems.org/wiki/TBR/Delete/SpecBuilder be Deleted?
- #2488 Vagrant Scripts
- #2490 RSB: Use SHA512 instead of MD5
- #2493 Remove notepads
- #2494 Remove task variables
- #2503 mvme5500 BSP: Exception Handler uses deprecated Notepads.
- #2509 Should "https://devel.rtems.org/wiki/TBR/Delete/BSP_Template" be replaced?
- #2513 Remove m68k/idp BSP
- #2514 Make POSIX API mandatory (except signals and the sporadic server)
- #2515 i386 score/libcpu API Layering Violation
- #2527 Move pc386/tools/bin2boot to rtems-tools
- #2529 BSP for the Atmel SAM V71/V70/E70/S70 chip platform
- #2536 RSB allows use of insecure hash algorithms like MD5 and SHA1

- #2537** Use Newlib exec*() variants and remove RTEMS versions
- #2542** Review cxx_iostream size change per function-section changes
- #2543** Obsolete gen68302 BSP
- #2544** Obsolete m68k/ods68302
- #2545** Obsolete mbx8xx BSP
- #2546** Obsolete idp BSP
- #2553** [mvme3100] boot_card() broken by 37030e38
- #2554** New watchdog handler implementation
- #2555** Eliminate the Giant lock
- #2556** Implement the O(m) Independence-Preserving Protocol (OMIP)
- #2557** Add word splitting to print output
- #2559** Delete the EXTERN pattern
- #2560** smdk2410 is broken due to gp32 removal
- #2562** RSB Docs Quick Start version number
- #2576** arm/lpc176x: linker script update (add KEEP() sections)
- #2606** alarm() uses seconds watchdog and thus is affected by clock changes
- #2608** POSIX Condition Variables Clock Attribute Support
- #2617** rtems_heap_allocate_aligned_with_boundary() body and prototype inconsistent
- #2624** Fix the year 2038 problem
- #2625** Use one lookup tree per-thread for the POSIX keys
- #2626** Unify thread cancel/join and delete
- #2627** Fix CPU time used for threads on SMP
- #2628** Avoid home-grown condition variable implementation in the Classic Regions
- #2631** Use an ISR lock to protect the state of Classic Rate Monotonic objects
- #2632** rtems-tester failure
- #2633** waf build failed for rtems-libbsd
- #2634** New warning in pc386 VESA driver
- #2638** pc386: ld -r issue with per function sections
- #2641** configure: enable-rtemsbsp doesn't warn if bsp does not exist
- #2644** sis does not run on gdb 7.11 but does on gdb 7.9
- #2649** RSB remove 4.11, 4.10 and 4.9 from the master branch.
- #2663** pc386 BSP has complex dependencies
- #2664** spclock_err02
- #2669** Update OpenRISC toolchain in 4.12
- #2672** After latest patches with Objects_Get_by_name rtems-master not compiling without --enable-posix
- #2674** CORE spinlock implementation is next to be useless
- #2676** Obsolete clock_get() directive
- #2680** Add pthread_setconcurrency() and pthread_getconcurrency()
- #2683** Configuration table's smp_enabled conditional on RTEMS_SMP
- #2684** rtems/c/src/lib/libbsp/sparc/leon3/clock/ckinit.c:122: duplicate if
- #2685** c/src/lib/libbsp/arm/atsam/network/if_atsam.c:409: possible bad if statement
- #2689** POSIX key destructors must be called during thread restart
- #2692** User extensions execution order must be clarified
- #2693** Update doc to reflect obsoleting rtems_clock_get()
- #2694** linking issue for htonl, etc when using -std=c99
- #2695** Add libatomic for RTEMS
- #2696** Unpredictable errno value returned by sem_wait() in case of semaphore deletion
- #2698** GCC 6.1 is broken for microblaze
- #2700** cpukit/libfs/src/nfsclient/src/rpcio.c:524]: (style) Suspicious condition
- #2701** Rename asm file with .S(upper case) ext. name
- #2702** Remove descriptor objects for POSIX message queues
- #2706** Buffer allocation of capture engine is broken on SMP configurations
- #2707** Unsafe use of current processor index in capture engine
- #2714** A pthread_detach() does not lead to a resource reclamation
- #2718** Blocking _CORE_message_queue_Submit() may lead to unpredictable results
- #2722** SEM_VALUE_MAX is unusually small on RTEMS
- #2723** CPUINFO command to report per-processor information
- #2725** Classic binary semaphores without a locking protocol can be released by everyone
- #2726** grasc.c: Questionable use of binary semaphore
- #2727** FAT file systems use wrong semaphore for mutual exclusion
- #2728** Pipes use wrong semaphore for mutual exclusion
- #2729** TFTP client uses wrong semaphore for mutual exclusion
- #2732** Add clock_nanosleep()
- #2734** pthread_setschedprio() is missing
- #2735** pthread_setschedparam() sets the priority not according to POSIX
- #2736** pthread_getschedparam() returns wrong priority values
- #2737** Add CLOCK_DRIVER_USE_ONLY_BOOT_PROCESSOR
- #2740** Suboptimal type for Timestamp_Control
- #2741** New warning from printf plugin changes
- #2742** New warning in SHM driver
- #2745** Use clock from pthread_condattr in pthread_cond_timedwait
- #2748** Move RTEMS-specific socket wake-up to RTEMS-specific <rtems/rtems_bsdnet.h>
- #2749** rtems_task_set_scheduler() has insufficient parameters
- #2750** Compile Error When Multiprocessing Enabled
- #2751** Thread dispatch via interrupt is broken at least on ARM and PowerPC
- #2752** Relax execution environment for thread begin extensions
- #2754** no .strtab section
- #2765** Application level deadlocks may lead to SMP lock level deadlocks
- #2768** untar does not keep permissions correctly.
- #2769** rtems-syms does not clean up temp files.
- #2770** Missing documentation for RTEMS_LINKER_ROSET_CONTENT and RTEMS_LINKER_RWSET_CONTENT
- #2771** Empty C++ file with just <rtems.h> does not compile with HEAD.
- #2775** ARM CP15 arm_cp15_set_translation_table_entries fails if TTB in read-only memory
- #2776** SPI Framework
- #2777** Remove librtems++
- #2784** Add function to get the current priority of a task by scheduler instance
- #2788** RTEMS I2C API only defines Standard-mode (Sm) speed as a default.
- #2790** Linker sets broken with GCC 7
- #2795** Overrun Handling for general real-time models
- #2797** Add ability to add/remove processors to/from a scheduler instance
- #2798** Fix POSIX timer interval
- #2800** qorIQ variants failing to build
- #2802** Test "libdl (RTL) 5" fails on SPARC targets

- #2803 Get rid of CPU_BIG_ENDIAN and CPU_LITTLE_ENDIAN
- #2805 Use SPRG0 on PowerPC for current per-CPU control (SMP only)
- #2806 Undocumented confdefs.h Configure Options
- #2807 rtems-docs repository is not known to trac
- #2808 Conditionally provide rtems_interrupt_frame
- #2809 Reduce interrupt latency on SMP configurations during thread dispatch
- #2810 Remove sparc/sis BSP variant
- #2811 More robust thread dispatching on SMP and ARM Cortex-M
- #2816 Many ARM BSPs have Static Assert
- #2817 All Blackfin BSPs do not Compile on Master
- #2818 NIOS2 Does Not Compile on Master
- #2819 powerpc-ss555 does not compile on master
- #2820 All SPARC64 BSPs do not Build on master
- #2821 No BSPs Build on Master
- #2822 m32csim does not build on master
- #2823 Nearly all m68k BSPs do not Build on Master
- #2824 arm/lpc23xx_tli800 no longer links tar01
- #2825 Improve the fatal error handling chapter of the user manual
- #2826 arm_cp15_get_translation_table_base_control_register warning.
- #2829 xz git URL in README is broken
- #2835 Ada support is broken on SMP configurations
- #2836 Add posix_devctl()
- #2838 Termios task driven mode should use mutex for device operations
- #2839 Add new interrupt server driven Termios mode
- #2840 Use self-contained mutexes for Termios framework
- #2841 Add NXP SC16IS752 serial device driver
- #2843 Use self-contained objects instead of Classic API for drivers and support libraries
- #2844 JFFS2: Add IO controls to get filesystem instance information and force a garbage collection
- #2845 Add I2C framework documentation
- #2849 ATA/IDE support in RTEMS is out-dated
- #2850 Driver manual covers non-existent Analog Driver
- #2851 Driver manual covers non-existent Discrete Driver
- #2853 Driver manual covers non-existent Non-Volatile Memory Driver
- #2858 Add user defined thread names
- #2859 Implement POSIX Shared Memory Objects
- #2862 docs.rtems.org Add support to ReST format releases.
- #2863 Update POSIX 1003.1 Compliance Guide for ReST
- #2864 docs.rtems.org Automatic update of branches content when a rtems-doc.git change is made.
- #2865 Coverpage installed when building the docs repeats catalogue.xml entries
- #2867 Fix exclude rule in rtems-test-check
- #2868 src/c/src/lib/libbsp/arm/smdk2410/smc/smc.c: 3 * pointless local variables ?
- #2873 src/c/src/lib/libbsp/arm/raspberrypi/i2c/i2c.c:320: defective error checking ?
- #2874 src/c/src/lib/libbsp/powerpc/beatnik/marvell/gt_timer.c: 4 * pointless check ?
- #2877 DHCP client fails on complex networks
- #2878 src/c/src/lib/libbsp/sparc/shared/can/occan.c:1573: broken error checking ?
- #2879 src/cpukit/libdebugger/rtems-debugger-server.c: four problems
- #2880 src/cpukit/libfs/src/jffs2/src/readinode.c:189: faulty logic
- #2883 src/c/src/lib/libbsp/arm/tms570/console/tms570-sci.c:248: strange expression ?
- #2885 Fix rtems_rate_monotonic_postponed_job_count() prototype
- #2889 RTEMS_STACK_CHECKER_EXTENSION has incomplete definition
- #2890 _RBTree_Initialize_node generates warnings
- #2893 Remove CONFIGURE_SMP_APPLICATION
- #2894 Rename CONFIGURE_SMP_MAXIMUM_PROCESSORS to CONFIGURE_MAXIMUM_PROCESSORS
- #2895 Prefix the confdefs.h internal defines with an underscore
- #2896 RSB requirements are missing pax
- #2897 Update termios.h to match the latest FREEBSD definitions
- #2905 Merge LEON
- #2906 rtems-doc waf configure does not detect sphinxcontrib.bibtex status
- #2909 xz: Support for 64-bit CRC is build although XZ_USE_CRC64 is not defined
- #2912 libdebugger: control reaches end of non-void function
- #2916 termios: Change receive callback invocation to enable select() and poll() support
- #2917 termios: Make write POSIX compatible
- #2922 libdl unresolved externals that use more than one block or multiple entries corrupts.
- #2923 Questionable Code in resource_snapshot.c
- #2924 Warnings in SPARC BSPs
- #2925 Warnings in rtl-obj-cache.c on some targets
- #2930 Coverity Reports Out of Bounds Read in drvmgr_print.c
- #2933 Flexibleassignto is broken on new ticket page.
- #2935 Termios task driven mode not compatible with SMP
- #2941 building rsb freezes
- #2942 rtems building error
- #2943 rtems building error
- #2945 Many failures on LEON3 with SMP disabled
- #2946 Add a top level global testsuite configuration file (.tcfg) and a 'user-input' test state.
- #2949 Questionable patch organization in RTEMS tools and RSB
- #2951 Error path in rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg
- #2954 ARM: Optimize context switch
- #2957 Shared memory support internal locking is broken
- #2958 Add some popular benchmark programs to the testsuite
- #2959 arm/libdl: C++ exception index tables may not be ordered correctly
- #2962 Set test configurations to reflect test results.
- #2963 Add a testsuite top level configuration file that is common to all tests.
- #2965 bootstrap sort inconsistent with sb-bootstrap for acinclude
- #2967 ARM: Change ABI to not use short enums
- #2968 newlib inttypes.h is missing some methods
- #2969 qoriq BSPs depend on mkimage which is not always available
- #2976 warnings in rtems-debugger-server.c
- #2977 warnings in Dhrystone Benchmark
- #2980 pc586-sse does not compile fsjffs2gc01
- #2981 testdata excludes on included tcfg files does not work
- #2982 LibBSD broken with GCC+RTEMS changes
- #2983 Create <rtems/inttypes.h> to consolidate extensions to <inttypes.h>
- #2984 Changing Trac milestone page fails.

- #2990 RTEMS Source Builder Fails on Windows Builds
- #2992 Long path crashes the RSB when listing a directory.
- #2993 SMP assert in _Thread_Executing in libdebugger
- #2994 tar01 XZ error
- #2995 Missing bsets
- #2997 Monitor config command does not handle unlimited objects.
- #2998 RTEMS User Manual Quick Start does not cover releases.
- #2999 sb-check on Cygwin
- #3000 Setting interrupt level in the mode arg on SMP returns RTEMS_UNSATISFIED
- #3001 SMP build of RTEMS Testsuite does not set CONFIGURE_MAXIMUM_PROCESSORS
- #3003 FAT does not support clusters bigger than 32K
- #3006 SPARC LEON3 BSP SMP build is broken.
- #3007 ARM caching issues
- #3008 missing pax causes install failures
- #3009 Provide invalid link handler for docs.rtems.org so old docs can be removed.
- #3010 src/cpukit/posix/src/mmap.c:189]: (style) Suspicious condition
- #3011 Error compiling xilinx_zynq_zedboard.
- #3012 Global C++ IO streams are broken (cout, cin, cerr)
- #3013 ProgrammingError: (1064, "You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'sid='nikolaykomashinskiy' AND authenticated=1 AND name='force_change_passwd' at line 1")
- #3014 interrupt vector indexing is assuming BSP_INTERRUPT_VECTOR_MIN = 0 for this code.
- #3015 Add support for IBM PPC 750 chip
- #3016 missing a couple register names + a #ifndef __ASM__ around serial.h inclusion
- #3017 improvement in pci.h
- #3018 RSB cannot compile tool chain in CentOS 7.
- #3023 Parameter of CPU_COPY() are in wrong order
- #3025 m32c/m32csim does not build linpack-pc.c
- #3027 RTEMS source builder fails when building gcc documentation with newer versions of gcc
- #3032 CPU_NAND_S() implementation is not in line with FreeBSD
- #3036 CPU_CMP() implementation is not in line with FreeBSD
- #3040 Cannot use RTEMS mailing list archive for patches
- #3043 4.11/rtems-nios2 does not build on Windows.
- #3046 4.12/rtems-moxie missing release number.
- #3047 Remove docs directory from the RSB
- #3049 Warnings in libdebugger
- #3052 RSB: powerpc GDB build broken on Apple Darwin
- #3054 gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux
- #3056 Add EDF SMP scheduler
- #3057 Add a workaround for the LEON3FT store-store errata
- #3059 Add a simple processor affinity support to the EDF SMP scheduler
- #3061 including 'unistd.h' in C++ does not build.
- #3063 Make the EDF scheduler the default SMP scheduler
- #3069 Add rtems_scheduler_ident_by_processor()
- #3070 Add rtems_scheduler_ident_by_processor_set()
- #3071 Create an interrupt server for every processor in the system
- #3072 Declaration of global functions in driver source files
- #3076 Test suite failures due to floating point usage
- #3077 SPARC: Add lazy floating point context switching
- #3079 Ada tests do not build
- #3080 Infinite loop in SPARC rtems_invalidate_multiple_instruction_lines()
- #3082 Add 64-bit support for PowerPC
- #3083 parallel make not working
- #3084 Makefile recipe override warning has returned
- #3085 Add hypervisor support for QorIQ BSPs
- #3087 RSB rtems-gdb-7.12-1.cfg MD5 value is ERROR
- #3088 shell test in testsuites\samples\fileio many COMMANDs is Lost
- #3089 Inconsistent blocking addressing in RFS
- #3090 Add BSP for i.MX 7
- #3091 Core Dump in powerpc-rtems4.12-ld
- #3096 Shell internal commands should be public.
- #3098 Add new RTEMS repos to github.
- #3099 Add RTEMS FDT wrapper and shell command to libmisc
- #3100 Add Xilinx AXI I2C driver
- #3101 Add I2C Drivers for LM25066A, TMP112, ADS1113 and ADS1115
- #3102 rtems-exeinfo does not decode ARM static constructors.
- #3103 rtems-tools on CentOS 7 Build Failure
- #3109 Add RISC-V support
- #3111 Newlib: Change time_t and clock_t integer types to 64-bit
- #3112 POSIX: Make pthread_mutex_t self-contained
- #3113 POSIX: Make pthread_cond_t self-contained
- #3114 POSIX: Make pthread_barrier_t self-contained
- #3115 POSIX: Make pthread_rwlock_t self-contained
- #3116 POSIX: Make sem_t self-contained
- #3117 score: Optimize _Thread_queue_Enqueue() timeout handling
- #3121 clock() implementation in Newlib is broken
- #3122 Simplify and unify BSP_output_char
- #3123 GDB 8.0.1 is broken on FreeBSD 11
- #3124 Ignore pshared attribute for POSIX semaphores
- #3125 Accept PTHREAD_PROCESS_SHARED for POSIX mutexes
- #3126 Accept PTHREAD_PROCESS_SHARED for POSIX barriers
- #3127 MIPS tool build on Darwin (MacOS) fails.
- #3128 RTEMS Tools corvar does not build on Windows.
- #3129 RTEMS Tools covoar build fails on Windows
- #3130 RTEMS Doxygen.in latex output does not build
- #3132 Add reference counting to file descriptors
- #3133 Remove rtems_libio_t::driver
- #3134 Remove LIBIO_FLAGS_CREATE
- #3135 Devel mailing list doesn't work and Git push impossible due to disk full
- #3136 Use FIFO for file descriptor free list
- #3137 Accept PTHREAD_PROCESS_SHARED for POSIX condition variables
- #3139 Remove old ISR parameter from Clock_driver_support_install_isr() and make it optional
- #3140 CPU Kit broken with --enable-rtems-debug
- #3141 Change the BSP Howto's name to something smaller.

- ~~#3142~~ POSIX: Reduce size of pthread_once_t and make it zero-initialized
- ~~#3148~~ PSXRDWRV Test failure on Beaglebone Black
- ~~#3152~~ Beaglebone Black crashes on u-boot master build.
- ~~#3153~~ Accept PTHREAD_PROCESS_SHARED for POSIX rwlocks
- ~~#3157~~ PowerPC tools don't build on 32-bit hosts
- ~~#3158~~ Examples v2 does not build
- ~~#3159~~ Examples v2 trace linker ini files reference non-existing dump-on-error
- ~~#3160~~ Trace linker score support is broken
- ~~#3163~~ Add I2C device driver for temperature sensor LM75A
- ~~#3166~~ New default ticket assignee: NeedsReview
- ~~#3167~~ Internal status codes must not depend on RTEMS_POSIX_API
- ~~#3168~~ Simplify POSIX_API_Control
- ~~#3170~~ Use BSP_output_char via RTEMS printer or simple console driver for test output by default
- ~~#3171~~ RSB GCC does not build on High Sierra and APFS
- ~~#3172~~ i386 PC BSP does not reset when bsp_reset is called.
- ~~#3173~~ Xilinx AXI I2C driver IP race condition causes clock glitch.
- ~~#3174~~ Remove rtems_pthread_attribute_compare()
- ~~#3175~~ Merge FreeBSD timecounter changes from 2015-01-20 to now
- ~~#3176~~ __getreent in libc.a and generated by confdefs.h
- ~~#3177~~ Replace/update POSIX Compliance Guide
- ~~#3178~~ Update sh-rtems4.12 bset to use rtems-default (using old gcc)
- ~~#3179~~ New warnings from Time Changes
- ~~#3180~~ ar warning: `u' modifier ignored since `D' is the default (see `U')
- ~~#3181~~ Various cc1plus warnings for "valid for C/ObjC but not for C++"
- ~~#3182~~ CLOCK_REALTIME timeout implementation is not POSIX compliant
- ~~#3185~~ Change uptime seconds to int32_t
- ~~#3187~~ smptests/Makefile.am Issues
- ~~#3188~~ Add C11 Threading Examples
- ~~#3189~~ MUTEX_INITIALIZER missing braces warning
- ~~#3190~~ RTEMS Tester covoar does not link on MacOS
- ~~#3191~~ RTEMS Tester covoar dies with no arguments.
- ~~#3198~~ Add lazy update of line control and baud divisor to NS16550 serial driver
- ~~#3200~~ m32c tests don't build -- test_context too large
- ~~#3201~~ epiphany tools checksum error
- ~~#3202~~ or1k tools build error
- ~~#3203~~ Upgrade trac to fix numerous problems.
- ~~#3204~~ Exception in rtems-test
- ~~#3205~~ Relative timespec timeouts are subject to integer overflows
- ~~#3207~~ Supported Architectures Page is out of date
- ~~#3209~~ RSB should fail on this error
- ~~#3210~~ Improve the RSB build email message
- ~~#3211~~ Fix pthread_create() with user provided stack
- ~~#3212~~ Qemu Fails to Build, RSB Gives Odd Traceback
- ~~#3213~~ Move erc32, leon2, leon3, psim and jmr3904 to Tier 2
- ~~#3215~~ Configuring a System Still Includes Notepads and Has Wrong Heading
- ~~#3216~~ Replace vprintk() implementation
- ~~#3217~~ Add RTEMS version, build and tools details to tests
- ~~#3218~~ Termios canonical mode (ICANON) does not return input line by line
- ~~#3219~~ Zynq BSP missing linker option --gc-sections

#1247	13 years ago	fixed	fs	strauman	Chris Johns	2 years ago
Summary	RTEMS does not implement locks needed by multithreaded newlib					
Description	multi-threaded newlib protects a number of internal data structures (as of newlib-1.15 these comprise: • global list of FILE objects • stdio FILE object initializer • individual FILEs [since FILEs with the exception of stdin/stdout/stderr are per-process entities] • global hash table used by telldir/seekdir • individual DIR structures (opendir/readdir) • atexit list • list of environment variables • global timezone variable) using mutexes. It expects the OS to implement these locks but defaults to not using locking if the OS does not provide an implementation. Currently, RTEMS does *not* provide its own implementation of 'sys/lock.h' and therefore vital data structures in newlib are currently *unprotected* (with the exception of environment variables -- 'envlock.c' had been added to RTEMS a while ago but since then, newlib has introduced more locks and a general OS interface which - once implemented - will obsolete 'envlock.c'). Note that while semantics of having no protection for individual FILE objects may be tolerable, having no protection for global newlib data structures such as lists of FILEs is not acceptable. I am currently working on an implementation which should be available shortly.					
#1394	11 years ago	fixed	tool/newlib	Daniel Hellstrom	Chris Johns	2 years ago
Summary	scandir() fails due to MAXNAMELEN is incorrect					

Description	I have been trying to use scandir() however the newlib one does not work due to MAXNAMLEN and NAMLEN differ. scandir in libcsupport seems to have a fix for this, however my libcsupport_a-scandir.o is empty, I'm guessing because HAVE_SCANDIR is defined.						
	It is used in scandir() (newlib-1.17.0/newlib/libc/posix/scandir.c:117) by the macro DIRSIZ. Where DIRSIZ uses the MAXNAMELEN define which is set incorrectly. It does not match the sizeof(struct dirent) which makes the DIRSIZ return a negative number, then malloc(DIRSIZ(d)) will try to allocate 4GB which fail.						
	My guess is that MAXNAMELEN should be defined in newlib-1.17.0/newlib/libc/sys/rtems/sys/dirent.h or newlib-1.17.0/newlib/libc/sys/rtems/include/limits.h or in a new file.						
	I tried to run the code below on my FAT filesystem, taken directly from the scandir(3) man page.						
	/* print files in current directory in reverse order */ #include <dirent.h> main(){						
	struct dirent namelist ; int n;						
	n = scandir(".", &namelist, 0, NULL); if (n < 0)						
	perror("scandir");						
	else {						
	while(n--) {						
printf("%s\n", namelist[n]->d_name); free(namelist[n]);							
} free(namelist);							
}							
}

Summary	Heap extend allows discontinuous memory regions.						
Description	The check in (cpukit/ChangeLog) states:						
	2010-06-07 Sebastian Huber <sebastian.huber@...>						
	• score/src/heapextend.c: Implemented support for scattered heap areas.						
	The heap cannot support scattered blocks because the _Heap_Is_block_in_heap assumes the region is continuous between the first and last blocks of the heap. Making the gaps in the regions passed to the heap extend call used is questionable and makes the _Heap_Is_block_in_heap test not really perform the task it's name states. This is an issue because it is this check that determines if a heap free of NULL should proceed. This issue is covered in another PR.						
	I also wonder about a heap free call to an address that maps to one of the "in-use" gap regions. The previous heap code knew if an address was in the heap and therefore it was kind of safe to probe for a valid block. This assumption is now not valid.						
	The former heap extend code:						
	http://www.rtems.org/viewvc/rtems/cpukit/score/src/heapextend.c?revision=1.7&view=markup						
	clearly states the type of memory that can be added to an existing heap. The current code has no restrictions. The user manual is not great in this area. It would also be useful if comments are added to the heap extend code.						
	The heap extend code is used by the rtems_region_extend call and this call clearly states in the manual that the memory region must be continuous. If this has changed we should discuss the API change and make better note of it. I also suspect the testsuite will need additions to test any API changes.

Summary	Memory leak in tmpfile()						
Description	Hello,						
	I use tmpfile() in my RTEMS application, and found that it has memory leak. I wrote small test application (see attachment), that output memory usage:						
	Memory usage before: Number of used blocks: 12 Largest used block: 1288 Total bytes used: 3628						
	Memory used after: Number of used blocks: 1013 Largest used block: 1288 Total bytes used: 112064						
Description	By 1000 iteration, each call tmpfile() cause memory leak about 108 bytes.

	fishy behavior in termios tx task mode					2 years ago
	I have a look around in the drivers in the various BSPs and I notice that none of the termios drivers appear to transmit characters at task level even if they are running in termios task mode. Maybe all (most) of them send characters in the ISR. If there was a large frame of characters to send then this could lock out task activity for too long. FWIW, I had a closer look at this today, and maybe something is fishy in the termios code when the TX part of termios runs in task driven mode. It seems that in task mode if the UART can accept characters immediately in the write routine then we wouldnt need to turn on any interrupts at all. The write routine would need to somehow tell termios how many characters it sent; presumably this would occur by calling rtems_termios_dequeue_characters in the driver's write function. I see in the code that this tries to work, rtems_termios_dequeue_characters posts the semaphore of termios tx and increases the characters sent count of termios. However after the write routine returns it goes badly. If the transmitter runs in termios TASK mode and the driver's write routine does not immediately enable an interrupt, then it returns to the code below in rtems_termios_puts and it sets the transmitter to rob_busy. After that the termios tx daemon proceeds to step through all of the characters remaining (I think that I see this in the debugger) and discards them because the transmitter stays in rob_busy state. It's also probably odd that termios calls the write function with interrupts disabled when it is in task driven mode; we could loop outputting a large frame of characters in the write routine at task level with interrupts globally disabled. <pre>if (tty->rawOutBufState == rob_idle) { /* check, whether XOFF has been received */ if (!(tty->flow_ctrl & FL_ORCVXOFF)) { (*tty->device.write)(tty->minor, (char *)&tty->rawOutBuf.theBuf[tty->rawOutBuf.Tail],1); } else { /* remember that output has been stopped due to flow ctrl*/ tty->flow_ctrl = FL_OSTOP; } tty->rawOutBufState = rob_busy; }</pre> [debug]#0 rtems_termios_puts (_buf=0x9ca60, len=1, tty=0x11509c) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libcsupport/src/termios.c:677 [debug]## 0x00015c68 in oproc (c=99 'c', tty=0x11509c) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libcsupport/src/termios.c:748 [debug]## 0x00015d9c in rtems_termios_write (arg=0x9cad8) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libcsupport/src/termios.c:770 [debug]## 0x00002ef0 in console_write (major=0, minor=0, arg=0x9cad8) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/lib/libbsp/nios2/altera-sys-config/.console/console.c:171 [debug]## 0x0006c328 in rtems_io_write (major=0, minor=0, argument=0x9cad8) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/sapi/src/iowrite.c:47 [debug]#5 0x00068044 in device_write (iop=0x114988, buffer=0x3366d4, count=44) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libbfs/imfs/deviceio.c:160 [debug]## 0x00017ef4 in write (fd=1, buffer=0x3366d4, count=44) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libcsupport/src/write.c:51 [debug]## 0x0007f078 in _write_r (ptr=0x9d638, fd=1, buf=0x3366d4, nbytes=44) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libcsupport/src/write_r.c:38 [debug]## 0x0006d488 in _fflush_r (ptr=0x9d638, fp=0x9d98c) at ../../../../../../nios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/fflush.c:214 [debug]## 0x000754e8 in _sfvwrite_r (ptr=0x9d638, fp=0x9d98c, uio=0x9cbe0) at ../../../../../../nios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/vfwrite.c:257 [debug]## 0x0007830c in sprint_r (ptr=0x9d638, fp=0x20, uio=0x9cbe0) at ../../../../../../nios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/vfprintf.c:322 [debug]## 0x00072fc8 in _vfprintf_r (data=0x9d638, fp=0x9d98c, fmt0=<value optimized out>, ap=0x0) at ../../../../../../nios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/vfprintf.c:1501 [debug]## 0x0006dce8 in printf (fmt=0x1 "") at ../../../../../../nios2-rtems/altera/altera11.0/gnu-tools/rtems-patched/gcc-4.1/newlib/libc/stdio/printf.c:52 [debug]## 0x00057de0 in bootpc_init (update_files=false, forever=true) at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libnetworking/nfs/bootpc_subr.c:997 [debug]## 0x0002960c in rtems_bsdnet_do_bootp () at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libnetworking/rtems/rtems_bootp.c:23 [debug]## 0x0002b218 in rtems_bsdnet_initialize_network () at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/libnetworking/rtems/rtems_glue.c:980 [debug]## 0x0001528 in Init (ignored=565432) at init.c:47 [debug]## 0x0006ccb0 in _Thread_Handler () at /home/hill/nios2-rtems/rtems/rtems-git/rtems-4.10/c/src/../../../../cpukit/score/src/threadhandler.c:145 [debug]## 0x0006cc28 in _Thread_Is_heir (the_thread=0x6cc28) at ../../../../../../cpukit/../../../../altera-sys-config/lib/include/rtems/score/thread.inl:82 [debug]Backtrace stopped: frame did not save the PC

	RTEMS tar does not overwrite.					2 years ago
	A host tar by default will overwrite the contents of a directory. A sort of refresh. The RTEMS tar requires you remove the existing files rather than overwrite. This is dangerous because you have to remove files yet you do not know if the tar will be successful and moving and saving files assumes you know the contents of the tar file before hand. Tar should be changed to overwrite and so allow files to be refreshed. Consistence of files should be managed outside of tar via hashes or checksums.

	Add coverage report generation support to rtems-tools					2 years ago

Description	This ticket is to capture the current state of the project started by Krzysztof Miesowicz <krzysztof.miesowicz@...>. The goals of the project were to:					
	- replace the existing shell scripts in rtems-testing with Python code integrated into rtems-tools - add the capability to generate a report per directory. This is important because a large body of code with low coverage negatively impacts the overall coverage area and makes reports harder to read. Breaking the reports down by functional area lets us do coverage reporting on more code even when some of the areas are in need of testing improvement.					
	The remaining effort in conjunction with other activity related to coverage such as inclusion of gcov generated reports is a good "summer of code" type project. This is an important capability to add to the rtems-tools.					
Summary	The attached tar file krzyz-patches.tar.bz2 contains the current code. There may be other issues to resolve but writing from memory, the following are the highest priority ones:					
	- no default setting for coverage enable/disable - configuration file has hard coded paths. This should be able to be a template which is adjusted by the tools at run-time. - variable naming and coding style does not match that used in other Python code in rtems-tools					
	Krzysztof wrote some in his blog about this (http://kmiesowicz.blogspot.com/p/esa-socis-2014.html). Ensure that your base RTEMS tools are built with the RTEMS Source Builder and check on the development list if it builds a qemu with coverage support. This may have changed since he blogged.

```

The watchdog lock is highly contended and since the watchdog insert procedure acquires and releases the lock during the iteration of the watchdog chain several times, this yields the high thread dispatch disabled times.

To get rid of this bottleneck we should move the watchdog context into the scheduler context to use one watchdog context per scheduler instance. Take care that active watchdogs move in case of a scheduler change of a thread.

#2354	5 years ago	fixed	unspecified	Sebastian Huber		2 years ago
Summary	Replace red-black tree implementation, change API					
Description	The RTEMS red-black tree implementation is not as good as the BSD implementation which performs quite well in a benchmark: https://github.com/sebhub/rb-bench					
	Proposal: https://github.com/sebhub/rb-bench/blob/master/test-rttree-bsd-for-rtems.c					
	One benefit is that the search/insert is done inline and the red-black tree fixup is done in a general purpose _BSD_RBTree_Insert_color() function (similar to the Linux red-black tree API).					
	This makes it possible to get rid of the red-black tree implementation used by the JFFS2 support.					
#2355	5 years ago	fixed	arch/sparc	Sebastian Huber	Daniel Hellstrom	2 years ago
Summary	SPARC: Several shared drivers are not SMP ready					
Description	Several drivers in c/src/lib/libbsp/sparc/shared/ use interrupt disable/enable for low-level mutual exclusion. This is not enough on SMP configurations.					
#2363	5 years ago	duplicate	arch/sparc	Sebastian Huber		2 years ago
Summary	SPARC: Silent FP context corruption possible					
Description	On uni-processor configurations the post-switch actions (e.g. signal handlers) and context switch extensions may silently corrupt the floating point context. Set test sptests/spcontext01.					
	This problem exists for many years and might be working as intended. It is possible to fix this issue using the SPARC_USE_SAFE_FP_SUPPORT option. This is already used for the SMP configurations. The disadvantage is that this disables the deferred floating point support.

Summary	Enable function and data sections					

In order to reduce the size of executables it is beneficial to put all global functions and data into separate sections. This enables the linker to perform a garbage collection which removes all items not directly referenced. The following steps are necessary:

- Descripti
on
1. Modify the build system to use the following compiler and linker flags:

CFLAGS += -ffunction-sections -fdata-sections LDFLAGS += -Wl,--gc-sections

2. Review all linker command files and ensure that linker sets and global constructor sections are not affected by the garbage collection (e.g. use the KEEP() directive of GNU ld).

Summar
y

Linker set based initialization

Linker sets are used for example in Linux, FreeBSD (they are used in the RTEMS port of the FreeBSD network stack, e.g. libbsd), eCos and for global C++ constructors. They provide a space efficient and flexible means to initialize modules. A linker set consists of

- dedicated input sections for the linker (e.g. `.ctors` and `.ctors.*` in the case of global constructors),
- a begin marker (e.g. provided by `__ctbegin.o`), and
- an end marker (e.g. provided by `__ctrend.o`).

A module may place a certain data item into the dedicated input section. The linker will collect all such data items in this section and creates a begin and end marker. The initialization code can then use the begin and end markers to find all the collected data items (e.g. function pointers).

Lets look how this works using a simple example. For this we need three files `myset.h`,

```
#ifndef MYSET_H
#define MYSET_H

/* The linker set items */
typedef struct {
    void (*func)(void);
} item;

/*
 * Macro to create a linker set item. The first parameter is
 * the designator of the item. It must be unique within the
 * module scope. The second parameter is the desired function.
 */
#define MYSET_ITEM(i, f) \
    __attribute__((used)) \
    __attribute__((section(".rtemsroset.myset.content"))) \
    static item i = { f }

#endif /* MYSET_H */
```

`module.c`

```
#include "myset.h"
#include <stdio.h>

/*
 * Some global function that needs a module specific
 * initialization done by f().
 */
void
g(void)
{
    printf("g() \n");
}

/* The module constructor */
static void
f(void)
{
    printf("f() \n");
}

/*
 * This registers the module constructor f()
 * in the linker set "myset".
 */
MYSET_ITEM(i, &f);
```

and `init.c`.

```
#include "myset.h"
#include <stddef.h>

/* Should be in a proper header file */
void g(void);

/* Define the start marker */
__attribute__((used))
__attribute__((section(".rtemsroset.myset.begin")))
static volatile const item begin[0];

/* Define the end marker */
__attribute__((used))
__attribute__((section(".rtemsroset.myset.end")))
static volatile const item end[0];

int main(void)
{
    size_t n = &end[0] - &begin[0];
    size_t i;

    /* Call all functions of the linker set */
    for (i = 0; i < n; ++i) {
        (*begin[i].func)();
    }

    /*
     * This will pull in the module.c and register its item in the
     * linker set "myset". So g() can rely on f() being called first.
     */
    g();

    return (0);
}
```

Descripti
on

In the linker command file of the GNU linker we need the following statement.

```
.rtemsroset : {
    KEEP (*(SORT(.rtemsroset.*)))
}
```

The `KEEP()` ensures that a garbage collection by the linker will not discard the content of this section. This would be normally the case since the linker set items are not referenced

directly. The `|SORT()` directive sorts the input sections lexicographically. Please note the lexicographical order of the `|.begin|`, `|.content|` and `|.end|` section name parts in the previous example which ensures that the position of the begin and end markers are right. The interesting part of linker map file of the previous example may look like this.

```
.rtemsroset      0x0000000001001990      0x4 load address 0x000000000002268c
*(SORT(.rtemsroset.*))
.rtemsroset.myset.begin
                0x0000000001001990      0x0 init.o
.rtemsroset.myset.content
                0x0000000001001990      0x4 module.o
.rtemsroset.myset.end
                0x0000000001001994      0x0 init.o
```

So what is the benefit of using linker sets to initialize modules? Currently in RTEMS all available managers (semaphore, message queue, barrier, etc.) are initialized since the initialization code doesn't know what is actually used by the application. With the linker set approach we need to initialize only those managers that are used by the application. In case an application uses message queues, then it must call `|rtems_message_queue_create()|`. In the module implementing this function we can place a linker set item and register the message queue handler constructor. Otherwise, in case the application doesn't use message queues, then there will be no reference to the `|rtems_message_queue_create()|` function and the constructor is not registered, thus nothing of the message queue handler will be in the final executable.

Summary

Improved priority inheritance implementation

Problem

The RTEMS mutexes implement only a very simple approximation of the priority inheritance protocol. The real priority of a thread is only restored once it releases its last mutex. Lets consider this scenario. We have a file system instance protected by one mutex (e.g. JFFS2) and a dynamic memory allocator protected by another mutex. A low priority thread performs writes some log data into a file, thus it acquires the file system instance mutex. The file system allocates dynamic memory. Now a high priority thread interrupts and tries to allocate dynamic memory. The allocator mutex is already owned, so the priority of the low priority thread is raised to the priority of the high priority thread. The memory allocation completes and the allocator mutex is released, since the low priority thread still owns the file system instance mutex it continues to execute with the high priority (the high priority thread is not scheduled). It may now perform complex and long file system operations (e.g. garbage collection, polled flash erase and write functions) with a high priority.

Functional requirements

- The mutex shall use the priority inheritance protocol to prevent priority inversion. On SMP configurations OMIP shall be used.
- The mutex shall allow vertical nesting (a thread owns multiple mutexes).
- The mutex shall allow horizontal nesting (a thread waits for ownership of a mutex those owner waits for ownership of a mutex, and so on).
- Threads from one scheduler instance shall wait in priority order. The highest priority thread shall be dequeued first.
- The highest priority waiting thread of each scheduler instance shall wait in FIFO order.
- The mutex shall provide an acquire operation with timeout.
- In case a mutex is released, then the previous owner shall no longer use the priorities inherited by this mutex.
- In case a mutex acquire operation timeout occurs, then the current owner of the mutex shall no longer use the priorities inherited by the acquiring thread.
- The order of the mutex release operations may differ from the order of the mutex acquire operations.
- Priority changes not originating due to the priority inheritance protocol shall take place immediately.
- Deadlock shall be detected. In case a deadlock would occur an error status shall be returned or a fatal error shall be generated.
- Deadlocks at application level shall not lead to a deadlock at operating system level.

Performance requirements

- The mutex acquire operation shall use only object-specific locks in case the mutex is not owned currently.
- The mutex release operation shall use only object-specific locks in case no threads wait for ownership of this mutex.

Invariants

- A mutex shall be owned by at most one thread.
- A thread shall wait for ownership of at most one mutex.

Possible implementation

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

```
typedef struct Thread_Priority_node {
    Priority_Control current_priority;
    Priority_Control real_priority;
    struct Thread_Priority_node *owner;
    RBTREE_Node Node;
    RBTREE_Control Inherited_priorities;
} Thread_Priority_node;

typedef struct {
    ...
    Thread_Priority_node *priority_nodes; /* One per scheduler instances */
    ...
} Thread_Control;
```

Initially a thread has a priority node reflecting its real priority. The `Thread_Priority_node::owner` is `NULL`. The `Thread_Priority_node::current_priority` is set to the real priority. The `Thread_Priority_node::Inherited_priorities` is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in `Thread_Priority_node::Inherited_priorities` of the mutex owner.

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in `Thread_Priority_node::Inherited_priorities` of the previous mutex owner (ownership transfer) or the current mutex owner (acquire timeout).

In case the minimum of `Thread_Priority_node::real_priority` and `Thread_Priority_node::Inherited_priorities` changes, then `Thread_Priority_node::current_priority` is updated. In case the `Thread_Priority_node::owner` its not `NULL`, the priority change propagates to the owner, and so on. In case `Thread_Priority_node::current_priority` changes, the corresponding scheduler is notified.

The biggest issue is the locking on SMP configurations in case of recursive minimum updates.

Somehow we must connect this to the scheduler helping protocol for OMIP. We may have to replace the return value based scheduler operations with a pre-context-switch action. Due to some recent implementation changes the run-time of the `_Thread_Dispatch()` function is no longer average-case performance critical.

Summary	RSB %source file fails					
Description	It seems that the method for accessing an existing file repository both isn't covered much in the "manual", but it also fails to find it. Looking at the python code in download.py, it requires the format <code>file://</code> to identify the local file protocol, but then tries to access the actual file/directory using that the entire url (including <code>file://</code>). This unfortunately fails and I'm not familiar enough with Python to correct this, although it appears that the <code>"file://"</code> part should be cut from the URL before calling the "return path.isdir(url)" in the <code>_file_downloader</code> function.

Summary	rtems_iterate_over_all_threads lacks user callback private pointer pass through					
Description	Typically when designing an API that calls a user callback there is a user private "void *" pointer transparently passed through to the user callback so that the user can access his private state inside of his callback without being forced to employ a global variable. A global variable doesn't work very well if there are multiple objects instances created each of them using the same method with <code>rtems_iterate_over_all_threads</code>. This type of "void *" private pointer is of course a standard approach allowing the users callback to behave much the same way as a virtual method in C++, but nevertheless retaining a compatible C based API. An enhanced version of the API might look like this. <pre>void rtems_iterate_over_all_threads_xxx(rtems_per_thread_routine routine, void * const pUserPrivatePassThrogh);</pre> <pre>typedef void (*rtems_per_thread_routine_xxx)(Thread_Control *the_thread, void * const pUserPrivatePassThrogh);</pre> The <code>pUserPrivatePassThrogh</code> is not used by the library; it is retained for the duration of the <code>rtems_iterate_over_all_threads_xxx</code> function only so that it can be passed through to the user's callback. thanks for your consideration of this matter

Summary	Remove AVR Architectural Port					
Description	Remove the AVR port per the instructions at https://devel.rtems.org/wiki/Developer/Removing_a_Port. All BSPa must be removed before the architectural port can be removed. These are tracked by the following tickets: #2442 - avrtest Rationale: The AVR port is incomplete and the largest AVR CPU models are just barely large enough to run RTEMS. This by itself is not enough to drop the port. However, the state of GCC for this target is poor. It is marginally maintained. Atmel maintains their own patch set independent of GCC. Plus they use their own small (and unique) C Library. This makes avr-rtems the only user of AVR+newlib. The target size is a challenge but that was why the port was initially interesting. It provided a real goal. But the tool state is painful for a port which is incomplete and has neither users nor anyone interested in actively maintaining it for GCC or RTEMS.

#2554	4 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	New watchdog handler implementation					

Background

The watchdog handler uses delta chains. The insert operation has a $O(n)$ worst-case time complexity with n being the count of watchdogs in the delta chain. In each step of the insert operation, the SMP lock of the corresponding watchdog header is acquired and released. The profiling data obtain by test program `smptests/smpwakeafter01` showed that the current implementation leads to unacceptable latencies, thus it should be replaced by something else.

The use cases for the watchdog handler fall roughly into two categories.

- Timeouts - used to detect if some operations needs more time than expected. Since the unexpected happens hopefully rarely, timeout timers are usually removed before they expire. The critical operations are insert and removal. They are important for the performance of a network stack.
- Timers - used to carry out some work in the future. They usually expire and need a high resolution. An example user is a time driven scheduler, e.g. rate-monotonic or EDF.

One approach is to use a red-black tree with the expiration time as the key. This leads to $O(\log(n))$ worst-case insert and removal operations. For each operation it is sufficient to acquire and release the lock only once. The drawback is that a 64-bit integer type must be used for the intervals to avoid a potential overflow of the key values. With a system tick interval of 1ns the system could run more than 500 years before an overflow happens. The EDF scheduler would also profit from a 64-bit interval representation, see [#2173](#).

An alternative is the use of a **timer wheel** based algorithm which is used in Linux and **FreeBSD** for example. A timer wheel based algorithm offers $O(1)$ worst-case time complexity for insert and removal operations. The drawback is that the run-time of the watchdog tick procedure is somewhat unpredictable due to the use of a hash table or cascading.

Which approach should we choose? Since the watchdog serves the timeout and timer services in RTEMS we have to make some trade-offs. We recommend to use the red-black tree approach which offers a more predictable run-time behaviour and sacrifice the constant insert and removal operations offered by the timer wheel algorithms, see also <https://www.kernel.org/doc/ols/2006/ols2006v1-pages-333-346.pdf>. We can reuse the red-black tree support already used for the thread priority queues.

The new watchdog handler implementation is a prerequisite to eliminate the Giant lock in the Classic Timer manager.

Implementation

Change the `_Watchdog_Ticks_since_boot` to a 64-bit integer type. Keep the `_Watchdog_Interval` at 32-bit for backward compatibility. Replace the delta chains with a red-black tree. Use the ticks for timers with a relative expiration time. Use `struct timespec` or `struct bintime` for timers with an absolute expiration time. This has the benefit that we do not have to adjust the data structures in case the absolute time changes, e.g. due to NTP. It simplifies the POSIX timer services, since no conversion to ticks is necessary.

#2555	4 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
-------	-------------	-------	-------	-----------------	-----------------	-------------

Summary
Eliminate the Giant lock

Background

The standard approach to turn a uni-processor operating system into an SMP-capable operating system is to encapsulate virtually the complete operating system state and protect it by one global recursive lock - the Giant lock. Thus, at most one processor can modify the operating system state at a time. Under Giant lock protection interrupt disable/enable critical sections still work. This approach is easy to realize and leads to something that runs on SMP with a minimal effort. Unfortunately, such an operating system does not scale with the processor count and offers very poor performance. It is quite useless for real applications.

The first steps to get rid of the Giant lock are tackled with the introduction of fine grained locking for the scheduler, watchdog handler, timestamps, thread queues, events, semaphores and message queues. The Giant lock is still used in a couple of places, e.g. all other objects using thread queues, thread life cycle changes (termination, restart) and scheduler changes. It is a straight forward task to eliminate it entirely, but it is also somewhat labour intensive since a lot of code must be changed.

Implementation

Eliminate all remaining code areas that use

- `_ISR_Disable()`,
- `_ISR_Enable()`, and
- `_ISR_Flash()`.

Direct users of these macros are

- `_Chain_Append()`,
- `_Chain_Extract()`,
- `_Chain_Get()`,
- `_Chain_Insert()`, and
- `_Chain_Prepend()`.

Each spot must be dealt with individually. Once this is done, delete these macros since they are now superfluous. Rename `_ISR_Disable_without_giant()` into `_ISR_Locale_disable()`. Rename `_ISR_Enable_without_giant()` into `_ISR_Locale_enable()`.

Eliminate all remaining code areas that use

- `_Thread_Disable_dispatch()` and
- `_Thread_Enable_dispatch()`.

A prominent user of this functions is `_Objects_Get()`. The following components are affected by these functions

- Classic barrier handler,
- Classic dual-ported memory handler,
- Classic message queue handler,
- Classic partition handler,
- Classic rate-monotonic handler,
- Classic region handler,
- Classic semaphore handler,
- Classic timer handler,
- extension handler,
- IO manager,
- multi-processing management,
- objects management,
- POSIX barrier handler,
- POSIX condition handler,
- POSIX key handler,
- POSIX message queue handler,
- POSIX mutex handler,
- POSIX rwlock handler,
- POSIX semaphore handler,
- POSIX spinlock handler,
- POSIX timer handler,
- signals,
- thread cancellation,
- thread life-cycle changes, and
- thread scheduler changes.

Once this is done, delete `_Thread_Disable_dispatch()` and `_Thread_Enable_dispatch()`. As a side-effect the Giant lock will be removed.

-------	-------------	-------	-------	-----------------	-----------------	-------------

Summary
Implement the O(m) Independence-Preserving Protocol (OMIP)

Background

The O(m) Independence-Preserving Protocol (OMIP) is a generalization of the priority inheritance protocol to clustered scheduling which avoids the non-preemptive sections present with priority boosting. The m denotes the number of processors in the system. Its implementation requires an extension of the scheduler helping protocol already used for the MrsP semaphores. However, the current implementation of the scheduler helping protocol has two major issues, see Catellani, Sebastiano, Luca Bonato, Sebastian Huber, and Enrico Mezzetti: Challenges in the Implementation of MrsP. In Reliable Software Technologies - Ada-Europe 2015, pages 179–195, 2015. Firstly, the run-time of some scheduler operations depend on the size of the resource dependency tree. Secondly, the scheduler operations of threads which don't use shared resources must deal with the scheduler helping protocol in case an owner of a shared resource is somehow involved.

To illustrate the second issue, let us look at the following example. We have a system with eight processors and two L2 caches. We assign processor 0 to a partition P for latency sensitive real-time tasks (e.g. sensor and actuator handling), processors 1, 2 and 3 are assigned to a cluster C_A and the remaining processors are assigned to a cluster C_B for soft real-time worker tasks. The worker tasks use a shared resource, e.g. a file system for data storage. Let us suppose a task R of partition P sends a message to the workers. This may make a waiting worker ready, which in turn pre-empts the owner of a shared resource. In this case the scheduler helping protocol takes action and is carried out by the task R. This contradicts the intended isolation of scheduler instances.

The reason for this unfortunate coupling is a design issue of the scheduler helping protocol implementation. Some scheduler operations may return a thread in need of help. For example, if a thread is unlocked which pre-empts an owner of a shared resource, then the pre-empted thread is returned. Once a thread in need of help is returned, the ask for help operation of the scheduler is executed. An alternative to this return value based approach is the introduction of a pre-emption intervention during thread dispatching. Threads taking part in the scheduler helping protocol indicate this with a positive resource count value. In case a thread dispatch occurs and pre-empts an owner of a shared resource, the scheduler ask for help operation is invoked. So, the work is carried out on behalf of the thread which takes part in the scheduler helping protocol.

To overcome the first issue, an improved resource dependency tracking is required. One approach is to use a recursive red-black tree based data structure, see #2412.

Implementation

There are several steps necessary to implement OMIP.

- Introduce per-scheduler locks.
- Enable context switches with interrupts enabled.
- Add a pre-emption intervention to the thread dispatch.
- Add a table for priority nodes to the thread control block. For each scheduler instance there is one priority node.
- Update the table in case the thread blocks on a resource, a timeout while waiting for a resource occurs, or ownership of a resource is transferred to the thread.
- Use this table in the pre-emption intervention.
- Update the MrsP implementation to the new infrastructure.

Currently, only one scheduler lock for all scheduler instances is used. This simplified the MrsP implementation and due to the presence of a Giant lock, this was not an issue. With the elimination of the Giant lock, however, we need one scheduler lock per scheduler instance to really profit from a decoupled system due to clustered scheduling.

The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress.

If we add pre-emption intervention to the thread dispatch sequence, then there is an even greater need to avoid this issue with the interrupt latency. Interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame.

The pre-emption intervention should be added to `_Thread_Do_dispatch()` before the heir is read and perform the following pseudo-code actions.

```
pre_emption_intervention(executing):
    if executing.resource_count > 0:
        executing.lock()
        if executing.is_ready():
            for scheduler in executing.schedulers:
                scheduler.lock()
            if !executing.is_scheduled():
                for scheduler in executing.schedulers:
                    scheduler.ask_for_help(executing)
            for scheduler in executing.schedulers:
                scheduler.unlock()
        else if executing.active_help_level > 0:
            idle.use(executing.scheduler_node)
            executing.unlock()
```

The scheduler help operation affects multiple scheduler instances. In terms of locking we have only two options,

- use a global scheduler lock, or
- obtain multiple per-scheduler locks at once.

A global scheduler lock is not an option. To avoid deadlocks obtain the per-scheduler locks in a fixed order. However, in this case the per-scheduler locks will observe different worst-case and average-case acquire times (depending on the order).

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

```
typedef struct Thread_Priority_node {
    Priority_Control current_priority;
    Priority_Control real_priority;
    struct Thread_Priority_node *owner;
    RBTREE_Node Node;
    RBTREE_Control Inherited_priorities;
} Thread_Priority_node;

typedef struct {
    ...
    Thread_Priority_node *priority_nodes; /* One per scheduler instances */
    ...
} Thread_Control;
```

Initially a thread has a priority node reflecting its real priority. The `Thread_Priority_node::owner` is `NULL`. The `Thread_Priority_node::current_priority` is set to the real priority. The `Thread_Priority_node::Inherited_priorities` is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in `Thread_Priority_node::Inherited_priorities` of the mutex owner.

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in `Thread_Priority_node::Inherited_priorities` of the previous mutex owner (ownership transfer) or the current mutex owner (acquire timeout).

In case the minimum of the `Thread_Priority_node::real_priority` and the `Thread_Priority_node::Inherited_priorities` changes, then `Thread_Priority_node::current_priority` is updated. In case the `Thread_Priority_node::owner` is not `NULL`, the priority change propagates to the owner, and so on. In case `Thread_Priority_node::current_priority` changes, the corresponding scheduler is notified.

Summar y	POSIX Condition Variables Clock Attribute Support					
-------------	---	--	--	--	--	--

Descripti on	I am beginning to add support for the clock attribute to POSIX condition variables. http://pubs.opengroup.org/onlinepubs/9699919799/functions/pthread_condattr_getclock.html Since the clock can't be a CPU time clock, that leaves CLOCK_MONOTONIC and CLOCK_REALTIME. The thread queue is based on CLOCK_MONOTONIC and does not have an option to use CLOCK_REALTIME. Threads and timers waiting on CLOCK_REALTIME should be impacted by time of day changes. https://docs.google.com/document/d/1GsGer0t84p-nUfZFim4Ty0LTDYNhgKBvlwip_gLQjTY/edit?usp=sharing is a Google doc with my notes so far in it on POSIX clocks. I will move it to the Wiki as it turns into something more concrete than notes and reflects plans/code. So the first issue is how best to alter the thread queue to support using either clock source? And what does that do to the current ticks based API since you proposed different time representations for the ticks (relative/monotonic) and seconds (absolute/realtime) structures?

Waf: Leaving directory `/home/josh/development/rtems/rtems-libbsd/build/i386-rtems4.12-pc386' Build failed

<https://devel.rtems.org/wiki/Release//5/5.1>

Descripti on	The <code>rtems_configuration_table</code> has:					
	<pre>#ifdef RTEMS_SMP bool smp_enabled; #endif</pre>					
Summar y	I would like the <code>smp_enabled</code> variable to always be defined for 4.12 and always set to <code>false</code> when <code>RTEMS_SMP</code> is not defined. It is impossible to parse the configuration table with external auditing tools with out this field always being present unless you examine the DWARF debug info.					
	I wonder if <code>User_multiprocessing_table</code> is the same so this means the members of the configuration table must always be defined.					
Summar y	Chris

Summar y	2 years ago					
	POSIX key destructors must be called during thread restart					
Summar y	POSIX key destructors must be called during thread restart. Just like the POSIX cleanup handlers. This ensures that the TLS object destructors are called during thread restart for example. It is important for the global construction, which uses a thread restart to run the Init task in a clean environment.					
	#2692	4 years ago	fixed	score	Sebastian Huber	Sebastian Huber
Summar y	2 years ago					
	User extensions execution order must be clarified					
Summar y	The implemented and documented execution order of some user extensions disagree. Intended behaviour must be tested. Documentation must be updated accordingly.					
	#2693	4 years ago	fixed	doc	Joel Sherrill	Chris Johns
Summar y	2 weeks ago					
	Update doc to reflect obsoleting rtems_clock_get()					
Summar y	Ticket to reflect documentation change needed on the master but not on 4.11. When new documentation format is available for master, this needs to be accounted for.					
	#2694	4 years ago	worksforme	network/legacy	Joel Sherrill	Sebastian Huber
Summar y	2 years ago					
	linking issue for htonl, etc when using -std=c99					
Summar y	When -std=c99 is on the compile line, there is a linking error for undefined references to htonl , htons , ntohl , and ntohs . This test case is just for htonl but others should be similar.					
	This likely impacts the 4.11 branch of rtems-libbsd as well but I was testing on master.					
Summar y	Test case ===== #include <arpa/inet.h>					
	int main(int argc, char argv) { uint32_t v = (uint32_t) argc; uint32_t rc = htonl(v); return v; } =====					
Summar y	This script was what I used to find what caused the linking error to go away.

	Summar y	cpukit/libfs/src/nfsclient/src/rpcio.c:524]: (style) Suspicious condition					
	Descripti on	cpukit/libfs/src/nfsclient/src/rpcio.c:524]: (style) Suspicious condition (assignment + comparison); Clarify expression with parentheses. Source code is if ((len = getgroups(NGROUPS, gids) < 0)) { maybe better code if ((len = getgroups(NGROUPS, gids)) < 0) {					
		#2701	4 years ago	fixed	build	printk	Amar Takhar
Summar y		Rename asm file with .S(upper case) ext. name					
Descripti on	The are some asm file with .s ext. name, .s and .S is different for gnu as, the pre processed produce .s file from .S. In a word, .S can use #define .s can not. KBuild clean .s files when make clean. I have submit a patch to devel, but blocked. Too big patch.						
#2702	4 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago	
Summar y	Remove descriptor objects for POSIX message queues						
Descripti on	The mq_open() function returns a descriptor to a POSIX message queue object identified by a name. This is similar to sem_open(). In contrast to the POSIX semaphore the POSIX message queues use a separate object for the descriptor. This extra object is superfluous, since the object identifier can be used directly for this purpose, just like for the semaphores.						
#2706	4 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber <sebastian.huber@...>	2 years ago	
Summar y	Buffer allocation of capture engine is broken on SMP configurations						
Descripti on	The capture engine uses function static variables.						
#2707	4 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber <sebastian.huber@...>	2 years ago	
Summar y	Unsafe use of current processor index in capture engine						
Descripti on	The current processor index is used outside a thread dispatch disabled section.						
#2714	4 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago	
Summar y	A pthread_detach() does not lead to a resource reclamation						
Descripti on	According to POSIX a pthread_detach() should lead to a resource reclamation if the thread is already cancelled.						
#2718	4 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber	2 years ago	
Summar y	Blocking _CORE_message_queue_Submit() may lead to unpredictable results						
Descripti on	The thread wait return code is not properly initialized before the thread queue enqueue.

#2725	4 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Classic binary semaphores without a locking protocol can be released by everyone					

The Classic binary semaphores without a locking protocol can be released by everyone, e.g. in contrast to the POSIX mutexes (all variants) or the Classic binary semaphores with priority inheritance or ceiling, there is no owner check in the release path.

This behaviour is a bit unexpected and not documented.

The following test case fails in case an owner check is added:

Description	<pre>*** BEGIN OF TEST SP 42 *** Exercising blocking discipline w/extract in FIFO order Exercising blocking discipline w/unblock in FIFO order TA00 - unblocked - OK rtems_semaphore_delete FAILED -- expected (RTEMS_SUCCESSFUL) got (RTEMS_RESOURCE_IN_USE)</pre>
-------------	--

This is actually a bug in the test, since an available mutex is released again.

#2726	4 years ago	fixed	arch/sparc	Sebastian Huber	Daniel Hellstrom	2 years ago
Summary	grascs.c: Questionable use of binary semaphore					

Use a simple binary semaphore or binary semaphore with inherit priority instead.

Description	<pre>c/src/lib/libbsp/sparc/shared/ascs/grascs.c- c/src/lib/libbsp/sparc/shared/ascs/grascs.c- /* Create semaphores for blocking ASCS_TC/TM functions */ c/src/lib/libbsp/sparc/shared/ascs/grascs.c- if(rtems_semaphore_create(rtems_build_name('A','S','C','0'),1, c/src/lib/libbsp/sparc/shared/ascs/grascs.c- (RTEMS_FIFO RTEMS_BINARY_SEMAPHORE c/src/lib/libbsp/sparc/shared/ascs/grascs.c- RTEMS_NO_INHERIT_PRIORITY RTEMS_LOCAL c/src/lib/libbsp/sparc/shared/ascs/grascs.c- RTEMS_NO_PRIORITY_CEILING), 0, c/src/lib/libbsp/sparc/shared/ascs/grascs.c- &cfg->tcsem1) != RTEMS_SUCCESSFUL) {</pre>

#2742	4 years ago	fixed	unspecified	Joel Sherrill	Sebastian Huber	2 years ago
Summary	New warning in SHM driver					
Description	Not sure how to fix this one <pre>../../../../rtems/c/src/libchip/shmdr/init.c:241:29: warning: assignment from incompatible pointer type [-Wincompatible-pointer-types]</pre> <pre>MPCI_Shmem_extensions.fatal = MPCIE_Fatal;</pre> PowerPC/psim with multiprocessing enabled.					
#2745	4 years ago	fixed	posix	Gedare Bloom	Gedare Bloom	2 years ago
Summary	Use clock from pthread_condattr in pthread_cond_timedwait					
Description	For pthread_cond_timedwait, the condition variable shall have a clock attribute which specifies the clock that shall be used to measure the time specified by the abstime argument. RTEMS currently does not honor the clock attribute. See http://pubs.opengroup.org/onlinepubs/9699919799/functions/pthread_cond_timedwait.html					
#2748	4 years ago	fixed	network/legacy	Sebastian Huber	Sebastian Huber <sebastian.huber@...>	2 years ago
Summary	Move RTEMS-specific socket wake-up to RTEMS-specific <rtems/rtems_bsdnet.h>					
Description	The <sys/socket.h> contains definitions for the RTEMS-specific socket wake-up support. Move this stuff to <rtems/rtems_bsdnet.h> since this feature is not present in standard network stacks. Portable applications should not use it.					
#2749	4 years ago	fixed	rtems	Sebastian Huber	Sebastian Huber	2 years ago
Summary	rtems_task_set_scheduler() has insufficient parameters					

Task priorities are only valid within a scheduler instance. The `rtems_task_set_scheduler()` directive moves a task from one scheduler instance to another using the current priority of the thread. However, the current task priority of the source scheduler instance is undefined in the target scheduler instance. Add a third parameter to specify the priority.

```
/**
 * @brief Sets the scheduler instance of a task.
 *
 * Initially, the scheduler instance of a task is set to the scheduler instance
 * of the task that created it. This directive allows to move a task from its
 * current scheduler instance to another specified by the scheduler identifier.
 *
 * @param[in] task_id Identifier of the task. Use @ref RTEMS_SELF to select
 * the executing task.
 * @param[in] scheduler_id Identifier of the scheduler instance.
 * @param[in] priority The task priority with respect to the new scheduler
 * instance. The real and initial priority of the task is set to this value.
 * The initial priority is used by rtems_task_restart() for example.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_ILLEGAL_ON_REMOTE_OBJECT Directive is illegal on remote tasks.
 * @retval RTEMS_INVALID_ID Invalid task or scheduler identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid priority.
 * @retval RTEMS_RESOURCE_IN_USE The task owns resources which deny a scheduler
 * change.
 *
 * @see rtems_scheduler_ident().
 */
rtems_status_code rtems_task_set_scheduler(
  rtems_id task_id,
  rtems_id scheduler_id,
  rtems_task_priority priority
);
```

#2750	4 years ago	fixed	unspecified	Joel Sherrill	Sebastian Huber	2 years ago

Summary
Compile Error When Multiprocessing Enabled

This should impact every BSP with multiprocessing enabled but I saw it on the sparc/leon3 and powerpc/psim

```
.././cpukit/./../psim/lib/include/rtems/score/basedefs.h:229:5: error: static assertion failed: "Message_queue_MP_Packet"
```

```
_Static_assert(cond, # msg)
```

```
.././././././rtems/c/src/./../cpukit/rtems/src/msgmp.c:28:1: note: in expansion of macro 'RTEMS_STATIC_ASSERT'
```

```
RTEMS_STATIC_ASSERT(
```

#2751	4 years ago	fixed	score	Sebastian Huber	Sebastian Huber	22 months ago
-------	-------------	-------	-------	-----------------	-----------------	---------------

Summary
Thread dispatch via interrupt is broken at least on ARM and PowerPC

The ARM and PowerPC interrupt epilgues call `_Thread_Dispatch()` with interrupts disabled (counter example: SPARC).

On SMP configurations, since inter-processor interrupts set the thread dispatch necessary indicator this prevents a thread dispatch notification in post-switch handlers (which all run with interrupts disabled).

On all configurations, this is a serious issue for the interrupt latency.

-------	-------------	-------	-------	-----------------	-----------------	-------------

Summary
Relax execution enviroment for thread begin extensions

Currently, the thread begin extensions are invoked with thread dispatching disabled. There is an explanation for this in the code

```
/*
 * Take care that 'begin' extensions get to complete before
 * 'switch' extensions can run. This means must keep dispatch
 * disabled until all 'begin' extensions complete.
 */
_User_extensions_Thread_begin( executing );
```

However, the switch extension is always invoked before the thread begin extension for all threads except the initialization thread. A thread dispatch disabled contexts drastically limits the work which can be carried out in the thread begin extensions. It is for example not possible to call `malloc()`, create POSIX keys or access C++ thread local storage.

The thread begin extension should excute in a normal thread context. Thread begin extensions that are disturbed by a thread dispatch should deal with this locally.

With the availability of C++ thread local storage in RTEMS being able to pre-initialize such objects in the thread begin extension would be quite handy.

Summary
no .strtab section

`dlopen` on the object generated by `libfoo.cpp` in the attached test case fails and results in the error `no .strtab section`. `readelf` shows that the section is present, though:

```
readelf -S libfoo.o | grep strtab
(standard input):97: [92] .shstrtab          STRTAB          00000000 001fb0 00040c 00      0 0 1
(standard input):99: [94] .strtab            STRTAB          00000000 0018b0 00019e 00      0 0 1
```

Steps to Reproduce (you may have to edit `BSP_DIR` in the Makefile):

```
make clean all
qemu-system-arm -m 256M -M xilinx-zynq-a9 -serial null -serial mon:stdio \
  -nographic -no-reboot -kernel libdl-strtab-test.exe
```

Expected Output:

```
TEST BEGIN
dlopen: no .strtab section
assertion "handle != NULL" failed: file "libdl-strtab-test.c", line 46, function: POSIX_Init
```

Development Environment:

- **RTEMS Version:** 4.11 (Branch "4.11", commit [3f72dda6ee518d3ea04341ad4df079ecb1895ef7](#)) with the dlerror patches from [#2747](#), and the attached ARM PREL31 support patch (I will be making a separate ticket for this with test code soon).
- **System Type:** ARM Cortex-A9, `xilinx_zynq_a9_qemu` BSP
- **GCC Version:**

```
arm-rtems4.11-gcc (GCC) 4.9.3 20150626 (RTEMS 4.11, RSB 1675a733536d1aec2020011e5e522497a442561a (HEAD, origin/4.11, 4.11), Newlib 2.2.0.20150423)
```

- **RTEMS Configure Options:**

```
--target=arm-rtems4.11 --enable-rtemsbsp="xilinx_zynq_a9_qemu xilinx_zynq_zedboard xilinx_zynq_csp_cots xilinx_zynq_csp_hybrid" --enable-tests=samples --enable-posix --prefix=$HOME/development/rtems/4.11 --disable-networking
```

	Overrun Handling for general real-time models					
Description	In the current implementation, if a task period is time out, the next call of rtems_rate_monotonic_period() will only release one following job and manipulate the task period with the calling moment + the next length of period. With the assumption that implicit/constraint deadline and hard real-time model, the above mechanism is okay.					
	However, it may not be applicable for general task models, e.g., soft real-time task, arbitrary deadline, mixed-criticality system [1-4]. It is usually assumed that multiple task jobs of a task are executed in a first-come-first-serve manner. Thus, it is sufficient to release the second task job at the moment the first task job finishes according to a strictly periodic release pattern. The current design in fact shifts the release pattern of periodic/sporadic tasks. Since there maybe more than one postponed jobs due to the preemption, these postponed jobs that should be released are never released to the system.					
Description	Although there is no standard requirement in reality for deadline misses, with this enhancement, the postponed jobs will be released with the correct number without periodic release shifting. This way of handling is already widely considered in academia from 90s [2] until now [3] or even on multicores as well [4].					
	I refine the following four files and handle this requirement individually. The overhead seems to me negligible. cpukit/rtems/include/rtems/rtems/ratemon.h cpukit/rtems/include/rtems/rtems/ratemonimpl.h cpukit/rtems/src/ratemontimeout.c cpukit/rtems/src/ratemonperiod.c I have tested the enhancement on Qemu and Raspberry Pi Model B+ with corresponding BSPs.					
Summary	I believe this patch as a basis is required for further use for more general real-time task models. This enhancement only affect those timeout cases without changing any behaviour in normal cases. This enhancement is accepted in workshop mixed-criticality (WMC 2016) along with RTSS'16 this year [5].					
	To demonstrate the differences, a heuristic example is prepared in testsuites/sptests/sprmsched01 to show the benefit of the enhancement: Given two tasks with implicit deadline that task deadline is equal to its period. Task 1 period is 10000 ticks, whereas task 2 is 2000 ticks. Task 1 has the execution time 6000 ticks, and task 2 has 1000 ticks. Assume Task 1 has a higher priority than task 2. Task 1 only executes 2 times. In the expected result, we can observe that the postponed jobs are continuously released till there is no postponed job left, and the task period will still keep as it is. (Job 3-7 in task 2 are postponed jobs)

Summary
Fix POSIX timer interval

See also:
<https://lists.rtems.org/pipermail/users/2016-October/030714.html>

Descripti
on

Just back to RTEMS after a long time. I've build the last version (Git) with last compiler (4.12) and looks like a simple POSIX timer doesn't work anymore... It should display "Signal 14" every second but period is veryyyy short...and display very fast :(

Any idea? any change in the way to use POSIX with RTEMS?

See my program attached (it works fine with Linux).

I have tested with Raspberry Pi and QEMU/i386.

thx by advance

Summary	Reduce interrupt latency on SMP configurations during thread dispatch					
Description	Currently we have this situation: https://docs.rtems.org/doc-current/share/rtems/html/c_user/Symmetric-Multiprocessing-Services-Thread-Dispatch-Details.html#Symmetric-Multiprocessing-Services-Thread-Dispatch-Details "On SMP systems, scheduling decisions on one processor must be propagated to other processors through inter-processor interrupts. So, a thread dispatch which must be carried out on another processor happens not instantaneous. Thus several thread dispatch requests might be in the air and it is possible that some of them may be out of date before the corresponding processor has time to deal with them. The thread dispatch mechanism uses three per-processor variables, • the executing thread, • the heir thread, and • an boolean flag indicating if a thread dispatch is necessary or not. Updates of the heir thread and the thread dispatch necessary indicator are synchronized via explicit memory barriers without the use of locks. A thread can be an heir thread on at most one processor in the system. The thread context is protected by a TTAS lock embedded in the context to ensure that it is used on at most one processor at a time. The thread post-switch actions use a per-processor lock. This implementation turned out to be quite efficient and no lock contention was observed in the test suite. The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress. It is difficult to avoid this issue with the interrupt latency since interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame. This issue needs further investigation. The problematic situation occurs in case we have a thread which executes with thread dispatching disabled and should execute on another processor (e.g. it is an heir thread on another processor). In this case the interrupts on this other processor are disabled until the thread enables thread dispatching and starts the thread dispatch sequence. The scheduler (an exception is the scheduler with thread processor affinity support) tries to avoid such a situation and checks if a new scheduled thread already executes on a processor. In case the assigned processor differs from the processor on which the thread already executes and this processor is a member of the processor set managed by this scheduler instance, it will reassign the processors to keep the already executing thread in place. Therefore normal scheduler requests will not lead to such a situation. Explicit thread migration requests, however, can lead to this situation. Explicit thread migrations may occur due to the scheduler helping protocol or explicit scheduler instance changes. The situation can also be provoked by interrupts which suspend and resume threads multiple times and produce stale asynchronous thread dispatch requests in the system." Add an interrupt frame to the per-CPU control which can be used during context switches on SMP configurations.					
#2810	3 years ago	fixed	arch/sparc	Joel Sherrill	Joel Sherrill	2 years ago
Summary	Remove sparc/sis BSP variant					
Description	As discussed in the following thread, the sparc/sis BSP variant is no longer necessary and can be removed. https://lists.rtems.org/pipermail/devel/2016-November/016383.html This ticket is to track that removal.					
#2811	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago

Summary	More robust thread dispatching on SMP and ARM Cortex-M						
Description	On SMP configurations, it is a fatal error to call blocking operating system with interrupts disabled, since this prevents delivery of inter-processor interrupts. This could lead to executing threads which are not allowed to execute resulting in undefined behaviour. The ARM Cortex-M port has a similar problem, since the interrupt state is not a part of the thread context. Add a new CPU port function: <pre>/** * @brief Returns true if interrupts are enabled in the specified ISR level, * otherwise returns false. * * @param[in] level The ISR level. * * @retval true Interrupts are enabled in the ISR level. * @retval false Otherwise. */ RTEMS_INLINE_ROUTINE bool _CPU_ISR_Is_enabled(uint32_t level) { return false; }</pre>						
	Use this function to ensure that _Thread_Do_dispatch() is called with an interrupt level with enabled interrupts, otherwise call _Terminate().

The Ada support in GCC should be changed to use a function call or C11 thread-local storage.																																																																																																																																																																										
#2036	3 years ago	fixed	score	Joel Sherrill	Joel Sherrill	2 years ago																																																																																																																																																																					
Summary	Add posix_devctl()																																																																																																																																																																										
Description	The posix_devctl() method is defined in POSIX 1003.26 and required by the FACE POSIX profiles. The only use case that needs to be supported is FIONBIO on sockets per the FACE Technical Standard.																																																																																																																																																																										
	ioctl() is not a standardized method per POSIX and is not included in the FACE Profiles.																																																																																																																																																																										
	Making operations non-blocking can also be done with fcntl() but due to RTOS qualification concerns, fcntl() is not included in the more stringent FACE profiles. Specifically, it is not in the Safety Base profile which matches the RTEMS POSIX capabilities.																																																																																																																																																																										
	This requires adding the <devctl.h> file to newlib. That has been done. I am testing my implementation but a tool update will be needed before this can be pushed to the community. This is OK because we have other reasons to move to a new gcc and newlib version soon.																																																																																																																																																																										
#2038	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago																																																																																																																																																																					
Summary	Termios task driven mode should use mutex for device operations																																																																																																																																																																										
Description	Termios has a task driven mode (TERMIOS_TASK_DRIVEN). This mode aims to avoid long sections with disabled interrupts. This is only partly implemented since the device level state is still protected by disabled interrupts. Use a mutex to protect the device level state in task driven mode to fix this issue.																																																																																																																																																																										
#2039	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago																																																																																																																																																																					
Summary	Add new interrupt server driven Termios mode																																																																																																																																																																										
Description	Add a new new interrupt server driven Termios mode (TERMIOS_IRQ_DRIVEN). This mode is identical to the interrupt driven mode except that a mutex is used for device level locking. The intended use case for this mode are device drivers that use the interrupt server, e.g. SPI or I2C connected devices.																																																																																																																																																																										
#2040	3 years ago	fixed	dev/serial	Sebastian Huber	Sebastian Huber	2 years ago																																																																																																																																																																					
Summary	Use self-contained mutexes for Termios framework																																																																																																																																																																										
Description	Use C11 mutexes instead of Classic semaphores as a performance optimization and to simplify the application configuration.																																																																																																																																																																										
	A performance of Classic semaphores vs. C11 mutexes was measured on the arm/atsam BSP. A NXP SC16IS752 was connected via SPI. The RTEMS application used one task to read from the device and write it immediately back (look back via task). A development system constantly transmitted data at 115200 bits per second.																																																																																																																																																																										
	CPU usage by function with Classic semaphores:

Summary	Add NXP SC16IS752 serial device driver																																																																																																																																																																										
Description	Add Termios device driver for NXP SC16IS752 (RS232/RS485 over SPI or I2C).																																																																																																																																																																										

#2843	3 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Use self-contained objects instead of Classic API for drivers and support libraries					
Description	The Classic API has some weaknesses: • Dynamic memory (the workspace) is used to allocate object pools. This requires a complex configuration with heavy use of the C pre-processor. • Objects are created via function calls which return an object identifier. The object operations use this identifier and map it internally to an object representation. • The objects reside in a table, e.g. they are suspect to false sharing of cache lines. • The object operations use a rich set of options and attributes. For each object operation these parameters must be evaluated and validated at run-time to figure out what to do exactly for this operation. The overhead for Classic API mutexes used for example in Termios and the SPI framework is significant, see discussion: https://lists.rtems.org/pipermail/devel/2016-December/016543.html There are some API options available: 1. Use C11 mutexes and condition variables. 2. Turn the POSIX synchronization objects into self-contained objects and use them. 3. Use FreeBSD synchronization objects like MUTEX(9) or CONDVAR(9). 4. Add RTEMS-specific self-contained synchronization objects and use them. Option 1. and 2. lack support for binary semaphores which are used for task/interrupt synchronization, e.g. Termios. Option 2. needs run-time evaluation to figure out the actual object variant, e.g. non-recursive, recursive, ceiling, error-checking, robust POSIX mutex. Option 3. uses hash tables, thus it is not suitable for real-time systems. Option 1. and 2. lack support for user-defined object names that may help for system diagnostic, tracing and debugging. Option 4. could be used to avoid all shortcomings of options 1-3. It would be trivial to implement, test and document. In order to enable user-defined object names one option is to add a const char *name member to Thread_queue_Queue.

Summary	docs.rtems.org Add support to ReST format releases.					
Description	Add support to the releases section of the web site to handle ReST packages. The catalogues have a legacy field for texinfo docs. The 4.11.0 and 4.11.1 releases need to have a catalogue added because this did not exist when those releases were created.					
#2863	3 years ago	duplicate	doc	Joel Sherrill	Joel Sherrill	2 years ago
Summary	Update POSIX 1003.1 Compliance Guide for ReST					
Description	The POSIX 1003.1 Compliance Guide should be auto-generated from a spreadsheet into the ReST format. My vague recollection is that we used shell scripts to do this for texinfo output. I will have to decipher what we used to do and define a new procedure. This impacts 4.11 and newer. One issue is having correct information for what methods are present on a branch. The FACE Conformance Test Suite can be used for ~800 of the methods.					

#2864	3 years ago	fixed	doc	Chris Johns		2 years ago

#2867	3 years ago	fixed	tool	Stavros Passas	Chris Johns	2 years ago
Summary	Fix exclude rule in rtems-test-check					
Description	rtems-test-check is responsible of checking the testsuite configuration of a given BSP and adapt it based on a given "command". Currently for the "exclude" command, we never exclude anything, the output of the script is always the whole list of the input tests. This happens because the script always starts with output = \$tests and appends on the list the tests that are not excluded, so the output is always all the tests.

[src/c/src/lib/libbsp/powerpc/beatnik/marvell/gt_timer.c:128]: (style) Checking if unsigned variable 'timer' is less than zero. Parameter "timer" is only ever type uint32_t, so any check < 0 seem pointless.					
#2877	3 years ago	fixed	score	Stavros Passas	joel.sherrill@...	2 years ago
Summary	DHCP client fails on complex networks					
Description	What happens is that on networks with more than one DHCP servers, or on networks that use multiple vlans it can happen that After a DHCP discover our client broadcasts, it receives multiple offers, which is perfectly fine based on the DHCP RFC. However our implementation of a DHCP client, expects a linear execution flow: 1. Broadcast a DHCP discover; 2. Wait for a DHCP offer; 3. Transmit a DHCP request; 4. Wait for a DHCP ack; However the network stack is not cleaned between the reception of a DHCP offer and a DHCP ack, so if multiple offers are received, just the first one will be processed during the "Receive DHCP offer" phase, and the next one will be received when we expect a "DHCP ack", which makes our implementation assume the DHCP handshake is invalid and fail. Thus we restart the network and retry the whole process from the beginning which will cause the same issue again. This issue that is present from when I remember in RTEMS, definitely from 4.10 up to now.

Summary	Coverity Reports Out of Bounds Read in drvmgr_print.c					
Description	https://scan5.coverity.com/reports.htm#v29808/p10069/fileInstanceId=109359850&defectInstanceId=30967449&mergedDefectId=1399730					
	354 printf(" DRIVER ID: 0x%llx\n", drv->drv_id); 1. Condition drv->name, taking true branch.					
	355 printf(" NAME: %s\n", drv->name ? drv->name : "NO_NAME"); 356 printf(" BUS TYPE: %d\n", drv->bus_type); 357 printf(" OPERATIONS:\n"); 2. alias: Assigning: ppfunc = &drv->ops->init[0]. ppfunc now points to element 0 of drv->ops->init (which consists of 4 4-byte elements). 3. Condition i < 6U /* sizeof (struct drvmgr_drv_ops) / sizeof (void (*)(void)) */, taking true branch. 4. Condition i < 6U /* sizeof (struct drvmgr_drv_ops) / sizeof (void (*)(void)) */, taking true branch. 5. cond_at_most: Checking i < 6U implies that i may be up to 5 on the true branch.					
	358 for (i = 0, ppfunc = (fun_ptr *)&drv->ops->init[0]; 359 i < DRVMGR_OPS_NUM(struct drvmgr_drv_ops); ++) 4. Jumping back to the beginning of the loop.					
	CID 1399730 (#+ of 1): Out-of-bounds read (OVERRUN) 7. overrun-local: Overrunning array of 4 4-byte elements at element index 5 (byte offset 20) by dereferencing pointer ppfunc + i. 360 printf(" %s %p\n", drv_ops_names[i], ppfunc[i]); 361 printf(" NO. DEVICES: %d\n", drv->dev_cnt); 362					
#2933	3 years ago	fixed	unspecified	Amar Takhar	Amar Takhar	19 months ago
Summary	Flexibleassignto is broken on new ticket page.					

Descripti on	The plugin needs to be fixed for new trac template changes. I usually don't have to modify this often but we made a huge version jump.					
	Right now all we see is assign to <default> There should be a list of developers.					
	#2935	3 years ago	wontfix	score	Martin Aberg	joel.sherrill@... 2 years ago
Summar y	Termios task driven mode not compatible with SMP					
Descripti on	When the Termios task driven functioning mode is used, rtems_termios_open_tty() calls rtems_task_create() with RTEMS_NO_PREEMPT in the initial task mode parameter. RTEMS_NO_PREEMPT is not supported on SMP.					
	rtems_task_create() returns RTEMS_UNSATISFIED in this SMP scenario and Termios ends up in rtems_fatal_error_occurred().					
	Termios starts the RX and TX tasks successfully on SMP if RTEMS_NO_PREEMPT is removed from the initial task modes of these tasks. However, I suspect there may be assumptions on the NO_PREEMPT mode for the RX and TX tasks in other parts of Termios.

#2946	3 years ago	fixed	unspecified	Chris Johns	joel.sherrill@...	2 years ago
Summar y	Add a top level global testsuite configuration file (.tcfg) and a 'user-input' test state.					
Descripti on	Adding a top level testsuite configuration file lets us specify tests that have a common test state across all BSPs.					
	Adding the test state 'user-input' clearly tags the test as needing user input and test result tools can correctly determine the test result. The current practice of passing a test needing user input is actually hiding the real result of the test.					
#2949	3 years ago	wontfix	tool/rsb	Sebastian Huber		2 years ago
Summar y	Questionable patch organization in RTEMS tools and RSB					
Descripti on	Patches for RTEMS tools are available via the RTEMS tools repository: https://git.rtems.org/rtems-tools/tree/tools					
	They are organized using subdirectories.					
	The RSB uses these patches. It removes the subdirectories and collects everything in a "patches" directory, e.g. download: https://git.rtems.org/rtems-tools/plain/tools/4.11/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff -> patches/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff					
	This works only in case the patch file names are unique. So, the use of subdirectories in the RTEMS tools is questionable.					
#2951	3 years ago	fixed	build	alexgerbor	chrisj@...	2 years ago
Summar y	Error path in rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg

#2954	3 years ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	ARM: Optimize context switch					
Descripti on	Set CPU_ENABLE_ROBUST_THREAD_DISPATCH to TRUE. In this case the interrupts are always enabled during a context switch even after interrupt processing (see #2751). Remove the CPSR from the context control since it contains only volatile bits.					
#2957	3 years ago	fixed	score	Sebastian Huber	Gedare Bloom	2 years ago
Summar y	Shared memory support internal locking is broken					
Descripti on	The top level lock is an ISR lock (interrupt disable/enable or SMP lock) and the low level lock is potentially a mutex. The problem is exposed by test psxshm02:					
	<pre>#0 _Terminate (the_source=INTERNAL_ERROR_CORE, the_error=31) at ../../../../../../rtems/c/src/../../../../cpukit/score/src/interr.c:35 #1 0x00111654 in _Internal_error (core_error=INTERNAL_ERROR_BAD_THREAD_DISPATCH_ENVIRONMENT) at ../../../../../../../../rtems/c/src/../../../../cpukit/score/src/interr.c:52 #2 0x00117010 in _Thread_Do_dispatch (cpu_self=0x2035c0 <_Per_CPU_Information>, level=1611071955) at ../../../../../../../../rtems/c/src/../../../../cpukit/score/src/threaddispatch.c:190 #3 0x0011a568 in _Thread_Dispatch_enable (cpu_self=0x2035c0 <_Per_CPU_Information>) at ../../../../../../../../realview_pbx_a9_gemu/lib/include/rtems/score/threaddispatch.h:227 #4 0x0011b6c4 in _Thread_Change_life (clear=THREAD_LIFE_PROTECTED, set=THREAD_LIFE_PROTECTED, ignore=(unknown: 0)) at ../../../../../../../../rtems/c/src/../../../../cpukit/score/src/threadrestart.c:684 #5 0x0011b6ea in _Thread_Set_life_protection (state=THREAD_LIFE_PROTECTED) at ../../../../../../../../rtems/c/src/../../../../cpukit/score/src/threadrestart.c:691 #6 0x0010f3dc in _API_Mutex_Lock (the_mutex=0x2037d8) at ../../../../../../rtems/c/src/../../../../cpukit/score/src/apimutexlock.c:31 #7 0x001050a0 in _RTEMS_Lock_allocator () at ../../cpukit/../../../../realview_pbx_a9_gemu/lib/include/rtems/score/apimutex.h:120 #8 0x00105442 in rtems_heap_allocate_aligned_with_boundary (size=10004, alignment=0, boundary=0) at ../../../../../../../../rtems/c/src/../../../../cpukit/libcsupport/src/malloc_deferred.c:89 #9 0x001055a6 in malloc (size=10004) at ../../../../../../rtems/c/src/../../../../cpukit/libcsupport/src/malloc.c:39 #10 0x0011e820 in _realloc (ptr=0x0, size=10004) at ../../../../../../rtems/c/src/../../../../cpukit/libcsupport/src/realloc.c:62 #11 0x0010b1a2 in _POSIX_Shm_Object_resize_from_heap (shm_obj=0x204870, size=10004) at ../../../../../../../../rtems/c/src/../../../../cpukit/posix/src/shmheap.c:59 #12 0x0010b6ac in shm_ftruncate (iop=0x202cf8 <rtems_libio_iops+168>, length=10004) at ../../../../../../../../rtems/c/src/../../../../cpukit/posix/src/shmopen.c:83 #13 0x00104cfc in ftruncate (fd=3, length=10004) at ../../../../../../rtems/c/src/../../../../cpukit/libcsupport/src/ftruncate.c:37 #14 0x001008e0 in POSIX_Init (argument=0x0) at ../../../../../../rtems/c/src/../../../../testsuites/psxtests/psxshm02/init.c:54 #15 0x001201ee in _Thread_Entry_adaptor_pointer (executing=0x2041a8) at ../../../../../../../../rtems/c/src/../../../../cpukit/score/src/threadentryadaptorpointer.c:25 #16 0x00120302 in _Thread_Handler () at ../../../../../../rtems/c/src/../../../../cpukit/score/src/threadhandler.c:88</pre>					
#2958	3 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	Add some popular benchmark programs to the testsuite					

Descripti on	Add dhrystone, whetstone and linpack benchmark programs to the testsuite. This may help to evaluate compiler settings, compiler versions and processors.					
#2959	3 years ago	fixed	lib/dl	Chris Johns	Chris Johns	2 years ago
Summar y	arm/libdl: C++ exception index tables may not be ordered correctly					
Descripti on	The ARM EXIDX sections have the SHF_LINK_ORDER flag set and this is not honored by libdl which means the section order in the ELF file needs to be the correct order of the functions in the address map.					
	Add support to libdl to follow the link-to order.					
#2963	3 years ago	fixed	unspecified	Chris Johns	Chris Johns	2 years ago
Summar y	Add a testsuite top level configuration file that is common to all tests.					
Descripti on	Add the file <code>testsuites/rtems.tcfg</code> to hold test states common to all BSPs. This lets us globally set a test state.					
	For example <code>fileio</code> is <code>user-input</code> .					
	Note, <code>user-input</code> will be added a test state to test this file.					
#2965	3 years ago	fixed	unspecified	Gedare Bloom	Gedare Bloom <gedare@...>	2 years ago
Summar y	bootstrap sort inconsistent with sb-bootstrap for acinclude					
Descripti on	The output of bootstrap does not use a consistent sort order with sb-bootstrap. The difference appears to be in the default behavior of the sort command versus Python's sorted. By forcing the locale to C, sort should have a consistent behavior.					
#2967	3 years ago	fixed	tool/gcc	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	ARM: Change ABI to not use short enums					
Descripti on	Whether enums are short or not is left open in the ARM EABI. On Linux and FreeBSD no short enums are used. Otherwise short enums are enabled by default.					
	Short enums may cause hard to find issues with 3rd party software, since the are quite unusual in general, e.g.					
	https://git.rtems.org/rtems-libbsd/commit/freebsd/include/rpc?id=9880635f2e642380b69b85e00271649b3a2fc2de					
	The data and structure layout may suddenly change in case enumeration values are added/removed. The benefit of short enums is probably not worth the trouble, since the packed compiler attribute can be used to individually make an enum short.					
	The reason for not choosing no short enums during the ARM EABI introduction was an issue with Newlib. This is addressed with the following patch:					
	https://sourceware.org/ml/newlib/2017/msg00238.html					
#2968	3 years ago	fixed	unspecified	Joel Sherrill		2 years ago
Summar y	newlib inttypes.h is missing some methods					
Descripti on	inttypes.h defines some methods which are not present but required for POSIX compliance. They are also included in the FACE General Purpose Profile.					
	intmax_t imaxabs(intmax_t); imaxdiv_t imaxdiv(intmax_t, intmax_t); intmax_t strtoumax(const char *restrict, char restrict, int); uintmax_t strtoumax(const char *restrict, char restrict, int); intmax_t wcstoumax(const wchar_t *restrict, wchar_t restrict, int); uintmax_t wcstoumax(const wchar_t *restrict, wchar_t restrict, int);					
	This was originally discussed here (https://sourceware.org/ml/newlib/2013/msg00626.html) with follow up discussion here (https://sourceware.org/ml/newlib/2017/msg00240.html).					
	The consensus seems to be that the methods as currently implemented in FreeBSD address the concerns raised in that email thread.					
	This ticket is complete when:					
	- source for these methods is merged into newlib - methods are documented in newlib - RSB is updated appropriately - tests are added to RTEMS - RTEMS POSIX Compliance spreadsheet (https://goo.gl/AXrnXO) is updated					
#2969	3 years ago	fixed	unspecified	Joel Sherrill	Sebastian Huber	2 years ago
Summar y	qoriq BSPs depend on mkimage which is not always available					
Descripti on	The following BSPs do not successfully build on the master because they use UBoot's mkimage which is not part of the standard RTEMS tools.					
	qoriq_core_0 qoriq_core_1 qoriq_p1020rdb					
#2976	3 years ago	fixed	unspecified	Joel Sherrill	Chris Johns	2 years ago
Summar y	warnings in rtems-debugger-server.c					
Descripti on	This should be present on any ARM or x86 build.					
	cpukit/libdebugger/rtems-debugger-server.c:393:1: warning: control reaches end of non-void function [-Wreturn-type] cpukit/libdebugger/rtems-debugger-server.c:405:1: warning: control reaches end of non-void function [-Wreturn-type]					
#2977	3 years ago	fixed	unspecified	Joel Sherrill	Sebastian Huber	2 years ago

#2993	3 years ago	fixed	score	Chris Johns	joel.sherrill@...	2 years ago
Summary	SMP assert in _Thread_Executing in libdebugger					

The target code in libdebugger has support to recover from exceptions related to invalid memory accesses. GDB may request the server access memory on the target that results in an exception. The exception occurs on the server's remote connection thread and the server needs to recover and return an error to GDB.

Running the debugger01 test with an SMP build of RTEMS and libbsd for `xilinx_zedboard` and issuing `bt` in GDB results in:

```
*** LIBBSD DEBUGGER 1 TEST ***
[144/1950]
shell:cannot set terminal attributes(/dev/console)

RTEMS Shell on /devn/ecxounss0:1 e<.R TUEsMeS 'Nheexlups' dteov ilcies>t

".../cpukit/.../xilinx_zynq_zedboard/lib/include/rtems/score/percpu.h", line 630, function: _Per_CPU_Get
```

If I enable `TARGET_DEBUG` in libdebugger and apply the attached patch I can create the assert with `DIE_ON_ASSERT` set to `1`. The output is:

```
rtems-db: tcp remote: connect host: 10.10.5.2
rtems-db: arm debug: (v3.0) ARMv7 [v7, all CP14 registers] breakpoints:5 watchpoints:3
[] frame = 005664EC sig=1 vector=4 ifsr=00000000 pra=0024173A

".../cpukit/.../xilinx_zynq_zedboard/lib/include/rtems/score/percpu.h", line 630, function: _Per_CPU_Get
```

and set to `{{0}}`:

```
rtems-db: tcp remote: connect host: 10.10.5.2
rtems-db: arm debug: (v3.0) ARMv7 [v7, all CP14 registers] breakpoints:5 watchpoints:3
[] frame = 005664EC sig=1 vector=4 ifsr=00000000 pra=0024173A
[] R0 = 00000158 R1 = 00000004 R2 = 00000001 R3 = 0041AB64
[] R4 = 00000158 R5 = 00000004 R6 = 00000000 R7 = 005606A4
[] R8 = 00000016 R9 = 00000001 R10 = 00000006 R11 = 0041AB64
[] R12 = 00560658 SP = 00566540 LR = 0000FFFD PC = 00241736
[] CPSR = 08010173 ----Q--A-FT GE:0 IT:01 M:13 SVC
[] target exception: 0 0 0
[] tid:0A01000A: thread:0041F5B0 frame:005664EC
[] server access fault
[] frame = 005664EC sig=1 vector=4 ifsr=00000000 pra=0024173A
[] R0 = 00000158 R1 = 00000004 R2 = 00000001 R3 = 0041AB64
[] R4 = 00000158 R5 = 00000004 R6 = 00000000 R7 = 005606A4
[] R8 = 00000016 R9 = 00000001 R10 = 00000006 R11 = 0041AB64
[] R12 = 00560658 SP = 00566540 LR = 0000FFFD PC = 00241736
[] CPSR = 08010173 ----Q--A-FT GE:0 IT:01 M:13 SVC
[] target exception: 0 0 0
[] tid:0A01000A: thread:0041F5B0 frame:005664EC
[] server access fault
```

The following lines first two values are `cpu_self->thread_dispatch_disable_level` and `_ISR_Get_level()` which are both `0` so I cannot see a reason the assert is happening:

```
[] target exception: 0 0 0
```

Summary	sb-check on Cygwin					
Description	It looks like there are two issues in windows.py - Probes for programs like bison and flex as required. - tar - bsdtar must be on mingw. It doesn't appear to exist on cygwin. I think the fix is pretty simple code-wise but I wanted to get some feedback on why there were a lot more required programs in this file than on other OS.py files.					
#3000	3 years ago	fixed	score	Chris Johns	Joel Sherrill	16 months ago
Summary	Setting interrupt level in the mode arg on SMP returns RTEMS_UNSATISFIED					
Description	If for any reason a user sets the interrupt level in the mode on an SMP build the error <code>RTEMS_UNSATISFIED</code> is returned. The documentation indicates this is a lack of stack and this confusing. The reason this happens is the SMP check for an interrupt level being set is in the score's <code>Thread_Initialize</code>. I propose that and <code>is_preemptible</code> check be converted to an <code>assert</code> and checks be added to the Classic API to catch these errors and report suitable error codes. There is no meaningful error code available without abusing an existing one so I propose adding <code>RTEMS_INVALID_MODE</code>.					
#3001	3 years ago	fixed	score	Chris Johns	Sebastian Huber	2 years ago
Summary	SMP build of RTEMS Testsuite does not set CONFIGURE_MAXIMUM_PROCESSORS					
Description	The default setting for <code>CONFIGURE_MAXIMUM_PROCESSORS</code> is <code>1</code> and this means <code>rtems_configuration_is_smp_enabled()</code> returns <code>false</code>. Only the <code>smptests</code> set the maximum processor count to <code>CPU_COUNT</code> and therefore run in SMP mode. If SMP is not running in an SMP build when running the tests are the tests really reporting a true indication of the of the system? I would expect we have the API tests, <code>libtests</code> and <code>fstests</code> running with SMP enabled in an SMP build.					
#3003	3 years ago	fixed	fs/fat	munster	Sebastian Huber	2 years ago
Summary	FAT does not support clusters bigger than 32K					
Description	When used with 64KiB clusters, the FAT driver will loop forever in <code>cpukit/libfs/src/dosfs/fat.c</code>, line 580. This happens because <code>struct fat_vol_s</code> declares bytes per cluster variable as <code>uint16_t bpc</code>, whereas it can be as big as 256KiB. Here is a link for Linux FAT driver which doesn't make any assumption about cluster size: http://lxr.free-electrons.com/source/fs/fat/inode.c?v=2.6.24#L1262

#3007	3 years ago	fixed	arch/arm	munster	joel.sherrill@...	2 weeks ago
Summary	ARM caching issues					
Description	There are two problems with the caching on ARM: - In cases where the buffer is not aligned to line boundary at the beginning or the end, the invalidate operation would lose modifications done on the adjacent data. This applies to both L1 and L2 caches. - The L2C-310 cache management operations use excessive locking. According to manual, the used operations (Clean Line by PA, Clean and Invalidate Line by PA, Cache Sync) are atomic and do not require locking. I have attached the proposed patch.					
#3008	3 years ago	fixed	doc	Hassan Karim	chrisj@...	2 years ago
Summary	missing pax causes install failures					
Description	I have tried to install <code>sparc bsp=erc32</code> on 4 different builds. 3 failed, and 1 flawlessly installed. The others all seem to fail somewhere during make install of test suites. Each reports one missing config problem or another. I believe the problem resulted in a missing package, <code>pax</code> & <code>libbsd-dev</code> on Ubuntu 12.04.5 LTS (GNU/Linux 3.2.0-126-virtual x86_64) I hadn't seen this exact problem because I normally update & upgrade as soon as I get a new image. Pressed for time, I skipped it. So, I am not sure if we need to update the documentation to directly include <code>pax</code>, since it is directly called in configure and breaks if not present. https://docs.rtems.org/rsb/#_host_setups Under this section, 11.1.5. Ubuntu Add <code>pax</code> to this line <code>\$ sudo apt-get build-dep binutils gcc g++ gdb unzip git python2.7-dev pax</code>

Summary	Error compiling xilinx_zynq_zedboard.					
Description	I encountered an error compiling the <code>xilinx_zynq_zedboard</code> BSP. I am using a built of the RSB that I compiled in December. With that built of the RSB I could built this BSP several times until I did a git pull of the RTEMS repo two weeks ago. Today I updated my repos of the RTEMS and RSB sources, I rebuilt the RSB and I tried to built again the <code>xilinx_zynq_zedboard</code> BSP, encountering the same error:					

gmake[6]: * No rule to make target `posix/include/sys/mman.h'`, needed by `../cpukit/../../xilinx_zynq_zedboard/lib/include/sys/mman.h'`. Stop.

#3012	3 years ago	fixed	tool/newlib	Sebastian Huber	Chris Johns	2 years ago
-------	-------------	-------	-------------	-----------------	-------------	-------------

Summary

Global C++ IO streams are broken (cout, cin, cerr)

The global C++ IO stream objects are initialized here

https://gcc.gnu.org/viewcvs/gcc/trunk/libstdc%2B%2B-v3/src/c%2B%2B98/ios_init.cc?view=markup#l85

via a placement new. The "stdout" etc. is thread-local in Newlib

```
#define stdout (_REENT->_stdout)
```

Using this for a global object like std::cout is quite broken. Which FILE object should be used instead? Potential fix:

Description

```

#3017	3 years ago	worksforme	score	phongvanpham	joel.sherrill@...	2 years ago
Summary	improvement in pci.h					
Description	In pci.h, there are references to BSP_pci_configuration data structure which is in pci.c. However, in this file, there are also references to detect_host_bridge() in detect_raven_bridge.c. For folks that are just interested in pci_read_config_dword() + its brothers, all they need is to include pci.h and content for where BSP_pci_configuration is defined. The rest of the stuff in pci.c should be separate. Or in another word, data structures and #defines involving with BSP_pci_configuration needs to be in separate files rather all stuffed in pci.c I currently do not need this functionality for my BSP (nor do I able to test it), so I cannot modify code and submit. It is best someone who can test the code to make the code change. Or else, just shelf it under the table and/or close this ticket.					
#3018	3 years ago	fixed	tool/rsb	phongvanpham	Chris Johns	2 years ago
Summary	RSB cannot compile tool chain in CentOS 7.					
Description	In CentOS 6.8, everything works fine. But in CentOS 7, it does not. Initial investigation (I did a while back around New Year time) looks like later version of texinfo has an issue with autoconf. Enclosed is the email Chris Johns replied but I didn't follow through since I switched to CentOS 6.8 for my work. "Looks to me like the RSB is trying to download autoconf 2.69-1 and from https://bugs.debian.org/cgi-bin/bugreport.cgi?bug=711297 Looks like this autoconf version has a bug. I also noticed my autoconf version is 2.69-11; however, from what I am reading, RSB will download its own version independent of what user has." Chris John replies: "I guess a recent texinfo version has exposed the issue. I suggest you get the patch from the link in the bug report, create a patch for rtems-tools.git to add the autoconf patch, then create a patch to the RSB adding the patch to the autoconf build, finally 'git send-email' the patches to devel@... for review."					
#3023	3 years ago	fixed	tool/newlib	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Parameter of CPU_COPY() are in wrong order					

According to the FreeBSD man page we have: https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports <pre>CPU_COPY(cpuset_t *from, cpuset_t *to);</pre>						
Descripti on	However, in Newlib we have: <pre>static __inline void CPU_COPY(cpu_set_t *dest, const cpu_set_t *src) { *dest = *src; }</pre>					
#3025	3 years ago	fixed	unspecified	Chris Johns	joel.sherrill@...	2 years ago
Summar y	m32c/m32csim does not build linpack-pc.c					
Descripti on	1 tests m32c/m32csim build: configure: /opt/work/chris/rtems/kernel/rtems.git/configure --target\ =m32c-rtems4.12 --enable-rtemsbasp=m32csim --prefix=/opt/rtems/4.12\ --enable-tests error: testsuites/benchmarks/linpack/linpack-pc.c:253:33: error: storage size of 'a' isn't constant error: testsuites/benchmarks/linpack/linpack-pc.c:253:21: error: storage size of 'aa' isn't constant					
#3027	3 years ago	fixed	tool/rsb	Worth Burruss	Chris Johns	2 years ago
Summar y	RTEMS source builder fails when building gcc documentation with newer versions of gcc					
Descripti on	Originally discovered with MSYS2 on windows. Building the gcc compiler fails for older versions of gcc (ie 4.8.3) when building bfin and m32c architectures. The gcc maintainers recommend the use of MISSING=texinfo switch during configuration. A possible solution is attached.					
#3032	3 years ago	fixed	tool/newlib	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	CPU_NAND_S() implementation is not in line with FreeBSD					
Descripti on	According to the FreeBSD man page we have: https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports The CPU_NAND() macro removes CPUs in src from dst. (It is the cpuset(9) equivalent of the scalar: dst &= ~ src.) However, in Newlib we had: <pre>static __inline void CPU_NAND_S(size_t setsize, cpu_set_t *destset, const cpu_set_t *srcset1, const cpu_set_t *srcset2) { cpu_set_word_t *wdest = &destset->_bits[0]; const cpu_set_word_t *wsrcl = &srcset1->_bits[0]; const cpu_set_word_t *wsrcl2 = &srcset2->_bits[0]; size_t n = setsize / sizeof(*wdest); size_t i; for (i = 0; i < n; ++i) wdest[i] = ~(wsrcl[i] & wsrcl2[i]); }</pre>					
#3036	3 years ago	fixed	tool/newlib	Sebastian Huber	joel.sherrill@...	2 years ago
Summar y	CPU_CMP() implementation is not in line with FreeBSD					
Descripti on	According to the FreeBSD man page we have: https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports The CPU_CMP() macro returns true if cpuset1 is NOT equal to cpuset2. However, in Newlib we had: <pre>/* return 1 if the sets set1 and set2 are equal, otherwise return 0 */ static __inline int CPU_CMP(const cpu_set_t *set1, const cpu_set_t *set2) { return CPU_EQUAL(set1, set2); }</pre>					
#3040	3 years ago	invalid	tool/website	Sebastian Huber	Amar Takhar	19 months ago
Summar y	Cannot use RTEMS mailing list archive for patches					
Descripti on	The RTEMS mailing list archive has no option to get the raw e-mail via the web interface, e.g. https://lists.rtems.org/pipermail/devel/2017-June/018101.html For example the Newlib mailing list archive: https://sourceware.org/cgi-bin/get-raw-msg?listname=newlib&date=2017&msgid=20170612064218.11969-1-sebastian.huber%40embedded-brains.de					
#3043	3 years ago	fixed	unspecified	Chris Johns		2 years ago
Summar y	4.11/rtems-nios2 does not build on Windows.					
Descripti on	The attached RSB report details the failure. The path to ranlib is the cwd (see make[5] path) plus the relative path (see the report) which is 308 characters in length and this exceeds the max path length for the Win32 API and binutils reports this as a No such file.					
#3046	3 years ago	fixed	tool/rsb	Chris Johns	Chris Johns	2 years ago
Summar y	4.12/rtems-moxie missing release number.					
Descripti on	4.12/rtems-moxie is reporting <pre>cleaning: dtc-1.4.1-x86_64-freebsd11.0-1 cleaning: expat-2.1.0-x86_64-freebsd11.0-1 cleaning: moxie-rtems4.12-binutils-2.28-x86_64-freebsd11.0- cleaning: moxie-rtems4.12-gcc-7.1.0-newlib-2.5.0.20170519-x86_64-freebsd11.0- cleaning: moxie-rtems4.12-gdb-7.12-x86_64-freebsd11.0- cleaning: rtems-tools-HEAD-</pre> There is no -1 or whatever at the end of the lines.					

#3047	3 years ago	fixed	tool/rsb	Chris Johns	Chris Johns	2 years ago
Summary	Remove docs directory from the RSB					
Description	The documentation has been moved to rtems-docs.git repo. Remove the docs directory and asciidocs from RTEMS.					
#3049	3 years ago	fixed	unspecified	Joel Sherrill	Chris Johns	19 months ago

#3054	3 years ago	fixed	unspecified	AndiK	Andreas Kölbl <andreas.koelbl@...>	2 years ago
Summary	gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux					
Description	7.12.1 does not compile with latest guile As already stated here: https://sourceware.org/bugzilla/show_bug.cgi?id=21104 GDB in version 7.12.1 fails when trying to compile on Archlinux. GDB uses deprecated functions of libguile which were gone in version 2.2 of libguile. As GDB states in its configure script to support version 2.2 of libguile it fails compiling. Tested with the latest rtems source builder on master.					
#3056	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add EDF SMP scheduler					
Description	The current SMP schedulers are all fixed-priority schedulers. Add a job-level fixed priority scheduler (EDF).					
#3057	3 years ago	fixed	tool/gcc	Sebastian Huber	Daniel Hellstrom	2 years ago
Summary	Add a workaround for the LEON3FT store-store errata					
Description	GCC needs support to provide a workaround for the LEON3FT store-store errata, e.g. https://gcc.gnu.org/ml/gcc-patches/2017-06/msg01577.html and follow up versions.					
#3059	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add a simple processor affinity support to the EDF SMP scheduler					
Description	Add support to the EDF SMP scheduler to honour one-to-one and one-to-all thread processor affinities. Use one ready queue for threads with a one-to-all affinity. Use one ready queue for each of the one-to-one threads for each processor. Since a red-black tree is used for the ready queues, the space overhead of one pointer per ready queue is small.					
#3061	3 years ago	invalid	tool	Chris Johns	chrisj@...	2 years ago
Summary	including 'unistd.h' in C++ does not build.					

Including `unistd.h` in a C++ program does not compile with the RSB for today:

```

#3063	3 years ago	fixed	config	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Make the EDF scheduler the default SMP scheduler					
Description	The EDF SMP scheduler supports simple thread processor affinities (see #3059) with a small run-time overhead. The current default SMP scheduler lacks support for thread processor affinities at all. The EDF SMP scheduler offers a good feature set for most applications. So, use it by default. Run-time libraries like libgomp, MTAPI, work stealing schedulers, language interpreters (e.g. Erlang virtual machine), etc. use a one-to-one thread processor affinity for example.					
#3069	3 years ago	fixed	rtems	Sebastian Huber	Sebastian Huber	2 years ago

Summary	Inconsistent blocking addressing in RFS						

Background There are two ways to address a block in RFS:

- 1. Via a single 32bit block number (bno)
- 2. Via a group number(gno) and a bit offset (bit)

They should be fully convertible (1-1 mapping). In other words, the equation to convert 1 to 2 should be unique within the RFS implementation.

The bug The RFS implementation contains two different conversions between 1 and 2.

Details

- 1. In `rtems_rfs_group_bitmap_alloc` (`rtems-rfs-group.c`, line 172)

```
bno = gno * group_blocks + bit
```

- 2. In `rtems_rfs_group_bitmap_alloc` (`rtems-rfs-group.c`, line 228)

```
bno = gno * group_blocks + bit + 1 (via rtems_rfs_group_block() function)
```

- 3. In `rtems_rfs_group_bitmap_free` (`rtems-rfs-group.c`, line 283)

```
bno = gno * group_blocks + bit + 1 (RTEMS_RFS_SUPERBLOCK_SIZE)
```

- 4. In `rtems_rfs_group_bitmap_test` (`rtems-rfs-group.c`, line 332)

```
bno = gno * group_blocks + bit
```

To summarize, the implementation contains two ways of converting a bno to a (gno, bit) pair:

Either:

```
bno = gno * group_blocks + bit
```

Or:

```
bno = gno * group_blocks + bit + 1
```

The Fix The RFS implementation should consistently convert a bno to a (gno, bit) pair with:

```
bno = gno * group_blocks + bit + RTEMS_RFS_SUPERBLOCK_SIZE
```

This is because the superblock is not accounted for in the block bitmaps. So places to change:

- 1. `rtems-rfs-group.c`: all references to the conversion must be updated to use `RTEMS_RFS_SUPERBLOCK_SIZE` explicitly.
- 2. `rtems_rfs_group_block` converts the pair to bno via:

```
#define rtems_rfs_group_block(_g, _b) (((_g)->base) + (_b))
```

(`_g`)->base is calculated via `rtems-rfs-format.c` from:

```
#define rtems_rfs_fs_block(_fs, _grp, _blk) \
((( _fs)->group_blocks) * ( _grp)) + ( _blk) + 1)
```

The "+ 1" part should really be "+ `RTEMS_RFS_SUPERBLOCK_SIZE`" to be logically correct. As `RTEMS_RFS_SUPERBLOCK_SIZE` itself has a comment saying:

```
/**
 * Number of blocks in the superblock. Yes I know it is a superblock and not
 * superblocks but if for any reason this needs to change it is handled.
 */
#define RTEMS_RFS_SUPERBLOCK_SIZE (1)
```

#3132	3 years ago	fixed	fs	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add reference counting to file descriptors					

The use of a file descriptor after or during a close() operation may result in a **use after free**. Finding such errors in applications is difficult. Especially in SMP systems using the highly dynamic libbsd network stack.

The file descriptor objects reside in a table with a application configuration defined size. So, the storage of a file descriptor object is always present, only the referenced file system node may change over time. The file system nodes may use an internal reference counting, which is independent of the file descriptors.

To implement reference counting for the file descriptors add a bit field for the reference count to the rtems_libio_t::flags and use atomic operations to maintain the flags.

Each operation using a file descriptor should perform a sequence like this:

Descripti
on

```
int op( int fd, ... )
{
    rtems_libio_t *iop;
    unsigned int    flags;

    if ( (uint32_t) fd >= rtems_libio_number_iops ) {
        rtems_set_errno_and_return_minus_one( EBADF );
    }

    iop = rtems_libio_iop( fd );
    flags = rtems_libio_iop_hold( iop );

    if ( ( flags & LIBIO_FLAGS_OPEN ) == 0 ) {
        rtems_libio_iop_drop( _iop );
        rtems_set_errno_and_return_minus_one( EBADF );
    }

    do_op( iop, ... );
    rtems_libio_iop_drop( iop );
    return 0;
}
```

A close() should return -1 with EBUSY in case the file descriptor is referenced. In this case, no close operation will be performed.

-------	-------------	-------	----	-----------------	-----------------	-------------

Summary	Use FIFO for file descriptor free list					
Description	Currently, the free list of file descriptors is organized as a LIFO. In erroneous systems which use a file descriptor after a call to close(), this increases the likelihood that this error is undetected due to the prompt re-use of the file descriptor. The use of a FIFO has the benefit that free file descriptors remain on the free list as long as possible. This increases the time frame in which an invalid use of a closed file descriptor returns an error status.					

#3137	3 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago
-------	-------------	-------	-------	-----------------	-----------------	-------------

Summary	Accept PTHREAD_PROCESS_SHARED for POSIX condition variables					
Description	Since we have only one process, sharing between processes is trivial.					

#3139	3 years ago	fixed	bsps	Sebastian Huber	Sebastian Huber	2 years ago
-------	-------------	-------	------	-----------------	-----------------	-------------

Summary	Remove old ISR parameter from Clock_driver_support_install_isr() and make it optional					
Description	The old ISR is not used by the clock driver shell.					

#3140	3 years ago	fixed	score	Chris Johns	joel.sherrill@...	2 years ago
-------	-------------	-------	-------	-------------	-------------------	-------------

Summary	CPU Kit broken with --enable-rtems-debug					
---------	--	--	--	--	--	--

Building with:

```
....rtems.git/configure --target=arm-rtems4.12 --prefix=/opt/work/chris/rtems/kernel/4.12 --disable-networking --enable-rtemsbsp=beagleboneblack
--enable-maintainer-mode --enable-rtems-debug
```

results in an error:

```
gmake[5]: Entering directory '/opt/work/chris/rtems/kernel/bsps/beagleboneblack/arm-rtems4.12/c/beagleboneblack/cpukit/score'

#3163	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add I2C device driver for temperature sensor LM75A					
#3166	3 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber	2 years ago
Summary	New default ticket assignee: NeedsReview?					
Description	We have to many tickets with an unclear state if someone is working on them. One problem is that the tickets are assigned to a real person by default. Assign the tickets to a virtual person NeedsReview? to make it clear that this ticket has nobody assigned which can resolve it.					
#3167	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Internal status codes must not depend on RTEMS_POSIX_API					
Description	The internal status codes encode a Classic rtems_status_code and error codes used by the POSIX and C11/C++11 APIs. In case the POSIX API is disabled, the C11/C++11 support must still work.					
#3168	3 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Simplify POSIX_API_Control					
Description	There is no need to have a copy of the thread attributes used for the pthread_create() in POSIX_API_Control::Attributes. This is at least in line with Linux.					
#3170	3 years ago	fixed	unspecified	Chris Johns	Chris Johns	2 years ago
Summary	Use BSP_output_char via RTEMS printer or simple console driver for test output by default					

Descripti on	Test runs with a interrupt driven console driver result in unreliable test outcomes.					
	Problem was noticed with test runs on Microzed, for example libtest/block08:					
	The test prints:					
	<pre>** END OF TEST BLOCK 8 ***</pre>					
	The <code>rtems-test</code> command marks the result as a failure. There is a single <code>*</code> missing from the start of the line. I attach the full test trace.					
#3171	3 years ago	fixed	tool/gcc	Chris Johns	Chris Johns	19 months ago
Summar y	RSB GCC does not build on High Sierra and APFS					
Descripti on	The issue has been reported upstream as https://gcc.gnu.org/bugzilla/show_bug.cgi?id=81797					
#3172	3 years ago	fixed	arch/i386	Chris Johns	Chris Johns	2 years ago
Summar y	i386 PC BSP does not reset when bsp_reset is called.					
Descripti on	Removal of the Edison support removed the standard PC reset using the keyboard controller rather than the specific Edison support.					
#3173	3 years ago	fixed	arch/arm	Chris Johns	Chris Johns	2 years ago
Summar y	Xilinx AXI I2C driver IP race condition causes clock glitch.					
Descripti on	The Xilinx AXI I2C IP has a race condition when the PIRQ read FIFO level is reached and the clock is throttling.					
#3174	3 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	Remove <code>rtems_pthread_attribute_compare()</code>					
Descripti on	The <code>rtems_pthread_attribute_compare()</code> function is undocumented and used only in one test. Move it to the test.					
#3175	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	19 months ago
Summar y	Merge FreeBSD timecounter changes from 2015-01-20 to now					
#3176	3 years ago	fixed	tool/newlib	Joel Sherrill	Joel Sherrill	20 months ago
Summar y	getreent in <code>libc.a</code> and generated by <code>confdefs.h</code>					
Descripti on	Some applications are getting duplicate symbol definitions for <code>getreent()</code> . One of the examples-v2 programs is doing this. It is because there are two bodies for this method -- one from <code>confdefs.h</code> and another from <code>newlib</code> . https://sourceware.org/ml/newlib/2017/msg01020.html addresses the issues and needs to be incorporated by the RSB. https://sourceware.org/ml/newlib/2017/msg01019.html is a cleanup that was spotted at the same time. It can be picked up by a newlib snapshot.					
#3177	3 years ago	fixed	doc	Joel Sherrill	Chris Johns	2 years ago
Summar y	Replace/update POSIX Compliance Guide					
Descripti on	The POSIX Compliance Guide was never converted from texinfo. Beyond that, it is out of date and follows the outline of the printed version of the POSIX standard which no one sees anymore. This ticket proposes: 1. new Sphinx document 2. contents generated from POSIX API tracking spreadsheet (CSV) 3. outline per .h file, not functional area 4. use bullets, not tables so easier to format					
#3178	3 years ago	fixed	tool/gcc	Joel Sherrill	Joel Sherrill <joel@...>	2 years ago
Summar y	Update sh-rtems4.12 bset to use rtems-default (using old gcc)					
Descripti on	I built a toolset and all BSPs on Centos 7 after switching this to rtems-default.bset again. There was no comment indicating why it was using an older gcc so I assume something has been fixed.					
#3179	3 years ago	fixed	posix	Joel Sherrill	Sebastian Huber	2 years ago
Summar y	New warnings from Time Changes					

New warnings after picking up your recent commits. How are you checking for warnings?

#3186	3 years ago	fixed	build	Joel Sherrill	Sebastian Huber	19 months ago
Summary	ar warning: <code>'u' modifier ignored since `D' is the default (see `U')</code>					
Descripti on	Remove this warning <code>sparc-rtems4.12-ar: `u' modifier ignored since `D' is the default (see `U')</code>					
#3181	3 years ago	fixed	build	Joel Sherrill	Joel Sherrill <joel@...>	2 years ago
Summary	Various cc1plus warnings for "valid for C/ObjC but not for C++"					
Descripti on	Fix these <code>cc1plus: warning: command line option '-Wmissing-prototypes' is valid for C/ObjC but not for C++</code> <code>cc1plus: warning: command line option '-Wimplicit-function-declaration' is valid for C/ObjC but not for C++</code> <code>cc1plus: warning: command line option '-Wstrict-prototypes' is valid for C/ObjC but not for C++</code> <code>cc1plus: warning: command line option '-Wnested-externs' is valid for C/ObjC but not for C++</code>					
#3182	3 years ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 years ago
Summary	CLOCK_REALTIME timeout implementation is not POSIX compliant					
Descripti on	Changes of the CLOCK_REALTIME must trigger absolute timeouts. This is not the case. There is no test for this in RTEMS.					
#3185	3 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Change uptime seconds to int32_t					
Descripti on	The use of a 64-bit integer for the uptime seconds is overkill. Use int32_t instead for _Timecounter_Time_uptime. Change derived APIs, e.g. rtems_clock_get_uptime_seconds().					
#3187	3 years ago	fixed	build	Joel Sherrill	Sebastian Huber	2 years ago
Summary	smptests/Makefile.am Issues					
Descripti on	There appear to be two issues in smptests/Makefile.am: 1. smppsxaaffinity0[12] are listed twice. This causes a warning. I am unsure if they should always be built or only when POSIX is enabled. 2. smppsxmutex01 is listed in the "HAS_POSIX" section. Aren't POSIX mutexes always on now so this test should not be inside the conditional?					

#3188	3 years ago	fixed	unspecified	Joel Sherrill	Joel Sherrill	2 years ago
Summary	Add C11 Threading Examples					
Description	C11 is new and we need to provide examples.					
#3189	3 years ago	fixed	tool/newlib	Joel Sherrill	Sebastian Huber	2 years ago

Summary	Upgrade trac to fix numerous problems.					
Description	There are a ton of issues going on with trac that need to be resolved. The two major ones are: - The ticket commenter emails people who aren't a trac user. This may require a custom modification. - The always_email setting is taking things too literally and always sending emails even if it shouldn't. - The Git plug-in consistently spins, floods the jail with processes then the site dies. - Frequent, strange and random crashes. - This one is not a huge deal since it's just that request process users won't even notice when this happens. Upgrading trac is a weeklong project usually I will start preparing for it and update here.					
	If anyone has any feature requests now is the time to do it!					
	#3204	3 years ago	worksforme	tool	Joel Sherrill	Chris Johns5 months ago
Summary	Exception in rtems-test					
Description	Note: No category for rtems-tools.					
	My first attempt to send run logs didn't go so well. This was a weird failure mode. It didn't exit but had to be killed by hand. I dropped off the options related to mailing the log and it still failed. This is on an up to date CentOS 7 (rtbf64c 7.4) as well as my 7.3 VM.					
	<pre>+ /home/joel/rtems-work/rtems-tools//tester/rtems-test --rtems-tools=/home/joel/rtems-work/tools/4.12 --rtems-bsp=erc32 --log=run.log --mail --mail-from=joel@rtems.org --mail-to=build@lists.rtems.org ./sparc-rtems4.12/c/erc32/testsuites/samples/ticker/ticker.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/minimum/minimum.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/iostream/cxx_iostream.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/fileio/fileio.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/capture/capture.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/nsecs/nsecs.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/paranoia/paranoia.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/cdtest/cdtest.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/base_sp/base_sp.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/unlimited/unlimited.exe ./sparc-rtems4.12/c/erc32/testsuites/samples/hello/hello.exe RTEMS Testing - Tester, 4.12 (52513610668b) [5/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: hello.exe [6/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: cxx_iostream.exe [3/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: cdtest.exe [9/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: paranoia.exe [7/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: minimum.exe [1/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: base_sp.exe [11/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: unlimited.exe [4/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: fileio.exe [10/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: ticker.exe [2/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: capture.exe [8/11] p:0 f:0 u:0 e:0 I:0 B:0 t:0 i:0 sparc/erc32: nsecs.exe Traceback (most recent call last): File "/home/joel/rtems-work/rtems-tools//tester/rtems-test", line 40, in <module> rt.test.run() File "/data/home/joel/rtems-work/rtems-tools/tester/rt/test.py", line 336, in run job_trace() File "/data/home/joel/rtems-work/rtems-tools/tester/rt/test.py", line 189, in report_finished reports.log(tst.executable, report_mode) File "/data/home/joel/rtems-work/rtems-tools/tester/rt/report.py", line 193, in log exe = path.basename(self.results[name]['exe']) File "/home/joel/rtems-work/rtems-tools/rtemstoolkit/path.py", line 77, in basename return shell(os.path.basename(path)) File "/usr/lib64/python2.7/posixpath.py", line 121, in basename i = p.rfind('/') + 1 AttributeError: 'NoneType' object has no attribute 'rfind'</pre>

Description	This Zynq BSP is missing this option.					
#3220	2 years ago	fixed	unspecified	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Change RTEMS release number scheme from 4.12 to 5					
Description	As discussed here					
	https://lists.rtems.org/pipermail/devel/2017-October/019169.html					
	it was agreed to use version 5.1 with the new number scheme for the next RTEMS release.					
	Most important items of this release:					
	• SMP support • 64-bit time_t (year 2038 problem) • the network stack header consolidation and the move to Newlib • self-contained POSIX synchronization objects (impacting the configuration) • improved Ada support (however, not all Ada tests pass currently)					
Description	The following steps are necessary to carry out the number change:					
	1. Change version of RTEMS tools					
	2. Change version of RSB					
	3. Change version of RTEMS					
	4. Documentation repo. Easy.					
	5. Documentation website repo. Easy.					
	6. Release procedure repo. Easy.					
	7. Trac tickets. Not sure.					
	8. Trac wiki. Medium(?) . A wiki search of 4.12 gives 21 hits.					
	9. rtems.org website. That needs Joel.					
10. Make announcement on the devel and user mailing list						
#3221	2 years ago	fixed	doc	Sebastian Huber	Chris Johns	4 weeks ago

Summary	sb-check fails on Msys2 64-bit					

There must be a recent change to msys2 which is breaking things. I installed the 64-bit version from <https://msys2.github.io/> per the instructions at <https://docs.rtems.org/branches/master/user/hosts/index.html#microsoft-windows>

```
$ ./source-builder/sb-check
error: no hosts defaults found; please add
```

After adding some prints, I learned this:

```
$ ./source-builder/sb-check
posix
made it
MSYS_NT-10.0
error: no hosts defaults found; please add
```

I filled in options.py and windows.py to recognize this as MSYS2. I was then able to run sb-check. But it wasn't happy. Apparently the pacman command in the User's Guide is missing some packages based on newer versions:

```
$ ./source-builder/sb-check
posix
MSYS_NT-10.0
RTEMS Source Builder - Check, 5 (8b30eb3f440a modified)
error: exe: not found: (__ar) ar
error: exe: not found: (__as) as
error: exe: not found: (__cc) x86_64-w64-mingw32-gcc
error: exe: not found: (__cxx) x86_64-w64-mingw32-g++
error: exe: not found: (__ld) ld
error: exe: not found: (__nm) nm
error: exe: not found: (__objcopy) objcopy
error: exe: not found: (__objdump) objdump
error: exe: not found: (__ranlib) ranlib
Environment is not correctly set up
```

Descripti
on

I installed binutils explicitly with pacman and then sb-check is complaining about gcc. I did a find to locate the gcc's installed:

```
$ find / -name "gcc.*"
/home/jrs007/.ssh/id_rsa_gcc.pub
/mingw64/bin/gcc.exe
/mingw64/bin/x86_64-w64-mingw32-gcc.exe
/mingw64/lib/gcc/x86_64-w64-mingw32/6.2.0/include/stdint-gcc.h
/mingw64/lib/gcc/x86_64-w64-mingw32/6.2.0/libgcc.a
/mingw64/share/info/gcc.info.gz
/mingw64/share/man/man1/gcc.1.gz
/usr/share/vim/vim80/compiler/gcc.vim
find: failed to read file names from file system at or below '/': No such file or directory

jrs007@JRS-OAR-Laptop MINGW64 /c/opt/rtems/rsb/source-builder
$ /mingw64/bin/x86_64-w64-mingw32-gcc.exe --version
x86_64-w64-mingw32-gcc.exe (Rev2, Built by MSYS2 project) 6.2.0

#3228	2 years ago	fixed	tool/rsb	Chris Johns		2 years ago
Summary	aarch64 missing from 5/rtems-all build set					
Description	This arch needs to be added to the all build set.					
#3229	2 years ago	fixed	doc	Chris Johns	Chris Johns	19 months ago
Summary	Add index to all documents.					
Description	Indexes currently do not work. Fix this adding them to all documents. Add index entries where possible.					
#3231	2 years ago	fixed	rtems	Chris Johns	Chris Johns	5 days ago
Summary	RTEMS Top level README needs updating.					
Description	• Add markdown header. • Does the release process add a VERSION file to releases? • Docs link is wrong. • Anything else we need to add?					
#3232	2 years ago	fixed	doc	Chris Johns	Chris Johns	2 years ago
Summary	Use of <code>.. include::</code> in the User Manual should be changed.					
Description	This tricket for Sphinx highlights an issue when using <code>.. include::</code> , we should be using <code>.. toctree::</code> : https://github.com/sphinx-doc/sphinx/issues/3432					
#3234	2 years ago	invalid	doc	Joel Sherrill	Joel Sherrill	2 years ago
Summary	Quick Start Instructions Inconsistent					
Description	In section 5 of the User's Manual, the clone of rtems-source-builder has you clone it into rsb but the sb-bootstrap command is based on cloning it into the rsb subdirectory.					
#3235	2 years ago	fixed	rtems	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Fix rtems_semaphore_flush() for priority inheritance semaphores					
Description	The _Semaphore_Get_operations() must return the proper operations for priority inheritance semaphores. Add a test case for rtems_semaphore_flush() with priority inheritance.					
#3236	2 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Fix thread queue owner priority update in _Thread_queue_Flush_critical()					
Description	The thread queue extract operations performed by the _Thread_queue_Flush_critical() may result in a priority change of the thread queue owner. Carry out the scheduler priority update operation. This is especially important in SMP configurations.					

#3237	2 years ago	fixed	score	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Fix priority ceiling updates					
Description	We must not clear the priority updates in <code>_Thread_queue_Extract_locked()</code> since this function is used by the priority ceiling surrender operations after the ceiling priority handover from the previous owner to the new owner. This is especially important in SMP configurations. Move the <code>_Thread_queue_Context_clear_priority_updates()</code> invocation to the callers.					
#3238	2 years ago	fixed	admin	Chris Johns	Amar Takhar	19 months ago
Summary	Git push to Trac with more than one commit does not update tickets.					
Description	The git push to trac hook does not queue or handle a number of commits in a push. As a result updates to tickets can be missed.					
#3239	2 years ago	fixed	dev	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add <code>getentropy()</code> implementation provided by each BSP					
Description	The <code>getentropy()</code> system call was introduced by OpenBSD and is now also available on glibc 2.25 and later. It is used for example by <code>arc4random_buf()</code> . Which in turn is used by various cryptographic functions.					
#3240	2 years ago	fixed	lib	Andrei Chichak	Chris Johns	2 years ago
Summary	cpukit/libmisc/stackchk/check.c stack addresses formatted incorrectly.					
Description	The function <code>Stack_check_Dump_threads_usage</code> displays the stack high, low, and current pointers incorrectly. Instead of displaying these pointers in conventional hex format, the values have a proper prefix of 0x, but the pointer value is displayed in decimal. The incorrect <code>inttypes.h</code> formatting define was used.					
#3242	2 years ago	fixed	tool/gcc	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Workarounds for UT699, UT700, and GR712RC errata					
Description	https://gcc.gnu.org/ml/gcc-patches/2017-11/msg01751.html This patch series adds workarounds for the newly discovered errata for UT699, UT700, and GR712RC. The errata and possible workarounds are described in the following documents available at http://www.gaisler.com/index.php/information/app-tech-notes : GRLIB-TN-0010 - LEON3/FT AHB Deadlock After Sequence of Load and Atomic Instructions GRLIB-TN-0011 - LEON3/FT AHB Lock Release during Atomic Operation GRLIB-TN-0012 - GR712RC Incorrect Annulation of Floating-point Operation on Instruction Cache Parity Error GRLIB-TN-0013 - GRFPU Floating-point controller: Missing FDIV/FSQRT Result Daniel Cederman (4): [SPARC] Errata workaround for GRLIB-TN-0012 [SPARC] Errata workaround for GRLIB-TN-0011 [SPARC] Errata workaround for GRLIB-TN-0010 [SPARC] Errata workaround for GRLIB-TN-0013					
#3243	2 years ago	fixed	score	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Simplify global construction					
Description	For the SMP support the global construction was changed to use an approach with a thread restart after global construction. With this implementation thread-local objects and POSIX keys initialized during global construction are not present in the initialization thread (main thread). This is not in line with what users familiar with GNU/Linux or FreeBSD would expect. See for example: https://lists.rtems.org/pipermail/users/2017-July/031525.html					
#3244	2 years ago	fixed	rtems	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Change <code>rtems_panic()</code> implementation and document this function					
Description	The current <code>rtems_panic()</code> implementation is quite heavy weight. It depends on <code>_exit()</code> which calls the global destructors. It uses <code>fprintf(stderr, ...)</code> for output which depends on an initialized console device and the complex <code>fprintf()</code> . Introduce a new fatal source <code>RTEMS_FATAL_SOURCE_PANIC</code> for <code>rtems_panic()</code> and output via <code>printk()</code> . Document this function in Fatal Manager chapter. Replace all <code>BSP_panic()</code> with <code>rtems_panic()</code> .					
#3245	2 years ago	fixed	arch/powerpc	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Replace <code>BSP_panic()</code> with <code>rtems_panic()</code>					
Description	Due to a new <code>rtems_panic()</code> implementation, it is possible to replace the PowerPC-specific <code>BSP_panic()</code> with <code>rtems_panic()</code> . Remove <code>BSP_panic()</code> implementations.					
#3246	2 years ago	fixed	arch/powerpc	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Remove <code>_BSP_Fatal_error()</code>					
Description	BSPs can use the <code>bsp_fatal_extension()</code> to provide BSP-specific fatal error handling. There is no need for a <code>_BSP_Fatal_error()</code> .					
#3247	2 years ago	fixed	build	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Remove BSP-specific defaults for <code>RTEMS_BSP_CLEANUP_OPTIONS()</code>					
Description	Remove BSP-specific defaults for <code>RTEMS_BSP_CLEANUP_OPTIONS()</code> to simplify the BSP configuration and documentation. Change default to: <code>BSP_PRESS_KEY_FOR_RESET=0</code> <code>BSP_RESET_BOARD_AT_EXIT=1</code> <code>BSP_PRINT_EXCEPTION_CONTEXT=1</code>					
#3248	2 years ago	fixed	build	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Add <code>BSP_VERBOSE_FATAL_EXTENSION</code> to <code>RTEMS_BSP_CLEANUP_OPTIONS</code>					
Description	Add <code>BSP_VERBOSE_FATAL_EXTENSION</code> to <code>RTEMS_BSP_CLEANUP_OPTIONS</code> to optionally print the RTEMS version, the fatal source and the fatal code in the shared <code>bsp_fatal_extension()</code> .					
#3249	2 years ago	fixed	arch/arm	Joel Sherrill	Sebastian Huber	2 years ago
Summary	imx7 does not link <code>getentropy01</code> test on master					
Description	arm-rtems5-gcc -B../..../imx7/lib/ -specs bsp_specs -qrtems -march=armv7-a -mthumb -mcpu=neon -mfloat-abi=hard -mtune=cortex-a7 -O2 -g -ffunction-sections -fdata-sections -Wall -Wmissing-prototypes -Wimplicit-function-declaration -Wstrict-prototypes -Wnested-externs -Wl,--gc-sections -march=armv7-a -mthumb -mcpu=neon -mfloat-abi=hard -mtune=cortex-a7 -Wl,--wrap=printf -Wl,--wrap=puts -Wl,--wrap=putchar -o getentropy01.exe init.o In function `test_getentropy': /home/joel/rtems-work/rtems-testing/rtems/build-arm-imx7-rtems/arm-rtems5/c/imx7/testsuites/libtests/getentropy01/../../../../rtems/c/src/../../../../testsuites/libtests/getentropy01/init.c:57: undefined reference to `getentropy' /home/joel/rtems-work/rtems-testing/rtems/build-arm-imx7-rtems/arm-rtems5/c/imx7/testsuites/libtests/getentropy01/../../../../rtems/c/src/../../../../testsuites/libtests/getentropy01/init.c:59: undefined reference to `getentropy'					
#3254	2 years ago	fixed	build	Sebastian Huber		17 months ago
Summary	Reorganize header files to avoid "make preinstall"					
#3255	2 years ago	duplicate	arch/powerpc	Joel Sherrill	Sebastian Huber	2 years ago
Summary	Warnings on 64-bit targets					

<https://devel.rtems.org/wiki/Release//5/5.1>

Descripti on	The PowerPC BSP family headers need some refactoring for the RTEMS 5 release. The BSP family relies on the preinstall process to get suitable headers installed to work and removing <code>preinstall</code> exposes this. The specific issue appears with <code>irq.h</code> when building the <code>no-preinstall</code> branch. There is a PowerPC BSP family header and a number of BSPs also have an <code>irq.h</code> which overrides families header. The code has <code>#include <bsp/irq.h></code> and the header used depends on the include order on the GCC command line. This is fragile for any user. These headers needs to be moved to BSP specific paths, for example <code>#include <myme3100/irq.h></code> .					
#3270	2 years ago	fixed	arch/powerpc	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	Remove unused support for MPC505					
Descripti on	There is some support for MPC505 in libcpu, however, I cannot find a BSP for this code. Remove this apparently dead code.					
#3277	2 years ago	fixed	network/libbsd	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	QoriQ: Add MAC-less DPAA driver to libbsd					
Descripti on	The SDK Linux DPAA driver supports a so called MAC-less interface driver. This driver allows Ethernet communication between guest systems of a hypervisor.					
#3278	2 years ago	fixed	tool	Joel Sherrill	Chris Johns	2 years ago
Summar y	bsp-builder has incorrect print (%s in output)					
Descripti on	I don't think the tools have branches so only impacts master. Notice the "run: %s:" [1114/1565] powerpc/mpc5674fevb (profiling) Configuring run: %s: powerpc/mpc5674fevb.profiling\ /home/joel/rtems-work/rtems/configure --target=powerpc-rtems5\ --enable-rtemsbbsp=mpc5674fevb --prefix=/home/joel/rtems-work/bSPs\ --enable-profiling					
#3281	2 years ago	wontfix	tool/gdb	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	Add epiphany support to GDB 8.0.0					
#3283	2 years ago	fixed	doc	Joel Sherrill	Chris Johns	2 years ago
Summar y	Bad URL in OpenOCD/Xilinx_Zynq Wiki Page					
Descripti on	https://devel.rtems.org/wiki/Debugging/OpenOCD/Xilinx_Zynq has a link to the Zedboard Processor Debug Adapter. I think the URL has changed to this but would like someone more knowledgeable to confirm that before it is changed. http://zedboard.org/accessories/zedboard-processor-debug-adapter					
#3284	2 years ago	fixed	tool/rsb	Sebastian Huber	Sebastian Huber <sebastian.huber@...>	2 years ago
Summar y	RSB uses hard coded GCC binary paths					
Descripti on	In order to build a tool chain with Ada support you need a native GCC with Ada support of the same version as the cross compiler. The RSB uses hard coded paths for the gcc and g++ programs: <pre>source-builder/defaults.mc: __cc: exe, required, '/usr/bin/gcc' source-builder/defaults.mc: __cxx: exe, required, '/usr/bin/g++'</pre> So, the RSB user must change the main GCC installation of the machine to build a particular RTEMS tool chain. This is undesired/infeasible in most situations.					
#3285	2 years ago	fixed	build	Sebastian Huber	Sebastian Huber	21 months ago
Summar y	Reorganize BSP source directory					
Descripti on	Now, that all BSP header files are in • bSPs/include • bSPs/@RTEMS_CPU@/include • bSPs/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@/include we should also move the BSP sources to this new directory tree. How do we want to organize the BSP sources in bSPs/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@? • include (this is already there, see #3254) • config ◦ somebsp.cfg • start (everything required to run a minimal application without devices) ◦ start.S ◦ bSPstart.c ◦ bSPsmp.c ◦ linkcmds • cache (everything for the cache controller support) • irq (everything for the interrupt controller support) • console (everything for the console driver) • clock (everything for the clock driver) • i2c (everything for the I2C driver) • spi (everything for the SPI driver) • net (legacy network stack drivers) • mPCI (RTEMS_MULTIPROCESSING support) • rtc (everything for the RTC driver) • ata (everything for the ATA driver) • contrib (import of external sources) ◦ The layout of external sources should be used as is if possible.					
#3290	2 years ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	2 years ago
Summar y	Add device tree support to Altera/Intel? Cyclone V BSP					
#3294	2 years ago	fixed	tool/rsb	Chris Johns	Chris Johns	2 years ago
Summar y	gcc version report for released tools is wrong.					
Descripti on	The release gcc version string has the RTEMS release and not the actual release.					
#3298	2 years ago	fixed	lib/dl	Chris Johns	Chris Johns	15 months ago
Summar y	dlerror non-conformance					
Descripti on	This is a port of the 4.11 patches from #2747 to <code>master</code> . Please refer to that ticket for details.					
#3305	2 years ago	fixed	arch/arm	Joel Sherrill	Joel Sherrill	2 years ago
Summar y	Add paravirtualization support to ARM					
Descripti on	The Arm port does not currently have paravirtualization support.					
#3306	2 years ago	fixed	arch/powerpc	Joel Sherrill	Joel Sherrill <joel@...>	2 years ago
Summar y	Add paravirtualization support to PowerPC					

Descripti on	The PowerPC port does not currently have paravirtualization support.					
#3307	2 years ago	fixed	arch/powerpc	Joel Sherrill	Joel Sherrill	20 months ago
Summar y	PowerPC linkcmds.base missing wildcards on some sections					
Descripti on	Some sections were missing sections. Wildcards needed to be added.					
#3309	2 years ago	fixed	doc	Chris Johns		19 months ago
Summar y	rtems_task_create's initial_mode SMP update					
Descripti on	The <code>initial_mode</code> cannot have the non-preempt flag or an interrupt level set or an RTEMS_UNSATISFIED error is returned. This is not documented in the directive.					
#3312	2 years ago	fixed	tool/rsb	Chris Johns	Chris Johns	2 years ago
Summar y	RSB macro calls such as define fail on unicode keys.					
Descripti on	The <code>define</code> call in <code>macros.py</code> checks for a <code>str</code> while the <code>_setitem</code> call can convert a <code>unicode</code> string to <code>str</code> . Remove the check.					
	Remove the other places in <code>macros.py</code> a <code>key</code> <code>str</code> check is made and see if they can be improved.					
	The following has been reported to me:					
	<pre>cd rtems-source-builder-4.11.3/rtems ../source-builder/sb-set-builder --prefix=/home/user/rtems/4.11 --log=arm.txt --without-rtems 4.11/rtems-arm Traceback (most recent call last): File "../source-builder/sb-set-builder", line 29, in <module> setbuilder.run() File "../source-builder/sb/setbuilder.py", line 526, in run opts = options.load(sys.argv, optargs) File "../source-builder/sb/options.py", line 668, in load version.load_release_settings(o.defaults) File "../source-builder/sb/version.py", line 123, in load_release_settings sources.hash((hs[0], hash[0], hs[1]), macros, setting_error) File "../source-builder/sb/sources.py", line 105, in hash macros.define(_file, '%s %s' % (args[0], args[2])) File "../source-builder/sb/macros.py", line 439, in define raise TypeError('bad key type: %s' % (type(key))) TypeError: bad key type: <type 'unicode'></pre>					
#3315	2 years ago	fixed	tool/rsb	Chris Johns	Chris Johns	2 years ago
Summar y	Move expat's home site to github from SF.					
Descripti on	Move expat's home site from SF to github: https://libexpat.github.io/					
#3318	2 years ago	fixed	bsps	mfletcher	Sebastian Huber	2 years ago
Summar y	Improve INTERNAL_ERROR_THREAD_EXITTED to show the id and thread name					
Descripti on	It might be more helpful i the case of a thread exit to output some information about that thread to make tracking it down simpler.					
	This example works ok.					
	<pre>static void thread_exitted_print_info(rtems_tcb *tcb) { printf("Thread exited: %s (id %d)\n", tcb->Object.name, tcb->Object.id) } /* In your configuration: */ #define CONFIGURE_INITIAL_EXTENSIONS \ { .thread_exitted = thread_exitted_print_info }</pre>					
#3320	2 years ago	fixed	dev/serial	Sebastian Huber	Sebastian Huber <sebastian.huber@...>	22 months ago
Summar y	Add a simple task console driver					

The default console driver for tests is the simple console driver. It uses a polled output via `rtems_putc()` done directly in the context of the executing thread. This is a problem for timing sensitive tests. Add a simple task console driver.

```
.. index:: CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER

.. _CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER:

CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER
-----

CONSTANT:
    ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER``

DATA TYPE:
    Boolean feature macro.

RANGE:
    Defined or undefined.

DEFAULT VALUE:
    This is not defined by default.

DESCRIPTION:
    ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER`` is defined if
    the application wishes to include the Simple Task Console Device Driver.

NOTES:
    This device driver is responsible for providing the :file:/dev/console`
    device file. This device is used to initialize the standard input, output,
    and error file descriptors.

    This device driver reads via getchark().

    This device driver writes into a write buffer. The count of characters
    written into the write buffer is returned. It might be less than the
    requested count, in case the write buffer is full. The write is
    non-blocking and may be called from interrupt context. A dedicated task
    reads from the write buffer and outputs the characters via
    rtems_putc(). This task runs with the least important priority. The
    write buffer size is 2047 characters and it is not configurable.

    Use fsync(STDOUT_FILENO) or fdatasync(STDOUT_FILENO) to drain the
    write buffer.

    The Termios framework is not used. There is no support to change device
    settings, e.g. baud, stop bits, parity, etc.

    The

    * ``CONFIGURE_APPLICATION_NEEDS_CONSOLE_DRIVER``,

    * ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_CONSOLE_DRIVER``, and

    * ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER``

    configuration options are mutually exclusive.
```

#3323	2 years ago	fixed	lib	Chris Johns	Chris Johns	2 years ago
Summary	mhttpd's http etag can result in invalid caching in a browser.					
Descripti on	The mhttp's http etag uses the mtime and file length and this can cause subtle issues if a target has no RTC or it is incorrect and files are being copied without preserving the mtime or changes happen that do not change the length. The <code>cp</code> and <code>untar</code> code do not update a file's time. Add support for an etag callback so a user can manage the tag, ie MD5 or something similar.					
#3325	2 years ago	fixed	config	Sebastian Huber	Sebastian Huber	2 years ago
Summary	Simplify clustered scheduler configuration					
Descripti on	Improve the scheduler configuration documentation according to user review. Do not use names derived from scheduler implementation details. Instead use names derived from the scheduler configuration or documentation. Provide defines for backward compatibility.					
#3327	2 years ago	fixed	score	Joel Sherrill		2 years ago
Summary	Eliminate score/cpu/*/.../types.h					
Descripti on	Each port contains a types.h file. It universally defines one type (<code>CPU_Uint32ptr</code>) that is required. Some of the types.h files define a CPU specific simple vectored ISR handler prototype. - Move the <code>CPU_Uint32ptr</code> typedef to <code>cpu.h</code> - If unused, delete the ISR handler prototype. If used, move to <code>cpu.h</code>					
#3328	2 years ago	fixed	build	Amaan Cheval		2 years ago
Summary	bootstrap uses non-POSIX compliant echo -e					
Descripti on	On certain shells, the "-e" option is not supported, and causes echo to output the flag along with the quoted text. <pre>-> % sh \$ echo -e "foo bar" -e foo bar \$</pre> This varies by shell, and is not even consistent between sh or bash. It was introduced while removing the make preinstall stage here, and may still work on most shells, though it didn't for me on sh on Ubuntu 16.04 LTS (4.4.0-78-generic x86_64 GNU/Linux) - as far as I can tell, this bug hasn't made it to any releases yet, so just fixing it on master should be enough. A patch is attached. Reference to the POSIX standard which confirms that -n is the only argument supported. http://pubs.opengroup.org/onlinepubs/9699919799/utilities/echo.html Link to POSIX for printf(1): http://pubs.opengroup.org/onlinepubs/9699919799/utilities/printf.html

#3334	2 years ago	fixed	posix	Stavros Passas	Sebastian Huber	15 months ago
Summary	deadlock in _once()					
Description	RTEMS threads getting locked up when using certain c++ functionality. Issue happens for example when std::future is combined with std::async.					
	Investigating deeper, seems like this happens if std::async executes before std::future gets scheduled to run. Both of these create a pthread_once instance.					
	_once() uses a common semaphore for all calls, thus the first function (async.get usually) gets the lock, calls its "init" function (which blocks until the second function has completed. After this, std::future also uses pthread_once to execute, but because the lock is already taken, it also blocks, casing a deadlock.					
	Attached you can find a test application that reproduces the deadlock.

#3352	2 years ago	fixed	arch/arm	Joel Sherrill	Sebastian Huber	2 years ago
Summar y	Warning in all lpc176x variants					
Descripti on	bsps/arm/lpc176x/include/bsp.h defines OPERATION_COUNT in an attempt to override the autoconf generated constant. This conflicts and results in this warning: /home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/arm/lpc176x/include/bsp.h:42:0: warning: "OPERATION_COUNT" redefined I understand why this is lowered by the BSP but the mechanism used is not good. And if the include file order is different between tests, you could get the BSP value or the autoconf generated value based on the order. This warning needs to be fixed and a safer mechanism for a BSP to override OPERATION_COUNT defined. My first suggestion is to use BSP_OPERATION_COUNT and add logic to one of the common test .h files to undef OPERATION_COUNT and redefine it to BSP_OPERATION_COUNT if it is defined. A safer option might be to change the name of the autoconf generated variable to OPERATION_COUNT_DEFAULT and rely on logic in a common test support .h to define OPERATION_COUNT to OPERATION_COUNT_DEFAULT or BSP_OPERATION_DEFAULT.					
#3354	2 years ago	fixed	arch/powerpc	Joel Sherrill	Joel Sherrill	2 years ago
Summar y	PowerPC BSPs duplicate PAGE_MASK, etc redefinition					
Descripti on	The following BSPs: powerpc-beatnik powerpc-mcp750 powerpc-mtx603e powerpc-mvme2100 powerpc-mvme2307 powerpc-mvme5500 powerpc-qemuprep-altivec powerpc-qemuprep use bsp/powerpc/include/libcpu/page.h which defines _ALIGN, PAGE_MASK, and PAGE_SIZE. These are defined by <machine/param.h>. I think the solution is to delete the versions in libcpu/page.h. Comments appreciated. ===== In file included from .././.././.././../rtems/c/src/lib/libbsp/powerpc/mvme5500/./../powerpc/shared/startup/pgtbl_setup.c:3:0: /home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/powerpc/include/libcpu/page.h:22:0: warning: "PAGE_MASK" redefined #define PAGE_MASK (~(PAGE_SIZE-1)) In file included from /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/sys/_cpuset.h:36:0, from /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/sys/cpuset.h:45, from /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/sys/_pthreadtypes.h:24, from /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/sys/types.h:239, from /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/sys/time.h:43, from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/score/timestamp.h:43, from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/score/thread.h:36, from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/score/heap.h:22, from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/rtems/types.h:26, from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems.h:31, from .././.././.././../rtems/c/src/lib/libbsp/powerpc/mvme5500/./../powerpc/shared/startup/pgtbl_setup.c:1: /data/home/joel/rtems-work/tools/5/powerpc-rtems5/include/machine/param.h:70:0: note: this is the location of the previous definition #define PAGE_MASK (PAGE_SIZE - 1)

	#3381	2 years ago	fixed	doc	Joel Sherrill	Chris Johns
Summary	rtems-test command line documentation appears to be out of date					
Description	https://docs.rtems.org/branches/master/user/tools/tester.html#command-line-help does not look like the current output of the --help.					
	This may also apply to other branches and branch specific tickets filed.					
#3382	2 years ago	fixed	build	Chris Johns	Chris Johns	19 months ago
Summary	Testsuite Makefile merge to one per group of tests					
Description	Merge the nested Makefile.am files into a single file per group of tests.					
	A single Makefile.am for all tests is not practical at this point in time because a test is an estimated 7 lines and with over 750 tests this means the file would be too big and a conflict hot spot.					
#3383	2 years ago	fixed	build	Chris Johns	Chris Johns	2 years ago
Summary	Require --enable-rtemsbsp with --enable-smp or --enable-multiprocessor					
Description	There is a limited number of BSPs that support SMP or MP so using the BSP wildcard will result in a failed build. Require the user provide a BSP.					
	#3384	2 years ago	fixed	tool/gcc	Sebastian Huber	Sebastian Huber
Summary	Prefer int for int32_					

Common systems like Linux and FreeBSD define `int32_t` to `int`. This means a lot of third party code works well in these cases:

```
#include <stdint.h>

void f(int32_t);

void f(int);

void g(int32_t *);

void h(void)
{
    int i;
    g(&i);
}
```

On RTEMS you get however in C

```
test.c:5:6: error: conflicting types for 'f'
void f(int);
      ^
test.c:3:6: note: previous declaration of 'f' was here
void f(int32_t);
      ^
test.c: In function 'h':
test.c:12:4: warning: passing argument 1 of 'g' from incompatible pointer type [-Wincompatible-pointer-types]
    g(&i);
    ^
test.c:7:6: note: expected 'int32_t * {aka long int *}' but argument is of type 'int *'
void g(int32_t *);
```

Descripti
on

and C++

```
test.c: In function 'void h()':
test.c:12:4: error: invalid conversion from 'int*' to 'int32_t* {aka long int*}' [-fpermissive]
    g(&i);
    ^~
test.c:7:6: note: initializing argument 1 of 'void g(int32_t*)'
void g(int32_t *);
      ^
```

This is due to a Newlib speciality which uses `long` for `int32_t` if `long` is a 32-bit type. To ease the use of third party software in RTEMS we should override this option and use `int` for `int32_t` just like the standard host operating systems (e.g. Linux and FreeBSD). Only a small GCC patch is required to do this:

```
diff --git a/gcc/config/rtems.h b/gcc/config/rtems.h

	Failures:					
	powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-networking --enable-smp ld/collect2:0 error: no error message found!					
	powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-debug --enable-smp ld/collect2:0 error: no error message found!					
	powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-debug --enable-\ networking - -enable-smp ld/collect2:0 error: no error message found!					
Summary	powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-smp ld/collect2:0 error: no error message found!					
	I checked and it looks like qemuprep-altivec is listed in the smp excludes section.					
	It is the only BSP with a - in the name that is in smp-excludes. Could it be that the matching fails in this case?					
	The other is pc586-sse which is SMP excluded also but using a different mechanism..

	Remove Simple SMP Priority Scheduler					
Descripti on	This scheduler was the first SMP scheduler added. It was created to have an easy SMP scheduler to debug. This was especially important when all of the SMP modifications and support were new. A Simple Scheduler has a use case as a low resource alternative for small uniprocessor systems. But the SMP variant just doesn't seem to have a good use case. If you have an SMP system, the application is almost certain to have enough resources where the more complicated data structures used by the other schedulers wouldn't be a burden. The Deterministic Priority Scheduler uses ~3K for FIFO with 256 priorities. This should not be an issue for an SMP system.					
	This ticket is a proposal to remove this as no longer having a use case.					
Descripti on	#3433	2 years ago	fixed	arch/riscv	Sebastian Huber	16 months ago
	Add SMP support for RISC-V					
Descripti on	The project includes the following tasks:					
	• add CPU counter support • add context validation code • add BSP support for Qemu • add support for device tree provided by Qemu • fix all unexpected test suite failures running on Qemu • add build system support to enable an SMP build • add SMP implementation

	Remove clock driver Clock_driver_support_shutdown_hardware() hook					

Most applications use a clock driver and most BSPs use the clock driver framework provided by clockimpl.h. This framework offers a Clock_driver_support_shutdown_hardware() hook which is used like this.

```
#ifdef Clock_driver_support_shutdown_hardware
/**
 * @brief Clock_exit
 *
 * This routine allows the clock driver to exit by masking the interrupt and
 * disabling the clock's counter.
 */
void Clock_exit( void )
{
    Clock_driver_support_shutdown_hardware();

    /* do not restore old vector */
}
#endif
...
#ifdef Clock_driver_support_shutdown_hardware
    atexit( Clock_exit );
#endif
```

The aim is to stop clock tick interrupts at some late point in the exit() procedure.

The use of atexit() pulls in malloc() which pulls in errno. It is incompatible with the intention of the CONFIGURE_DISABLE_NEWLIB_REENTRANCY configuration option.

The exit() function must be called from thread context, so accompanied clock tick interrupts should cause no harm. On the contrary, someone may assume a normal operating system operation, e.g. working timeouts.

Remove the superfluous Clock_driver_support_shutdown_hardware() hook.

Summary	Remove install-if-change script					
Description	The last installed tool in RTEMS repository is the install-if-change script. This script does the same as the standard "install" program with an additional feature to install variants via the -V command line option. This script is used by the standard Makefile support: c/src/make/host.cfg.in:INSTALL_CHANGE=\$(PROJECT_BIN)/install-if-change The INSTALL_CHANGE is used by: c/src/make/host.cfg.in:ifndef INSTALL_CHANGE c/src/make/host.cfg.in:INSTALL_CHANGE=\$(PROJECT_BIN)/install-if-change c/src/make/host.cfg.in:INSTALL_VARIANT=\$(INSTALL_CHANGE) -V "\$(LIB_VARIANT)" Is the variant stuff still supported? I would remove the support for it and replace the "install-if-change" script with the standard "install" program.					

#3458	23 months ago	fixed	tool	Chris Johns	Chris Johns <chrisj@...>	23 months ago
Summary	rtems-test should not use the env PATH to find covoar					
Description	The <code>rtems-test</code> command should know where <code>covoar</code> is when invoking it. It cannot use the environment's path. The path can contain invalid or outdated versions with subtle issues that could be hard to find.					
	There should be no need to run install to use and test <code>rtems-test</code> with coverage.					
	The <code>rtems-test</code> python code for running the tests knows where it is and adjusts. For example using an absolute path to <code>rtems-tests</code> in a build directly results in it being able to find the development tree <code>rtemstoolkit</code> and configuration data. The command needs to be taught to find the development version of <code>covoar</code> .					
Note, currently <code>covoar</code> needs external tools and this is currently using the environment's path however there is work underway to remove this dependence so there case does not need to be handled.						

#3459	23 months ago	fixed	score	Sebastian Huber	Sebastian Huber	14 months ago
Summary	Rework initialization and interrupt stack support					
y	We need an initialization stack to run the sequential system initialization before multitasking is enabled. The system initialization is done with interrupts disabled.					
	We need an interrupt stack for interrupt processing. This helps to avoid a per thread stack overhead for interrupt processing. The size for interrupt stack is application dependent, e.g. maximum interrupt nest level, stack demands of interrupt handlers.					
	The initialization and interrupt stacks are needed for each processor in the system.					
	Since interrupts are disabled during the sequential system initialization we can re-use the interrupt stack for the initialization stack. This is important for low end targets, with very limited RAM sizes. We need the initialization stack before a proper C run-time environment is set up e.g. we cannot assume that the access to global data is available. The stack memory area begin and size should be available via global symbols (named addresses). On some BSPs, e.g. ARM, this is done via the linker command file.					
	It should be possible to set the stack size via the CONFIGURE_INTERRUPT_STACK_SIZE configuration option and not via some magic stuff in linker command files.					
	Many BSPs set the BSS area to zero during system initialization. Thus, the initialization stack must not be contained in the BSS area.					
The interrupt stack implementation is currently controlled by the following CPU port defines:						

```
/**
 * Does RTEMS manage a dedicated interrupt stack in software?
 *
 * If TRUE, then a stack is allocated in @ref _ISR_Handler_initialization.
 * If FALSE, nothing is done.
 *
 * If the CPU supports a dedicated interrupt stack in hardware,
 * then it is generally the responsibility of the BSP to allocate it
 * and set it up.
 *
 * If the CPU does not support a dedicated interrupt stack, then
 * the porter has two options: (1) execute interrupts on the
 * stack of the interrupted task, and (2) have RTEMS manage a dedicated
 * interrupt stack.
 *
 * If this is TRUE, @ref CPU_ALLOCATE_INTERRUPT_STACK should also be TRUE.
 *
 * Only one of @ref CPU_HAS_SOFTWARE_INTERRUPT_STACK and
 * @ref CPU_HAS_HARDWARE_INTERRUPT_STACK should be set to TRUE. It is
 * possible that both are FALSE for a particular CPU. Although it
 * is unclear what that would imply about the interrupt processing
 * procedure on that CPU.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_HAS_SOFTWARE_INTERRUPT_STACK FALSE

/**
 * Does this CPU have hardware support for a dedicated interrupt stack?
 *
 * If TRUE, then it must be installed during initialization.
 * If FALSE, then no installation is performed.
 *
 * If this is TRUE, @ref CPU_ALLOCATE_INTERRUPT_STACK should also be TRUE.
 *
 * Only one of @ref CPU_HAS_SOFTWARE_INTERRUPT_STACK and
 * @ref CPU_HAS_HARDWARE_INTERRUPT_STACK should be set to TRUE. It is
 * possible that both are FALSE for a particular CPU. Although it
 * is unclear what that would imply about the interrupt processing
 * procedure on that CPU.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_HAS_HARDWARE_INTERRUPT_STACK TRUE

/**
 * Does RTEMS allocate a dedicated interrupt stack in the Interrupt Manager?
 *
 * If TRUE, then the memory is allocated during initialization.
 * If FALSE, then the memory is allocated during initialization.
 *
 * This should be TRUE is CPU_HAS_SOFTWARE_INTERRUPT_STACK is TRUE.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_ALLOCATE_INTERRUPT_STACK TRUE
```

Do the following steps to unify and simplify the initialization and interrupt stack support.

1. Add RTEMS_DECLARE_GLOBAL_SYMBOL() and RTEMS_DEFINE_GLOBAL_SYMBOL() macros to basedefs.h, to allow a global symbol definition via C code, e.g. in confdefs.h, to make the interrupt stack size available to the low level initialization code.
2. Add a special input section ".rtemsstack" to the linker command files to allow a placement of the interrupt stacks. The BSPs can provide the optimal memory location for this section, e.g. on-chip RAM, tightly-coupled memory.

This makes the CPU_HAS_SOFTWARE_INTERRUPT_STACK and CPU_HAS_HARDWARE_INTERRUPT_STACK CPU port defines superfluous, since the low level initialization code has all information available via global symbols.

This makes the CPU_ALLOCATE_INTERRUPT_STACK CPU port define superfluous, since the interrupt stacks are allocated by confdefs.h for all architectures. There is no need for BSP-specific linker command file magic.

The optional _CPU_Interrupt_stack_setup() is still useful to customize the registration of the interrupt stack area in the per-CPU information.

#3465	22 months ago	fixed	fs/jffs2	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Integrate all changes from Linux v3.11 to v4.17 made in the JFFS2 sources					

The original import version of the JFFS2 sources was Linux v3.11 (September 2013). Update the JFFS2 sources to Linux v4.17.

The Git command to generate the patches is:

```
git format-patch v3.11..v4.17 -- include/uapi/linux/jffs2.h fs/jffs2/LICENCE fs/jffs2/acl.h fs/jffs2/build.c fs/jffs2/compr.c fs/jffs2/compr.h
fs/jffs2/compr_rtime.c fs/jffs2/compr_rubin.c fs/jffs2/compr_zlib.c fs/jffs2/debug.c fs/jffs2/debug.h fs/jffs2/erase.c fs/jffs2/gc.c
fs/jffs2/jffs2_fs_i.h fs/jffs2/jffs2_fs_sb.h fs/jffs2/nodelist.h fs/jffs2/nodemgmt.c fs/jffs2/read.c fs/jffs2/readinode.c
fs/jffs2/scan.c fs/jffs2/summary.h fs/jffs2/write.c fs/jffs2/xattr.h
```

We need a source file transformation in the patches:

```
sed -i 's%/fs/jffs2%/cpukit/libfs/src/jffs2/src%g' 00*
```

To support the first commit:

```
From e8bbeeb755a077cfc0f814b07739f9225642d65c Mon Sep 17 00:00:00 2001
From: Cody P Schafer <cody@linux.vnet.ibm.com>
Date: Thu, 23 Jan 2014 15:56:11 -0800
Subject: [PATCH 01/24] fs/jffs2: use rbtree postorder iteration helper instead
of opencoding

Use rbtree_postorder_for_each_entry_safe() to destroy the rbtree instead
of opencoding an alternate postorder iteration that modifies the tree

Signed-off-by: Cody P Schafer <cody@linux.vnet.ibm.com>
Cc: Michel Lespinasse <walken@google.com>
Cc: Jan Kara <jack@suse.cz>
Cc: David Woodhouse <dwmw2@infradead.org>
Signed-off-by: Andrew Morton <akpm@linux-foundation.org>
Signed-off-by: Linus Torvalds <torvalds@linux-foundation.org>
```

we have to a postorder iterator to the red-black tree support code.

The remaining 23 patches are easy to apply.

#3471	22 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	22 months ago
Summary	Update libfdt as of date 2018-07-09					
Description	The initial import of libfdt was in 2015. Update it to the version as of date 2018-07-09.					
#3472	22 months ago	fixed	network/libbsd	Sebastian Huber	Sebastian Huber	15 months ago
Summary	Update of libbsd to a version close to the FreeBSD 12 release					
Description	The FreeBSD project is about to prepare the FreeBSD 12 release soon: https://www.freebsd.org/releases/12.0R/schedule.html Use this time frame to update the libbsd stepwise to a FreeBSD trunk version close to the FreeBSD 12 release.					
#3475	22 months ago	fixed	score	Sebastian Huber	Sebastian Huber	22 months ago
Summary	Add RTEMS_PREDICT_TRUE() and RTEMS_PREDICT_FALSE() for static branch prediction hints					
Description	Add macros to <rtems/score/basedefs.h> for the GNU extension builtin_expect(). Use RTEMS_PREDICT_TRUE() and RTEMS_PREDICT_FALSE() similar to the FreeBSD predict_true() and predict_false(). Alternatives are the Linux likely() and unlikely() or directly the GCC builtin_expect(), however, the FreeBSD names seem to be the most easy to understand.					
#3478	22 months ago	fixed	arch/riscv	Joel Sherrill	Sebastian Huber	21 months ago
Summary	RISCV BSP Tester Cleanup Needed					
Description	rtems-tools currently has the following bsp testing configurations: <pre>\$ find . -name "*riscv*.ini" ./tester/rtems/rtems-bsps-riscv64.ini ./tester/rtems/testing/bsps/riscv64_generic.ini ./tester/rtems/testing/bsps/riscv_generic.ini ./tester/rtems/rtems-bsps-riscv32.ini</pre> rtems-bsps.ini does not include the riscv. tester/rtems/rtems-bsps-tiers.ini does not list the riscv					
#3480	21 months ago	fixed	config	Sebastian Huber	Sebastian Huber	18 months ago
Summary	CONFIGURE_MINIMUM_TASK_STACK_SIZE may affect CONFIGURE_INTERRUPT_STACK_SIZE					
Description	In case an application defines CONFIGURE_MINIMUM_TASK_STACK_SIZE, then this may change the CONFIGURE_INTERRUPT_STACK_SIZE as well: <pre>#ifndef CONFIGURE_INTERRUPT_STACK_SIZE #define BSP_INTERRUPT_STACK_SIZE #define CONFIGURE_INTERRUPT_STACK_SIZE BSP_INTERRUPT_STACK_SIZE #else #define CONFIGURE_INTERRUPT_STACK_SIZE CONFIGURE_MINIMUM_TASK_STACK_SIZE #endif</pre> I think this is not what a user expects.					
#3482	21 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	21 months ago
Summary	Relax the buffer alignment required by rtems_partition_create()					
Description	Buffer alignment required by rtems_partition_create() is too strict since it is checked via _Addresses_Is_aligned() which is <pre>RTEMS_INLINE_ROUTINE bool _Addresses_Is_aligned (const void *address) { #if (CPU_ALIGNMENT == 0) return true; #else return (((uintptr_t)address % CPU_ALIGNMENT) == 0); #endif }</pre> The CPU_ALIGNMENT must take long double and vector data type alignment requirements into account. For the partition maintenance only pointer alignment is required. The user should ensure that its buffer is suitable for the items it wants to manage. The user should not be burdened to provide buffers with the maximum architecture alignment, e.g. why need a 16 byte aligned buffer if you want to manage items with 4 byte integers only?					

#3484	21 months ago	fixed	fs/rfs	Sebastian Huber	Sebastian Huber	21 months ago
Summary	RFS: Remove stray call of rtems_disk_release() in rtems_rfs_buffer_sync()					
Description	The function rtems_rfs_buffer_sync() erroneously calls rtems_disk_release(). This screws up the reference counting of the disk.					
#3486	21 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	21 months ago
Summary	Use uintptr_t and size_t instead of uint32_t in rtems_partition_create()					
Description	Use uintptr_t to specify the length of the partition buffer area instead of uint32_t. This is in line with rtems_region_create(). On 64-bit targets, the length may exceed 4GiB. Use size_t for the buffer size, since on some targets the single object size is less than the overall address range, e.g. m32c sizeof(uintptr_t) > sizeof(size_t).					
#3488	21 months ago	fixed	config	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Remove CONFIGURE_HAS_OWN_MOUNT_TABLE					
Description	RTEMS has the configuration option CONFIGURE_HAS_OWN_MOUNT_TABLE since 1999. This configuration option is broken since RTEMS 4.11. Remove this broken configuration option.					
#3489	21 months ago	fixed	config	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Obsolete CONFIGURE_HAS_OWN_CONFIGURATION_TABLE					
Description	Obsolete the CONFIGURE_HAS_OWN_CONFIGURATION_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes.					
#3490	21 months ago	fixed	config	Sebastian Huber	Sebastian Huber	13 months ago
Summary	Remove CONFIGURE_HAS_OWN_CONFIGURATION_TABLE					
Description	This configuration option was obsoleted in RTEMS 5.1.					
#3491	21 months ago	fixed	posix	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Align mprotect() prototype with POSIX					
Description	The correct prototype is: int mprotect(void *, size_t, int);					
#3496	21 months ago	fixed	score	Sebastian Huber	Sebastian Huber	21 months ago
Summary	Remove superfluous interrupt enable in _Thread_Dispatch_enable()					
Description	The _Thread_Dispatch_enable() contains a superfluous interrupt enable. This bug had probably no effect since the interrupt enable is idempotent on all CPU ports. RTEMS_INLINE_ROUTINE void _Thread_Dispatch_enable(Per_CPU_Control *cpu_self) { uint32_t disable_level = cpu_self->thread_dispatch_disable_level; if (disable_level == 1) { ISR_Level level; _ISR_Local_disable(level); if (cpu_self->dispatch_necessary #if defined(RTEMS_SCORE_ROBUST_THREAD_DISPATCH) ! _ISR_Is_enabled(level) #endif) { _Thread_Do_dispatch(cpu_self, level); <-- This function enabled interrupts } else { cpu_self->thread_dispatch_disable_level = 0; _Profiling_Thread_dispatch_enable(cpu_self, 0); } _ISR_Local_enable(level); <-- Here we enable it again } else { _Assert(disable_level > 0); cpu_self->thread_dispatch_disable_level = disable_level - 1; } }					
#3498	21 months ago	fixed	doc	Jens Schweikhardt	Sebastian Huber	21 months ago
Summary	Command and Variable Index is empty					
Description	The Command and Variable Index, https://docs.rtems.org/branches/master/cpu-supplement/command.html does not contain any commands or variables. If this chapter does not apply to RTEMS it should not be generated. If it does apply, it should contain what its title promises.					
#3499	21 months ago	fixed	doc	Jens Schweikhardt	Sebastian Huber	21 months ago
Summary	The "Index" chapter is empty					
Description	The "Index" chapter, https://docs.rtems.org/branches/master/cpu-supplement/genindex.html is empty. This chapter should contain a usable and helpful index or not be generated at all.					
#3500	21 months ago	fixed	tool	Chris Johns	Chris Johns <chrisj@...>	21 months ago
Summary	Change rtems_waf's RTEMS path check from <code>bin</code> to <code>share/rtems<version></code>					
Description	Currently <code>rtems_waf</code> checks for a <code>bin</code> directory in the RTEMS path. There is no <code>bin</code> directory any more so this test needs to be changed to <code>share/rtems<version></code> .					
#3501	21 months ago	fixed	arch/powerpc	Joel Sherrill	Christian Mauderer	21 months ago
Summary	MSR_RI defined multiple places					
Description	Two files define the MSR_RI macro. Since one is a register name on the PowerPC, this shows up on 48 PowerPC BSPs. This is one example. log/powerpc-qoriq_e6500_64.log:../../../../rtems/c/src/../../../../cpukit/dev/serial/sc16is752-regs.h:117:0: warning: "MSR_RI" redefined log/powerpc-qoriq_e6500_64.log: #define MSR_RI (1u << 6) log/powerpc-qoriq_e6500_64.log: #define MSR_RI (1<<1) /* Recoverable Exception */ log/powerpc-qoriq_e6500_64.log:../../../../rtems/c/src/../../../../cpukit/dev/serial/sc16is752-regs.h:117:0: warning: "MSR_RI" redefined log/powerpc-qoriq_e6500_64.log: #define MSR_RI (1u << 6) log/powerpc-qoriq_e6500_64.log: #define MSR_RI (1<<1) /* Recoverable Exception */					
#3502	21 months ago	fixed	arch/arm	Joel Sherrill	Sebastian Huber	21 months ago
Summary	PL111_LCD_CONTROL_LCD_BPP_16 Redefined					
Description	The constant PL111_LCD_CONTROL_LCD_BPP_16 is defined twice in the file bsp/arm/include/bsp/arm-pl111-regs.h: #define PL111_LCD_CONTROL_LCD_BPP_16 0x04U #define PL111_LCD_CONTROL_LCD_BPP_24 0x05U #define PL111_LCD_CONTROL_LCD_BPP_16 0x06U #define PL111_LCD_CONTROL_LCD_BPP_12 0x07U Given the context, I am guessing the first one should be BPP_32 but since Sebastian added the file, I am assuming he has docs and can answer this question for sure.					

#3503	21 months ago	fixed	doc	Chris Johns	Chris Johns	21 months ago
Summary	PDF Documentation is missing an index					
Description	The PDF generated documents have an empty index.					
#3504	21 months ago	fixed	arch/powerpc	Joel Sherrill	Sebastian Huber	20 months ago
Summary	Warning and formatting in bsp/powerpc/mpc55xxevb/dev/dspi.c					
Description	This is a printf format warning. Also the file is formatted with tabs and not two spaces. In file included from ../../../../../../rtems/c/src/lib/libbsp/powerpc/mpc55xxevb/../../../../bsp/powerpc/mpc55xxevb/dev/dspi.c:32:0: ../../../../rtems/c/src/lib/libbsp/powerpc/mpc55xxevb/../../../../bsp/powerpc/mpc55xxevb/dev/dspi.c: In function 'mpc55xx_dspi_edma_done': /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/status-checks.h:88:23: warning: format '%x' expects argument of type 'unsigned int', but argument 3 has type 'uint32_t {aka long unsigned int}' [-Wformat=] <pre>RTEMS_SYSLOG_PRINT("%s: " fmt, func, ##VA_ARGS) /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/status-checks.h:76:15: note: in definition of macro 'RTEMS_SYSLOG_PRINT' printk(fmt, ##VA_ARGS) /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/status-checks.h:109:3: note: in expansion of macro 'RTEMS_SYSLOG' RTEMS_SYSLOG("Error: " fmt, ##VA_ARGS) ~ ../../../../rtems/c/src/lib/libbsp/powerpc/mpc55xxevb/../../../../bsp/powerpc/mpc55xxevb/dev/dspi.c:122:3: note: in expansion of macro 'RTEMS_SYSLOG_ERROR' RTEMS_SYSLOG_ERROR("eDMA error: 0x%08x\n", error_status); ~ ../../../../rtems/c/src/lib/libbsp/powerpc/mpc55xxevb/../../../../bsp/powerpc/mpc55xxevb/dev/dspi.c:122:41: note: format string is defined here RTEMS_SYSLOG_ERROR("eDMA error: 0x%08x\n", error_status); ~%08lx</pre>					
#3505	21 months ago	wontfix	arch/powerpc	Joel Sherrill	Sebastian Huber	19 months ago
Summary	powerpc/virtex redefined warning					
Description	This looks like ppc403 and ppc405 are both defined but I am not seeing source of the ppc405 definition. The warning is in this section of code: <pre>#if defined (ppc403) #define exisr 0x040 /* DCR: external interrupt status register */ #define exier 0x042 /* DCR: external interrupt enable register */ #endif /* ppc403 */ #if defined(ppc405) #define exisr 0x0C0 /* DCR: external interrupt status register */ #define exier 0x0C2 /* DCR: external interrupt enable register */ #endif /* ppc405 */</pre> In file included from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/score/percpu.h:25:0, from ../../../../../../rtems/c/src/lib/libbsp/powerpc/virtex/../../../../bsp/powerpc/shared/exceptions/ppc_exc_async_normal.S:16: /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:228:0: warning: 'exisr' redefined #define exisr 0x0C0 /* DCR: external interrupt status register */ /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:224:0: note: this is the location of the previous definition #define exisr 0x040 /* DCR: external interrupt status register */ /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:229:0: warning: 'exier' redefined #define exier 0x0C2 /* DCR: external interrupt enable register */ /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:225:0: note: this is the location of the previous definition #define exier 0x042 /* DCR: external interrupt enable register */					
#3506	21 months ago	fixed	build	Joel Sherrill	Chris Johns	19 months ago
Summary	waf for building RTEMS applications needs updating					
Description	Because there are no native tools in the RTEMS tree anymore, the RTEMS install point will not have a bin/ directory. If the --rtems-tools and --rtems directories are different, the sanity check by waf configure for \${rtems}/bin fails. See examples-v2. <pre>+ ./waf configure -v --rtems=/home/joel/rtems-work/bsp-install --rtems-tools=/home/joel/rtems-work/tools/5 --rtems-bsps=powerpc/qemuppc Setting top to : /home/joel/rtems-work/examples-v2 Setting out to : /home/joel/rtems-work/examples-v2/build RTEMS path is not valid. No bin directory found. (complete log in /home/joel/rtems-work/examples-v2/build/config.log)</pre>					
#3507	20 months ago	fixed	score	Sebastian Huber	Sebastian Huber	15 months ago
Summary	Add flexible per-CPU data					
Description	Add means to declare, define and get custom per-CPU data. The API should cover the APIs defined by the Linux <linux/percpu.h> and FreeBSD <sys/pcpu.h> header files.					
#3508	20 months ago	fixed	score	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Add support for thread to processor pinning					
Description	FreeBSD started to use lock-free data structures (Concurrency Kit) with epoch based reclamation (EBR) in May 2018. The goal of this synchronization approach is to avoid atomic read-modify-write operations in the fast path. The algorithms need highly efficient access to per-processor data. This gives raise to add a new feature to RTEMS: thread to processor pinning. Thread pinning is orthogonal to thread processor affinity and overrules the processor affinity settings of a thread. It is intended for temporary use in short critical sections which allow preemption.					
#3510	20 months ago	fixed	lib/block	Joel Sherrill	Sebastian Huber	20 months ago
Summary	ATA driver uses deprecated rtems_blkdev services					
Description	This shows up building fileio on the following BSPs. i386/pc386 i386/pc486 i386/pc586 i386/pc586-se i386/pc686 i386/pcp4 powerpc/brsI powerpc/brs6l powerpc/dp2 powerpc/icecube powerpc/pm520_cr825 powerpc/pm520_ze30					
#3511	20 months ago	duplicate	arch/powerpc	Joel Sherrill	Sebastian Huber	20 months ago
Summary	int/pointer size warnings in powerpc-qoriq_e6500_64					
Description	These all look suspiciously like real issues: <pre>\$ grep warning log/powerpc-qoriq_e6500_64.log ../../../../../../rtems/c/src/lib/libbsp/powerpc/qoriq/../../../../bsp/powerpc/qoriq/start/bspstart.c:173:5: warning: passing argument 1 of 'qoriq_initialize_exceptions' makes pointer from integer without a cast [-Wint-conversion] ../../../../../../rtems/c/src/../../../../cpukit/libmisc/rtems-fdt/rtems-fdt-shell.c:57:27: warning: cast to pointer from integer of different size [-Wint-to-pointer-cast] ../../../../../../rtems/c/src/../../../../cpukit/libmisc/rtems-fdt/rtems-fdt-shell.c:64:27: warning: cast to pointer from integer of different size [-Wint-to-pointer-cast] ../../../../../../cpukit/libmisc/rtems-fdt/rtems-fdt-shell.c:488:11: warning: format '%u' expects argument of type 'unsigned int', but argument 5 has type 'long int' [-Wformat=] ../../../../../../rtems/c/src/../../../../cpukit/libmisc/rtems-fdt/rtems-fdt-shell.c:536:13: warning: format '%au' expects argument of type 'unsigned int', but argument 2 has type 'long int' [-Wformat=] ../../../../rtems/c/src/lib/libbsp/powerpc/qoriq/../../../../bsp/powerpc/shared/exceptions/ppc_exc_alignment.c:28:25: warning: cast to pointer from integer of different size [-Wint-to-pointer-cast] ../../../../../../rtems/c/src/lib/libbsp/powerpc/qoriq/../../../../bsp/powerpc/shared/exceptions/ppc_exc_initialize.c:38:10: warning: cast from pointer to integer of different size [-Wpointer-to-int-cast]</pre>					
#3512	20 months ago	duplicate	tool/rsb	Justin		19 months ago

Summary	sb-check:No python command with Python 2 and Python 3 installed					
	On Ubuntu 18.04.1 LTS there is no command named Python. I have the following Python commands:					
Description	<pre>python2.7 python3.6 python3.6m-config python3m-config python 2.7-config python3.6-config python3-config python3 python3.6m python3m</pre>					
	I am going to symlink python2.7 to python to make it work, but there should be a better solution.					
#3513	20 months ago	fixed	arch/powerpc	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Convert tqm8xx console driver to new Termios API					
#3516	20 months ago	fixed	tool/rsb	Joel Sherrill	Chris Johns	19 months ago
Summary	sb-set-builder should report disk usage of build					
Description	Helping others work through the hello world, it is common for their VM images to not have enough disk space for the build to complete. It would be useful if the set-builder could report disk usage of the build/ directory. This information could be fed into the Users Guide. It is frustrating and a bad experience to watch the build fail 90% of the way through.					
#3517	20 months ago	fixed	doc	Joel Sherrill	Joel Sherrill <joe!@...>	19 months ago
Summary	RSB Ubuntu Host Requirements Missing Some					
Description	Add libncurses5-dev and zlib1g-dev to Ubuntu apt-get instructions Also bison and flex seemed to be missing per one of the persons trying it.					
#3518	20 months ago	fixed	doc	Joel Sherrill	Chris Johns	19 months ago
Summary	RSB MacOS Nits					
Description	The MacOS section of the RSB manual has some minor things that need to be fixed: • says Serria when it should be Sierra (I think). • has +sb-check+ which indicates a formatting error Please review as a Mac user and make sure that's it. :)					
#3519	20 months ago	fixed	tool/rsb	Chris Johns	Chris Johns	20 months ago
Summary	RSB does not strictly check args					
Description	The RSB loose argument parsing in the RSB needs to change. The RSB needs to strictly check arguments to avoid simple user errors.					
#3520	20 months ago	fixed	config	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Remove CONFIGURE_HAS_OWN_FILESYSTEM_TABLE					
Description	This configuration is untested and undocumented. Remove it to avoid a potential exposure of internal data structures to the application domain.					
#3522	20 months ago	fixed	network/libbsd	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Update mDNSResponder to Apple version v878.30.4					
Description	Download mDNSResponder-561.1.1.tar.gz mDNSResponder-567.tar.gz mDNSResponder-576.30.4.tar.gz mDNSResponder-625.41.2.tar.gz mDNSResponder-765.1.2.tar.gz mDNSResponder-765.20.4.tar.gz mDNSResponder-765.30.11.tar.gz mDNSResponder-765.50.9.tar.gz mDNSResponder-878.1.1.tar.gz mDNSResponder-878.20.3.tar.gz mDNSResponder-878.30.4.tar.gz from https://opensource.apple.com/tarballs/mDNSResponder/ Merge each update into libbsd/mDNSResponder.					
#3523	20 months ago	fixed	network/libbsd	Sebastian Huber	Sebastian Huber	20 months ago
Summary	Add FEC network interface driver for TQM8XX					
Description	Import legacy network driver and port it to libbsd.					
#3525	19 months ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Add MMC/SDCard support for i.MX 7Dual BSP					
Description	Port device drivers from FreeBSD for i.MX 7Dual uSDHC module.					
#3526	19 months ago	fixed	dev/serial	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Convert PTY driver to new Termios API					
Description						
#3528	19 months ago	fixed	config	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Remove undocumented and untested CONFIGURE_MAXIMUM_PTYS					
Description	Remove the undocumented and untested CONFIGURE_MAXIMUM_PTYS configuration option. Add a rtems_telnetd_config_table::client_maximum member to the Telnet configuration.					
#3529	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Fix issues raised by Coverity Scan for Telnet server

Summary	Fix issues raised by Coverity Scan for FTP server					
#3531	19 months ago	fixed	unspecified	Joel Sherrill	Joel Sherrill	19 months ago
Summary	Add POSIX Attribute Reports for More Than Scheduler (examples-v2)					
Description	Add programs to report default attributes for various POSIX objects including barriers, condition variables, message queues, mutexes, pthreads, and rwlocks. The programs should be able to run on any POSIX host and report what it uses for object attribute defaults. Object attribute defaults are unspecified by POSIX. The portable practice is to explicitly set every attribute. These programs allow one to probe and compare various operating system implementations.					
#3532	19 months ago	fixed	tool/rsb	Chris Johns	Chris Johns	12 months ago

Summary	RSB source only download is host specific					
Description	The RSB source only download is host specific. Configurations for builds can restrict sources or patches by host to work around specific host issues. Currently a source only download is host specific because the host check is based on the host the RSB is being run on.					
	The release process uses source only downloading to create the complete set of sources in a release. This issue means some host specific source may not be captured.					
	I am yet to figure how to resolve this issue because the download logic is driven by the configuration scripts and this type of logic exists in configuration files such as <code>rtems-gcc-7.3.0-newlib-d13c84eb07e35984bf7a974cd786a6cdac29e6b9.cfg</code> :					
	<pre>%if %{_build_os} == freebsd %{_build_os} == darwin %patch add gcc --rsb-file=freebsd-libgcc-sed-fix.patch -p0 https://gcc.gnu.org/bugzilla/attachment.cgi?id=41380 %hash sha256 freebsd-libgcc-sed-fix.patch 8a11bd619c2e55466688e328da00b387d02395c1e8ff4a99225152387a1e60a4 %endif</pre>					
	The simpler construct in <code>rtems-tools-common-1.cfg</code> of:					
Description	<pre>%ifos win32 mingw ming32 SB_BUILD_ROOT_WAF=\$SB_BUILD_ROOT\$(echo %{_prefix} cut -c 1-2) %else SB_BUILD_ROOT_WAF=\$SB_BUILD_ROOT %endif</pre>					
	is easier to manage as the <code>%ifos</code> logic can always return <code>True</code> however the <code>%else</code> path also need to be followed and this could break the logic in a configuration file. Yes, the example is not about sources or patches however it shows what could be used. I do not think creating a new variable such as <code>%{download_only}</code> and adding logic to the configuration file will help, for example:					
	<pre>%if %{download_only} %{_build_os} == freebsd %{_build_os} == darwin %patch add gcc foobar-bsd.patch %else %patch add gcc foobar-gnu.patch %endif</pre>					
	We require the logic to follow the <code>%if True</code> path and the <code>%else</code> path.					
#3533	19 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Add rtems_task_exit()					
Description	The rtems_task_delete(RTEMS_SELF) function does not return. In order to aid compilers and static analysis tools provide an rtems_task_exit() function which can be specified as a no return function.					
	<pre>void rtems_task_exit(void) RTEMS_NO_RETURN;</pre>					
	This is similar to the POSIX equivalent.					
	<pre>void pthread_exit (void * __value_ptr) __dead2;</pre>					
#3535	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Remove stdin, stdout, stderr convenience routines for CEXP					
Description	These functions should be moved to a general CEXP support.					
#3536	19 months ago	fixed	tool	Chris Johns	Chris Johns	19 months ago
Summary	Move RTEMS configuration data to a common <code>config</code> directory					
Description	Move the <code>rtems-bsp-builder</code> configuration files to a common area in the RTEMS Tools project and create an <code>rtems.py</code> module to handle the configuration. This allows a number of tools access to the <code>arch/bsp</code> data.					
	In time this directory of data can move into the <code>rtems.git</code> repo.					
#3537	19 months ago	fixed	tool	Chris Johns	Chris Johns	16 months ago
Summary	RSB and RTEMS Tools Support for python2 and python3					
Description	Upstream python does not create a <code>python</code> command any more and creates <code>python2</code> and <code>python3</code> . Distributions and operating systems are starting to ship without the <code>python</code> command.					
	The RSB and RTEMS Tools python commands need to be updated and tested so they run on Python2 and Python3 and support added to use the available commands.					
#3538	19 months ago	fixed	doc	Joel Sherrill	Joel Sherrill	19 months ago
Summary	Classic API Barrier Wait Section Title Has Wrong Name					
Description	The section title says obtain not wait.					
	Likely also applies to 4.11.					
#3539	19 months ago	fixed	score	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Remove CPU_PROVIDES_IDLE_THREAD_BODY					
Description	Remove the CPU_PROVIDES_IDLE_THREAD_BODY option to avoid unnecessary conditional compilation.					
#3542	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Remove keep_stdio feature from Telnet service					
Description	The Telnet service started via rtems_telnetd_start() has a keep_stdio feature. This just a task and executes the command function in a loop. For this kind of service we do not library support. This can be done by an application task on its own. Remove this functionality and provide only the real Telnet services.					
#3543	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Change Telnet server to allocate most resources during initialization					
Description	The Telnet server currently creates the resources needed for a client connection on demand. Allocate most resources during initialization to avoid sporadic resource shortage issues.					
#3545	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Support O_DIRECTORY open() flag					
Description	Use this flag in opendir().					
#3546	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago

Description						
#3547	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	19 months ago
Summary	Support O_CLOEXEC open() flag					

Descripti on	This is a POSIX flag. Make sure its use causes no open failure.					
#3549	19 months ago	fixed	arch/powerpc	Sebastian Huber	Sebastian Huber	19 months ago
Summar y	Obsolete powerpc/virtex BSP					
Descripti on	This BSP is quite old (was added 1995), unmaintained and likely without users: https://lists.rtems.org/pipermail/users/2018-September/032557.html					
#3551	19 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Move default configuration to separate library					
Descripti on	An RTEMS application default configuration is contained in cpukit/libmisc/dummy/default-configuration.c. This default configuration is contained in librtmscpu.a. This has at least two problems:					
	1. Application configuration errors may pull in the default configuration which in turn leads to multiply define symbols error. This is quite confusing. You have to consult the linker map file to figure out what cased the pull in of the default configurations. You need to know what a linker map file is and how you generate it with your build system. This is not very user friendly.					
	2. It prevents the use of default configuration items for each subsystem in librtmscpu.a. This can be used to reduce the size of the configuration itself.					
#3552	Proposed change: Move the default configuration to a separate library, e.g. librtmsdefaultconfig.a.					
	19 months ago	fixed	shell	jameszsj	Chris Johns	4 months ago
	Summar y	cpu usage error in SMP mode				
Descripti on	• CPU load dispaly error in SMP mode					
	Load Average: 100.510% Load: 100.966% Idle: 99.033%					
	In fact,CPU is doing nothing.					
Descripti on	• priority display unreadable in SMP mode					
	in diffrent Schedulers priority is map to a core priority, I think unmap					
	maybe reasonable when display the infomation					
#3553	I create a patch about this,see the attachment.

Descripti on	Updated to the latest Trac Spam Filter and upgraded captcha to v2 to avoid any errors. This was reported a while back and should fix any issues.					
	There are more please open a new ticket.					
#3559	19 months ago	fixed	admin	Amar Takhar	Amar Takhar	19 months ago
Summar y	Fix NavAdd? plugin.					
Descripti on	I had no idea but this had gotten removed in the last upgrade I've re-added it.					
	This makes a few changes to the navigation:					
	• "New Ticket" now goes to /wiki/NewTicket • There is a new button "New Ticket (direct)" in the upper right for those who want to directly go to creating a ticket. • "My Tickets" used to go to a query but now goes to the new wiki:MyTickets page.					
#3560	These changes existed years ago when NavAdd? was working I opened this ticket in case anyone has complaints about it coming back if not I will close it in a few days.					
	19 months ago	fixed	admin	Amar Takhar	Amar Takhar	19 months ago
	Summar y	Fix FlexibleAssignTo?				
Descripti on	When we first went to trac we had restrictions on the 'owner' to developers only. When track was upgraded this broke completely but all the code to handle this was already in place.					
	I took the time to fix it today so we have dropdowns again.					
	I've created this ticket to see if anyone has an issue with this should we keep it? Drop it? I know it's been years but it was our original choice.					
#3561	See any ticket the 'reassign to' and on a new ticket the 'assign to' is now a dropdown. These are based on trac permissions so we can always add more if we need it but it really should be restricted to having a project member be the owner so we can ensure tickets are closed and sorted properly.					
	19 months ago	fixed	admin	Amar Takhar	Amar Takhar	18 months ago
	Summar y	Migrate to CommitTicketUpdater?				
Descripti on	The old script was ancient and outdated. I've now killed it off and moved to the internal system described here: https://trac.edgewall.org/wiki/CommitTicketUpdater					
	This should handle all scenarios if it does not please let me know. I will leave this ticket open for a week or so.					
	#3562	19 months ago	fixed	tool/rsb	Chris Johns	Chris Johns
Summar y	Use a short paths for the RSB temporary build path on Windows					

The <code>{_tmproot}</code> path is currently based on a <code>BuildRoot</code> setting in the build configuration files. The line is:						
Descripti on	<code>BuildRoot: %({_tmppath})/%(name)-root-%({_id_u} -n)</code>					
	This is for a shared <code>\$TEMP</code> path plus the name is not shortened so on Windowss these paths become long. Remove the <code>BuildRoot</code> from all configuration files and add support for a shortened temporary path. Windows needs short paths due to the 256 max. path length issue.					
#3568	18 months ago	fixed	tool/rsb	Sebastian Huber	Chris Johns	16 months ago

Summar y	testsuite's rtems-test-check.py python version support					
Descripti on	This command used in the testsuite needs to find a suitable python or the build system needs to find it and invoke it with that python.					
#3583	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Add rtems_malloc() and rtems_calloc()					
Descripti on	The standard C/POSIX functions malloc() and calloc() set errno in case of an error. A dependency to errno pulls in getreent() which pulls in a lot of data structures and functions. This is an issue in low level code especially in the area of a basic board support package initialization and device drivers. Provide rtems_malloc() and rtems_calloc() functions declared in <rtems/malloc.h> which do the same as the corresponding C/POSIX functions except setting errno. The posix_memalign() and aligned_alloc() functions do not have this issue with the errno.					
#3585	18 months ago	fixed	score	Sebastian Huber	Sebastian Huber	5 months ago
Summar y	Deprecate proc_ptr					
Descripti on	See comment in basedefs.h					
Descripti on	<pre>/** * XXX: Eventually proc_ptr needs to disappear!!! */ typedef void * proc_ptr;</pre>					
#3587	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Deprecate rtems_context					
Descripti on	The rtems_context typedef as no corresponding API. A user can do nothing with it. It is only used in cpukit/libmisc/monitor/mon-monitor.c and cpukit/libmisc/monitor/mon-editor.c in RTEMS. Deprecate it in this release.					
#3589	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Deprecate rtems_context_fp					
Descripti on	The rtems_context_fp typedef as no corresponding API. A user can do nothing with it. It is only used in cpukit/libmisc/monitor/mon-editor.c in RTEMS. Deprecate it in this release.					
#3591	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Deprecate region_information_block					
Descripti on	The region_information_block typedef as no corresponding API. It has no proper namespace prefix. A user can do nothing with it. It is only used in cpukit/libmisc/cpuuse/cpuusagetop.c and cpukit/libmisc/shell/main_mallocinfo.c in RTEMS. Deprecate it in this release.					
#3593	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Deprecate rtems_thread_cpu_usage_t					
Descripti on	The rtems_thread_cpu_usage_t typedef as no corresponding API. It violates the POSIX namespace. A user can do nothing with it. It is only used in cpukit/include/rtems/rtems/ratemon.h in RTEMS. Deprecate it in this release.					
#3595	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Deprecate rtems_rate_monotonic_period_time_t					

Descripti on	The rtems_rate_monotonic_period_time_t typedef as no corresponding API. It violates the POSIX namespace. A user can do nothing with it. It is only used in cpukit/include/rtems/rtems/ratemon.h in RTEMS. Deprecate it in this release.					
#3598	18 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	17 months ago
Summar y	Move internal types of API objects to separate header file					
Descripti on	The <rtems.h> header file still exposes a lot of implementation details via the definition of internal data structures, e.g. the *_Control structures of the API objects. They are only necessary for the application configuration. Move them to separate header files. Currently we have:					
	<rtems/rtems/XYZ.h> <rtems/rtems/XYZimpl.h>					
	Use <rtems/rtems/XYZdata.h> for this new header file.					
Descripti on	Potential new header files are:					
	- rtems/extensiondata.h - rtems/rtems/asrdata.h - rtems/rtems/barrierdata.h - rtems/rtems/dpmemdata.h - rtems/rtems/eventdata.h - rtems/rtems/messagedata.h - rtems/rtems/partdata.h - rtems/rtems/ratemondata.h - rtems/rtems/regiondata.h - rtems/rtems/semdata.h - rtems/rtems/tasksdata.h - rtems/rtems/timerdata.h					
#3599	18 months ago	fixed	arch/m32c	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Remove m32c architecture port					
Descripti on	The m32c architecture port is incomplete, e.g. important features such as interrupt support are missing. It never run on real hardware. The tools are out dated and unmaintained. There are no known users:					
	https://lists.rtems.org/pipermail/users/2018-January/031991.html

Summar y	Update or1k tools to use GCC master					
Descripti on	Stafford Horne emailed me to say that he just pushed the or1k gcc to the FSF repository. We can now switch from gcc 4.9.3 to a hash from the gcc master. I was testing periodically from his repository before the merge so it should be working.					
	I am marking this as a blocker but expect it to be easy and quick to resolve. We don't want to release using gcc 4.9.3 for any target.					
#3602	18 months ago	fixed	arch/or1k	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Update or1k tool chain to use the upstream GCC					
#3603	18 months ago	fixed	score	Sebastian Huber	Sebastian Huber	18 months ago
Summar y	Remove support for 16-bit object identifiers					
Descripti on	The RTEMS_USE_16_BIT_OBJECT define is not set by an RTEMS port. Remove support for 16-bit object identifiers. If someone really wants to use RTEMS on a 16-bit target, then it is better to use self-contained objects instead of playing around with object identifier optimizations.					
#3604	18 months ago	fixed	lib/dl	Joseph Hickey	Chris Johns	17 months ago
Summar y	RTL Unresolved Symbols from common section on i386/pc686 (cloned)					
Descripti on	Cloned from #3527:					
	By default GCC puts uninitialized global variables into a common section in the ELF file. When attempting to load the resulting ELF file at runtime using <code>dlopen()</code> , these global symbols are not resolved as expected.					
	The RTL reports unresolved symbols, and runtime code that take the address of the global get <code>NULL</code> instead.					
	This is reproducible using the libtests/dl01 example by adding a global variable to the module code. I will attach a patch that replicates the issue.					
Descripti on	Test platform is QEMU using pc686 BSP, RTEMS source version 4.11.3 (latest on 4.11 git branch as of this writing)					
#3605	18 months ago	fixed	lib/dl	Kevin Gordon		5 months ago
Summar y	RTL Allows Unloading a Module other Modules Depend Upon (cloned)					
Descripti on	Cloned from #3195:					
	Consider the following example using ELF .o files from compiled source files module-0.c and module-1.c from ticket #3194:					
	module-0.o is loaded using dlopen() with no code or data dependencies. module-1.o is loaded using dlopen() with both code and data dependencies on module-0 which are resolved by RTL.					
	The RTL function dlclose() returns no error when module-0 is unloaded, when it should return an error and not unload module-0. This becomes quite dangerous because a subsequent call to module1Function1() in the currently-loaded module-1.o, which accesses shared_resource_0[] and calls module0Function0(), will result in an unexpected trap on qemu or the call succeeding with the correct return value on hardware when it should not.					
	The erroneous successful unload() of module-0 aside, it appears as though the resources are not actually deleted and I believe this ticket is related to tickets #3192 and #3194.					
	Architecture is sparc-leon3 using both the RTEMS 4.11.1 public release and rtems master @f043b9bd3bf25626fb1a311dd7fa041eacc68adc with rtems-source-builder @55f2d69e9b67cde23d61375fa34ef5b0f04a985d.					
Descripti on	Execution environments are qemu-system-sparc and LEON3 UT700 hardware.

SummaryRTL Allows Unloading a Module other Modules Depend Upon (cloned)

Description	Cloned from #3195 :						
	Consider the following example using ELF .o files from compiled source files module-0.c and module-1.c from ticket #3194 :						
	module-0.o is loaded using dlopen() with no code or data dependencies. module-1.o is loaded using dlopen() with both code and data dependencies on module-0 which are resolved by RTL.						
Description	The RTL function dlclose() returns no error when module-0 is unloaded, when it should return an error and not unload module-0. This becomes quite dangerous because a subsequent call to module1Function1() in the currently-loaded module-1.o, which accesses shared_resource_0[] and calls module0Function0(), will result in an unexpected trap on qemu or the call succeeding with the correct return value on hardware when it should not.						
	The erroneous successful unload() of module-0 aside, it appears as though the resources are not actually deleted and I believe this ticket is related to tickets #3192 and #3194 .						
	Architecture is sparc-leon3 using both the RTEMS 4.11.1 public release and rtems master @f043b9bd3bf25626fb1a311dd7fa041eacc68adc with rtems-source-builder @55f2d69e9b67cde23d61375fa34ef5b0f04a985d.						
Summary	Execution environments are qemu-system-sparc and LEON3 UT700 hardware.

Summary	Add RSB reporting section to the documentation.						
	As reported in this email https://lists.rtems.org/pipermail/users/2018-November/032802.html :						
	"I could imagine that the GCC 6.3.0 of the TASTE VM isn't suitable to build RTEMS toolchain with RTEMS source builder & kernel masters but I can't find information which of all those config files of RSB I have to use for a successful build (targets: ARM, x86-64). This is pretty frustrating and very disappointing. There are so many variables which are not exactly documented, at least for the current version of RSB/kernel." there is no documented way to get a configuration report of an RSB configuration. The documentation needs to be updated to show how this can be done. For example: <pre>\$./source-builder/sb-reports 5/rtems-sparc \$ less 5-rtems-sparc.txt</pre>						
Summary	#3630	17 months ago	fixed	arch/arm	Markus Bernd Moessner	Chris Johns	4 days ago
	Build of rtems-tools fails with i686-w64-mingw32						
	Hi, I am following https://docs.rtems.org/branches/master/user/hosts/windows.html to build a Windows Host toolchain on Linux Mint 19. However, the build of rtems-tools fails with: "unknown host: i686-w64-mingw32". I can track the issue down to the function "check_options" in the wscript. The function expects a host called "mingw32" or "x86_64-w64-mingw32". My naive solution would be to simply extend the list with "i686-w64-mingw32", but I've just started with RTEMS so I might have choosen a wrong path in an earlier step.

#3665	17 months ago	fixed	lib	Sebastian Huber	Sebastian Huber	4 months ago
-------	---------------	-------	-----	-----------------	-----------------	--------------

Summary	Add low level event recording infrastructure					
---------	--	--	--	--	--	--

Add low level event recording infrastructure for system and user defined events. The infrastructure should be able to record high frequency events such as

- SMP lock acquire/release,
- interrupt entry/exit,
- thread switches,
- UMA zone allocate/free,
- Ethernet packet input/output, etc.

It should allow post-mortem analysis in fatal error handlers, e.g. the last events should be in the record buffer, the newest event overwrites the oldest event. It should be possible to detect record buffer overflows for consumers that expect a continuous stream of events, e.g. to display the system state in real-time.

The framework should support high-end SMP machines (more than 1GHz processor frequency, more than four processors).

The existing capture engine tries to solve this problem, but its performance is not good enough for high-end production systems. The main issues are the variable-size buffers and the use of SMP locks for synchronization. To fix this, the API would change significantly.

Add a new API instead. The implementation should use per-processor data structures and no atomic read-modify-write operations. It is pretty much a per-processor ring buffer for record events.

Use the CPU counter to get the time of events. Combine it with periodic uptime events to synchronize it with `CLOCK_REALTIME`.

Here is an example of the

Descripti
on

```
/**
 * @brief Produces a record item.
 *
 * @param event The record event without a time stamp for the item.
 * @param data The record data for the item.
 */
void rtems_record_produce( rtems_record_event event, rtems_record_data data );
```

function PowerPC machine code generated by GCC:

```

Summary xilinx_zynq_a9_qemu - fails to link psxconfig01

Summary	Raspberry Pi Fails to Build
---------	-----------------------------

Description

Summary	RSB: Change default prefix to OS prefix + "rtems" + \$rtems_version
---------	---

Description

The default prefix selected by the RSB should take this into account. Use OS prefix + "rtems" + \$rtems_version, e.g. on Linux for RTEMS 5: "/opt/rtems/5".

Summary	ARM BSP contains ARM code in THUMB only build
---------	---

The `xilinx_zynq_a9_qemu` BSP contains a `memcpy` that is ARM mode code and not THUMB. This can be seen with `hello.exe` and `vlan01.exe` in the libbsd examples.

The script run with the command that follows shows there is a single ARM function in the executable. The python script is:

```
from __future__ import print_function
import sys
for line in sys.stdin:
    ls = line.split()
    if len(ls) == 8 and ls[0][-1] == ':' and ls[3] == 'FUNC':
        addr = int(ls[1], 16)
        if addr & 1 == 0:
            print(ls[7])
```

Command with output:

```
$ arm-rtems5-readelf -a `find . -name hello.exe` | python ./arm-thumb.py
memcpy
```

The presence of this single function makes me wonder why and if something is wrong in the building of the `memcpy` function. Examination with `rtems-exeinfo` shows the code is built by GNU AS from the file `memcpy-armv7a.S` while other asm files are not generating ARM code. The section of the output from:

```
$ rtems-exeinfo -a `find . -name hello.exe`
```

is:

```
GNU AS 2.31.1: 14 objects
| arm_exc_interrupt.S
| armv4-exception-default.S
| bpabi.S
| bpabi.S
| bsp-start-memcpy.S
| cpu_asm.S
| liblfuncs.S
| liblfuncs.S
| liblfuncs.S
| liblfuncs.S
| memchr.S
| memcpy-armv7a.S
| start.S
| strcmp-armv7.S
| strlen-armv7.S
```

GNU LD is correctly managing the interworking and the code runs however is this behavior expected and understood? Note, the existence of this code breaks libdl's loading of `dhcpcd.c` as section `.rel.text.dhcpcd_handle_hwaddr` contains a `R_ARM_THM_JUMP24` relocation record which requires a veneer in large memory application as well as `bl` to `blx` support. This support could be added but I am not currently in favor of having this support for something that should not happen.

```

#3685	15 months ago	fixed	lib/dl	Chris Johns	Chris Johns	4 months ago
-------	---------------	-------	--------	-------------	-------------	--------------

Summary Add large memory support to libdl

Description Add large memory support to libdl. Some architectures use small relative offsets with smaller instructions for performance reasons. Object files loaded at addresses that are outside the relative range require trampoline calls that bridge the instruction in the object to the target symbol. The mechanism used depends on the archives.

Libdl requires generic support to parse the relocation record before the object file allocation to provide the memory to hold the trampoline calls.

The ARM and PowerPC architectures require trampolines. This is called veneers on ARM.

#3686	15 months ago	fixed	lib/dl	Chris Johns	Chris Johns	2 months ago
-------	---------------	-------	--------	-------------	-------------	--------------

Summary Add library searching and loading to libdl

Description	Provide support to search library files (archives) for symbols loading the object file that contains the symbol. The support shall:					
	1. Parse a configuration file called <code>/etc/libdl.conf</code> for the list of archive symbols to load. Support <code>fnmatch()</code> wildcard parsing. Allow runtime updates reloading if there is a change. 2. Maintain archive symbol tables in memory to improve symbol search performance. Archives must have a <code>ranlib</code> generated symbol table. Reload an archive if it has changed. 3. Make sure separate text and data built object files is supported. Assume a duplicate symbol means that section and symbol has already been loaded. Load all sections not loaded. There is no need to be efficient at this point in time. 4. Add support to check if there are any system wide unresolved symbols. 5. Automatically unloaded archive object files that are not referenced. 6. Duplicate symbols in archives is not an error. The first archive that has the symbol in an object file is loaded. The feature adds symbol based demand loading of object files to <code>libdl</code>. A user loads an object file using the <code>dlopen</code> function and unresolved symbols are loaded from the libraries hosted on the target.					
#3687	15 months ago	fixed	lib/dl	Chris Johns	Chris Johns	2 months ago
Summary	Add architecture section support to libdl and support PowerPC's small data.					
Description	Add support for architecture specific sections. Allow architecture back end support to handle sections that are specific to an architecture.					
	Add PowerPC <code>sdata</code> and <code>sbss</code> support. The PowerPC can support a small data 64K continuous system wide region of memory. Small data accesses are faster as the instruction is smaller however the variable is referenced as a signed 16bit offset from the register <code>r13</code>. This register is offset from the region's base address by 32K. The linker creates the <code>.sdata</code> and <code>.sbss</code> regions and sets the <code>_SDA_BASE</code> symbol which is loaded into <code>r13</code>. Any run-time loaded code with small data support needs space in the small data region therefore a BSP needs a way to define the space and the linker needs to allocate it. Provide a way for PowerPC BSPs to add extra memory to the small data region. RTEMS supports the PowerPC EABI and uses <code>sysv</code> small data allocations. RTEMS uses the default variable size of <code>8</code> as the selector for a variable to be allocated in the small data region. The GCC user manual recommends all code is built with the same settings. Dynamically loaded code could be built with small data disabled and if enabled the default size is recommended. Note, small data is system wide which means a default size of <code>8</code> allows only 8192 8 byte variables. Provide an allocator to manage the available small data memory.

Summary	Basic Support for Trace Compass					

The **Trace Compass** is a tool to analyse and display trace data. Trace data can be gathered from RTEMS applications via various means, for example:

- **RTEMS Trace Linker**
- **Event Recording**
- **Capture Engine**

The goal of this project is to enable the Trace Compass to analyse and display some basic information using the Event Recording infrastructure. Basic information is defined by the Linux kernel trace support (lttng) and includes (see Trace Compass project explorer Tracing -> Traces -> Something):

- kernel
 - Views
 - CPU usage
 - CPU usage
 - IRQ Analysis
 - IRQ Statistics
 - IRQ Table
 - IRQ vs Count
 - IRQ vs Time
 - Linux Kernel
 - Control Flow
 - Resources

Example data can be obtained from the **Trace Visualization Labs**.

Advanced support for Trace Compass could include dynamic memory traces, stack usage, network packet flow, etc.

There are four main problems.

1. Generation of sufficient trace events, currently the interrupt entry/exit events are not available for example.
2. The trace data must be transferred from the target system running the RTEMS application to a host computer running the Trace Compass (transfer via TCP is available, for UDP based transfer see **#3695**).
3. The Trace Compass must be able to analyse and display the information obtained from the Event Recording.
4. The RTEMS user must be able to use this infrastructure. This requires that it is easy to use, availability of tutorials and documentation.

To tackle problem 3. there are two approaches possible. You can extend the Trace Compass to work with the trace data provided by RTEMS as is. Alternatively, the RTEMS trace data could be converted to Linux kernel trace data (lttng) which Trace Compass already understands.

Related topics are **Common Trace Format**, **Babeltrace**, **barectf**, **#2961** and **#3028**.

Skills Needed

You need good C and C++ skills with a proven record. You need to show socket level and networking programming skills. In case Trace Compass needs to be extended this requires Java skills and familiarity with the Eclipse framework. Knowledge of YAML and XML is helpful. High end RTEMS targets can generate a huge number of events per second (10MiB/s trace data is 1310720 events per second; on a 4GHz host processor this is 3051 instructions per event under real-time processing conditions) which imposes a considerable work load to modern host computers, so the host programs must work efficiently.

Summary	mfill shell command uses the wrong arguments for the memset()					
#3724	14 months ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	14 months ago
Summary	bsp/lpc24xx: Convert SSP driver to Linux API					
#3725	14 months ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	12 months ago
Summary	bsp/lpc24xx: Convert I2C driver to Linux API					
Description						
#3728	13 months ago	fixed	bsps	Chris Johns	Chris Johns	13 months ago
Summary	Set small data section to max size for mvme5500 and motorola_powerpc BSPs					
Description	These are large memory targets that can support libdl. Make the small data memory the maximum size.					
#3731	13 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	13 months ago
Summary	Add rtems_scheduler_get_processor()					
Description	Add rtems_scheduler_get_processor() as a replacement for rtems_get_current_processor(). The rtems_get_current_processor() is a bit orphaned. Adopt it by the Scheduler Manager. This is in line with the glibc sched_getcpu() function.					
#3732	13 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	13 months ago
Summary	Add rtems_scheduler_get_processor_maximum()					
Description	Add rtems_scheduler_get_processor_maximum() as a replacement for rtems_get_processor_count(). The rtems_get_processor_count() is a bit orphaned. Adopt it by the Scheduler Manager. The count is also misleading, since the processor set may have gaps and the actual count of online processors may be less than the value returned by rtems_get_processor_count().					
#3733	13 months ago	fixed	lib/debugger	Chris Johns	Chris Johns	13 months ago
Summary	Add general reg support to libdebugger					

Testing master on a Zynq reports:

```
(gdb) target remote 10.10.5.45:1122
Remote debugging using 10.10.5.45:1122
Truncated register 19 in remote 'g' packet
```

It looks to me like gdb is now smart enough to know this ARM arch has a NEON and floating point registers:

Descripti
on

Name	Nr	Rel	Offset	Size	Type
r0	0	0	0	4	uint32_t
r1	1	1	4	4	uint32_t
r2	2	2	8	4	uint32_t
r3	3	3	12	4	uint32_t
r4	4	4	16	4	uint32_t
r5	5	5	20	4	uint32_t
r6	6	6	24	4	uint32_t
r7	7	7	28	4	uint32_t
r8	8	8	32	4	uint32_t
r9	9	9	36	4	uint32_t
r10	10	10	40	4	uint32_t
r11	11	11	44	4	uint32_t
r12	12	12	48	4	uint32_t
sp	13	13	52	4	*1
lr	14	14	56	4	uint32_t
pc	15	15	60	4	*1
f0	16	16	64	12	_arm_ext
f1	17	17	76	12	_arm_ext
f2	18	18	88	12	_arm_ext
f3	19	19	100	12	_arm_ext
f4	20	20	112	12	_arm_ext
f5	21	21	124	12	_arm_ext
f6	22	22	136	12	_arm_ext
f7	23	23	148	12	_arm_ext
fps	24	24	160	4	uint32_t
cpusr	25	25	164	4	uint32_t

The target support in libdebugger is a simple array of 32bit ints. This needs to change to handle registers at various offsets. The lack of fp regs was a simplification at the time I first implement this server. Loos like I need to sort this out.

#3734	13 months ago	fixed	score	Sebastian Huber	Sebastian Huber	13 months ago
Summary	Add RTEMS_CONST attribute					
Description	Add RTEMS_CONST attribute to make the compiler specific <u>attribute</u> ((const)) available.					
#3735	13 months ago	fixed	config	Sebastian Huber	Sebastian Huber	5 months ago
Summary	Remove CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE					
Description	Remove the CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes. The use of this configuration option had a note in the documentation: "This is a configuration parameter which is very unlikely to be used by an application. If you find yourself wanting to use it in an application, please reconsider and discuss this on the RTEMS Users mailing list." No discussion took place in a couple of years about this topic.					
#3736	13 months ago	fixed	arch/powerpc	Chris Johns	Sebastian Huber <sebastian.huber@...>	6 months ago
Summary	PowerPC Beatnik BSP C++ exceptions broken					

Running `cdtest.exe` fails. I am wondering if there is an issue in the `linkcmd` scripts this BSP uses. The psim works.

The trace is:

#3741	12 months ago	fixed	lib/dl	default	Chris Johns	12 months ago
Summary	libdl loading ELF objects from libbsd NFS file system ends in a deadlock					
Description	For ELF files the run-time loader calls this chain: <code>rtems_rtl_elf_file_load()</code> <code>rtems_rtl_alloc_lock()</code> <code>rtems_rtl_alloc_heap()</code> <code>_RTEMS_Lock_allocator()</code> <code>_RTEMS_Lock_allocator()</code> locks all heap operations. RTL then calls <code>read()</code> and for NFS file systems the NFS threads try to use the heap, locking up the system.					
#3742	12 months ago	fixed	test	Chris Johns	joel@...	12 months ago
Summary	T_config conflicting type qualifiers for 'config'					
Description	Running the <code>rtems-bsp-builder</code> on FreeBSD is give an error in <code>ttest01</code> for bsps: <code>arm/csb336</code> <code>arm/csb337</code> <code>arm/csb637</code> <code>arm/kit637_v6</code> <code>mips/csb350</code> The error being reported is: <pre>error: testsuites/libtests/ttest01/init.c:146:23: error: conflicting type qualifiers for 'config'</pre> The builder command line is: <pre>/opt/work/chris/rtems/rt/rtems-tools.git/tester/rtems-bsp-builder \ --rtems-tools=/opt/work/rtems/5 \ --rtems=/opt/work/chris/rtems/kernel/rtems.git \ --log=everything-tests \ --profile=everything \ --build=tests \ --jobs=7/6</pre> A BSP configure command line is: <pre>/opt/work/chris/rtems/kernel/rtems.git/configure \ --target=mips-rtems5 --enable-rtemsbbsp=csb350 --prefix=/opt/rtems/5 \ --enable-tests --disable-smp</pre>					
#3743	12 months ago	fixed	tool/rsb	Chris Johns	Chris Johns	12 months ago
Summary	RSB os and arch config logic is broken					
Description	The config file processing of conditionals: <code>%ifos</code> <code>%ifnos</code> <code>%ifarch</code> do not correctly process lists of arguments. The argument list is split in 2 with the first element correct handled and the remaining treated as a lump. The argument list needs to be split evenly.					
#3746	12 months ago	fixed	lib/dl	Chris Johns	Chris Johns <chrisj@...>	12 months ago
Summary	libdl test di05.exe failing					
Description	This test is failing because the second stage of the symbol loading does not check if a section referenced by a symbol has been loaded. It is not clear yet if the lack of support in <code>libdl</code> for <code>group</code> sections is a factor.					
#3747	12 months ago	fixed	arch/arm	Sebastian Huber	Sebastian Huber	12 months ago
Summary	Address Cortex-M3 Errata 602117					
Description	While testing on a NXP LPC1788 it found that this chip is affected by the Cortex-M3 Errata 602117. NXP didn't bother to document this in their errata sheet for the chip: https://www.nxp.com/docs/en/errata/ES_LPC177X_8X.pdf To avoid the issues, you have to compile everything with <code>-mfix-cortex-m3-ldrd</code>. This option is enabled by default, if you use <code>-mcpu=cortex-m3</code>. I think we have to change our GCC multilibs to account for this errata. For example: <pre>diff --git a/gcc/config/arm/t-rtems b/gcc/config/arm/t-rtems index 026a5895662..e276b4f3e57 100644 --- a/gcc/config/arm/t-rtems +++ b/gcc/config/arm/t-rtems @@ -1,7 +1,7 @@ # Custom RTEMS multilibs for ARM -MULTILIB_OPTIONS = mbig-endian mthumb march=armv6-m/march=armv7-a/march=armv7-r/march=armv7-m/mcpu=cortex-m7 mfpu=neon/mfpu=vfp/mfpu=vfpv3- d16/mfpu=fpv4-sp-d16/mfpu=fpv5-d16 mfloat-abi=hard -MULTILIB_DIRNAMES = eb thumb armv6-m armv7-a armv7-r armv7-m cortex-m7 neon vfp vfpv3-d16 fpv4-sp-d16 fpv5-d16 hard +MULTILIB_OPTIONS = mbig-endian mthumb march=armv6-m/march=armv7-a/march=armv7-r/mcpu=cortex-m3/mcpu=cortex-m4/mcpu=cortex-m7 mfpu=neon/mfpu=vfp/mfpu=vfpv3-d16/mfpu=fpv4-sp-d16/mfpu=fpv5-d16 mfloat-abi=hard +MULTILIB_DIRNAMES = eb thumb armv6-m armv7-a armv7-r cortex-m3 cortex-m4 cortex-m7 neon vfp vfpv3-d16 fpv4-sp-d16 fpv5-d16 hard # Enumeration of multilibs @@ -16,7 +16,8 @@ MULTILIB_REQUIRED += mthumb/march=armv7-a/mfpu=neon/mfloat-abi=hard MULTILIB_REQUIRED += mthumb/march=armv7-a MULTILIB_REQUIRED += mthumb/march=armv7-r/mfpu=vfpv3-d16/mfloat-abi=hard MULTILIB_REQUIRED += mthumb/march=armv7-r -MULTILIB_REQUIRED += mthumb/march=armv7-m/mfpu=fpv4-sp-d16/mfloat-abi=hard +MULTILIB_REQUIRED += mthumb/mcpu=cortex-m3 +MULTILIB_REQUIRED += mthumb/mcpu=cortex-m4 +MULTILIB_REQUIRED += mthumb/mcpu=cortex-m4/mfpu=fpv4-sp-d16/mfloat-abi=hard MULTILIB_REQUIRED += mthumb/mcpu=cortex-m7/mfpu=fpv5-d16/mfloat-abi=hard -MULTILIB_REQUIRED += mthumb/march=armv7-m MULTILIB_REQUIRED += mthumb</pre>					
#3748	12 months ago	fixed	lib/dl	Chris Johns	Chris Johns <chrisj@...>	12 months ago
Summary	libdl uses a linear symbol search on object file symbols					
Description	Symbol searching has two parts, searching the object file and searching the global symbol table. Currently the object file search is linear and the global table search uses a hash table. A large incrementally linked object file can have a large local and global set of symbols and this can slow the loading process. This issue does not show up for small object files with a few symbols which is typically how our libraries are made. Change the object file symbol search to a binary search (<code>bsearch</code>). A hash table for each object file would increase the in memory object file footprint by a significant amount and would harm the small object file use case that only have a few symbols. A binary search is a suitable compromise.					
#3751	12 months ago	fixed	doc	Joel Sherrill	Joel Sherrill <joel@...>	5 months ago

Summary	No documentation on Region Get Information Directives					
Description	rtems_region_get_information and rtems_region_get_free_information are not documented in the Classic API Users Guide. They have been present since at least 4.6 and should be documented.					
#3753	12 months ago	fixed	config	Joel Sherrill	Sebastian Huber <sebastian.huber@...>	4 months ago
Summary	Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORs					
Description	CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORs probably should not mention LIBIO as that is an internal component/organization aid which should not be visible to the user.					
	This ticket is to discuss renaming CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORs to just CONFIGURE_MAXIMUM_FILE_DESCRIPTORs.					
	Perhaps deprecate now and obsolete in next major version. Include code to warn and map old name to new.					
	Thoughts?

Summary	Users Guide Ubuntu Instructions Have Typo					
Description	sudo should be sudo					
#3756	11 months ago	fixed	arch/sparc	Sebastian Huber	Sebastian Huber	11 months ago
Summary	Condition codes in PSR are destroyed by lazy FP context switch					
Description	https://lists.rtems.org/pipermail/devel/2019-June/026014.html					
#3760	11 months ago	fixed	arch/arm	Chris Johns	Chris Johns <chrisj@...>	9 months ago
Summary	BBB MMU update crashes					
Description	Calling <code>arm_cp15_set_translation_table_entries()</code> on a BBB (Cortex-A8) crashes in the call to <code>arm_cp15_tlb_invalidate_entry_all_asids()</code> . There is no HYP support in the BBB's A8. The <code>cp15</code> register is documented in the A8 manual but the BBB device from TI does not have the support built in.					
	A check of the A8 doco from ARM says this is for use in HYP mode so should we be using without checking if HYP is supported and if it is active? I am also wondering if we use should be using it on the Zynq. I have no idea why the Zync (A9) does not complain, it may be ignoring the invalidate request.					
	While looking at this code I was wondering why we do not follow ARM's recommendation of 'break-make' updates of the TLB? I do not know we could support such a process because we may be asked to invalidate the entry for the text section we are running in to update it.					
	Note, following the other path in the call works on a BBB.					
#3762	10 months ago	fixed	arch/arm	Chris Johns	Chris Johns	10 months ago
Summary	Return the current handler from ARM cp15 set exception call					
Description	Update the cp15 call <code>arm_cp15_set_exception_handler()</code> to return the current handler. This lets code catch and return an exception handler, for example code to probe suspect hardware.					
	This is need to probe the memory map debug registers for debug v7 implementations.					
#3763	10 months ago	fixed	tool/rsb	Chris Johns	Chris Johns <chrisj@...>	9 months ago

#3768	10 months ago	fixed	build	Chris Johns	Chris Johns	10 months ago

Summary	Add staging support to Makefile.inc					
Description	Add support to allow staging of an RTEMS BSP build so dependent packages can be built in a single RBS buildset build.					
#3769	10 months ago	fixed	tool/rsb	Chris Johns	Chris Johns	9 months ago
Summary	RSB BSP Buildsets					
Description	Add support to the RSB for BSP build sets. The support includes building 3rd party packages for a BSP. 1. Add BSP buildset support 2. Build packages for a BSP 3. Stage buildset builds if not the outer build so dependent packages and be built before a package and used 4. Fix packages to support staged builds					
#3770	10 months ago	wontfix	tool/rsb	Chris Johns		5 months ago
Summary	RSB 3rd party packages failing to build					
Description	The following packages do not build or have issues and will be removed if they are not updated: 1. ntp 2. microwindows 3. nxlib 4. lwip The lwip patch used by this package needs to be updated. The <code>install</code> target for the <code>Makefile</code> does not support <code>DESTDIR</code> and cannot be staged. It is being built however a lack of <code>DESTDIR</code> is not compatible with the requirements of the RSB for staged builds. The package installs directly to the <code>prefix</code> which is not suppose to happen. The packages will need to be fixed or removed before 5.1. There is no point releasing the RSB with packages that are broken.					
#3773	9 months ago	fixed	arch/arm	Chris Johns	Chris Johns	9 months ago
Summary	RPI fails to boot					
Description	The RPi BSP fails to boot with the current master. A bsect of the repo shows the failure appears after this change <code>[bdec62c4/rtems]</code> .					
#3774	9 months ago	fixed	arch/arm	Chris Johns	Sebastian Huber <sebastian.huber@...>	9 months ago

#3794	8 months ago	fixed	posix	Joel Sherrill	Joel Sherrill	7 months ago
Summary	Initial POSIX Signals Mask Incorrect					

RTEMS initial signal mask for the "process" does not match the behavior of Linux, FreeBSD, and Cygwin.

There are some subtle rules which need to be followed for the value of the created thread's signal mask. Because signals are part of C99 and enhanced by POSIX, both Classic API tasks and POSIX threads have to have them enabled.

- 1. Internal system threads should have no signals enabled. They have no business executing user signal handlers -- especially IDLE.
- 2. The initial signal mask for other threads needs to follow the implication of a pure C99 environment which only has the methods raise() and signal(). This implies that all signals are unmasked until the thread explicitly uses a POSIX methods to block some. This applies to both Classic tasks and POSIX threads created as initialization tasks/threads (e.g. before the system is up).
- 3. After the initial threads are created, the signal mask should be inherited from the creator. This can be done based on system state.

RTEMS behavior was incorrect by blocking all signals initially and for Classic API tasks.

Notes:

- The default signal mask does not matter for any application that does not use POSIX signals.
- It is assumed that Classic API tasks should provide a compliant C run-time environment. Hence the default signal mask state matters.

Impact on Applications and Tests ===== In general, an application should always explicitly block or unmask any signals that it intends to process. If there is concern about which thread may process it, then it should be blocked in all threads that are not intended to process it. The following code can be used to block all signals. This method can be used in the initialization task/thread to mimic historical behavior:

```
static void block_all_signals(void)
{
    int          sc;
    sigset_t      mask;

    sc = sigfillset( &mask );
    // check sc == 0

    sc = pthread_sigmask( SIG_BLOCK, &mask, NULL );
    // check sc == 0
}
```

#3796	8 months ago	fixed	doc	Gedare Bloom	Joel Sherrill <joel@...>	5 months ago
Summary	docs/develenv directory structure bitrot					
Description	The directory structure described in the Development Environment Guide is outdated and does not reflect changes made in relocating BSPs to the bsp/ directory and refactoring the include paths.					
#3797	8 months ago	fixed	tool/rsb	Chris Johns	Chris Johns	5 months ago
Summary	Add LLVM as a package					
Description	Add 5/rtems-llvm to build LLVM for supported hosts.					
	This can be used to help resolve the dependency the recent trace changes have created by using LLVM symbol/dwarf support.					
#3798	7 months ago	fixed	network/libbsd	Joel Sherrill	Sebastian Huber	4 months ago
Summary	Add socketmark to libbsd					
Description	Now that pselect() is in libbsd, socketmark() is the only method called out by any of the four POSIX profiles in the FACE Technical Standard (http://opengroup.org/face) which is not provided by rtems-libbsd.

The released source has the <code>--rsb-file</code> name as the file name and not the URL file name. The transformation occurred when the release process downloaded the files to make the release. The release fails to find the source in the RTEMS file server and falls back to the home site to fetch the source.						
#3814	6 months ago	fixed	admin	Chris Johns	Chris Johns	6 months ago
Summar y	Releasing creates 2 copies of the kernel and tools.					
The release snapshot <code>m1911</code> as found here:						
https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/						
Descripti on	has a kernel (<code>rtems-5.0.0-m1911.tar.xz</code>) in the top directory and another copy in the <code>sources</code> directory.					
The top level copy is the head of the branch, in this case <code>master</code> while I suspect the copy in the <code>sources</code> directory is created by the RSB when collecting the source.						
Which is correct for a release? I am not sure, the tagged version in the RSB or the release packaged version?						
I tend to think the release packaged version is used and the RSB collected versions should not be collected. They are only useful when working from git.

Summary Duplicate description of Tiers and Rules

Descripti
on

I think <https://docs.rtems.org/branches/master/user/hardware/tiers.html> is intended to be the real site of this information. However, <https://devel.rtems.org/wiki/Developer/Architectures> also describes the tiers rules with slightly different language.

I think the Wiki page can be reviewed and removed. But any references and sub-pages should be dealt with at the same time. <https://devel.rtems.org/search?q=Developer%2FArchitectures&noquickjump=1&wiki=on> shows two sub-pages to deal with:

- <https://devel.rtems.org/wiki/Developer/Architectures/ARM> which is one sentence and can be removed.
- <https://devel.rtems.org/wiki/Developer/Architectures/ARM/ARM-EABI> which probably should move to the Users Manual.

This would eliminate a few pages and a point of duplication for a very important concept to the RTEMS Project.

-------	--------------	-------	-------	-----------------	-----------------	--------------

Summary Simplify RTEMS semaphore configuration

Descripti on	In SMP configurations, the maximum count of MrsP semaphores must be configured via CONFIGURE_MAXIMUM_MRSP_SEMAPHORES. The MrsP semaphore implementation predates the addition of self-contained synchronization objects. At this time, the potential memory reduction was justified considering the more complex configuration and additional use of the workspace. With the availability of self-contained synchronization options, e.g. POSIX mutexes, this is no longer justified. Memory constrained applications should use the self-contained synchronization objects. Remove the CONFIGURE_MAXIMUM_MRSP_SEMAPHORES configuration option. This has only an impact on applications which use SMP and a large number of scheduler instances.					
#3834	5 months ago	fixed	dev	Sebastian Huber	Sebastian Huber	4 months ago
Summar y	Simplify clock driver					
Descripti on	Use a system initialization handler to initialize the clock driver instead of using a legacy IO driver. This makes the system initialization more modular and removes a bit of overhead introduced by the legacy IO driver dependency.					
#3835	5 months ago	fixed	score	Sebastian Huber	Sebastian Huber	2 months ago
Summar y	Support statically allocated threads					
Descripti on	In some applications it is desirable to have statically allocated resources for all operating system objects.					
	In addition to the thread control block, up to four memory areas are currently allocated by a thread:					
	1. stack area					
	2. TLS area					
	3. FP context					
	4. thread queue heads					
	Currently the FP context and the TLS area are separately allocated from the workspace. This complicates the workspace size estimate. Add the FP context and TLS size to the stack size and place them in the stack area. This makes it also possible to move the stack area allocation out of _Thread_Initialize(). Use a hook to get the thread queue heads which is configured depending on the unlimited objects option of the configuration.					
	Statically allocate the stacks for internal threads (e.g. idle and MPCIE receive server) in a dedicated linker section (similar to the interrupt stacks). Mention this in the Classic API Guide configuration chapter.					
#3836	5 months ago	fixed	config	Sebastian Huber	Sebastian Huber	4 weeks ago
Summar y	Specify the application configuration options					
Descripti on	The application configuration is currently specified by the RTEMS Classic API Guide, the test cases, and the implementation. Add the application configuration to specification items maintained by Doorstop to "spec/acfg" in a repository. Generate the documentation from the specification items.					
	The specification and the generator scripts are contained in: https://git.rtems.org/sebh/rtems-qual.git					
#3837	5 months ago	duplicate	config	Sebastian Huber	Sebastian Huber	5 months ago
Summar y	Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR					
Descripti on	Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR in CONFIGURE_MAXIMUM_FILE_DESCRIPTOR. Issue a C preprocessor warning if CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR is used and map it to CONFIGURE_MAXIMUM_FILE_DESCRIPTOR.					
#3838	5 months ago	fixed	bsps	Sebastian Huber	Sebastian Huber	4 weeks ago
Summar y	Rework work area initialization					
Descripti on	The work area initialization is done by the BSP through bsp_work_area_initialize(). This approach predates the system initialization through the system initialization linker set. The workspace and C program heap are unconditionally initialized. With the availability of statically initialized threads a system without workspace and C program heap is feasible. Change the work area initialization so that components are initialized on demand. To achieve this:					
	1. Add a Memory Handler which provides support for low level handling of memory areas which are handed over to the higher level Heap Handler.					
	2. Add an implementation of _Memory_Get() to each BSP (basically a restructuring of the bsp_work_area_initialize() implementations).					
	See optimization opportunity in #3925.

Summar y	Add CONFIGURE_DIRTY_MEMORY					
Descripti on	Change the BSP_DIRTY_MEMORY BSP option (build-time configuration) into a CONFIGURE_DIRTY_MEMORY application configuration option (link-time configuration).					
#3844	5 months ago	fixed	config	Sebastian Huber	Sebastian Huber	4 months ago
Summar y	Remove CONFIGURE_HAS_OWN_DEVICE_DRIVER_TABLE					
Descripti on	Remove the CONFIGURE_HAS_OWN_DEVICE_DRIVER_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes. The CONFIGURE_HAS_OWN_DEVICE_DRIVER_TABLE configuration option had no test case. There was an attempt to get user feedback about this option:					
	https://lists.rtems.org/pipermail/users/2019-April/033131.html					
#3845	5 months ago	fixed	config	Sebastian Huber	Sebastian Huber	4 months ago

Summary	Remove Ada-specific configuration options					
Description	We have currently three Ada related configuration options: • CONFIGURE_GNAT RTEMS • CONFIGURE_MAXIMUM_ADA_TASKS • CONFIGURE_MAXIMUM_FAKE_ADA_TASKS The CONFIGURE_MAXIMUM_FAKE_ADA_TASKS option has no effect. The CONFIGURE_GNAT RTEMS is mandatory to use the CONFIGURE_MAXIMUM_ADA_TASKS option. So, if you just use <pre>#define CONFIGURE_MAXIMUM_ADA_TASKS 123</pre> then you get a re-definition warning and hopefully pay attention to it. This is not very user friendly from point of view. The CONFIGURE_MAXIMUM_ADA_TASKS just adds the configured count to CONFIGURE_MAXIMUM_POSIX_THREADS. The original purpose of these was to: CONFIGURE_GNAT RTEMS - add in resources required by Ada run-time independent of the number of Ada tasks (e.g. POSIX threads) CONFIGURE_MAXIMUM_ADA_TASKS - add in POSIX threads, condition variable, and mutex required for each Ada task CONFIGURE_MAXIMUM_FAKE_ADA_TASKS - add in condition variables and mutex required by Ada run-time for a task/thread created outside the Ada run-time which invokes Ada code and is thus a user of the run-time. Given that you can turn on unlimited threads now and condition variables and mutexes are static, I don't think they have a need any longer. Plus it sounds like they bit rotted. If we needed them still, they would have to be fixed. We still need documentation that Ada tasks are POSIX threads and must be accounted for in configuring the system. So when moving documentation around, please make that point clear in the CONFIGURE_MAXIMUM_POSIX_THREADS description. See also: https://lists.rtems.org/pipermail/devel/2019-December/056523.html					
	#3848	4 months ago	fixed	network/libbsd	Chris Johns	Chris Johns2 months ago
	Libdebugger test in libbsd should depend on libdebugger.a					
	The test should be built based on this library being present. The PowerPC does not support libdebugger.

Summary	Use EAGAIN for POSIX mq wait in ISR error					
Description	POSIX message queues which are about to block in an ISR currently return ENOMEM. This is a status not listed by POSIX. The better status is EAGAIN per https://pubs.opengroup.org/onlinepubs/9699919799/functions/mq_receive.html.					
#3859	3 months ago	fixed	shell	Chris Johns	Chris Johns	2 weeks ago

Summary	No output from joel scripts in telnet					
Description	Running a <code>joel</code> script in a telnet session results in the output being sent to the global <code>stdout</code>. For example: <pre>\$ telnet 1.2.3.4 Trying 1.2.3.4... Connected to 1.2.3.4. Escape character is '^]'. RTEMS Shell on /dev/pty0. Use 'help' to list commands. [/] # cat j #! joel ls -las / [/] # ./j [/] #</pre> The bug is a new shell main loop task will default to the global <code>stdout</code>, <code>stdin</code> etc and has no information about the parent's <code>std</code> handles. A <code>joel</code> script runs in it's own work task and does not know the telnet's <code>std</code> handles. There are a related set of issues in the handling of the <code>shell_env</code> variable, POSIX key handling and the use of the external call <code>rtems_shell_main_loop</code>. The telnet example in <code>libbsd</code> has: <pre>static void telnet_shell(char *name, void *arg) { rtems_shell_env_t env; memset(&env, 0, sizeof(env)); env.devname = name; env.taskname = "TLNT"; env.login_check = NULL; env.forever = false; rtems_shell_main_loop(&env); }</pre> This is problematic as control of the <code>env</code> has been lost and this make backwards comptable changes difficult. Control of this <code>struct</code> needs to be brought back under the shell code. Currently the posix key is set in the parent task only when the run entry point is used. The run's created <code>shell_env</code> is then passed to the shell's main loop task as an argument from which it is cloned. This means an <code>env</code> is <code>malloc</code>ed in each run call and again in the main loop of the shell. The current code leaks memory as repeated calls to a <code>joel</code> script in a shell will set the key over and over. The destructor is only called when the task is deleted. We have to assume the cleanup of any <code>shell_env</code> allocated externally to the shell code has to be handled externally. Setting the key in the main loop task is problematic because telnet code such as the example in <code>libbsd</code> uses a local stack <code>shell_env</code> and the key has a destructor that blindly <code>free</code>'s the key's memory when a task is released. Changes: 1. Add <code>parent_stdout</code>, <code>parent_stdin</code>, and <code>parent_stderr</code> to the <code>shell_env</code> and set to the parent's <code>std</code> handles. 2. Add a <code>managed</code> flag to <code>shell_env</code> and only set when allocated by <code>rtems_shell_init_env</code>. Change <code>rtems_shell_env_free</code> to only <code>free</code> the <code>shell_env</code> if <code>managed</code>. 3. Remove all key sets and have only one in the shell's main loop code. 4. Change <code>rtems_shell_init_env</code> to get the current tasks key and clone that before cloning the global env. 5. Update <code>rtems_shell_dup_current_env</code> to set the parent <code>std</code> handles. 6. Have the main loop use the parent <code>std</code> handles rather than the global handles. 7. Check the <code>magic</code> field has been set in the shell's main loop and raise an error if not set. The only code to set this field should reside in <code>shell.c</code>. Code such as <code>libbsd</code> will need to call <code>rtems_shell_dup_current_env</code>.

Summary	Add CONFIGURE_VERBOSE_SYSTEM_INITIALIZATION					
Description	Add a configuration option to print some information during system initialization.					
#3862	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	3 months ago
Summary	Canonicalize CONFIGURE_ZERO_WORKSPACE_AUTOMATICALLY					
Description	The CONFIGURE_ZERO_WORKSPACE_AUTOMATICALLY configuration option is documented to be a boolean feature macro (is defined or undefined). However, in confdefs.h it uses the values TRUE and FALSE. It is the only configuration option implemented like this. Change it to use defined/undefined instead like the other options. This affects existing application configurations which use: <pre>#define CONFIGURE_ZERO_WORKSPACE_AUTOMATICALLY FALSE</pre> An unintentional zero of the workspace has an effect on the system boot time. This is an acceptable trade-off for the more canonical configuration.					
#3863	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	3 months ago
Summary	Remove support for the BSP_ZERO_WORKSPACE_AUTOMATICALLY BSP option					
Description	BSPs had the option to enable the CONFIGURE_ZERO_WORKSPACE_AUTOMATICALLY via the BSP_ZERO_WORKSPACE_AUTOMATICALLY BSP option. There is no BSP which defines this option. In addition, it makes no sense that a BSP can influence this high level system configuration.

Summary	rtems-tester does not work with gdb simulators					
Description	It appears that something has broken with the rtems-tester on gdb simulators. On the latest run, I had to kill the tester by hand when it hung. On other times, it appears to abort with a lock issue.					
#3865	3 months ago	fixed	score	Sebastian Huber	Sebastian Huber	3 months ago
Summary	Fix linker set item declarations for small data area targets					
Description	Some targets (e.g. 32-bit PowerPC) have a small-data area. Linker set items are not in the small data area. We have to tell this the compiler, otherwise linker error may occur due to a mismatch of relocations. There are two options to do this. 1. We can declare items as an array of unspecified size and define items as an array with one element. The problem with this is that it breaks existing code, e.g. an item initializer would have to change. 2. We add the section to the declaration. The problem is that in this case we need a dedicated declaration macro for the ordered items. Since item declarations are rarely used, we select option 2.					
#3868	3 months ago	fixed	tool/rsb	Chris Johns	Chris Johns <chrisj@...>	3 months ago
Summary	newlib links breaks mingw build					

The following patch in newlib adds links and Windows does not have symlinks and it is emulated as copy. This complicates a bsdtar extraction of source ... https://github.com/RTEMS/sourceware-mirror-newlib-cygwin/commit/cfc4955234828881145a20987c8a0a3cd373585c						
Descripti on	I tried the <code>-E</code> option that was added to the RSB to extract the tar file a second time, this has worked with other tar files with symlinks however it does not work. I have no investigated why. We need Windows building to make a release. Note, this is in the <code>tools/rsb</code> component however is not an RSB bug. I need input on what the RSB needs to do to fix this issue if that is the path we take.					
#3871	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	2 months ago
Summar y	Remove <code>rtems_configuration_get_posix_api_configuration()</code>					
Descripti on	The corresponding data structure not longer exists. This function was not tested.					
#3873	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	2 months ago
Summar y	Remove <code>CONFIGURE_HAS_OWN_INIT_TASK_TABLE</code>					
Descripti on	The <code>CONFIGURE_HAS_OWN_INIT_TASK_TABLE</code> and <code>CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE</code> are the last <code>*_HAS_OWN_*</code> configuration options. These two options are probably unused, see also: https://lists.rtems.org/pipermail/users/2019-April/033129.html https://lists.rtems.org/pipermail/users/2019-April/033130.html					
	Removing them simplifies the configuration. If there is a real user need which shows up after the removal, we can resurrect them on demand.					
	Using <code>CONFIGURE_HAS_OWN_INIT_TASK_TABLE</code> would have required the use of the undocumented <code>CONFIGURE_INIT_TASK_TABLE</code> and <code>CONFIGURE_INIT_TASK_TABLE_SIZE</code> configuration options.					
#3874	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	2 months ago
Summar y	Remove <code>CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE</code>					
Descripti on	The <code>CONFIGURE_HAS_OWN_INIT_TASK_TABLE</code> and <code>CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE</code> are the last <code>*_HAS_OWN_*</code> configuration options. These two options are probably unused, see also: https://lists.rtems.org/pipermail/users/2019-April/033129.html https://lists.rtems.org/pipermail/users/2019-April/033130.html					
	Removing them simplifies the configuration. If there is a real user need which shows up after the removal, we can resurrect them on demand.					
	Using <code>CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE</code> would have required the use of the undocumented <code>CONFIGURE_POSIX_INIT_THREAD_TABLE_NAME</code> and <code>CONFIGURE_POSIX_INIT_THREAD_TABLE_SIZE</code> configuration options.					
#3875	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	2 weeks ago
Summar y	Split up <code>confdefs.h</code> in component based header files					

The confdefs.h header file is large, complex, and hard to review. Split it up into component header files to make it easier to maintain and review.

The general approach is to place the default configuration of things in librtemscpu.a. The benefit is that the application configuration object file will only include data structures which have a user-defined value.

The component based header files include their dependencies explicitly. It should be possible to include component based header files separately to ease testing. For example we could use this template:

```
#ifndef _RTEMS_CONFDEFS_FOOBAR_H
#define _RTEMS_CONFDEFS_FOOBAR_H

#ifdef __CONFIGURATION_TEMPLATE_h
#error "Do not include this file directly, use <rtems/confdefs.h> instead"
#endif

#if defined(CONFIGURE_INIT) && \
    defined(CONFIGURE_FOOBAR_STUFF) && \
    defined(CONFIGURE_MORE_FOOBAR_STUFF)

/* Foobar includes */

#ifdef __cplusplus
extern "C" {
#endif /* __cplusplus */

/* Configure foobar. */

#ifdef __cplusplus
}
#endif /* __cplusplus */

#endif /* CONFIGURE_INIT */

#endif /* _RTEMS_CONFDEFS_FOOBAR_H */
```

In case CONFIGURE_INIT is not defined, then including <rtems/confdefs.h> should expose nothing to the C compiler.

Here is a first proposal to group the configuration in components:

Descripti
on

```
rtems/
confdefs.h
This file just includes the component based header files listed below.
confdefs/
bdbuf.h
classicobj.h
    Classic API objects
classictasksinit.h
    Classic initialization task
driverclock.h
    Clock driver and related configuration, e.g. CONFIGURE_MICROSECONDS_PER_TICK
driverconsolesimple.h
    Simple console driver configuration
driverlegacy.h
    Legacy IO driver configuration table
extensions.h
    User extensions, internal extensions
filesystem.h
    Filesystem configuration
general.h
    Basic stuff which is mandatory to configure, e.g. ISR stacks, per-CPU information
libpci.h
    PCI library configuration
malloc.h
    Malloc configuration
mpci.h
    MPCIE specific configuration options
msgq.h
    General message queue configuration
obsolete.h
    Warning about the use of obsolete configure options
posixkeys.h
    POSIX keys
posixobj.h
    POSIX objects
posixthreadsinit.h
    POSIX initialization threads
scheduler.h
    Scheduler configuration
support.h
    Support macros for confdefs header files
threads.h
    General thread configuration (e.g. thread control block)
unlimited.h
    Unlimited objects configuration
```

#3876	3 months ago	fixed	config	Sebastian Huber	Sebastian Huber	2 months ago
Summary	Remove CONFIGURE_DISABLE_SMP_CONFIGURATION					
Description	The CONFIGURE_DISABLE_SMP_CONFIGURATION configuration option and rtems_configuration_is_smp_enabled() were added during the SMP support development cycle as a workaround to fix some testsuite failures in SMP configurations. Replace this configuration option with tests for specific conditions. The configuration option was undocumented.					
#3881	2 months ago	fixed	rtems	Sebastian Huber	Sebastian Huber	2 months ago
Summary	Add API functions to map a task priority to/from a POSIX thread priority					

Mapping task priorities to/from POSIX thread priorities is probably done in many applications. There seems to be no API to help doing this. Add the following API functions to map a task priority to/from a POSIX thread priority:

```
/**
 * @brief Map a task priority to the corresponding POSIX thread priority.
 *
 * @param scheduler_id Identifier of the scheduler instance.
 * @param priority The task priority to map.
 * @param[out] posix_priority Pointer to a POSIX thread priority value.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ADDRESS The @a posix_priority parameter is @c NULL.
 * @retval RTEMS_INVALID_ID Invalid scheduler instance identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid task priority.
 */
rtems_status_code rtems_scheduler_map_to_posix_priority(
  rtems_id scheduler_id,
  rtems_task_priority priority,
  int *posix_priority
);

/**
 * @brief Map a POSIX thread priority to the corresponding task priority.
 *
 * @param scheduler_id Identifier of the scheduler instance.
 * @param posix_priority The POSIX thread priority to map.
 * @param[out] priority Pointer to a task priority value.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ADDRESS The @a priority parameter is @c NULL.
 * @retval RTEMS_INVALID_ID Invalid scheduler instance identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid POSIX thread priority.
 */
rtems_status_code rtems_scheduler_map_from_posix_priority(
  rtems_id scheduler_id,
  int posix_priority,
  rtems_task_priority *priority
);
```

#3882	2 months ago	fixed	posix	Sebastian Huber	Sebastian Huber	2 months ago
Summary	Add POSIX user environment pointer to TCB					

Descripti on	The IO library uses a POSIX key to store an optional POSIX user environment pointer. This pulls in the POSIX keys support in every application configuration. Add a user environment pointer to the thread control block (TCB) instead. Applications which do not need the POSIX user environment will just get an overhead of one pointer per thread.					
#3885	2 months ago	fixed	score	Sebastian Huber	Sebastian Huber	2 months ago
Summary	Context switch extension is broken in SMP configurations					

The context switch extensions are called during `_Thread_Do_dispatch()`:

```
void _Thread_Do_dispatch( Per_CPU_Control *cpu_self, ISR_Level level )
{
  Thread_Control *executing;

  executing = cpu_self->executing;

  ...
  do {
    Thread_Control *heir;

    heir = _Thread_Get_heir_and_make_it_executing( cpu_self );
    ...
    _User_extensions_Thread_switch( executing, heir );
    ...
    _Context_Switch( &executing->Registers, &heir->Registers );
    ...
  } while ( cpu_self->dispatch_necessary );
  ...
}
```

Descripti
on

In uniprocessor configurations, the context switch extensions are called for all thread switches except the very first thread switch to the initialization thread. However, in SMP configurations, the context switch may be invalidated and updated in the low-level `_Context_Switch()` routine. See: https://docs.rtems.org/branches/master/c-user/symmetric_multiprocessing_services.html#thread-dispatch-details

In case such an update happens, a thread executes on the processor which was not visible to the context switch extensions. This can confuse for example event record consumers which use events generated by a context switch extension.

Fixing this is not straight forward. The context switch extensions call must move after the low-level context switch. The problem here is that we may end up in `_Thread_Handler()`. Adding the context switch extensions call to `_Thread_Handler()` covers now also the thread switch to the initialization thread. We also have to save the last executing thread of the processor. Registers or the stack cannot be used for this purpose. We have to add it to the per-processor information. Existing extensions may be affected, since now context switch extensions use the stack of the heir thread.

Calling the thread switch extensions in the low level context switch is difficult since at this point an intermediate stack is used which is only large enough to enable servicing of interrupts.

Description	The BCR initialization in qoriq_clock_initialize() is off by one resulting in a wrong clock interval.					
#3927	4 weeks ago	fixed	tool/rsb	Joel Sherrill	Chris Johns	4 weeks ago
Summary	tclsh required to build sqlite -- makes all BSP bssets fail					
Description	I'm not sure what to do about this. If building sqlite is a requirement, then host setup instructions, sb-check, etc are impacted. But dtc is a required component for a few things and the RSB deals with it. It is also possible to say that sqlite should not be in the BSP bssets. This is IMO a blocker at some level for the 5.1 release because it impacts building all bssets. <pre>+ make -j 8 sqlite3.h libsqli3.la tclsh /home/joel/rtems-cron-5/rtems-source-builder/rtems/build/sqlite-3.8.8.1-powerpc-rtems5-1/build-xc/./sqlite-src-3080801/tool/mksqlite3h.tcl /home/joel/rtems-cron-5/rtems-source-builder/rtems/build/sqlite-3.8.8.1-powerpc-rtems5-1/build-xc/./sqlite-src-3080801 >sqlite3.h gcc -g -o mkkeywordhash -DSQLITE_OMIT_WAL=1 -DSQLITE_ENABLE_COLUMN_METADATA=1 /home/joel/rtems-cron-5/rtems-source-builder/rtems/build/sqlite-3.8.8.1-powerpc-rtems5-1/build-xc/./sqlite-src-3080801/tool/mkkeywordhash.c gcc -g -o lemon /home/joel/rtems-cron-5/rtems-source-builder/rtems/build/sqlite-3.8.8.1-powerpc-rtems5-1/build-xc/./sqlite-src-3080801/tool/lemon.c /bin/sh: tclsh: command not found</pre>
