## RTEMS Release 5.2

### RTEMS 5.2 Release Notes

#### API Changes

- **Termios**
  - `txTaskCharsDequeued` has been added to `struct rtems_termios_tty`. With that the size of the structure changed. Libraries and applications that use the structure should be recompiled.
  - The `l_start` line discipline function now receives the number of characters that have been sent. It is save to ignore the extra parameter for applications that don't need it.

#### API Additions

- NTP support
  - Addition of NTP update second handler via `_Timecounter_Set_NTP_update_second()` from `<rtems/score/timecounter.h>`

### RTEMS 5.2 Ticket Overview

Total	Closed	In progress	New	Assigned	Percentage
105	105	0	0	0	100%

## RTEMS 5.2 Ticket Summary

ID	Status	Summary
<a href="#">2746</a>	closed	RTEMS gdb python script do not load.
<a href="#">2830</a>	closed	throwing std::runtime on PC BSP fails.
<a href="#">3347</a>	closed	tms570: Register Macro Redefinition
<a href="#">3540</a>	closed	How To Use SPARC memscrub
<a href="#">3571</a>	closed	Stream of Unicode Warnings from git hook on Commit
<a href="#">3601</a>	closed	Block device disk management implementation can underflow rtems_disk_device.uses
<a href="#">3619</a>	closed	Docs location for docs.rtems.org
<a href="#">3641</a>	closed	Gitlab mirror
<a href="#">4011</a>	closed	Test compilation error in riscv bsps
<a href="#">4024</a>	closed	NFS Client is broken on 64-bit targets
<a href="#">4058</a>	closed	RSB 5/rtems-riscv fails to build on Windows
<a href="#">4059</a>	closed	RSB: UnicodeDecodeError
<a href="#">4060</a>	closed	The reworked <rtems/confdefs.h> has a cyclic dependency with RTEMS_MULTIPROCESSING enabled
<a href="#">4064</a>	closed	RSB needs to support waf with no python command
<a href="#">4068</a>	closed	arm: arm_cp15_set_translation_table_entries() should affect Inner Shareable domain
<a href="#">4071</a>	closed	RSB does not pass BSP options correctly.
<a href="#">4073</a>	closed	libbsd: Back port ifmcstat command
<a href="#">4075</a>	closed	POSIX Compliance Guide Missing Some math.h Methods
<a href="#">4082</a>	closed	License files missing on 5-freebsd-12 branch
<a href="#">4092</a>	closed	bsps/pc386: Add missing license header
<a href="#">4094</a>	closed	RSB: pkgconfig.py uses python2 specific "unicode" keyword
<a href="#">4096</a>	closed	shell: CTRL-U sets the cursor to the wrong position
<a href="#">4099</a>	closed	Enhance rtems-bsps to print canonical names of bsps
<a href="#">4102</a>	closed	rtems-pairs includes invalid BSP
<a href="#">4106</a>	closed	RSB Missing BSP bset for xilinx_zynq_a9_qemu
<a href="#">4114</a>	closed	Cortex-A9 MPCore based BSPs should include the workaround for Errata 794072 and 845369
<a href="#">4119</a>	closed	rtems-bsp-tester: Off By One for Completed Jobs
<a href="#">4149</a>	closed	RFS bit map search buffer overflow
<a href="#">4154</a>	closed	Improve the workaround for the LEON3FT store-store errata: TN-0009
<a href="#">4165</a>	closed	Fix NVMe disk synchronization and media block handling (cloned)
<a href="#">4169</a>	closed	Link problem of C++ tests when using libpci in BSP
<a href="#">4174</a>	closed	devctl.h does not compile from C++
<a href="#">4185</a>	closed	arm/bsps: Small MMU pages are rounded to 1 MiB (cloned)
<a href="#">4189</a>	closed	rtems_interrupt_server_delete() does not destroy the ISR lock of the server control (cloned)
<a href="#">4190</a>	closed	Back port rtems_interrupt_server_create() improvements
<a href="#">4224</a>	closed	Missing "extern" in RTEMS_LINKER_ROSET_ITEM_ORDERED_DECLARE() (cloned)
<a href="#">4232</a>	closed	Timeout for automatic barriers is broken (cloned)
<a href="#">4233</a>	closed	MVME 2600/2700 has no console output (cloned)
<a href="#">4234</a>	closed	powerpc/motorola_shared display current RTEMS on boot
<a href="#">4236</a>	closed	bsps/zynq: termios not working correctly for stdin
<a href="#">4247</a>	closed	Change motorola_powerpc bsp to support irq-generic (cloned)
<a href="#">4248</a>	closed	PowerPC shared ISA IRQ support is broken (cloned)
<a href="#">4249</a>	closed	fix mkimage.py script type processing
<a href="#">4263</a>	closed	Activate ehci_pci in rtems-libbsd
<a href="#">4266</a>	closed	motorola_powerpc bootloader images not linking correctly
<a href="#">4274</a>	closed	GR1553RT driver: fixes to memory allocation and locking on descriptor updates
<a href="#">4275</a>	closed	GR1553B: use new codec available in GR740 revision 1
<a href="#">4303</a>	closed	griib.gr1553bc: better check of the DMA area address alignment
<a href="#">4304</a>	closed	griib.grspw: SET_PACKET_SIZE could use old DMA address
<a href="#">4305</a>	closed	griib.ambapp: update GRLIB IP core ID list
<a href="#">4306</a>	closed	griib.can: introduce a new common CAN baud-rate timing calculating functions
<a href="#">4307</a>	closed	griib.grcanfd: extend the GRCAN driver with GRCANFD support
<a href="#">4308</a>	closed	griib.greth: added support for variable sized descriptor table sizes
<a href="#">4309</a>	closed	bsps,leon3: avoid BSP dependency on apbuart/timer driver
<a href="#">4310</a>	closed	bsps,leon3: BSP assumes that timer pre-scaler runs at 1MHz
<a href="#">4311</a>	closed	bsps,leon3: _st64() did not follow the SPARC ABI
<a href="#">4312</a>	closed	bsps,leon3: need to make cpucounter restart after underflow
<a href="#">4313</a>	closed	griib.grspw_router: add function to control SpaceWire run clock divisor
<a href="#">4314</a>	closed	griib.ahbstat: add new register definitions for AHBSTAT version 1
<a href="#">4315</a>	closed	griib.l2cache: prevent unused diagnostic access
<a href="#">4316</a>	closed	griib.grspw_pkt: SpaceWire link-state defines corrected
<a href="#">4347</a>	closed	Allow RTEMS_PRIORITY for MrsP semaphores
<a href="#">4357</a>	closed	rtems_semaphore_set_priority() uses an invalid SMP lock (cloned)
<a href="#">4359</a>	closed	Priority discipline is broken for semaphores and message queues in SMP configurations (cloned)
<a href="#">4369</a>	closed	RTEMS5: Add driver for cadence-spi device for xilinx based BSPs (cloned)
<a href="#">4370</a>	closed	RTEMS5: Add spi driver for AXI SPI ip core from Xilinx (cloned)
<a href="#">4371</a>	closed	RTEMS5: Shell: Backport commands for spi and i2c
<a href="#">4394</a>	closed	Workspace initialization is broken for arm/imx7 and arm/raspberrypi
<a href="#">4409</a>	closed	rtems_task_start() does not check that the entry point is not equal to NULL
<a href="#">4429</a>	closed	clock_nanosleep() may use wrong clock for relative times (cloned)
<a href="#">4452</a>	closed	libbsd/i386: Include header error through bus.h
<a href="#">4456</a>	closed	bsps/i386: TSC calibration inaccurate (cloned)
<a href="#">4505</a>	closed	posix_devctl() should return the errno directly not -1 and set errno
<a href="#">4512</a>	closed	Count of postponed jobs is not set to zero for a newly created rate-monotonic period object (cloned)
<a href="#">4514</a>	closed	Count of postponed jobs is not set to zero for a newly created rate-monotonic period object (cloned)

ID	Status	Summary
4514	closed	Support mwl2307 DEC Pump driver
4515	closed	Make [out/in]_le and be calls conditional
4516	closed	Map LibBSD bus space to the PCI base address for motorola_powerpc BSP
4520	closed	Re-add lost capability for custom stack allocator to allocate IDLE thread stacks
4523	closed	gdb 9.1 no longer builds on Cygwin (thread local error)
4549	closed	Timecounter: Add NTP support (cloned)
4567	closed	Atomic store does not use the order parameter for C++ (cloned)
4649	closed	tcpdump: Fix dumping to file and reading from file
4651	closed	if_atsam: Fix checksum offload, add multicast and VLAN support
4653	closed	pfctl: Fix global state initialization
4655	closed	sync() whould synchronize all file descriptors
4676	closed	incorrect handling of "inactive_per_block" from "Objects_Information" structure
4683	closed	Leaked BSP section flags in Makefile.inc breaks EPICS
4687	closed	Documentation List for Releases Completely Missing 5.x
4704	closed	Fix invalid RSB source URLs
4709	closed	Installed header break C++
4711	closed	RSB does not expand dir type macros correctly (cloned)
4715	closed	RSB get sources misses a number of files
4716	closed	Backport RSB fixes from Development
4717	closed	Add RSB Deployment support
4725	closed	Git commit message format instructions (cloned)
4727	closed	RSB decode exception stops build
4731	closed	rtems-source-builder doesn't generate tar archives for all packages any more
4733	closed	Set top in RSB version.py
4734	closed	RSB decode exception stops build
4752	closed	RTEMS docs do not build with a recent sphinx
4754	closed	Set RSB GDB source path to https
4755	closed	Docs build system does not build singlehtml
4757	closed	RSB freetype 2.4.10 source not hosted any longer
4758	closed	Net-Snmp referenced patch missing
4761	closed	RSB fatal error on missing hash checksums (cloned)

**Comment 1**

1. **Chris Johns**, Fri, 24 Jun 2016 23:49:53 GMT
2. **description:** modified (diff)

**Comment 2**

1. **Chris Johns**, Mon, 27 Mar 2017 06:48:47 GMT
2. **milestone:** changed from **4.12.1** to **4.12.0**

Move to the first 4.12 milestone.

**Comment 3**

1. **Joel Sherrill**, Thu, 12 Oct 2017 02:47:58 GMT
2. **component:** changed from **unspecified** to **tool/gdb**

**Comment 4**

1. **Joel Sherrill**, Thu, 12 Oct 2017 02:48:37 GMT
2. **milestone:** changed from **4.12.0** to **4.12.1**

**Comment 5**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:05 GMT
2. **milestone:** changed from **4.12.1** to **5.2**

Milestone renamed

**Comment 6**

1. **Chris Johns**, Wed, 09 Nov 2022 22:14:21 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **wontfix**

The scripts are too hard to maintain on the 5 branch because a lot of detail in the score has changed. On 6 and later libdebugger provides a highlevel access to a number of pieces or data.

---

**2830 - throwing std::runtime on PC BSP fails.**

<b>Blocked by</b>	

#### Description

Throwing a `std::runtime()` exception locks up.

The lock up is in the exception clean up handler where the exception object is destructed. The destructor loops destructing the `std::string` object. The path ends up in `libstdc++-v3/include/ext/atomicity.h` line 48 or `exchange_and_add`.

At a guess it would seem like the C++ atomics on i386 is broken or fragile.

UPDATE: This was broken when gcc i386 eliminated `-mcpu` in favor of `-march/-mtune`. The multilibs were built with `-mtune` and not `-march`.

- owner:** set to **Needs Funding**
- status:** changed from **new** to **assigned**
- milestone:** changed from **4.12** to **Indefinite**

#### Comment 5

- Michael Davidsaver, Thu, 10 Sep 2020 20:24:40 GMT**  
I'm observing a hang with RTEMS 5.1 with i386/pc686 which may be this issue, though it does not look to me to be in an exception class dtor. This is a test case I'm running in QEMU w/ 1 virtual CPU.  
It's on exit from an `catch(...)` block. The actual hang appears to be a tight loop in the `__atomic_fetch_add_4` builtin. Specifically, these three instructions.

```

=> 0x3f1780 :   mov     $0x5,%eax
0x3f1785 :   mov     %eax,0xc(%esp)
0x3f1789 :   jmp    0x3f1780

```

The stack trace is:

```
(gdb) bt
#0  libat_fetch_add_4 (mptr=0x75d7bc, opval=4294967295, smodel=5) at ../../../../gcc-7.5.0/libatomic/fop_n.c:44

```

#### Comment 6

1. **Sebastian Huber**, Fri, 11 Sep 2020 04:51:16 GMT

If this BSP uses libatomic to load a 32-bit value, then it uses an obsolete instruction set.

#### Comment 7

1. **Michael Davidsaver**, Fri, 11 Sep 2020 16:56:14 GMT

I've not come across 'libatomic' before. I guess this is some compatibility glue for older x86?

From some playing around, it looks like the toolchain gcc is defaulting to '-march=i386' if no other option is provided. Maybe not surprising given that the toolchain name is 'i386-rtems5'. '/make/custom/pc686.cfg' has '-mtune=pentiumpro -march=pentium'. Passing this to a short test seems to result in the intrinsic actually being used. So I guess the RTEMS kernel config/build is ok?

Starting from the linker map of epicsTimeTest, I see that the symbol `__atomic_fetch_add_4` (aka. 'libat\_fetch\_add\_4') is undefined in `/lib/gcc/i386-rtems5/7.5.0/mpentiumpro/libstdc++.a`. So I guess this means that the (multilib?) build of `libstdc++` is not being done correctly?

My knowledge of GCC internals doesn't extend beyond `./configure` arguments. So I don't know where to look next.

#### Comment 8

1. **Joel Sherrill**, Fri, 11 Sep 2020 22:07:20 GMT

Could someone please try this test case with `-march=i486` as the compiler selection?

I think we need to move the base uniprocessor x86 CPU model up from vanilla i386 w/FPU but what the new floor needs to be is TBD. If I understand things correctly, i486 is the minimum with any atomic instructions but you have to get into the pentium II era to get the earliest SMP support.

I'm not sure if going beyond i486 is needed for uniprocessor but that may be sufficient. For SMP, you probably need to go to at least pentium II. On Qemu, I used `core2duo` long ago to test SMP.

If we move the floor to greater than or equal to Pentium, there is more opportunity to remove a small bit of code. But I'd like to know the bare technical minimums first.

So what is the lowest architecture (`-march=XXX`) that appears to solve this for you?

#### Comment 9

1. **Michael Davidsaver**, Fri, 11 Sep 2020 22:58:24 GMT

Could someone please try this test case with `-march=i486` as the compiler selection?

This seems to have the desired effect (emits a 'lock' instruction instead of calling `__atomic_fetch_add_4`).

I'm still perplexed that the 'pentiumpro' version of `libstdc++.a` appears to be built with `-march=i386`. All 6 versions seem to be. Is this how gcc's multilib is meant to work?

#### Comment 10

1. **Michael Davidsaver**, Fri, 11 Sep 2020 23:18:34 GMT

I may have answered part of my question with a lucky grep of the gcc source. I found `'gcc/config/i386/t-rtems'` which seems to show that the different multilib versions are built with `-mtune=...`, and presumably defaulting to `-march=i386`. RTEMS itself in `'/make/custom/pc686.cfg'` has `-march=pentium`. What is the logic here?

```
MULTILIB_OPTIONS = mtune=i486/mtune=pentium/mtune=pentiumpro msoft-float
MULTILIB_DIRNAMES= m486 mpentium mpentiumpro soft-float
MULTILIB_MATCHES = msoft-float=mno-80387
MULTILIB_MATCHES += mtune?pentium=mtune?k6 mtune?pentiumpro=mtune?athlon
MULTILIB_EXCEPTIONS = \
mtune=pentium/*msoft-float* \
mtune=pentiumpro/*msoft-float*
```

#### Comment 11

1. **Sebastian Huber**, Sat, 12 Sep 2020 07:47:29 GMT

We have two different issues:

The i386 BSPs use probably obsolete instruction sets which lead to the use of libatomic. If libatomic is used, then there is some broken behaviour.

The libatomic seems to work fine on other architectures, e.g. it is also used by the sparc/erc32 BSP. Here the `cdtest.exe` test program runs successfully and executes a similar context:

```

Breakpoint 2, libat_fetch_add_4 (mptr=0x203d798, opval=4294967295, smodel=4) at ../../gnu-mirror-gcc-c72alb6/libatomic/fop_n.c:164

```

**Comment 12**

1. **Sebastian Huber**, Sat, 12 Sep 2020 10:29:03 GMT

Replying to Michael Davidsaver:

It's on exit from an `catch(...){}` block. The actual hang appears to be a tight loop in the `__atomic_fetch_add_4` builtin. Specifically, these three instructions.

```

=> 0x3f1780 :      mov     $0x5,%eax
0x3f1785 :      mov     %eax,0xc(%esp)
0x3f1789 :      jmp     0x3f1780

```

From this code it is clear, that this is a libatomic configuration issue on i386. We have a recursive call here. We probably use instruction sets which are not really tested these days by someone else.

**Comment 13**

1. **Joel Sherrill**, Sat, 12 Sep 2020 14:54:58 GMT

The bug goes back to when gcc replaced `-mcpu=` with `-march=` and `-mtune=`. We used to generate code specifically compatible with and optimized for a CPU model. `-march` is now the compatibility level flag and `-mtune` is an optimization indication. We are generating i386 compatible code which is tuned based on say an i686 instruction weighting.

The multilib `-mtune` needs to change to `-march`.

Since `-march` is the first x86 option described, it is at the top of this page in the GCC manual:

<https://gcc.gnu.org/onlinedocs/gcc-7.5.0/gcc/x86-Options.html#x86-Options>

A quick search browsing `gcc/config/i386/t-*` shows RTEMS seems to be the only i386 target building multilibs which are cpu model based. Others use m32/m64 or other things.

**Comment 14**

1. **Michael Davidsaver**, Fri, 18 Sep 2020 21:36:49 GMT

Is there agreement on a path forward for this issue? Is it as simple as replacing 'mtune' with 'march' in `gcc/config/i386/t-rtems`? If so, who will do/test this? This change seems simple enough that I would just try it myself, but I'm not sure where/how to add a patch in the RSB recipes.

**Comment 15**

1. **Joel Sherrill**, Fri, 18 Sep 2020 21:53:00 GMT

I think that's the extent of the source changes which we think will resolve the issue. Someone may point to documentation but it is Friday and I am going to point to an example of adding a patch and talk you through it. This assumes the 5 branch because we won't get a patch merged into gcc 7. We can address RTEMS master after 5 is fixed. The patch for gcc should be the same. We just have more latitude to merge it to gcc master and newer release branches.

How to generate a patch: <https://devel.rtems.org/wiki/Developer/Coding/GenerateAPatch> which should also be in the Software Engineering Guide.

The easiest example I saw was in `rtems/config/5/rtems-lm32.bset` which adds a gdb patch only for lm32 builds. You would be adding a gcc patch to `rtems/config/5/rtems-i386.bset`.

For merging, a patch needs an Internet home (attaching to a ticket gives you a URL) but for testing, you can just drop the diff into the patches subdirectory `config/rtems/patches`. The RSB will see it there and not try to fetch it. But you need a sha checksum.

After that, it is build as normal for testing purpose. If this gives you a toolset that works, we can address changing the URL. But attaching it to this ticket and getting the URL for the "raw" attachment should work just fine.

**Comment 16**

1. **Michael Davidsaver**, Sat, 19 Sep 2020 16:47:42 GMT

I've attached patches for GCC and RSB.

A successful test build: [https://github.com/mdavidsaver/rsb/runs/1138090148?check\\_suite\\_focus=true#step:5:563](https://github.com/mdavidsaver/rsb/runs/1138090148?check_suite_focus=true#step:5:563)

**Comment 17**

1. **Joel Sherrill**, Sat, 19 Sep 2020 17:49:16 GMT

Congratulations! Can you confirm you tested code compiled with the resulting toolchain and it solved the problem?

**Comment 18**

1. **Michael Davidsaver**, Sat, 19 Sep 2020 19:44:55 GMT

Ha. That would be a good thing to mention would it not? Yes, the epicsTimeTest now passes, and the cctest completes as well (with qemu\*). I am having a problem with another test, but this is almost certainly a separate issue.

[https://github.com/mdavidsaver/rsb/runs/1138090148?check\\_suite\\_focus=true#step:8:71](https://github.com/mdavidsaver/rsb/runs/1138090148?check_suite_focus=true#step:8:71)

#### Comment 19

1. **Joel Sherrill**, Mon, 21 Sep 2020 19:43:58 GMT
2. **component**: changed from **unspecified** to **tool/gcc**
3. **description**: modified (diff)
4. **milestone**: changed from **Indefinite** to **5.2**

#### Comment 20

1. **Michael Davidsaver**, Mon, 21 Sep 2020 20:37:37 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In ebc3abe/rtems-source-builder:

```
patch gcc i386 multiarch
```

Add patch to change from mtune to march when building multilibs. The mtune argument tunes or optimizes for a specific CPU model but does not ensure the generated code is appropriate for the CPU model. Prior to this patch, i386 compatible code was always generated but tuned for later models.

Closes #2830.

#### Comment 21

1. **Michael Davidsaver**, Mon, 21 Sep 2020 21:14:32 GMT

In 1ea1c9c/rtems-source-builder:

```
patch gcc i386 multiarch
```

Add patch to change from mtune to march when building multilibs. The mtune argument tunes or optimizes for a specific CPU model but does not ensure the generated code is appropriate for the CPU model. Prior to this patch, i386 compatible code was always generated but tuned for later models.

This is the same fix as #2830 but applying to gcc 10.

Updates #4084.

**Description**

The source file `diskdevs.c` contains logic error with regard to a `rtems_disk_device.uses` member, in that the `.uses` value can underflow and wrap-around because this member is unsigned and the implementation does not check for a current value of 0.

Case in point, see `diskdevs.c` line 373:

```
physical_disk->uses -= deleted_count;
```

If `deleted_count` is greater than `physical_disk->uses`, e.g. `physical_disk->uses` is 0 and `deleted_count` is 1, `physical_disk->uses` will underflow. There are other references to the `uses` member that can result in errors, e.g., line 448:

```
uses = --dd->uses;
```

We discovered this bug via a unit-test that creates multiple RAM disks and then attempts to delete them, without any `uses`, resulting in RTEMS errors because the `uses` member had wrapped around. To circumvent this bug, we had to force the `uses` member to a value of 1 prior to calling `rtems_disk_release()`, which then successfully deleted the RAM disks via `rtems_disk_delete()`, otherwise the results cascaded into error situations that were undesirable.

**Comment 1**

1. **Sebastian Huber**, Mon, 12 Nov 2018 06:21:35 GMT
2. **component**: changed from **admin** to **lib/block**

This API is deprecated in RTEMS 5.1 and will be removed in RTEMS 6.1.

**Comment 2**

1. **Sebastian Huber**, Tue, 29 Jan 2019 08:06:16 GMT
2. **milestone**: changed from **5.1** to **5.2**

If you want to get this fixed, then please send a patch to `devel@...`. I would avoid this API and use `rtems_blkdev_create()` and `rtems_blkdev_create_partition()` instead.

**Comment 3**

**Description**

Where do the built docs from Buildbot need to go for docs.rtems.org?  
Right now I see the top is 'master' so just replace those?

**Comment 1**

1. **Chris Johns**, Wed, 28 Nov 2018 06:48:19 GMT

The docs.rtems.org website is constructed using the files in this repo <https://git.rtems.org/chrisj/rtems-admin.git/>. This includes all the previous releases. I do not understand how buildbot built docs plug into this set up so I it would be good to get some understanding of how this will work.

How are the docs being built by buildbot? Is there a public repo for the buildbot config files? How do the docs move from buildbot jail to the docs jail? Is there somewhere Joel and I can review the buildbot built docs?

**Comment 2**

**Description**

I just registered the 'rtems' group over at gitlab.com.  
It doesn't cost us anything to run mirrors at both Github and Gitlab when I have a chance I will setup a Gitlab mirror though it's not a priority.  
I'll work out getting access to everyone through their Gitlab accounts at a later date.

### Description

Configuring the riscv bsps with `--enable-tests` fails to build at least the dl06 test.

```
../rtems-5.0.0-m2006-2/configure --target=riscv-rtems5 --prefix../install/bsps --disable-networking --enable-tests --enable-rtemsbsp=griscv
```

Error during the compilation step:

```
rtems-ld -r /localdata2/somm_ja/rtems/5-0-rc/build-riscv/riscv-rtems5/c/griscv \
```

```
-C riscv-rtems5-gcc -c "-march=rv32imafd -mabi=ilp32d" \
-O rap -b dl06_pre -e rtems_main -s \
-o dl06.rap dl06-o1.o dl06-o2.o -lm
```

```

## Comment 2

1. **Arne Ehrlich**, Wed, 22 Dec 2021 11:37:04 GMT

This error occurs when the python locale environment is not set correctly. I got this for an compile error message when rtems-source-builder failing to building expat on MacOS.

ensuring LANG and LC\_ALL are set fixed the problem writing the error log

```
export LANG='en_US.UTF-8' LC_ALL='en_US.UTF-8'
```

LANG is generally set correctly on macos.

if one is setting one of the LC\_\* variables to a different locale (I use LC\_TIME="de\_DE.UTF-8")

then python assumes the encoding is ascii only.

setting LC\_ALL overrides this and python happily uses utf-8 again.

## Comment 3

1. **Chris Johns**, Wed, 09 Nov 2022 22:21:25 GMT

<b>Version</b>	5
<b>Milestone</b>	5.2
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

Recent Linux distros may not provide a python command by default. This breaks building any waf based tools such as the rtems-tools and rtems-libbsd. Provide support for waf builds by check for a suitable Python executable and using it to directly invoke waf. For example:

```
/usr/local/bin/python3.7 ./waf configure --prefix=blah/blah
```

#### Comment 1

1. **Chris Johns**, Wed, 09 Nov 2022 23:14:51 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

RTEMS 5 has a hack'ish detect that has been removed in RTEMS 6.

## 4068 - arm: arm\_cp15\_set\_translation\_table\_entries() should affect Inner Shareable domain

<b>Link</b>	<a href="https://devel.rtems.org/ticket/4068">https://devel.rtems.org/ticket/4068</a> ( <a href="https://devel.rtems.org/ticket/4068">https://devel.rtems.org/ticket/4068</a> )
<b>Id</b>	4068

<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

The `arm_cp15_set_translation_table_entries()` uses the wrong TLB maintenance operation in multi-processor systems.

**Comment 1**

1. **Sebastian Huber**, Thu, 17 Sep 2020 06:38:20 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 20d8237/rtems:

```
arm: Fix arm_cp15_set_translation_table_entries()
```

In a multi-processor system we must broadcast the TLB maintenance operation to the Inner Shareable domain to ensure that the other processors update their TLB caches accordingly.

Close #4068.

**4071 - RSB does not pass BSP options correctly.**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/4071">https://devel.rtems.org/ticket/4071</a> ( <a href="https://devel.rtems.org/ticket/4071">https://devel.rtems.org/ticket/4071</a> )
<b>Id</b>	4071
<b>Reporter</b>	kgardas

<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.2
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

Using 5.1 RTEMS release and RSB to build the beast I've found out it's not able to pass BSP options correctly using `--with-rtems-bspopts` option:

```
../source-builder/sb-set-builder
--prefix=$HOME/sfw/rtems/5.1-smp2-vga80x50-key-to-reset 5/bsps/pc
--with-rtems-tests --with-rtems-smp
--with-rtems-bspopts="BSP VIDEO 80x50=1 BSP PRESS KEY FOR RESET=1"
```

command fails with:

```
Build Set: Time 0:00:28.975685
Build Set: Time 0:03:36.556012
installing: 5/bsps/pc ->
/export/home/karel/sfw/rtems/5.1-smp2-vga80x50-key-to-reset
clean staging: 5/bsps/pc
Staging Size: 4.271GB
Build Set: Time 0:24:53.756984
Build Set: BSP PRESS KEY FOR RESET=1
error: no build set file found: BSP_PRESS_KEY_FOR_RESET=1.bset
Build Set: Time 0:00:00.000420
Build FAILED
```

It looks like even if I use just one BSP options, it's still not passed to the BSP, but build is built fine at least.

**Comment 1**

1. **Chris Johns**, Wed, 09 Nov 2022 22:31:38 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

The RTEMS 5 RSB has been updated to support deployment and I think this will now be fixed. Please refer to the RTEMS Deployment repo for example configurations known to work.

**Description**

This patch fixes a tiny bug in the command line editing of the RTEMS shell. Typing CTRL-U in the shell should remove all characters left of the cursor. After pressing CTRL-U, the current implementation does wrongly place the cursor at the end of the line instead at its beginning. To reproduce the bug, start the shell and type 'abc123' (no ):

```
~/src/rtems $ qemu-system-arm -net none -nographic -M realview-pbx-a9 -m 256M -kernel
build/arm/realview-pbx-a9-qemu/testsuites/libtests/dll10.exe
*** BEGIN OF TEST libdl (RTL) 10 ***
*** TEST VERSION: 6.0.0.d9bdf166644f612dd628fe4951c12c6f8e94ba5f
*** TEST STATE: USER INPUT
*** TEST BUILD: RTEMS_DEBUG RTEMS_NETWORKING RTEMS_POSIX_API RTEMS_SMP
*** TEST TOOLS: 10.2.I 20200904 \
(RTEMS 6, RSB 31f936a7b74d60bda609a9960c6e1a705ba54974, Newlib a0d7982)
RTL (libdl) commands: dl, rtl
RTEMS Shell on /dev/foobar. Use 'help' to list commands.
SHLL [/] # abc123
```

Then move the cursor onto the '1' by hitting three times the key. Next type -U:

```
SHLL [/] # 123
```

Note that the cursor is at the end of the line (after '3') instead of correctly at the beginning (on the '1'), now. Continuing typing 'echo ' incorrectly results in the output:

```
SHLL [/] # 123echo 123
```

The patch changes this behavior so that the cursor in the second last step will be on the '1' and typing 'echo ' will then correctly reflected as:

```
SHLL [/] # echo 123
```

**Comment 1**

1. **Frank Kuehndel**, Mon, 28 Sep 2020 12:21:17 GMT

<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

Looking at <https://lists.rtems.org/pipermail/build/2020-September/019154.html>, you can see that the completed number of jobs doesn't match up with the number for the last build:

```
Total Time      : 2:05:13.725904 for 1696 completed job(s)
Average BSP Build Time: 0:00:04.430262
.....
1695 profiling v850/v850sim build:
configure: /home/joel/rtems-cron-6/rtems/configure\
--target=v850-rtems6 --enable-rtemsbsp=v850sim --prefix=/home/joel\
/rtems-cron-6/tools/6/bsps --enable-profiling --disable-smp
```

I think there are 1695 jobs completed not 1696. :)

### Description

When using libpci in a custom BSP we experienced linking problems for C++ test (e.g. spcxx01).

The reason is the missing extern C include guards for confdefs/libpci.h. Therefore, the reference to pci\_config\_lib\_init is mangled.

A patch fixing this problem is provided here: <https://lists.rtems.org/pipermail/devel/2020-October/062981.html>

### Comment 1

1. **Jan Sommer**, Fri, 30 Oct 2020 02:22:13 GMT
2. **owner**: set to **Jan Sommer** <jan.sommer@...>
3. **status**: changed from **new** to **closed**
4. **resolution**: set to **fixed**

In f84c4a5/rtems:

```
confdefs: Add extern C guards to libpci.h
Closes #4169
```

---

## **4174 - devctl.h does not compile from C++**

**Description**

The closing boilerplate of the C++ extern C wrapper is out of order with another #endif and the resulting code does not compile.

The attached patch addresses this but it needs to be merged to newlib and the RSB updated before this ticket closed.

Patch to newlib is on #4193.

**Attachments:****1 Joel Sherrill, Mon, 09 Nov 2020 21:35:20 GMT**

**attach:** set to [0001-libc-include-newlib.h-Fix-C-compilation-issue.patch](https://devel.rtems.org/ticket/4174/0001-libc-include-newlib.h-Fix-C-compilation-issue.patch) (<https://devel.rtems.org/ticket/4174/0001-libc-include-newlib.h-Fix-C-compilation-issue.patch>)

**Description**

Cloned from #4184:

The function `arm_cp15_start_set_translation_table_entries` rounds the end address of a section up to 1 MiB even if small 4kiB pages are used (i.e. `ARM_MMU_USE_SMALL_PAGES` enabled).

Will submit a patch which only rounds the end address to 4kiB boundary.

**Comment 1**

1. **Jan Sommer**, Wed, 02 Dec 2020 12:39:29 GMT

To keep track of it during the Christmas break: The patch is here:

<https://lists.rtems.org/pipermail/devel/2020-November/063461.html>

---

**Description**

The termios test application does not work correctly for Zynq based BSPs. Also scanf and similar functions reading from stdin do return immediately and do not block as expected.

The console driver has been fixed in master. This should be backported to 5.x.

**Comment 1**

1. **Kinsey Moore**, Tue, 09 Mar 2021 08:30:07 GMT

In 2f32370/rtems:

```
zynq-uart: Fix set_attributes implementation
```

The zynq-uart set\_attributes implementation was configured to always return false which causes spconsole01 to fail. This restores the disabled implementation which sets the baud rate registers appropriately and allows spconsole01 to pass. This also expands the set\_attributes functionality to allow setting of the stop bits, character width, and parity.

```
Updates #4236
```

### **Description**

Cloned from #4239:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

The PowerPC shared ISA IRQ management in i8259s.c is broken. It fails to handle:

- Interrupt acknowledgements for the slave controller when the master has a lower priority pending interrupt acknowledge the slave and the master controllers
- The nesting support to suspend and resume an interrupt does not correctly handle the enable/disable
- The initialise of an interrupt does not handle any pending request
- Locks up when using with the IRQ server which is executing the handler in a task context

All these issues have been fixed in the i386 BSP however the code between is not shared as the i386 BSP has BSP specific IRQ management code as well.

#### Comment 1

1. **Chris Johns**, Tue, 16 Feb 2021 20:30:07 GMT

#### Description

The explanation is taken from André on the user list:

Hello,
after some digging I think I found the problem and at least a workaround.
As a disclaimer, I do not know if this really counts as a general fix. I have not invested enough time to dig through the original mkimage U-Boot source to figure this out. But I have attached my workaround patch if anyone might face the same problems.
The source of the problem are eight bytes between the header and the actual input file which are missing when using mkimage.py. Also the input size and input crc are wrong which is a result of the missing bytes.
These eight bytes always reflect the actual size of the input file (first four bytes) with four bytes zeros following. Within the original mkimage tool these eight bytes are considered part of the input file section in the output file. Therefore the calculated input size is eight bytes higher and the input crc differs.
As a workaround the mkimage.py script will add these eight bytes to the output file and the input crc calculation and adjusts the input size. This only happens when the type script was selected.
Best regards André

### Description

The change to support code and data sections has broken creating net boot images for the MVME 2700 (mvme2307) BSP. The linker command file ppboot.lids does not handle the per function text sections.

**Comment 1**

1. **Chris Johns**, Wed, 24 Feb 2021 21:50:13 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 3824960/rtems:

```
powerpc/motorola power: Link all text sections into the executable image
The change to building all code with code and data sections means
we have a section per function. Make sure all functions are
placed in the text section.
Closes #4266
```

**Comment 2**

1. **Chris Johns**, Fri, 26 Feb 2021 04:19:33 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

The change does not resolve the issue. I am not sure what happened in my testing.

The bootloader linked executable has the `.text.*` sections present. I am wondering if the Motorola debug monitor is not capable of loaded this type of ELF file. As a result the card information is not found and boot process fails. You can observe this by running `readelf -a` on the `rtems.img.elf` file created when making the image file. This is the RTEMS 5 executable linked with the RTEMS 6 bootloader:

Section Headers:										
[Nr]	Name	Type	Addr	Off	Size	ES	Flg	Lk	Inf	Al
[ 0]		NULL	00000000	000000	000000	00		0	0	0
[ 1]	.text	PROGBITS	00000000	010000	00f145	00	AX	0	0	32
[ 2]	.eh_frame	PROGBITS	0000f148	01f148	0017e0	00	A	0	0	4
[ 3]	.image	PROGBITS	00010928	020928	017778	00	WA	0	0	1
[ 4]	.reloc	PROGBITS	000280a0	0380a0	0002bc	00	WA	0	0	4
[ 5]	.handlers	PROGBITS	0002835c	03835c	0003ac	00	WA	0	0	1
[ 6]	.data	PROGBITS	00028720	038720	003c80	00	WA	0	0	32
[ 7]	.bss	NOBITS	0002c3a0	03c3a0	001158	00	WA	0	0	32
[ 8]	.gnu.attributes	GNU_ATTRIBUTES	00000000	03c3a0	000010	00		0	0	1
[ 9]	.symtab	SYMTAB	00000000	03c3b0	0066c0	10		10	698	4
[10]	.strtab	STRTAB	00000000	042a70	00616c	00		0	0	1
[11]	.shstrtab	STRTAB	00000000	048bdc	00005e	00		0	0	1

The RTEMS 6 executable has more code than the RTEMS 5. I tried a number of combinations in the linker command script but could not find a suitable result.

I have now looked into fixing the building of the bootloader in the RTEMS 5 automake build system and there are some fundamental issues present and I am yet to decide how this is to be resolved.

The bootloader Makefile has a variable `BOOTLOADER_CPU_FLAGS`:

[https://git.rtems.org/rtems/tree/c/src/lib/libbsp/powerpc/motorola\\_powerpc/bootloader/Makefile.am?h=5#n22](https://git.rtems.org/rtems/tree/c/src/lib/libbsp/powerpc/motorola_powerpc/bootloader/Makefile.am?h=5#n22) This is empty because `CPU_FLAGS` is not exported into this file:

```
$ grep CPU_FLAGS powerpc-rtems5/c/mvme2307/lib/libbsp/powerpc/motorola_powerpc/bootloader/Makefile
$
```

The CPU flags are being provided the globally set `CFLAGS` and this includes the text and data segment flags which is causing the problem. Adding:

```
CFLAGS =
CPPFLAGS =
CCASFLAGS =
```

Results in no valid CPU flags being set.

I am reluctant to add exporting the CPU flags to a high level in the build process because it will be seen by all BSPs and it is very difficult to know if there are possible side effects in another BSP.

I cannot only see a couple of solutions:

Remove the problem flags from the build Find a way to include the config with the flags

**Comment 3**

1. **Chris Johns**, Fri, 26 Feb 2021 07:14:46 GMT

I have isolated the issue to the building of `zlib.c` by the RTEMS 5 gcc. If I build just this file with the RTEMS 6 gcc the board boots.

**Comment 4**

1. **Chris Johns**, Fri, 26 Feb 2021 19:04:37 GMT

Comparing the `zlib.o` ELF sections for RTEMS 5 and 6 the `.bss` size is almost 0:

Section Headers:										
[Nr]	Name	Type	Addr	Off	Size	ES	Flg	Lk	Inf	Al
[ 0]		NULL	00000000	000000	000000	00		0	0	0
[ 1]	.text	PROGBITS	00000000	000034	003cb8	00	AX	0	0	4
[ 2]	.rela.text	RELA	00000000	004890	000444	0c	I	16	1	4
[ 3]	.data	PROGBITS	00000000	003cec	00027c	00	WA	0	0	4
[ 4]	.bss	NOBITS	00000000	003f68	000008	00	WA	0	0	4

and `zlib` has a set of tables it generates. The RTEMS 6 or gcc-10 ELF sections are:

Section Headers:										
[Nr]	Name	Type	Addr	Off	Size	ES	Flg	Lk	Inf	Al
[ 0]		NULL	00000000	000000	000000	00		0	0	0
[ 1]	.text	PROGBITS	00000000	000034	003c7c	00	AX	0	0	4
[ 2]	.rela.text	RELA	00000000	005014	000444	0c	I	18	1	4
[ 3]	.data	PROGBITS	00000000	003cb0	00027c	00	WA	0	0	4
[ 4]	.bss	NOBITS	00000000	003f2c	0010a8	00	WA	0	0	4

An inspection of the generated assembler shows the data being allocated using the .comm directory placing the data in the common section. Adding -f-no-common to the building of the boot loader has it working.

#### Comment 5

1. **Chris Johns**, Fri, 26 Feb 2021 19:06:17 GMT

GCC 10 defaults to -fno-common ...

[https://gcc.gnu.org/bugzilla/show\\_bug.cgi?id=85678](https://gcc.gnu.org/bugzilla/show_bug.cgi?id=85678)

#### Comment 6

1. **Chris Johns**, Fri, 26 Feb 2021 19:21:14 GMT

The preferred solution is to add \*(COMMON) to the .bss section in the linker command file used to link the boot loader. This will work with any gcc version and default they decide on.

#### Comment 7

1. **Chris Johns**, Sun, 28 Feb 2021 01:28:36 GMT

2. **status:** changed from **reopened** to **closed**

3. **resolution:** set to **fixed**

In d1bab98/rtems:

```
powerpc/motorola_power: Place any common data in the .bss section
It seems the compiler how defaults to -fcommon and this means
some uninitialised data is ignored.
Closes #4266
```

#### Comment 8

1. **Chris Johns**, Sun, 28 Feb 2021 03:37:18 GMT

In 75fb7a0e/rtems:

```
powerpc/motorola_power: Link all text sections into the executable image
The change to building all code with code and data sections means
we have a section per function. Make sure all functions are
placed in the text section.
Closes #4266
```

#### Comment 9

1. **Chris Johns**, Sun, 28 Feb 2021 03:37:22 GMT

In 96918af/rtems:

```
powerpc/motorola_power: Place any common data in the .bss section
It seems the compiler how defaults to -fcommon and this means
some uninitialised data is ignored.
Closes #4266
```

#### Comment 10

1. **Michael Davidsaver**, Wed, 03 Mar 2021 19:58:04 GMT

Maybe worthwhile looking into the --orphan-handling=MODE argument for ld in newer binutils? At least "warn" if not "error" seems like it would have made this situation more obvious.

<https://sourceware.org/binutils/docs/ld/Orphan-Sections.html>

#### Description

When the DMA table has been allocated dynamically, the IOCTL\_SET\_PACKETSIZE will trigger an issue where pDev->rx and pDev->tx are not updated with the new DMA tables base address. Instead the old pointers are used.

There is no point in reallocating the DMA tables because there is no configuration option to it.

#### Comment 1

**Description**

The new GRCAN\_FD IP supports CAN FD standard and is mostly backwards compatible with GRCAN SW interface. It introduces support for CAN-FD frames and a new bit-rate timing registers for new baud-rate.

The GRCAN driver have been extended to support the GRCANFD IP using the same API. Device IP-core specific functions are split into different files (grcanstd.c and grcanfd.c).

### Description

### Comment 1

1. **Daniel Hellstrom**, Sun, 07 Mar 2021 15:57:06 GMT

In c13205f/rtems:

leon,greth: added support for variable sized descriptor table sizes

The descriptor table size is equal to its alignment and set when configuring the HW IP through VHDL generics. This SW patch simply probes the HW how large the RX/TX descriptor tables are and adjusts accordingly.

The number of descriptors actual used are controlled by other settings (rxDescs and txDescs) controlled by the user.

Update #4308.

### Comment 2

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Daniel Hellstrom**, Tue, 09 Mar 2021 13:26:25 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**
4. **milestone:** changed from **6.1** to **5.2**

Minor improvement, no need to add to 5.2 changelog.

---

### **4309 - bsp,leon3: avoid BSP dependency on apbuart/timer driver**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/4309">https://devel.rtems.org/ticket/4309</a> ( <a href="https://devel.rtems.org/ticket/4309">https://devel.rtems.org/ticket/4309</a> )

#### **Description**

The BSP `amba.c` references the GPTIMER and APBUART drivers causing them to be dragged in when the driver manager is used. By moving the dependencies to a separate file the user can override the default without dragging in unused drivers.

#### **Comment 1**

1. **Daniel Hellstrom**, Sun, 07 Mar 2021 15:57:09 GMT

In `Oed294b6/rtems`:

```
leon3: avoid dependency on apbuart/timer driver
```

```
Moves drvmgr_drivers[] from amba.c to a separate file in order to avoid the dependency on APBUART/GPTIMER drivers. This has an effect when user configured not to use timer or uart in their project.
```

```
Update #4309.
```

#### **Comment 2**

1. **Daniel Hellstrom**, Tue, 09 Mar 2021 13:26:49 GMT
  2. **status:** changed from **assigned** to **closed**

**Description**

Fix for the BSP timer initialization when GPTIMER is used as the cpucounter. Without restarting in HW the cpucounter would stop after some time.

**Comment 1**

1. **Daniel Hellstrom**, Sun, 07 Mar 2021 15:57:16 GMT

In cb8379d/rtems:

```
leon: restart and load timer counter at initialization

Without this smp05 and smpthreadlife01 tests may fail depending on how the boot loader initialized the GPTIMER. Before the time counter stopped counting when reaching zero, but tests could work since it could take 232 us before stopping.

The timer driver will potentially overwrite this, but it happens later due to the initialization order having RTEMS_SYSINIT_CPU_COUNTER very early.

Update #4312.
```

<b>Keywords</b>	i386 clock
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

Cloned from #4455:

The current implementation of the TSC calibration during startup yields inaccurate results.

There are 2 issues:

1. Rounding error:

The `calibrate_tsc` function calibrates for 1s by waiting for `rtems_clock_get_ticks_per_second()` ticks via the PIT.

The PIT has a frequency of 1193182 Hz. For a rtems tick of 1ms this yields 1193. Waiting for 1s means then waiting for 1193000 PIT ticks (instead of the full 1193182).

For a 1 GHz TSC clock this would yield already ~150 kHz less then the correct TSC frequency.

2. Waiting for the first loop at begin of timer period

```
for (i = rtems_clock_get_ticks_per_second() * pc386_isrs_per_tick;
     i != 0; --i) {
    /* We know we've just completed a tick when timer goes from low to high */
    then_lsb = then_msb = 0xff;
    do {
        READ_8254(now_lsb, now_msb);
        if ((then_msb < now_msb) ||
            ((then_msb == now_msb) && (then_lsb < now_lsb)))
            break;
        then_lsb = now_lsb;
        then_msb = now_msb;
    } while (1);
}
```

This can yield deviations of several MHz for the TSC frequency.

For example, for a tested CPU with a TSC frequency of 19167.1 MHz yields a calibration result of 1912.3 MHz.

Proposed solution

- Just wait 1193182 PIT ticks for 1 s instead of a number of rtems ticks
- Use the raw timer value instead of waiting for clock ticks.

**Description**

The RTEMS implementation of `posix_devctl()` from POSIX 1003.26 does not return error codes as required by the standard.

"Upon successful completion, `posix_devctl()` shall return zero; otherwise an error number shall be returned to indicate the error. The value returned via the `dev_info_ptr` argument is driver dependent."

It should return the `errno` value and not -1 and set the `errno` variable. The current behavior is wrong but understandable because the implementation is a wrapper for `close()` and `ioctl()` which do set `errno` and return -1.

<b>Milestone</b>	5.2
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

The Cygwin link error is:

```
cp-support.o: in function `gdb demangle(char const*, int)':
/home/Christian/binutils-gdb/obj/gdb/../../gdb/cp-support.c:1619:(.text+0x6472): relocation truncated to fit: R_X86_64_PC32 against
undefined symbol `TLS init function for thread_local_seg_v_handler'
/home/Christian/binutils-gdb/obj/gdb/../../gdb/cp-support.c:1619:(.text+0x648b): relocation truncated to fit: R_X86_64_PC32 against
undefined symbol `TLS init function for thread_local_seg_v_handler'
collect2: error: ld returned 1 exit status
```

The issue appears to be that Cygwin changed their base address for executables and there are multiple approaches to fixing this on the Internet. None of these applied cleanly to a vanilla gdb 9.1. I adapted the patch presented at <https://stackoverflow.com/questions/61984974/failed-to-build-avr-and-arm-gdb-9-1-under-cygwin-relocation-truncated-to-fit>

This patch avoids using a thread-local extern variable, which causes link errors on some platforms, notably Cygwin. The poster through this was a better pattern even outside of working around linker bugs because it encapsulates direct access to the variable inside the class, instead of having a global extern variable.

It should be noted that gdb 10.1 builds cleanly on Cygwin but discussions leaned against bumping the gdb on the 5 branch. Hence we end up with a Cygwin specific patch for gdb 9.1 on Cygwin.

**Attachments:**

#### Description

When dumping to file, the file needs to be closed at program exit. When reading from file, we do not need the loop monitor. Do not use signals, since they are not cleaned up at program exit.

#### Comment 1

1. **Sebastian Huber**, Wed, 11 May 2022 06:44:56 GMT

```
if_atsam: Add tx/rx desc sysctls
Update #4651.
```

#### **Comment 16**

1. **Sebastian Huber**, Wed, 01 Jun 2022 07:51:09 GMT

In 62d320d/rtems-libbsd:

```
if_atsam: Shorten sysctl names
Update #4651.
```

#### **Comment 17**

1. **Sebastian Huber**, Wed, 01 Jun 2022 07:51:10 GMT

In 29f9822/rtems-libbsd:

```
if_atsam: Recover from receive freezes
```

Under unknown conditions the receive path ended up in a frozen state. In this state, the DMA and driver descriptor head were equal and all receive descriptors had the used bit set. So, the DMA was unable to store received frames. However, the receive daemon was never woken up to refill the receive buffers. It seems that the RXUBR interrupt can be used to recover from this state.

```
Update #4651.
```

<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

According to POSIX

<https://pubs.opengroup.org/onlinepubs/9699919799/functions/sync.html>

we have

```
The sync() function shall cause all information in memory that updates file systems to be scheduled for writing out to all file systems.
```

Currently, the RTEMS sync() implementation synchronizes only the file descriptors associated with a FILE object. This should be changed to call fsync() and fdatasync() for all file descriptors.

**Comment 1**

1. **Sebastian Huber**, Tue, 17 May 2022 13:24:35 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 8d54187/rtems:

```
Synchronize all file descriptors in sync()
Synchronize all file descriptors and not just the ones associated with a FILE object.
Close #4655.
```

**4676 - incorrect handling of "inactive\_per\_block" from "Objects\_Information" structure**

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/4676">https://devel.rtems.org/ticket/4676</a> ( <a href="https://devel.rtems.org/ticket/4676">https://devel.rtems.org/ticket/4676</a> )
<b>Id</b>	4676
<b>Reporter</b>	Adrian Varlan
<b>Created</b>	12 July 2022 06:45:56
<b>Modified</b>	21 July 2022 07:17:33
<b>Owner</b>	Sebastian Huber
<b>Type</b>	defect
<b>Component</b>	score
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.2
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	CONFIGURE_UNLIMITED_OBJECTS inactive_per_block
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

The inactive\_per\_block for block 1 is not handled correctly. For the first object in the second block, the inactive\_per\_block value is not decremented. As a consequence, the block might be deleted when the second to last object from block 1 is deleted. This is only valid when the application is configured with "CONFIGURE\_UNLIMITED\_OBJECTS".

The reason is the following:

in function "\_Objects\_Activate\_unlimited" from "objectimpl.h"

```
block = _Objects_Get_index( the_object->id ) - OBJECTS_INDEX_MINIMUM;
```

```

if ( block > objects_per_block ) {
    block /= objects_per_block;
}

information->inactive_per_block[ block ]--;
information->inactive--;
}

```

in a block with 8 objects per block, when creating the 9th object, `_Objects_Get_index( the_object->id )` returns 9. Therefore, "block" will be 8 (9 - 1). The next "if" will not be taken (8 > 8 ? No) and the `inactive_per_block` will not be decremented to 7 and remains at 8. This means that block 1 is a candidate for `"_Objects_Shrink_information"` function although object id 9 is still valid.

Steps to reproduce:

- assuming 8 objects per allocation block
- using semaphores as objects

- create 17 "RTEMS\_SIMPLE\_BINARY\_SEMAPHORE" semaphore objects id's 1 -> 17.
- delete semaphores 11, 12, 13, 14, 15, 16, 17 (order is important)
- lock semaphore 9
- delete semaphore 10 -> at this point, block 1 is freed although semaphore 9 is still active
- unlock semaphore 9 -> this can lead to errors. In my case due to the free the semaphore object was altered and changed from a "SEMAPHORE\_VARIANT\_SIMPLE\_BINARY" to "SEMAPHORE\_VARIANT\_MUTEX\_INHERIT\_PRIORITY" resulting in a return value of "RTEMS\_NOT\_OWNER\_OF\_RESOURCE".

Simple fix:

the condition for the "if" should be ">=" instead of ">".

#### Comment 1

1. **Sebastian Huber**, Tue, 12 Jul 2022 07:33:52 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **accepted**

Thanks for the detailed bug report. Do you would like to add a test case for this? If not, then I can do it.

I think the bug was introduced by:

```

commit 21275b58a5a69c3c838082ffc8a7a3641f32ea9a
Author: Sebastian Huber
Date: Thu Nov 22 19:14:51 2018 +0100
    score: Static Objects Information initialization
    Statically allocate the objects information together with the initial
    set of objects either via . Provide default object
    informations with zero objects via librtmscpu.a. This greatly
    simplifies the workspace size estimate. RTEMS applications which do not
    use the unlimited objects option are easier to debug since all objects
    reside now in statically allocated objects of the right types.
    Close #3621.

### **Description**

RTEMS 5 added -ffunction-sections -fdata-sections to the target flags for BSPs in an architecture that supports code and data sections.

Some EPICS code such as the NTP have code the linker does not link into the final executable. The data sections means the done variable is not linked into the executable when a function in the module is referenced.

RTEMS 6 only exports the ABI flags and any internal build flags are not exported.

EPICS should also review this type of code because it excludes potential optimizations.

### **Comment 1**

1. **Chris Johns**, Thu, 21 Jul 2022 05:52:08 GMT
2. **description:** modified (diff)

### **Comment 2**

1. **Joel Sherrill**, Thu, 21 Jul 2022 14:26:42 GMT

This is not a good code pattern to use if per item sectioning is used. There is no reference to the variable done at all and no reason for it to be included. Why not just call an explicit initialization method?

### **Comment 3**

1. **Chris Johns**, Wed, 09 Nov 2022 22:39:30 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **invalid**

This topic has been discussed in an EPICS github issue #288 and Michael thinks the flags are fine. Further testing has shown no real issue. I will set this ticket to invalid and close it. It can be reopened if it is a problem.

**Description**

Cloned from #4710:

The expansion of the dir type macros is not done correctly. Macro replacement only appends the file part to the last element of a path list. For example:

```
{mydir}/abc.cfg
```

with a path of:

```
%define mydir x:y:z
```

results in:

```
x:y:z/abc.cfg
```

The config load code handles this but it is wrong. The expansion of dir type macro variables should handle path separators (:) so you get:

```
x/abc.cfg:y/abc.cfg:z.abc.cfg
```

This has not been a problem in the RSB because the `_configdir` has only had two elements and the last one only ever had subdirectories.

### Description

Back port the changes from the development branch. The get sources tool is used during the release to collect the sources so they are hosted on <https://ftp.rtems.org>

The changes exposes a number of configuration file issues on the 5 branch.

### Comment 1

1. **Chris Johns**, Mon, 19 Sep 2022 21:24:53 GMT

In 3138ff5/rtems-source-builder:

```
sb/getsources: Fix getting sources
Back ported from the development branch
Updates #4715
```

### Comment 2

1. **Chris Johns**, Mon, 19 Sep 2022 21:24:56 GMT

In db3d470/rtems-source-builder:

```
sb/getsources: Fixes to configurations
Updates #4715
```

### Comment 3

1. **Chris Johns**, Wed, 09 Nov 2022 23:32:33 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

### Comment 4

1. **Chris Johns**, Fri, 11 Nov 2022 02:57:37 GMT
2. **status**: changed from **closed** to **reopened**
3. **resolution**: **fixed** deleted

More missed files.

### Comment 5

1. **Chris Johns**, Mon, 14 Nov 2022 20:58:24 GMT

In 5992bc9/rtems-source-builder:

```
bare/gcc: Remove gcc-4.8.2 because newlib references the unsupported CVS
Updates #4715
```

### Comment 6

1. **Chris Johns**, Mon, 14 Nov 2022 22:36:16 GMT

In b57948f/rtems-source-builder:

```
rtems: Update source and patch URLs to valid locations
Updates #4715
```

#### Comment 7

1. **Chris Johns**, Tue, 15 Nov 2022 21:42:36 GMT

In 3ec6441/rtems-source-builder:

```
rtems: Update source and patch URLs to valid locations
Updates #4715
```

#### Comment 8

1. **Chris Johns**, Tue, 15 Nov 2022 23:10:26 GMT

In 1116c5f/rtems-source-builder:

```
rtems: Add back gcc-4.6 build configuration
Updates #4715
```

#### Comment 9

1. **Chris Johns**, Tue, 06 Dec 2022 22:46:37 GMT
2. **status**: changed from **reopened** to **closed**
3. **resolution**: set to **fixed**

The release now fetches all sources.

**Description**

Cloned from #4730:

Like discussed in the following mailing list thread, the rtems-source-builder doesn't generate tar archives for all packages anymore:

<https://lists.rtems.org/pipermail/devel/2022-September/073369.html>

All RTEMS tools build sets 6/rtems-\* work fine except for 6/rtems-microblaze. devel/qemu and devel/dtc do not generate a tar archive. If the patch

<https://git.rtems.org/rtems-source-builder/commit/?id=6205068c5a429e9ee1b471f4c8a3a119bb6757b2>

is reverted, the tar files are generated just like before.

**Comment 1**

1. **Chris Johns**, Thu, 29 Sep 2022 23:13:11 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 6f1e914/rtems-source-builder:

```
sb/set-builder: Fix staging and tar file generation with a single config build
Closes #4731
```

**Comment 2**

1. **Chris Johns**, Fri, 30 Sep 2022 02:24:57 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

This has broken staging for multiple packages in a top level buildset.

**Comment 3**

1. **Chris Johns**, Fri, 30 Sep 2022 20:19:03 GMT
2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**

**Description**

The source is not present any longer. I think the simplest solution maybe using the source in the 5.1 release and pointing the RSB 5 freetype URL to that file. Any updates would be a change in the code and functionality.

**Comment 1**

1. **Chris Johns**, Tue, 15 Nov 2022 10:31:23 GMT
  2. **status**: changed from **new** to **closed**

**Description**

The Net-SNMP configuration references a patch that is missing. I cannot find it.  
Update to 5.9.3 and for the libbsd stack.

**Attachments:**

- 
- 1 **Chris Johns, Sun, 13 Nov 2022 22:49:57 GMT**  
attach: set to [rtems-net-snmp-5.9.3-20221113.patch](https://devel.rtems.org/ticket/4758/rtems-net-snmp-5.9.3-20221113.patch) (<https://devel.rtems.org/ticket/4758/rtems-net-snmp-5.9.3-20221113.patch>)

1. **Chris Johns**, Mon, 14 Nov 2022 20:58:25 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In c7e85e3/rtems-source-builder:

```
rtems/net-snmp: Update to 5.9.3 with the RTEMS patch

The 5.7.2.1 patch referenced in the configuration cannot be located so update the version to the latest. Checked with Zynq A9 qemu and libbsd.

Closes #4758
```

---

**4761 - RSB fatal error on missing hash checksums (cloned)**

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/4761">https://devel.rtems.org/ticket/4761</a> ( <a href="https://devel.rtems.org/ticket/4761">https://devel.rtems.org/ticket/4761</a> )

**Description**

Cloned from #4760:  
The time has come to raise a fatal error if a hash is missing rather than a warning. This will stop missing checksums being present when releasing.  
It also makes it simpler to test releases for no missing checksums.

**Comment 1**

1. **Chris Johns**, Tue, 15 Nov 2022 10:33:25 GMT
2. **milestone:** changed from **5.3** to **5.2**

**Comment 2**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Chris Johns**, Tue, 15 Nov 2022 21:42:34 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 0a7ecef/rtems-source-builder:

```
sb/downloads: Raise errors on no hash present
Close #4761
```

## RTEMS Release 5.1

---

### RTEMS 5.1 Release Notes

#### RTEMS Improvements

In this section, we discuss public API level changes as well as improvements to the implementation of those API routines.

Public API changes usually fall into one of the following categories:

- Addition of new methods
- Modifications to prototypes
- Deletion of obsoleted methods

Implementation improvements usually fall into one of the following categories:

- Algorithm improvements in execution time or memory usage
- Critical section reduction

#### API Changes

- The header file `<rtems.h>` no longer includes `<limits.h>` and `<string.h>`.
- Most services use now statically allocated resources and no longer need accounting in the application configuration.
- The work area initialization (RTEMS Work Space and C Program Heap) changed. BSPs must provide now a `_Memory_Get()` function.
- POSIX timers and signals are now the only POSIX resources which are enabled by the POSIX API.

#### API Additions

- Support for recording of high-frequency events in particular on SMP systems
- Termios supports now generation of signals.
- New fatal sources:
  - `RTEMS_FATAL_SOURCE_EXCEPTION`
  - `RTEMS_FATAL_SOURCE_PANIC`
  - `RTEMS_FATAL_SOURCE_SMP`
  - `RTEMS_FATAL_SOURCE_INVALID_HEAP_FREE`
  - `RTEMS_FATAL_SOURCE_HEAP`
- New chain API function: `rtems_chain_get_first_unprotected()`
- Add user defined thread names: `pthread_setname_np()` and `pthread_getname_np()`
- Support for xz compression/decompression
- Added `rtems_scheduler_ident_by_processor()`
- Added `rtems_scheduler_ident_by_processor_set()`
- Added `RTEMS_PREDICT_TRUE()` and `RTEMS_PREDICT_FALSE()` for static branch prediction hints

- Added `rtems_malloc()` and `rtems_calloc()`
- Added `rtems_scheduler_get_maximum_priority()`
- Added `rtems_scheduler_get_processor()`
- Added `rtems_scheduler_get_processor_maximum()`

#### API Implementation Improvements

- Priority inheritance is now transitive.
- POSIX key destructors are now called during thread restart.
- More robust thread dispatching on SMP and ARM Cortex-M

#### API Deprecations

- `rtems_iterate_over_all_threads()`. Use `rtems_task_iterate()` instead.
- `rtems_get_current_processor()`. Use `rtems_scheduler_get_processor()` instead.
- `rtems_get_processor_count()`. Use `rtems_scheduler_get_processor_maximum()` instead.
- `boolean` is deprecated. Use `bool` instead.
- `single_precision` is deprecated. Use `float` instead.
- `double_precision` is deprecated. Use `double` instead.
- `proc_ptr` is deprecated. Use a proper function pointer type.
- `rtems_context`
- `rtems_context_fp`
- `rtems_extension`
- `rtems_io_lookup_name()` is deprecated. Use `stat()` instead.
- `region_information_block`
- `rtems_thread_cpu_usage_t` is deprecated. Use `struct timespec` instead.
- `rtems_rate_monotonic_period_time_t` is deprecated. Use `struct timespec` instead.
- `_Copyright_Notice` is deprecated. Use `rtems_get_copyright_notice()` instead.
- `_RTEMS_version` is deprecated. Use `rtems_get_version_string()` instead.
- `RTEMS_MAXIMUM_NAME_LENGTH` is deprecated. Use `sizeof(rtems_name)` instead.
- `RTEMS_COMPILER_NO_RETURN_ATTRIBUTE` is deprecated. Use `RTEMS_NO_RETURN` instead.
- `RTEMS_COMPILER_PURE_ATTRIBUTE` is deprecated. Use `RTEMS_PURE` instead.
- `RTEMS_COMPILER_DEPRECATED_ATTRIBUTE` is deprecated. Use `RTEMS_DEPRECATED` instead.
- `RTEMS_COMPILER_UNUSED_ATTRIBUTE` is deprecated. Use `RTEMS_UNUSED` instead.
- `RTEMS_COMPILER_PACKED_ATTRIBUTE` is deprecated. Use `RTEMS_PACKED` instead.
- Including `<rtems/system.h>` is deprecated. This header file will be removed in RTEMS 6.

#### API Removals

- `rtems_clock_get()`
- API defined by `<rtems/debug.h>`
- Task notepads
- Task variables

#### SMP Support Improvements

- Reimplementation of the Multiprocessor Resource Sharing Protocol (MrsP) to address performance issues.

- Implementation of the O(m) Independence-Preserving Protocol (OMIP).
- Support for thread pinning (enables support for Epoch Based Reclamation; used by libbsd)
- The default SMP scheduler supports now EDF scheduling, one-to-one and one-to-all thread to processor affinities, and thread pinning.
- Timers (watchdogs) use now per-processor data structures.
- Improved POSIX key to value look up.
- The Ada runtime supports now SMP configurations.

## Configuration Changes

- All configuration options are now documented.
- Most resources are now statically allocated and no longer use the workspace.
- New configuration options:
  - `CONFIGURE_MAXIMUM_THREAD_NAME_SIZE`
  - `CONFIGURE_MINIMUM_POSIX_THREAD_STACK_SIZE`
  - `CONFIGURE_DIRTY_MEMORY`
  - `CONFIGURE_RECORD_EXTENSIONS_ENABLED`
  - `CONFIGURE_RECORD_FATAL_DUMP_BASE64`
  - `CONFIGURE_RECORD_FATAL_DUMP_BASE64_ZLIB`
  - `CONFIGURE_RECORD_PER_PROCESSOR_ITEMS`
  - `CONFIGURE_VERBOSE_SYSTEM_INITIALIZATION`
  - `CONFIGURE_IMFS_ENABLE_MKFIFO`
  - `CONFIGURE_IMFS_DISABLE_MKNOD_FILE`
- Renamed configuration options:
  - `CONFIGURE_SMP_MAXIMUM_PROCESSORS` to `CONFIGURE_MAXIMUM_PROCESSORS`
  - `CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR` to `CONFIGURE_MAXIMUM_FILE_DESCRIPTOR`
- Removed configuration options:
  - `CONFIGURE_SMP_APPLICATION`
  - `CONFIGURE_HAS_OWN_CONFIGURATION_TABLE`
  - `CONFIGURE_HAS_OWN_BDBUF_TABLE`
  - `CONFIGURE_HAS_OWN_DEVICE_DRIVER_TABLE`
  - `CONFIGURE_HAS_OWN_FILESYSTEM_TABLE`
  - `CONFIGURE_HAS_OWN_INIT_TABLE`
  - `CONFIGURE_HAS_OWN_MOUNT_TABLE`
  - `CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE`
  - `CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE`
  - `CONFIGURE_DISABLE_SMP_CONFIGURATION`
  - `CONFIGURE_MAXIMUM_DEVICES`
- The helper macro for the clustered scheduler configuration `RTEMS_SCHEDULER_EDF_SMP()` has now only one parameter.

---

## RTEMS Shell Improvements

The following improvements were made to the RTEMS Shell:

- Telnet now supports `joel` script output. Running a `joel` script in a telnet session now sees the output. Nested `joel` scripts also output to the telnet session.

---

## General

- The system initialization is now performed by system initialization handlers registered in a special linker set (similar to global constructors in C++).
- API header files have been collected from the various locations in the RTEMS source tree and placed under `cputkkit/include` and for BSPs under `bsps/include`. There is no header pre-install phase when building RTEMS.
- Improved parallel build performance. Nested `make` calls now run in parallel.
- Added support for the RISC-V 32-bit and 64-bit architecture.
- Added support for the 64-bit PowerPC architecture using the ELFv2 ABI.
- Synchronized support for Journalling Flash File System, Version 2 (JFFS2) with Linux 4.17.
- Import of `libfdt` from device tree compiler project.
- Added `libdebugger`, a thread aware GDB debug server with TCP transport support. Currently the supported architectures are i386 and ARM. The ARM support is experimental.
- Most BSP use now function and data sections to support the linker garbage collection.
- This is the last release of RTEMS with the `autoconf/automake` build system. RTEMS will be moving to a `waf` based build system driven from YAML specifications files. The effort is part of the on-going work in the RTEMS project to support qualification of the operating system.

---

## Architectures

Removed obsolete architectures:

- AVR
- H8300
- M32C
- M32R

Obsoleted architectures:

- Epiphany
- PowerPC SPE

---

## BSPs and Device Drivers

- General
  - BSP source code moved from `c/src/lib/libbsp` to `bsps` in the source tree. The configure and some other related pieces are still held in the original path.
- New BSPs
  - BSPs for ARM
    - `atsamv` - Microchip (former Atmel) SAM V71 series
    - `xilinx-zynqmp` - Xilinx Zynq UltraScale+ MPSoC platform
  - BSPs for RISC-V
    - `riscv` - Family of generic BSPs
    - `gripcv` - BSP based on the GRLIB
- Significant updates to existing BSPs
  - `powerpc/qoriq`: 64-bit support
- Removal of obsoleted BSPs
  - `arm/gdbarmsim`

- arm/nds
- arm/gp32
- arm/ep1a
- arm/score603e
- m68k/idp
- **Obsoleted BSPs**
  - m68k/gen68302
  - m68k/ods68302
  - powerpc/brs51
  - powerpc/brs61
  - powerpc/dp2
  - powerpc/mbx8xx
  - powerpc/mpc5566evb\_spe
  - powerpc/mpc56431\_dpu
  - powerpc/mpc56431\_evb
  - powerpc/mpc5674f\_ecu508\_app
  - powerpc/mpc5674f\_ecu508\_boot
  - powerpc/mpc5674fevb\_spe
  - powerpc/mpc5674f\_rsm6
- **Drivers**
  - **Drivers for `getentropy()`**
  - New I2C device driver framework supporting the Linux user-space API
  - New SPI device driver framework supporting the Linux user-space API

---

## Newlib Changes

- `time_t` is now 64-bit to adress the year 2038 problem.
- General improvements in the feature test macros support.
- Newlib internal locks are now supported, e.g. for FILE objects.
- The standard input, output, and error FILE objects are now global and no longer thread-specific.
- Added support for C++17 `std::aligned_alloc`

---

## Ecosystem

- RSB support to build a BSP software stack of tools, kernel, libbsd, and supported 3rd party packages.
- RTEMS Tester (`rtems-test`) support for DHCP/TFTP target hardware testing.
- RTEMS Trace addition of a new trace record support for target tracing.
- RTEMS Bootimage, a tool to portably create SD card images.

---

## RTEMS 5.1 Ticket Overview

Total	Closed	In_progress	New	Assigned	Percentage
844	844	0	0	0	100%

## RTEMS 5.1 Ticket Summary

ID	Status	Summary
1247	closed	RTEMS does not implement locks needed by multithreaded newlib
1334	closed	scandir() fails due to MAXNAMELEN is incorrect
1662	closed	termios.c: semaphore not deleted, consequently resulting in failure of rtems_termios_open
1747	closed	Heap extend allows discontinuous memory regions.
1971	closed	Memory leak in tmpfile()
2112	closed	<rtems/score/basedefs.h> superfluously includes <limits.h>
2132	closed	<rtems/score/basedefs.h> superfluously includes <string.h>
2133	closed	times() and _times() are subject to integer overflows
2173	closed	Potential integer overflow problem in EDF scheduler
2176	closed	fishy behavior in termios tx task mode
2196	closed	Automate doxygen build
2202	closed	RTEMS tar does not overwrite.
2217	closed	Decreased performance for whetstone benchmark using GCC >=4.5
2231	closed	Add coverage report generation support to rtems-tools
2236	closed	Move bsp_pretasking_hook() into files named bsppretaskinghook.c
2244	closed	h8300 gets error linking dl0* tests
2246	closed	rtems_ada_self is broken on SMP
2253	closed	sp07 needs to be split into an user extensions and a notepad test
2254	closed	powerpc/mvme5500/vectors/exceptionhandler.c uses task variables
2255	closed	Change uniprocessor INIT task mode to preempt.
2256	closed	Broken console driver infrastructure for SPARC
2257	closed	Second argument of ualarm() is ignored
2258	closed	One watchdog ticks header per scheduler instance
2259	closed	Replace red-black tree implementation, change API
2264	closed	SPARC: Several shared drivers are not SMP ready

## Summary

- clo SPARC: Silent FP context corruption possible
- se
- d
- clo Create a Public API for the Atomic Operations
- se
- d
- clo Documentation of User Extensions needs more information
- se
- d
- clo rtems\_waf: Tools without a version are not supported
- se
- d
- clo Warning from commit "bsps/arm: Do not use **ARM\_ARCH\_7A**"
- se
- d
- clo Enable function and data sections
- se
- d
- clo Linker set based initialization
- se
- d
- clo Improved priority inheritance implementation
- se
- d
- clo RSB %source file fails
- se
- d
- clo rtems\_iterate\_over\_all\_threads lacks user callback private pointer pass through
- se
- d
- clo Add 4.12 Tool Target Configurations to RSB
- se
- d
- clo lpc1768 variants fail to build with error in gpio.c
- se
- d
- clo Remove avrtest BSP
- se
- d
- clo Remove AVR Architectural Port
- se
- d
- clo Remove m68k/mvme136 BSP
- se
- d
- clo Remove m68k/sim68000 BSP
- se
- d
- clo Remove M32R Architectural Port
- se
- d
- clo Remove m32r/m32rsim
- se
- d
- clo Remove mips/mongoose BSP
- se
- d
- clo Remove arm/gba BSP
- se
- d
- clo Remove arm/nds
- se
- d
- clo Remove arm/gp32 BSP
- se
- d
- clo Remove H8300 Architectual Port
- se
- d
- clo Remove h8300/h8sim BSP
- se
- d
- clo Warning in threadqops.c
- se
- d
- clo Warning in spsimplsched02

## Summary

- Remove powerpc/ep1a BSP
- Remove powerpc/score603e BSP
- Add rtems\_chain\_get\_first\_unprotected() to chain API
- RSB: Tool patches use the RTEMS version
- Add Thread Local Storage (TLS) support on x86
- Remove <rtems/debug.h>
- Should <https://devel.rtems.org/wiki/TBR/Delete/SpecBuilder> be Deleted?
- Vagrant Scripts
- RSB: Use SHA512 instead of MD5
- Remove notepads
- Remove task variables
- mvme5500 BSP: Exception Handler uses deprecated Notepads.
- Should "[https://devel.rtems.org/wiki/TBR/Delete/BSP\\_Template](https://devel.rtems.org/wiki/TBR/Delete/BSP_Template)" be replaced?
- Remove m68k/idp BSP
- Make POSIX API mandatory (except signals and the sporadic server)
- i386 score/libcpu API Layering Violation
- Move pc386/tools/bin2boot to rtems-tools
- BSP for the Atmel SAM V71/V70/E70/S70 chip platform
- RSB allows use of insecure hash algorithms like MD5 and SHA1
- Use Newlib exec\*() variants and remove RTEMS versions
- Review cxx\_iostream size change per function-section changes
- Obsolete gen68302 BSP
- Osotele m68k/ods68302
- Obsolete mbx8xx BSP
- Obsolete idp BSP
- [mvme3100] boot card() broken by 37030e38

id	status	Summary
clo	se	New watchdog handler implementation
clo	se	Eliminate the Giant lock
clo	se	Implement the O(m) Independence-Preserving Protocol (OMIP)
clo	se	Add word splitting to print output
clo	se	Delete the EXTERN pattern
clo	se	smdk2410 is broken due to gp32 removal
clo	se	RSB Docs Quick Start version number
clo	se	arm/lpc176x: linker script update (add KEEP() sections)
clo	se	alarm() uses seconds watchdog and thus is affected by clock changes
clo	se	POSIX Condition Variables Clock Attribute Support
clo	se	rtems_heap_allocate_aligned_with_boundary() body and prototype inconsistent
clo	se	Fix the year 2038 problem
clo	se	Use one lookup tree per-thread for the POSIX keys
clo	se	Unify thread cancel/join and delete
clo	se	Fix CPU time used for threads on SMP
clo	se	Avoid home-grown condition variable implementation in the Classic Regions
clo	se	Use an ISR lock to protect the state of Classic Rate Monotonic objects
clo	se	rtems-tester failure
clo	se	waf build failed for rtems-libbsd
clo	se	New warning in pc386 VESA driver
clo	se	pc386: ld -r issue with per function sections
clo	se	configure: enable-rtemsbsp doesn't warn if bsp does not exist
clo	se	sis does not run on gdb 7.11 but does on gdb 7.9
clo	se	RSB remove 4.11, 4.10 and 4.9 from the master branch.
clo	se	pc386 BSP has complex dependencies
clo	se	spclock err02

Stat	Summary
closed	Update OpenRISC toolchain in 4.12
closed	After latest patches with Objects_Get_by_name rtems-master not compiling without --enable-posix
closed	CORE spinlock implementation is next to be useless
closed	Obsolete clock_get() directive
closed	Add pthread_setconcurrency() and pthread_getconcurrency()
closed	Configuration table's smp_enabled conditional on RTEMS_SMP
closed	rtems/c/src/lib/libbsp/sparc/leon3/clock/ckinit.c:122: duplicate if
closed	c/src/lib/libbsp/arm/atsam/network/if_atsam.c:409: possible bad if statement
closed	POSIX key destructors must be called during thread restart
closed	User extensions execution order must be clarified
closed	Update doc to reflect obsoleting rtems_clock_get()
closed	linking issue for htonl, etc when using -std=c99
closed	Add libatomic for RTEMS
closed	Unpredictable errno value returned by sem_wait() in case of semaphore deletion
closed	GCC 6.1 is broken for microblaze
closed	cpukit/libfs/src/nfscient/src/rpcio.c:524]: (style) Suspicious condition
closed	Rename asm file with .S(upper case) ext. name
closed	Remove descriptor objects for POSIX message queues
closed	Buffer allocation of capture engine is broken on SMP configurations
closed	Unsafe use of current processor index in capture engine
closed	A pthread_detach() does not lead to a resource reclamation
closed	Blocking _CORE_message_queue_Submit() may lead to unpredictable results
closed	SEM_VALUE_MAX is unusually small on RTEMS
closed	CPUINFO command to report per-processor information
closed	Classic binary semaphores without a locking protocol can be released by everyone
closed	grasc.c: Questionable use of binary semaphore

Summary

## Summary

- closed arm\_cp15\_get\_translation\_table\_base\_control\_register warning.
- closed xz git URL in README is broken
- closed Ada support is broken on SMP configurations
- closed Add posix\_devctl()
- closed Termios task driven mode should use mutex for device operations
- closed Add new interrupt server driven Termios mode
- closed Use self-contained mutexes for Termios framework
- closed Add NXP SC16IS752 serial device driver
- closed Change C11 threads support to use Classic tasks instead of POSIX threads
- closed Use self-contained objects instead of Classic API for drivers and support libraries
- closed JFFS2: Add IO controls to get filesystem instance information and force a garbage collection
- closed Add I2C framework documentation
- closed ATA/IDE support in RTEMS is out-dated
- closed Driver manual covers non-existent Analog Driver
- closed Driver manual covers non-existent Discrete Driver
- closed Driver manual covers non-existent Non-Volatile Memory Driver
- closed Add user defined thread names
- closed Implement POSIX Shared Memory Objects
- closed docs.rtems.org Add support to ReST format releases.
- closed Update POSIX 1003.1 Compliance Guide for ReST
- closed docs.rtems.org Automatic update of branches content when a rtems-doc.git change is made.
- closed Coverage installed when building the docs repeats catalogue.xml entries
- closed Fix exclude rule in rtems-test-check
- closed src/c/src/lib/libbsp/arm/smdk2410/smc/smc.c: 3 \* pointless local variables ?
- closed src/c/src/lib/libbsp/arm/raspberrypi/i2c/i2c.c:320: defective error checking ?
- closed src/c/src/lib/libbsp/powerpc/beatnik/marvell/qt timer.c: 4 \* pointless check ?

## Status

### Summary

- 2111 closed DHCP client fails on complex networks
- 2112 closed src/c/src/lib/libbsp/sparc/shared/can/occan.c:1573: broken error checking ?
- 2113 closed src/cpukit/libdebugger/rtems-debugger-server.c: four problems
- 2114 closed src/cpukit/libfs/src/jffs2/src/readinode.c:189: faulty logic
- 2115 closed src/c/src/lib/libbsp/arm/tms570/console/tms570-sci.c:248: strange expression ?
- 2116 closed Fix rtems\_rate\_monotonic\_postponed\_job\_count() prototype
- 2117 closed RTEMS\_STACK\_CHECKER\_EXTENSION has incomplete definition
- 2118 closed \_RBTree\_Initialize\_node generates warnings
- 2119 closed Remove CONFIGURE\_SMP\_APPLICATION
- 2120 closed Rename CONFIGURE\_SMP\_MAXIMUM\_PROCESSORS to CONFIGURE\_MAXIMUM\_PROCESSORS
- 2121 closed Prefix the confdefs.h internal defines with an underscore
- 2122 closed RSB requirements are missing pax
- 2123 closed Update termios.h to match the latest FREEBSD definitions
- 2124 closed Merge LEON
- 2125 closed rtems-doc waf configure does not detect sphinxcontrib.bibtex status
- 2126 closed xz: Support for 64-bit CRC is build although XZ\_USE\_CRC64 is not defined
- 2127 closed libdebugger: control reaches end of non-void function
- 2128 closed termios: Change receive callback invocation to enable select() and poll() support
- 2129 closed termios: Make write POSIX compatible
- 2130 closed libdl unresolved externals that use more than one block or multiple entries corrupts.
- 2131 closed Questionable Code in resource\_snapshot.c
- 2132 closed Warnings in SPARC BSPs
- 2133 closed Warnings in rtl-obj-cache.c on some targets
- 2134 closed Coverity Reports Out of Bounds Read in drvmgr\_print.c
- 2135 closed Flexibleassignto is broken on new ticket page.
- 2136 closed Termios task driven mode not compatible with SMP

Status	Summary
closed	building rsb freezes
closed	rtems building error
closed	rtems building error
closed	Many failures on LEON3 with SMP disabled
closed	Add a top level global testsuite configuration file (.tcfg) and a 'user-input' test state.
closed	Questionable patch organization in RTEMS tools and RSB
closed	Error path in rtems-gcc-6.3.0-newlib-2.5.0.20170228-1.cfg
closed	ARM: Optimize context switch
closed	Shared memory support internal locking is broken
closed	Add some popular benchmark programs to the testsuite
closed	arm/libdl: C++ exception index tables may not be ordered correctly
closed	Set test configurations to reflect test results.
closed	Add a testsuite top level configuration file that is common to all tests.
closed	bootstrap sort inconsistent with sb-bootstrap for acinclude
closed	ARM: Change ABI to not use short enums
closed	newlib inttypes.h is missing some methods
closed	qorIQ BSPs depend on mkimage which is not always available
closed	warnings in rtems-debugger-server.c
closed	warnings in Dhrystone Benchmark
closed	pc586-sse does not compile fsjffs2gc01
closed	testdata excludes on included tcfg files does not work
closed	LibBSD broken with GCC+RTEMS changes
closed	Create <rtems/inttypes.h> to consolidate extensions to <inttypes.h>
closed	Changing Trac milestone page fails.
closed	RTEMS Source Builder Fails on Windows Builds
closed	Long path crashes the RSB when listing a directory.

Status	Summary
closed	SMP assert in <code>_Thread_Executing</code> in <code>libdebugger</code>
closed	tar01 XZ error
closed	Missing bsets
closed	Monitor config command does not handle unlimited objects.
closed	RTEMS User Manual Quick Start does not cover releases.
closed	sb-check on Cygwin
closed	Setting interrupt level in the mode arg on SMP returns <code>RTEMS_UNSATISFIED</code>
closed	SMP build of RTEMS Testsuite does not set <code>CONFIGURE_MAXIMUM_PROCESSORS</code>
closed	FAT does not support clusters bigger than 32K
closed	SPARC LEON3 BSP SMP build is broken.
closed	ARM caching issues
closed	missing pax causes install failures
closed	Provide invalid link handler for docs.rtems.org so old docs can be removed.
closed	<code>src/cpukit/posix/src/mmap.c:189]: (style) Suspicious condition</code>
closed	Error compiling <code>xilinx_zynq_zedboard</code> .
closed	Global C++ IO streams are broken ( <code>cout</code> , <code>cin</code> , <code>cerr</code> )
closed	<code>ProgrammingError: (1064, "You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near 'sid='nikolaykomashinskiy' AND authenticated=1 AND name='force_change_passwd' at line 1")</code>
closed	interrupt vector indexing is assuming <code>BSP_INTERRUPT_VECTOR_MIN = 0</code> for this code.
closed	Add support for IBM PPC 750 chip
closed	missing a couple register names + a <code>#ifndef ASM</code> around <code>serial.h</code> inclusion
closed	improvement in <code>pci.h</code>
closed	RSB cannot compile tool chain in CentOS 7.
closed	Review tests using <code>CONFIGURE_DISABLE_SMP_CONFIGURATION</code>
closed	Parameter of <code>CPU_COPY()</code> are in wrong order
closed	<code>m32c/m32csim</code> does not build <code>linpack-pc.c</code>
closed	RTEMS source builder fails when building gcc documentation with newer versions of gcc

Summary

- 1 CPU\_NAND\_S() implementation is not in line with FreeBSD
- 2
- 3
- 4 CPU\_CMP() implementation is not in line with FreeBSD
- 5
- 6
- 7 Cannot use RTEMS mailing list archive for patches
- 8
- 9
- 10 4.11/rtems-nios2 does not build on Windows.
- 11
- 12
- 13 4.12/rtems-moxie missing release number.
- 14
- 15
- 16 Remove docs directory from the RSB
- 17
- 18
- 19 Warnings in libdebugger
- 20
- 21
- 22 RSB: powerpc GDB build broken on Apple Darwin
- 23
- 24
- 25 gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux
- 26
- 27
- 28 Add EDF SMP scheduler
- 29
- 30
- 31 Add a workaround for the LEON3FT store-store errata
- 32
- 33
- 34 Add a simple processor affinity support to the EDF SMP scheduler
- 35
- 36
- 37 including 'unistd.h' in C++ does not build.
- 38
- 39
- 40 Make the EDF scheduler the default SMP scheduler
- 41
- 42
- 43 Add rtems\_scheduler\_ident\_by\_processor()
- 44
- 45
- 46 Add rtems\_scheduler\_ident\_by\_processor\_set()
- 47
- 48
- 49 Create an interrupt server for every processor in the system
- 50
- 51
- 52 Declaration of global functions in driver source files
- 53
- 54
- 55 Test suite failures due to floating point usage
- 56
- 57
- 58 SPARC: Add lazy floating point context switching
- 59
- 60
- 61 Ada tests do not build
- 62
- 63
- 64 Infinite loop in SPARC rtems\_invalidate\_multiple\_instruction\_lines()
- 65
- 66
- 67 Add 64-bit support for PowerPC
- 68
- 69
- 70 parallel make not working
- 71
- 72
- 73 Makefile recipe override warning has returned
- 74
- 75
- 76 Add hypervisor support for QorIQ BSPs

## Summary

- closed RSB rtems-gdb-7.12-1.cfg MD5 value is ERROR
- closed shell test in testsuites\samples\fileio many COMMANDs is Lost
- closed Inconsistent blocking addressing in RFS
- closed Add BSP for i.MX 7
- closed Core Dump in powerpc-rtems4.12-ld
- closed Shell internal commands should be public.
- closed Add new RTEMS repos to github.
- closed Add RTEMS FDT wrapper and shell command to libmisc
- closed Add Xilinx AXI I2C driver
- closed Add I2C Drivers for LM25066A, TMP112, ADS1113 and ADS1115
- closed rtems-exeinfo does not decode ARM static constructors.
- closed rtems-tools on CentOS 7 Build Failure
- closed Add RISC-V support
- closed Newlib: Change time\_t and clock\_t integer types to 64-bit
- closed POSIX: Make pthread\_mutex\_t self-contained
- closed POSIX: Make pthread\_cond\_t self-contained
- closed POSIX: Make pthread\_barrier\_t self-contained
- closed POSIX: Make pthread\_rwlock\_t self-contained
- closed POSIX: Make sem\_t self-contained
- closed score: Optimize \_Thread\_queue\_Enqueue() timeout handling
- closed clock() implementation in Newlib is broken
- closed Simplify and unify BSP\_output\_char
- closed GDB 8.0.1 is broken on FreeBSD 11
- closed Ignore pshared attribute for POSIX semaphores
- closed Accept PTHREAD\_PROCESS\_SHARED for POSIX mutexes
- closed Accept PTHREAD\_PROCESS\_SHARED for POSIX barriers

## Summary

- 3 MIPS tool build on Darwin (MacOS) fails.
- 3 RTEMS Tools corvar does not build on Windows.
- 3 RTEMS Tools covoar build fails on Windows
- 3 RTEMS Doxygen.in latex output does not build
- 3 Add reference counting to file descriptors
- 3 Remove rtems\_libio\_t::driver
- 3 Remove LIBIO\_FLAGS\_CREATE
- 3 Devel mailing list doesn't work and Git push impossible due to disk full
- 3 Use FIFO for file descriptor free list
- 3 Accept PTHREAD\_PROCESS\_SHARED for POSIX condition variables
- 3 Remove old ISR parameter from Clock\_driver\_support\_install\_isr() and make it optional
- 3 CPU Kit broken with --enable-rtems-debug
- 3 Change the BSP Howto's name to something smaller.
- 3 POSIX: Reduce size of pthread\_once\_t and make it zero-initialized
- 3 PSXRDWRV Test failure on Beaglebone Black
- 3 Beaglebone Black crashes on u-boot master build.
- 3 Accept PTHREAD\_PROCESS\_SHARED for POSIX rwlocks
- 3 PowerPC tools don't build on 32-bit hosts
- 3 Examples v2 does not build
- 3 Examples v2 trace linker ini files reference non-existing dump-on-error
- 3 Trace linker score support is broken
- 3 Add I2C device driver for temperature sensor LM75A
- 3 New default ticket assignee: NeedsReview
- 3 Internal status codes must not depend on RTEMS\_POSIX\_API
- 3 Simplify POSIX\_API\_Control
- 3 Use BSP output char via RTEMS printer or simple console driver for test output by default

Summary

- 3 RSB GCC does not build on High Sierra and APFS
- 3 i386 PC BSP does not reset when bsp\_reset is called.
- 3 Xilinx AXI I2C driver IP race condition causes clock glitch.
- 3 Remove rtems\_pthread\_attribute\_compare()
- 3 Merge FreeBSD timecounter changes from 2015-01-20 to now
- 3 \_\_\_getreent in libc.a and generated by confdefs.h
- 3 Replace/update POSIX Compliance Guide
- 3 Update sh-rtems4.12 bset to use rtems-default (using old gcc)
- 3 New warnings from Time Changes
- 3 ar warning: u' modifier ignored since 'D' is the default (see 'U')
- 3 Various cc1plus warnings for "valid for C/ObjC but not for C++"
- 3 CLOCK\_REALTIME timeout implementation is not POSIX compliant
- 3 Change uptime seconds to int32\_t
- 3 smptests/Makefile.am Issues
- 3 Add C11 Threading Examples
- 3 MUTEX\_INITIALIZER missing braces warning
- 3 RTEMS Tester covoar does not link on MacOS
- 3 RTEMS Tester covoar dies with no arguments.
- 3 Add lazy update of line control and baud divisor to NS16550 serial driver
- 3 m32c tests don't build -- test\_context too large
- 3 epiphany tools checksum error
- 3 or1k tools build error
- 3 Upgrade trac to fix numerous problems.
- 3 Exception in rtems-test
- 3 Relative timespec timeouts are subject to integer overflows
- 3 Supported Architectures Page is out of date

Status	Summary
closed	RSB should fail on this error
closed	Improve the RSB build email message
closed	Fix pthread_create() with user provided stack
closed	Qemu Fails to Build, RSB Gives Odd Traceback
closed	Move erc32, leon2, leon3, psim and jmr3904 to Tier 2
closed	Configuring a System Still Includes Notepads and Has Wrong Heading
closed	Replace vprintk() implementation
closed	Add RTEMS version, build and tools details to tests
closed	Termios canonical mode (ICANON) does not return input line by line
closed	Zynq BSP missing linker option --gc-sections
closed	Change RTEMS release number scheme from 4.12 to 5
closed	RSB wiki page duplicates documentation
closed	Upgrade or1k and m32c to Binutils 2.29
closed	Upgrade m32c to GDB 8.0.1
closed	gdb: pr 16827, fix sim on Mavrick
closed	sb-check fails on Msys2 64-bit
closed	aarch64 missing from 5/rtems-all build set
closed	Add index to all documents.
closed	RTEMS Top level README needs updating.
closed	Use of .. include:: in the User Manual should be changed.
closed	Quick Start Instructions Inconsistent
closed	Fix rtems_semaphore_flush() for priority inheritance semaphores
closed	Fix thread queue owner priority update in _Thread_queue_Flush_critical()
closed	Fix priority ceiling updates
closed	Git push to Trac with more than one commit does not update tickets.
closed	Add getentropy() implementation provided by each BSP

## Summary

- cpukit/libmisc/stackchk/check.c stack addresses formatted incorrectly.
- Workarounds for UT699, UT700, and GR712RC errata
- Simplify global construction
- Change rtems\_panic() implementation and document this function
- Replace BSP\_panic() with rtems\_panic()
- Remove \_BSP\_Fatal\_error()
- Remove BSP-specific defaults for RTEMS\_BSP\_CLEANUP\_OPTIONS()
- Add BSP\_VERBOSE\_FATAL\_EXTENSION to RTEMS\_BSP\_CLEANUP\_OPTIONS
- imx7 does not link getentropy01 test on master
- Reorganize header files to avoid "make preinstall"
- Warnings on 64-bit targets
- Ada run-time needs support for self-contained POSIX synchronization objects
- libpci depends on BSP-specific header files
- A couple of documentation typos
- Add monotonic watchdog based on uptime
- Use second one based uptime for CLOCK\_MONOTONIC for FreeBSD compatibility
- cpukit/libpci references BSP headers.
- rtems/status-checks.h calls printf without including the needed header.
- PowerPC BSP include naming mess.
- Remove unused support for MPC505
- QorIQ: Add MAC-less DPAA driver to libbsd
- bsp-builder has incorrect print (%s in output)
- Add epiphany support to GDB 8.0.0
- Bad URL in OpenOCD/Xilinx\_Zynq Wiki Page
- RSB uses hard coded GCC binary paths
- Reorganize BSP source directory

Summary  
 Add device tree support to Altera/Intel Cyclone V BSP  
 gcc version report for released tools is wrong.  
 dlerror non-conformance  
 Add paravirtualization support to ARM  
 Add paravirtualization support to PowerPC  
 PowerPC linkcmds.base missing wildcards on some sections  
 rtems\_task\_create's initial\_mode SMP update  
 RSB macro calls such as define fail on unicode keys.  
 Move expat's home site to github from SF.  
 Improve INTERNAL\_ERROR\_THREAD\_EXITTED to show the id and thread name  
 Add a simple task console driver  
 mhttpd's http etag can result in invalid caching in a browser.  
 Simplify clustered scheduler configuration  
 Eliminate score/cpu\*/.../types.h  
 bootstrap uses non-POSIX compliant echo -e  
 Trac Login Failure (bad password) Causes Internal Error  
 deadlock in \_once()  
 Several PowerPC linker commands do not support constructors/destructors with priority  
 gen83xx warning for macros redefined  
 sparc64: Macro Redefined  
 pthread\_setschedparam() has incorrect prototype  
 pthread\_mutex\_getprioceiling() has incorrect prototype  
 mcf5272/mcf5272.h Timer3 Duplicate Definition  
 mvme3100 spaces needed around quote in macro definitions in bsp.h  
 bf533.h  
 beatnick:spaces needed around quote in macro definitions in bsp.h

## Summary

- closed pc386 edid.h invalid macro names
- closed sptimecounter02 warning due to defining \_KERNEL and disabling part of <sys/time.h>
- closed Warning in all lpc176x variants
- closed PowerPC BSPs duplicate PAGE\_MASK, etc redefinition
- closed Deprecate rtems\_disk\_create\_phys(), etc.
- closed rtems-test does not honor --mail-from argument
- closed Remove command line pre-processor defines
- closed Remove cklength program
- closed Remove eolstrip program
- closed Remove unhex program
- closed Remove packhex program
- closed Move rtems-bin2c program to rtems-tools
- closed rtems-test command line documentation appears to be out of date
- closed Testsuite Makefile merge to one per group of tests
- closed Require --enable-rtemsbsp with --enable-smp or --enable-multiprocessor
- closed Prefer int for int32\_t
- closed Generate an error if RTEMS's gcc is not found when the user runs configure
- closed Trac's git changeset browsing is suspect.
- closed Add subdir-objects to automake flags
- closed rtems-tester: possible parsing error for qemu-prep-altivec on exclude SMP configuration
- closed Warning flags have disappeared with recent autoconf changes
- closed NFS: Remove support for cexp
- closed infinite loop in RSB's path when a prefix path is not writable
- closed rtems-ld does not remove executable when there is an output error
- closed rtems-ld does not handle R\_ARM\_V4BX relocation records
- closed The register keyword is deprecated in C++11

4	
0	
3	Remove nios2gen program
4	
4	
1	
3	Remove multigen script

4 3 2 1	Summary
4 4 4 6	Remove cvsignore-add.sh script
3 4 4 7	Remove rtems-testsuite-autostuff script
3 4 4 5	Remove size_rtems script
3 4 4 5	Update RISC-V tool chain to support standard 64-bit chips
3 4 4 5	Add RISC-V GDB
3 4 4 5	Tracing Framework Documentation in User Manual
3 4 4 5	Remove install-if-change script
3 4 4 5	rtems-test should not use the env PATH to find covoar
3 4 4 5	Rework initialization and interrupt stack support
3 4 4 6	GDB 8 SIS LEON2 LEON3 Patches
3 4 4 6	Canadian cross compilation of RTEMS tools not supported for x86_64-w64-mingw32
3 4 4 6	Convert covoar to use DWARF function data
3 4 4 6	Integrate all changes from Linux v3.11 to v4.17 made in the JFFS2 sources
3 4 4 7	Update libfdt as of date 2018-07-09
3 4 4 7	Update of libbsd to a version close to the FreeBSD 12 release
3 4 4 7	Add RTEMS_PREDICT_TRUE() and RTEMS_PREDICT_FALSE() for static branch prediction hints
3 4 4 7	RISCV BSP Tester Cleanup Needed
3 4 4 8	CONFIGURE_MINIMUM_TASK_STACK_SIZE may affect CONFIGURE_INTERRUPT_STACK_SIZE
3 4 4 8	Relax the buffer alignment required by rtems_partition_create()
3 4 4 8	RFS: Remove stray call of rtems_disk_release() in rtems_rfs_buffer_sync()
3 4 4 8	Use uintptr_t and size_t instead of uint32_t in rtems_partition_create()
3 4 4 8	Remove CONFIGURE_HAS_OWN_MOUNT_TABLE
3 4 4 8	Obsolete CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
3 4 4 8	Remove CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
3 4 4 8	Align mprotect() prototype with POSIX
3 4 4 8	Remove superfluous interrupt enable in Thread Dispatch enable()

## Summary

- closed Fix issues raised by Coverity Scan for FTP server
- closed Add POSIX Attribute Reports for More Than Scheduler (examples-v2)
- closed RSB source only download is host specific
- closed Add `rtems_task_exit()`
- closed Remove `stdin`, `stdout`, `stderr` convenience routines for CEXP
- closed Move RTEMS configuration data to a common `config` directory
- closed RSB and RTEMS Tools Support for python2 and python3
- closed Classic API Barrier Wait Section Title Has Wrong Name
- closed Remove `CPU_PROVIDES_IDLE_THREAD_BODY`
- closed Remove `keep_stdio` feature from Telnet service
- closed Change Telnet server to allocate most resources during initialization
- closed Support `O_DIRECTORY` `open()` flag
- closed Support `O_NOFOLLOW` `open()` flag
- closed Support `O_CLOEXEC` `open()` flag
- closed Obsolete powerpc/virtex BSP
- closed Move default configuration to separate library
- closed cpu usage error in SMP mode
- closed `rtems-libbsd` Missing `waf` in Top Directory
- closed `rtems-libbsd` `README.waf` Needs an Update Sweep
- closed IRC bots need to be registered to join `#rtems`
- closed Test ticket
- closed Update `TracSpamFilter`
- closed Fix `NavAdd` plugin.
- closed Fix `FlexibleAssignTo`
- closed Migrate to `CommitTicketUpdater`
- closed Use a short paths for the RSB temporary build path on Windows

## Summary

- cl  
se  
d RSB: UnboundLocalError: local variable 'build\_max\_size\_human' referenced before assignment
- cl  
se  
d waf version in various rtems-repositories incompatible with python 3.7
- cl  
se  
d gdb 8.0.1 sis does not build on Cygwin
- cl  
se  
d Avoid CLoog and ISL host dependencies for target GCC
- cl  
se  
d testsuite's rtems-test-check.py python version support
- cl  
se  
d Add rtems\_malloc() and rtems\_calloc()
- cl  
se  
d Deprecate proc\_ptr
- cl  
se  
d Deprecate rtems\_context
- cl  
se  
d Deprecate rtems\_context\_fp
- cl  
se  
d Deprecate region\_information\_block
- cl  
se  
d Deprecate rtems\_thread\_cpu\_usage\_t
- cl  
se  
d Deprecate rtems\_rate\_monotonic\_period\_time\_t
- cl  
se  
d Move internal types of API objects to separate header file
- cl  
se  
d Remove m32c architecture port
- cl  
se  
d Update or1k tools to use GCC master
- cl  
se  
d Update or1k tool chain to use the upstream GCC
- cl  
se  
d Remove support for 16-bit object identifiers
- cl  
se  
d RTL Unresolved Symbols from common section on i386/pc686 (cloned)
- cl  
se  
d RTL Allows Unloading a Module other Modules Depend Upon (cloned)
- cl  
se  
d Update Spike Version in RSB (RISC-V simulator)
- cl  
se  
d RTL unresolved compaction does not update string indexes after removing a string
- cl  
se  
d CommitTicketUpdater does not process commits in order
- cl  
se  
d Statically initialize object information structures
- cl  
se  
d Remove cache routines working with a processor set
- cl  
se  
d MSYS2 builds appear to ignore tcfg file
- cl  
se  
d RTL Allows Unloading a Module other Modules Depend Upon (cloned)

## Summary

- closed sigtimedwait() needed when POSIX is disabled
- closed Add RSB reporting section to the documentation.
- closed Build of rtems-tools fails with i686-w64-mingw32
- closed Add rtems\_scheduler\_get\_maximum\_priority()
- closed Fix rtems\_task\_restart() argument type
- closed Error with IRC announcing in examples-v2 commits.
- closed Sphinx 1.8 PDF (latex) on FreeBSD does not build
- closed RSB config parsing slow on python3
- closed Add low level event recording infrastructure
- closed Add support for C++17 std::aligned\_alloc
- closed Support data cache disable on ARMv7-AR
- closed Commit message in examples-v2 and libbsd didn't trigger a ticket update.
- closed rtems-docs.git does not build with Sphinx 1.8.2 and 1.8.3
- closed examples-v2 uses deprecated or obsolete RTEMS interfaces
- closed No i386 BSP can link all tests after cache manager changes
- closed xilinx\_zynq\_a9\_qemu - fails to link psxconfig01
- closed Raspberry Pi Fails to Build
- closed RSB: Change default prefix to OS prefix + "rtems" + \$rtems\_version
- closed ARM BSP contains ARM code in THUMB only build
- closed Add RISC-V BSP with support for the grlib
- closed Add BSP for Xilinx Zynq UltraScale+ MPSoC platform
- closed Git clone via HTTPS does not give much interactive feedback
- closed rtems\_print\_buffer is broken
- closed Add large memory support to libdl
- closed Add library searching and loading to libdl
- closed Add architecture section support to libdl and support PowerPC's small data.

Issue	Summary
closed	rtems-docs fails to build with python3
closed	libdl does not honour write unlock/lock for sections
closed	libdl incorrectly handles MIPS16hi/lo relocs
closed	shm_open has logically unreachable code (Coverity ID: 1399706, 1399714)
closed	Basic Support for Trace Compass
closed	Wrong system register specified for ARM virtual timer value retrieval
closed	Remove Doxygen comments from confdefs.h
closed	mfill shell command uses the wrong arguments for the memset()
closed	bsp/lpc24xx: Convert SSP driver to Linux API
closed	bsp/lpc24xx: Convert I2C driver to Linux API
closed	Set small data section to max size for mvme5500 and motorola_powerpc BSPs
closed	Add rtems_scheduler_get_processor()
closed	Add rtems_scheduler_get_processor_maximum()
closed	Add general reg support to libdebugger
closed	Add RTEMS_CONST attribute
closed	Remove CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE
closed	PowerPC Beatnik BSP C++ exceptions broken
closed	libdl loading ELF objects from libbsd NFS file system ends in a deadlock
closed	T_config conflicting type qualifiers for 'config'
closed	RSB os and arch config logic is broken
closed	libdl test dl05.exe failing
closed	Address Cortex-M3 Errata 602117
closed	libdl uses a linear symbol search on object file symbols
closed	No documentation on Region Get Information Directives
closed	Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR
closed	Users Guide Ubuntu Instructions Have Typo

Status	Summary
closed	Condition codes in PSR are destroyed by lazy FP context switch
closed	BBB MMU update crashes
closed	Return the current handler from ARM cp15 set exception call
closed	RSB SIS build fails on FreeBSD
closed	Add staging support to Makefile.inc
closed	RSB BSP Buildsets
closed	RSB 3rd party packages failing to build
closed	RPi fails to boot
closed	RPi2 SMP does not build
closed	libdl does not handle ARM mode reloc tramp parsing
closed	libdl ARM does not support ARM mode trampolines.
closed	libdl object unload debugger delete support is broken
closed	RSB crashes in case the host as an unreadable directory in "/"
closed	MSYS2 RSB build error
closed	Add RISC-V BSP with support for the Freedom E310 Arty A7 FPGA
closed	TMS570 appciliation build error
closed	RSB fails to build on MSYS2
closed	trace record tool does not build on Windows
closed	Initial POSIX Signals Mask Incorrect
closed	docs/develenv directory structure bitrot
closed	Add LLVM as a package
closed	Add socketmark to libbsd
closed	termios - Add Capability to Generate SIGINTR and SIGQUIT
closed	RSB Build of Spike Fails on Second Time (bug in upstream spike)
closed	RSB ssl context error fetching qemu patches
closed	sb-get-sources: Error repo mail referenced before assignment

Stat	us	Summary
clo	sed	libdebugger build error on atsamv
clo	sed	Add fatal error for heap errors
clo	sed	Fix qemu-couverture-git RSB download file name
clo	sed	Fix epiphany-rtems5-gdb-7.8 RSB download file name
clo	sed	Use the release details in the release build docs
clo	sed	Release source path on ftp.rtems.org is wrong
clo	sed	Released RSB has no source set for rtems-tools
clo	sed	RSB does not handle --rsb-file in releases
clo	sed	Releasing creates 2 copies or the kernel and tools.
clo	sed	Improve SMP EDF scheduler configuration
clo	sed	RSB fails on FreeBSD 12.0 (32bit and 64bit)
clo	sed	Port NVMe support from FreeBSD to libbsd
clo	sed	Release created VERSION file in rtems-tools-*.tar.xz is wrong
clo	sed	Untar_family doesn't handle nested directories
clo	sed	top on SMP shows invalid priorities
clo	sed	Build problems with user names which contain space characters
clo	sed	Duplicate description of Tiers and Rules
clo	sed	Simplify RTEMS semaphore configuration
clo	sed	Simplify clock driver
clo	sed	Support statically allocated threads
clo	sed	Specify the application configuration options
clo	sed	Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR
clo	sed	Rework work area initialization
clo	sed	RTEMS revision does not handle -
clo	sed	Add CONFIGURE_IMFS_ENABLE_MKFIFO
clo	sed	Add rtems object get local node()

## Summary

- closed RSB RTEMS version message string is fixed to the git hash
- closed Add CONFIGURE\_DIRTY\_MEMORY
- closed Remove CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE
- closed Remove Ada-specific configuration options
- closed Libdebugger test in libbsd should depend on libdebugger.a
- closed Fix PSIM memory map
- closed posix\_devctl - Add support for SOCKCLOSE
- closed Use EAGAIN for POSIX mq wait in ISR error
- closed No output from joel scripts in telnet
- closed Add CONFIGURE\_VERBOSE\_SYSTEM\_INITIALIZATION
- closed Canonicalize CONFIGURE\_ZERO\_WORKSPACE\_AUTOMATICALLY
- closed Remove support for the BSP\_ZERO\_WORKSPACE\_AUTOMATICALLY BSP option
- closed rtems-tester does not work with gdb simulators
- closed Fix linker set item declarations for small data area targets
- closed newlib links breaks mingw build
- closed Remove rtems\_configuration\_get\_posix\_api\_configuration()
- closed Remove CONFIGURE\_HAS\_OWN\_INIT\_TASK\_TABLE
- closed Remove CONFIGURE\_POSIX\_HAS\_OWN\_INIT\_THREAD\_TABLE
- closed Split up confdefs.h in component based header files
- closed Remove CONFIGURE\_DISABLE\_SMP\_CONFIGURATION
- closed Add API functions to map a task priority to/from a POSIX thread priority
- closed Add POSIX user environment pointer to TCB
- closed Context switch extension is broken in SMP configurations
- closed Do not report remotes in RSB build log if --mail is used
- closed Update rtems\_waf in libbsd
- closed RSB staging changes have broken building a 3rd party package

## Summary

- clo Replace the device filesystem with a specialization of the IMFS
- se
- d
- clo Add a migration to RTEMS 5 chapter to User Manual
- se
- d
- clo RSB option --source-only-download does not work with releases
- se
- d
- clo Remove CONFIGURE\_MAXIMUM\_DEVICES
- se
- d
- clo New template for boolean feature defines
- se
- d
- clo New template for configuration options with a value
- se
- d
- clo raspberrypi2 libbsd 5-freebsd-12 does not build
- se
- d
- clo Add methods to dump the event records in base64 encoding (optionally zlib compressed)
- se
- d
- clo Update Getting Started Instructions
- se
- d
- clo rtems\_waf with python2 needs to handle unicode strings with waf
- se
- d
- clo Remove gdbarmsim
- se
- d
- clo Spike has hard-coded path to DTC
- se
- d
- clo RSB may not download source of pkconfig checked packages
- se
- d
- clo QorIQ clock tick interval is off by one hardware clock tick
- se
- d
- clo tclsh required to build sqlite -- makes all BSP bsets fail
- se
- d
- clo C++ thread-local storage broken on sparc64
- se
- d
- clo Many (~40) BSPs Fail to Link all Tests
- se
- d
- clo qorIQ\_e500 BSP bset fails
- se
- d
- clo Update DTC example on rtems-docs/user/rsb/configuration.rst
- se
- d
- clo clock\_settime() can lead to a failed \_Assert()
- se
- d
- clo rtems\_extensions\_create() accepts a NULL pointer table
- se
- d
- clo RSB BSP build with tests does not keep a copy
- se
- d
- clo Add to FreeBSD host setup information
- se
- d
- clo bsp/arm: CPU counter based on arm generic timer doesn't work correctly
- se
- d
- clo RSB bare version number if wrong.
- se
- d
- clo Release source package list is out of date

Stat	Summary
closed	symlinks in RTEMS source tree
closed	dl06 fails on all libdl supported architectures
closed	Deprecate use _RTEMS_version at API level
closed	Deprecate use of RTEMS_MAXIMUM_NAME_LENGTH
closed	Deprecate <rtems/system.h>
closed	Add rtems_get_copyright_notice() and deprecate _Copyright_Notice
closed	Deprecate ephipany port in rtems5 and remove in rtems6
closed	Released RSB qemu4 source download fails.
closed	ARMv7-M Exception handler does not store the SP
closed	Release URL path with sources is wrong
closed	Release doxygen support is broken
closed	Beaglebone and PC BSP stacks do not build
closed	Remove RTEMS_MP_NOT_CONFIGURED error condition
closed	rtems-test target_exe_filter fails when there is no filter
closed	Update mDNSResponder to Apple version v878.30.4
closed	RSB RTEMS 5 Post Branch Clean
closed	Sqlite has stopped http access
closed	shm_unlink uses uninitialized obj_err on successful return from _POSIX_Shm_Get_by_name
closed	RSB --host and --target option trigger the bset tarball
closed	PowerPC for libbsd does not build
closed	i386: SMP-System hangs with non-consecutive APIC IDs
closed	i386: ISR can overwrite its own stack during system initialization
closed	Add rtems_interrupt_server_create() and rtems_interrupt_server_destroy()
closed	arm/atsam/SC16IS752: Make interrupt server configurable
closed	RTEMS version number 5.1 breaks RTEMS version code
closed	libbsd test fails to build

id	status	Summary
4	closed	bsps/xilinx-zynq: Flush TX-Buffer before initializing the zynq-uart (cloned)
4	closed	RSB 5/rtems-arm fails to build on Windows
4	closed	i386: bad asm in smp mode (rtems.git/5)
4	closed	The select mechanism does not support asynchronous device communication
4	closed	the atomicity of some operations cannot be guaranteed.
4	closed	low efficiency of sending inter-core interrupts
4	closed	Raspberry Pi booting files from master branch not working
4	closed	rtems-record-ltng '-e' option does not verify existence
4	closed	Ubuntu's gcc preventing QEMU from being built
4	closed	about get cpu number
4	closed	the pci initialization part cannot pass the initialization
4	closed	about error number
4	closed	glib/genirq: Bad returned value when enabling/disabling interrupt
4	closed	shell command problem
4	closed	m68k/uC5282: _fini epilog is missing
4	closed	rtems-tools does not build with up-to-date llvm
4	closed	access JFFS2 sb->s_root question
4	closed	access JFFS2 sb->s_root
4	closed	mutex is not initilaized in jffs2_new_inode
4	closed	mutex is not initilaized in jffs2_read_inode
4	closed	rtems_filesystem_table compile
4	closed	rtems_jffs2_rmnode function problem
4	closed	Adapt improved mailer.py for rtems-tools 5 branch
4	closed	Adapt improved mailer.py for RSB 5 branch
4	closed	Fix build issue with qemu4 on Ubuntu
4	closed	Bump dtc on rtems5 to match rtems6

Issue	Summary
46195	about MIPS architecture support
46196	support pmu under MIPS platform
46600	non-alignment exception
46601	support for 64KB clusters DOSFS
46611	support commands such as rename
46612	Added support for Intel I210
46613	Telnet client protocols
46614	TFTP client protocols
46615	TFTP server protocols
46616	Added support for Intel 82580
46618	support for DMA access
46619	Spike failing to build with RSB 5 on Ubuntu 21.04
46620	Python 3.8 introduces new warning about using operator "is" with a literal

## RTEMS 5.1 Tickets

**1247 - RTEMS does not implement locks needed by multithreaded newlib**

---

**Description**

multi-threaded newlib protects a number of internal data structures (as of newlib-1.15 these comprise:

- global list of FILE objects
- stdio FILE object initializer
- individual FILEs [since FILEs with the exception of stdin/stdout/stderr are per-process entities]
- global hash table used by telldir/seekdir
- individual DIR structures (opendir/readdir)
- atexit list
- list of environment variables
- global timezone variable

)  
using mutexes. It expects the OS to implement these locks but defaults to not using locking if the OS does not provide an implementation. Currently, RTEMS does \*not\* provide its own implementation of 'sys/lock.h' and therefore vital data structures in newlib are currently \*unprotected\* (with the exception of environment variables -- 'envlock.c' had been added to RTEMS a while ago but since then, newlib has introduced more locks and a general OS interface which - once implemented - will obsolete 'envlock.c').

Note that while semantics of having no protection for individual FILE objects may be tolerable, having no protection for global newlib data structures such as lists of FILEs is not acceptable.

I am currently working on an implementation which should be available shortly.

**Comment 3**

1. **strauman, Sat, 07 Mar 2009 00:18:24 GMT**

This patch (to \*newlib\*) is required (in addition to the previously posted newlib patch) to help RTEMS autoconf tests. These tests try to link specific functions from newlib in order to determine if newlib provides them. Some functions require the newlib locks, however, and linkage would fail unless stubs for the locking routines are present in crt0. Such stubs are what this patch provides.

#### Comment 4

## 1394 - **scandir()** fails due to **MAXNAMELEN** is incorrect

### Description

I have been trying to use scandir() however the newlib one does not work due to MAXNAMLEN and NAMLEN differ. scandir in libcsupport seems to have a fix for this, however my libcsupport\_a-scandir.o is empty, I'm guessing because HAVE\_SCANDIR is defined.

It is used in scandir() (newlib-1.17.0/newlib/libc/posix/scandir.c:117) by the macro DIRSIZ. Where DIRSIZ uses the MAXNAMELEN define which is set incorrectly. It does not match the sizeof(struct dirent) which makes the DIRSIZ return a negative number, then malloc(DIRSIZ(d)) will try to allocate 4GB which fail.

My guess is that MAXNAMELEN should be defined in newlib-1.17.0/newlib/libc/sys/rtems/sys/dirent.h or newlib-1.17.0/newlib/libc/sys/rtems/include/limits.h or in a new file.

I tried to run the code below on my FAT filesystem, taken directly from the scandir(3) man page.

```

/* print files in current directory in reverse order */
#include
main(){

    struct dirent __namelist;
    int n; __

    n = scandir(".", &namelist, 0, NULL);
    if (n < 0)

        perror("scandir");

    else {

        while(n--) {

            printf("%s\n", namelist[n]->d_name);
            free(namelist[n]);

        }
        free(namelist);

    }

}

```

### Comment 1

- Sebastian Huber**, Thu, 28 Mar 2013 08:31:24 GMT
- cc: Sebastian Huber** added
- milestone: 2** deleted

### Comment 2

- Sebastian Huber**, Thu, 28 Mar 2013 09:30:17 GMT
- milestone:** set to **4.11**

I just looked in the latest Newlib sources. The MAXNAMELEN vs. NAME\_MAX problem still exists:

```

.newlib/libc/sys/rtems/sys/syslimits.h:#define NAME_MAX 255 /* max bytes in a file name */
.newlib/libc/sys/rtems/sys/dirent.h: char d_name[NAME_MAX + 1];
.newlib/libc/include/dirent.h:#if !defined(MAXNAMLEN) && !defined(_POSIX_SOURCE) .newlib/libc/include/dirent.h:#define MAXNAMLEN 1024
0x0202acd0 in scandir (dirname=, namelist=0x203feb0, select=0x200149c, dcomp=0x0) at /home/sh/archive/gcc-4.6.3/newlib/libc/posix/scandir.c:117 117 p =
(struct dirent *)malloc(DIRSIZ(d)); Value returned is $1 = 1 (gdb) s malloc (size=429496655) at /home/sh/git-rtems/c/src/./../cpukit/libcsupport/src/malloc.c:33
33 MSBUMP(malloc_calls, 1);

```

The psxtests/psxreaddir is quite sloppy since the scandir() return status is only printed:

```
scandir status: -1
```

### Comment 3

1. **Gedare Bloom**, Sun, 23 Nov 2014 16:06:57 GMT
2. **version:** changed from **unknown** to **4.11**
3. **description:** modified (diff)

### Comment 4

1. **Joel Sherrill**, Sun, 23 Nov 2014 16:11:19 GMT
2. **version:** changed from **4.11** to **4.10**

This was reported in the 4.10 development cycle. 4.9 used newlib 1.16.0 and 4.10 used 1.18.0.

### Comment 5

1. **Gedare Bloom**, Wed, 25 Feb 2015 19:07:53 GMT
2. **description:** modified (diff)

Attached patch should work but I haven't tested it yet.

### Comment 6

1. **Gedare Bloom**, Tue, 03 Mar 2015 16:35:58 GMT

I don't have a test case for this.

### Comment 7

1. **Gedare Bloom**, Tue, 03 Mar 2015 21:45:18 GMT

Further examination in newlib shows that this bug should no longer manifest itself. However, we might want to consider adding the tests and even upstreaming the patch for making the two defines match to avoid any future problems. I don't have a fix for 4.10.

### Comment 8

1. **Joel Sherrill**, Wed, 04 Mar 2015 20:47:47 GMT

Added new set of tests fsscandir01 in fstests for code shown in this PR.

### Comment 9

1. **Gedare Bloom**, Wed, 04 Mar 2015 21:18:58 GMT
2. **milestone:** changed from **4.11** to **4.10.3**

Move to 4.10.3 in case we want to provide a fix there. This problem is resolved in newlib already.

### Comment 10

1. **Sebastian Huber**, Tue, 24 Jan 2017 09:08:54 GMT

In 6af2221aac489acac54c2daaf9702a926ec1e263/rtems:

```

fsscandir01: Check MAXNAMLEN and NAME_MAX
Update #1394.

```

### Comment 11

1. **Sebastian Huber**, Tue, 24 Jan 2017 09:09:31 GMT
2. **milestone:** changed from **4.10.3** to **4.12**

<https://sourceware.org/ml/newlib/2017/msg00077.html>

### Comment 12

1. **Sebastian Huber**, Wed, 25 Jan 2017 12:24:00 GMT

2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

Fix with next Newlib snapshot.

#### Comment 13

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

#### Comment 14

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

## 1662 - termios.c: semaphore not deleted, consequently resulting in failure of rtems\_termios\_open

<b>Link</b>	<a href="https://devel.rtems.org/ticket/1662">https://devel.rtems.org/ticket/1662</a> ( <a href="https://devel.rtems.org/ticket/1662">https://devel.rtems.org/ticket/1662</a> )

#### Description

The semaphore osem is still in use in `rtems_termios_close` while an attempt to delete it is made and hence is not deleted. Consequently, it results in a `RTEMS_TOO_MANY` on `rtems_semaphore_create`, which further results in failure of `rtems_termios_open`.

2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

#### Comment 6

1. **Sebastian Huber**, Thu, 12 Aug 2010 06:36:21 GMT

Let me explain the problem with the clean up during the last close. The Termios driver is an example for a driver that will be opened by one thread, but the read and write access may be issued by different threads concurrently. The close may happen also concurrently (exit() may be called concurrently?). I think a concurrent call to close() will lead to more problems, so I omit this here. I think currently that the only way to avoid accesses to deleted resources is to not delete anything during the last close. Instead we should simply flush the output buffer.

#### Comment 7

1. **Gedare Bloom**, Mon, 24 Nov 2014 18:58:28 GMT
2. **version:** changed from **HEAD** to **4.11**

Replace Version=HEAD with Version=4.11 for the tickets with Milestone >= 4.11

#### Comment 8

1. **Gedare Bloom**, Fri, 19 Dec 2014 03:53:23 GMT
2. **description:** modified (diff)

2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**
4. **milestone:** changed from **4.11.3** to **5.1**

Due to the reference counting of file descriptors (#3132) this problem no longer exists in RTEMS 5.1. If you close() a file descriptor which is still in use, you get an error (EBUSY).

---

## 1747 - Heap extend allows discontinuous memory regions.

**Description**

The check in (cpukit/ChangeLog) states:

2010-06-07 Sebastian Huber

- score/src/heapextend.c: Implemented support for scattered heap areas.

The heap cannot support scattered blocks because the `_Heap_Is_block_in_heap` assumes the region is continuous between the first and last blocks of the heap. Making the gaps in the regions passed to the heap extend call used is questionable and makes the `_Heap_Is_block_in_heap` test not really perform the task it's name states. This is an issue because it is this check that determines if a heap free of NULL should proceed. This issue is covered in another PR.

I also wonder about a heap free call to an address that maps to one of the "in-use" gap regions. The previous heap code knew if an address was in the heap and therefore it was kind of safe to probe for a valid block. This assumption is now not valid.

The former heap extend code:

<http://www.rtems.org/viewvc/rtems/cpukit/score/src/heapextend.c?revision=1.7&view=markup>

clearly states the type of memory that can be added to an existing heap. The current code has no restrictions. The user manual is not great in this area. It would also be useful if comments are added to the heap extend code.

The heap extend code is used by the `rtems_region_extend` call and this call clearly states in the manual that the memory region must be continuous. If this has changed we should discuss the API change and make better note of it. I also suspect the testsuite will need additions to test any API changes.

**Comment 1**

1. **Sebastian Huber**, Tue, 01 Mar 2011 07:46:28 GMT

The support for scattered heap area does no harm for users of the continuous case. Only if you use the flexibility of a scattered heap area you have to live with a less effective `_Heap_Is_block_in_heap()` check.

#### **Description**

Hello,

I use tmpfile() in my RTEMS application, and found that it has memory leak. I wrote small test application (see attachment), that output memory usage:

```
Memory usage before:
Number of used blocks: 12
Largest used block: 1288
Total bytes used: 3628
```

```
Memory used after:
Number of used blocks: 1013
Largest used block: 1288
Total bytes used: 112064
```

By 1000 iteration, each call tmpfile() cause memory leak about 108 bytes.

#### Comment 3

1. **Joel Sherrill**, Mon, 14 Apr 2014 15:37:59 GMT
2. **cc**: **Joel Sherrill** added

#### Comment 4

1. **Andrey Mozzuhin**, Wed, 16 Apr 2014 05:21:26 GMT

I think real memory leak was fixed. How we can see in first memory trace after 1000 tmpfile() was allocated 1000+1 block. In Gedare memory trace after test was allocated 1 block. This block probably allocated at first tmpfile() for some initialization.

I can try to find out this 1 block allocation and write test but it can take a long time.

Not for license wars, this attached application is too simple to licensing and can be written by any RTEMS developer. Nonetheless, formalities for I give all rights on attached test application to Joel Sherrill.

#### Comment 5

1. **Chris Johns**, Thu, 20 Nov 2014 03:27:43 GMT
2. **description**: modified (diff)

#### Comment 5

1. **Joel Sherrill**, Thu, 27 Nov 2014 14:47:36 GMT

Out of curiosity, why shouldn't we just remove these includes now? There is no way to warn a user at compile time that they will be impacted. All we are doing is delaying the inevitable random number of users who are impacted. Hopefully that number is higher in the future than now.

My proposal is:

+ make a announcement to users@ and devel@ that these includes were removed and any

code that unintentionally depended on them will have compile errors or warnings. This will serve as a hit in Google.

+ Remove it and see what tests break. Make sure the commits for those issues include

enough information in the log so Google will see those as related.

Break and move forward.

#### Comment 6

1. **Amar Takhar**, Thu, 27 Nov 2014 14:49:14 GMT

Replying to joel.sherrill:

Out of curiosity, why shouldn't we just remove these includes now? There is no way to warn a user at compile time that they will be impacted. All we are doing is delaying the inevitable random number of users who are impacted. Hopefully that number is higher in the future than now.

All of these are moving in 5.0 anyway why bother moving it now when it works? I don't disagree with your reasoning but closing milestone:4.11 would be nice!

#### Comment 7

1. **Sebastian Huber**, Thu, 27 Nov 2014 15:02:35 GMT

At the time I created the \*impl.h header files, a lot of stuff broke due to the now missing indirect include. I guess this is also true for application code. Especially . Maybe this include is a feature not a bug.

#### Comment 8

1. **Joel Sherrill**, Thu, 27 Nov 2014 15:32:18 GMT

I agree on closing milestone 4.11 but this isn't the long pole in the tent. If we want to just get this behind us, let's do it. No point putting it off.

#### Comment 9

1. **Sebastian Huber**, Thu, 27 Nov 2014 15:45:08 GMT

We still have the option to set this to WONTFIX and close it forever.

#### Comment 10

1. **Chris Johns**, Sun, 13 Aug 2017 23:55:42 GMT
2. **description**: modified (diff)
3. **milestone**: changed from **5.0** to **4.11.3**

Please fix or close this ticket? Thanks.

#### Comment 11

I have another question regarding the EDF scheduler. Does this work in case  
\_Watchdog\_Ticks\_since\_boot overflows?

No. For this, I think we need to use "deadline folding" which is just modulo arithmetic.

```
void _Scheduler_EDF_Release_job(
```

```
    Thread_Control *the_thread,  
    uint32_t deadline
```

```
)  
{
```

```
    Priority_Control new_priority;
```

```
    if (deadline) {
```

```
        /* Initializing or shifting deadline. */  
        new_priority = (_Watchdog_Ticks_since_boot + deadline)
```

```
            & ~SCHEDULER_EDF_PRIO_MSB;
```

```
    }  
    else {
```

```
        /* Switch back to background priority. */  
        new_priority = the_thread->Start.initial_priority;
```

```
    }
```

```
    the_thread->real_priority = new_priority;  
    _Thread_Change_priority(the_thread, new_priority, true);
```

```
}
```

\_Watchdog\_Ticks\_since\_boot us uint32\_t and overflows after 49 days with a one millisecond clock tick.

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **wontfix**
4. **description:** modified (diff)

Sebastian noted this was a hardware problem. Seems to indicate problem is NA now.

#### Comment 3

1. **Sebastian Huber**, Mon, 24 Nov 2014 07:28:07 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **wontfix** deleted

Actually the Bugzilla to trac conversion seems to have a lot of errors.

This was not a hardware problem. This is still an open issue.

Without much consideration I would fix it like this:

Make the tick since boot `uint64_t`. Make the `Thread_Control::current_priority` and `Thread_Control::real_priority` `int64_t` (to support easy comparison operations for RB tree insert and search). Remove the `Scheduler_Operations::priority_compare` operation.

With a system tick of 1ns the system can run 146years before something overflows.

#### Comment 4

1. **Gedare Bloom**, Mon, 24 Nov 2014 18:58:28 GMT
2. **version:** changed from **HEAD** to **4.11**

Replace `Version=HEAD` with `Version=4.11` for the tickets with Milestone `>= 4.11`

#### Comment 5

1. **Joel Sherrill**, Mon, 24 Nov 2014 19:35:19 GMT

The EDF scheduler should NOT use priority to store the deadline. That is one issue and it shows itself by bogus values being returned when you obtain the current priority. So #2 is `__NOT__` acceptable to me. The EDF scheduler should use its own internal stored value to sort the threads.

Why can't the scheduler use uptime and not ticks since boot?

The EDF scheduler is broken in assuming it can rewrite a thread priority with a deadline.

#### Comment 6

1. **Gedare Bloom**, Mon, 24 Nov 2014 19:44:23 GMT

Why not rewrite thread (current) priority?

Priority should be an opaque notion of a scheduler in general, which should export information needed for synchronization modules (locks) to implement PI/PC protocols. The priority of a thread being scheduled according to EDF increases (toward 0) as its deadline draws closer.

That said, I'm not opposed to putting the absolute deadline into the scheduler-specific portion of the TCB. I just don't understand the strong negative reaction to letting the scheduler determine what priority means.

#### Comment 7

1. **Gedare Bloom**, Mon, 02 Mar 2015 20:42:45 GMT
2. **milestone**: changed from **4.11** to **4.11.1**

bump milestone

#### Comment 8

1. **Sebastian Huber**, Wed, 22 Jun 2016 12:47:47 GMT

In 77ff5599e0d8e6d91190a379be21a332f83252b0/rtems:

score: Introduce map priority scheduler operation

Introduce map/unmap priority scheduler operations to map thread priority values from/to the user domain to/from the scheduler domain. Use the map priority operation to validate the thread priority. The EDF schedulers use this new operation to distinguish between normal priorities and priorities obtain through a job release.

Update #2173. Update #2556.

#### Comment 9

1. **Sebastian Huber**, Wed, 22 Jun 2016 12:47:57 GMT

In 7ec66e0890c65f3dfed9db91a4ae59de6a8ff18/rtems:

score: Remove hidden deadline overrule for CBS

Do what the user commands. Maybe we should add a `rtems_cbs_period()` that calls `rtems_rate_monotonic_period()` with the right parameter.

Update #2173.

#### Comment 10

1. **Sebastian Huber**, Wed, 22 Jun 2016 12:48:06 GMT

In 9a78f8a5076687a8744991998ee6119f87db12a8/rtems:

score: Modify release job scheduler operation

Pass the deadline in watchdog ticks to the scheduler.

Update #2173.

#### Comment 11

1. **Sebastian Huber**, Wed, 22 Jun 2016 12:48:16 GMT

In 99fc1d1d1b44e70a0bed4c94a514bd3f3b5df64f/rtems:

score: Rework EDF scheduler

Use inline red-black tree insert. Do not use shifting priorities since this is not supported by the thread queues. Due to the 32-bit `Priority_Control` this currently limits the uptime to 49days with a lms clock tick.

Update #2173.

## 2176 - fishy behavior in termios tx task mode

#### Description

I have a look around in the drivers in the various BSPs and I notice that none of the termios drivers appear to transmit characters at task level even if they are running in termios task mode. Maybe all (most) of them send characters in the ISR. If there was a large frame of characters to send then this could lock out task activity for too long.

FWIW, I had a closer look at this today, and maybe something is fishy in the termios code when the TX part of termios runs in task driven mode. It seems that in task mode if the UART can accept characters immediately in the write routine then we wouldn't need to turn on any interrupts at all. The write routine would need to somehow tell termios how many characters it sent; presumably this would occur by calling `rtems_termios_dequeue_characters` in the driver's write function. I see in the code that this tries to work, `rtems_termios_dequeue_characters` posts the semaphore of `Termios tx` and increases the characters sent count of termios. However after the write routine returns it goes badly.

If the transmitter runs in termios TASK mode and the driver's write routine does not immediately enable an interrupt, then it returns to the code below in `rtems_termios_puts` and it sets the transmitter to `rob_busy`. After that the termios tx daemon proceeds to step through all of the characters remaining (I think that I see this in the debugger) and discards them because the transmitter stays in `rob_busy` state.

It's also probably odd that termios calls the write function with interrupts disabled when it is in task driven mode; we could loop outputting a large frame of characters in the write routine at task level with interrupts globally disabled.

```

if (tty->rawOutBufState == rob_idle) {
    /* check, whether XOFF has been received */
    if (!(tty->flow_ctrl & FL_ORCVXOF)) {
        (*tty->device.write)(tty->minor,
            (char *)&tty->rawOutBuf.theBuf[tty->rawOutBuf.Tail],1);
    }
    else {
        /* remember that output has been stopped due to flow ctrl*/
        tty->flow_ctrl |= FL_OSTOP;
    }
    tty->rawOutBufState = rob_busy;
}

```

```

<b>Blocked by</b>	

**Description**

A host tar by default will overwrite the contents of a directory. A sort of refresh. The RTEMS tar requires you remove the existing files rather than overwrite. This is dangerous because you have to remove files yet you do not know if the tar will be successful and moving and saving files assumes you know the contents of the tar file before hand.

Tar should be changed to overwrite and so allow files to be refreshed.

Consistence of files should be managed outside of tar via hashes or checksums.

**Comment 1**

1. **Chris Johns**, Wed, 03 Dec 2014 10:15:43 GMT

Running some tests wth tar on MacOS I see tar updates by removing files before outputting the new file. The example shown chowns x1/d1 to root while x1/d1/f1 is still owned by me:

```
$ tar xf z1.tar x1/d1/: Can't update time for x1/d1 x1/d1/f2: Can't unlink already-existing object tar: Error exit delayed from previous errors.
```

Looks like a delete tree needs to be added.

**Comment 2**

1. **Sebastian Huber**, Thu, 18 Dec 2014 09:12:11 GMT
2. **priority**: changed from **highest** to **low**
3. **milestone**: changed from **4.11** to **5.0**

**Comment 3**

1. **Chris Johns**, Sat, 04 Jun 2016 00:11:31 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

In d84e346b26017f021c1a7d5c8ad078c7264240ab/rtems:

libmisc/untar: Support directory create and overwrites. Share the common code.

Support creating directories for files with a path depth greater than 1. Some tar files can have files with a path depth greater than 1 and no directory entry in the tar file to create a directory.

Support overwriting existing files and directories failing in a similar way to tar on common hosts. If a file is replaced with a file delete the file and create a new file. If a directory replaces a file remove the file and create the directory. If a file replaces a directory remove the directory, and if the directory is not empty and cannot be removed report an error. If a directory already exists do nothing leaving the contents untouched.

The untar code now shares the common header parsing and initial processing with the actual writes still separate. No changes to the IMFS have been made.

Updates #2415. Closes #2207.

#### **Description**

Moving from GCC 4.4.2 to 4.9.2 increases the execution time of the whetstone benchmark on both SPARC and x86. The cause seems to be a single commit. I have submitted a bug report to the GCC bugzilla:

[https://gcc.gnu.org/bugzilla/show\\_bug.cgi?id=64193](https://gcc.gnu.org/bugzilla/show_bug.cgi?id=64193)

#### **Comment 1**

1. **Joel Sherrill**, Thu, 22 Jan 2015 15:15:04 GMT

Daniel.. did this get resolved? I recall discussions.

#### **Comment 2**

1. **daniel.cederman**, Fri, 23 Jan 2015 09:43:41 GMT

Richard Biener provided a patch that fixed it on trunk. It looks like it could be easy to backport, but I have not had time to test it yet.

#### **Comment 3**

1. **Gedare Bloom**, Mon, 02 Mar 2015 20:48:06 GMT
2. **milestone**: changed from **4.11** to **4.11.1**

**Comment 4**

1. **Sebastian Huber**, Mon, 23 Jan 2017 13:47:53 GMT
2. **owner**: set to **Needs Funding**
3. **status**: changed from **new** to **assigned**

How is the performance on GCC 6 or 7?

**Comment 5**

1. **Sebastian Huber**, Mon, 23 Jan 2017 13:48:08 GMT
2. **owner**: changed from **Needs Funding** to **Daniel Hellstrom**

**Comment 6**

1. **daniel.cederman**, Mon, 23 Jan 2017 14:53:23 GMT

A quick test shows that the performance for GCC 7 is about the same as for GCC 4.4.6.

GCC 4.4.6 => ~52 seconds GCC 4.9.4 => ~55 seconds GCC 7.0.0 (master at 20170116) => ~52 seconds Compiled with -O3 and -mcpu=leon3.

**Comment 7**

1. **Sebastian Huber**, Mon, 23 Jan 2017 14:55:31 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**
4. **milestone**: changed from **4.11.1** to **4.12**

Fixed in RTEMS 4.12, no plans to fix this in RTEMS 4.11.

**Comment 8**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

**Comment 9**

1. **Sebastian Huber**, Tue, 10 Oct 2017 05:58:26 GMT
2. **component**: changed from **GCC** to **tool/gcc**

**Comment 10**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

**2261 - Add coverage report generation support to rtems-tools**

**Description**

This ticket is to capture the current state of the project started by Krzysztof Mięśowicz . The goals of the project were to:

- replace the existing shell scripts in rtems-testing with Python code integrated into rtems-tools
- add the capability to generate a report per directory. This is important because a large body of code with low coverage negatively impacts the overall coverage

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

area and makes reports harder to read. Breaking the reports down by functional area lets us do coverage reporting on more code even when some of the areas are in need of testing improvement.

The remaining effort in conjunction with other activity related to coverage such as inclusion of gcov generated reports is a good "summer of code" type project. This is an important capability to add to the rtems-tools.

The attached tar file krzy-patches.tar.bz2 contains the current code. There may be other issues to resolve but writing from memory, the following are the highest priority ones:

- no default setting for coverage enable/disable
- configuration file has hard coded paths. This should be able to be a template which is adjusted by the tools at run-time.
- variable naming and coding style does not match that used in other Python code in rtems-tools

Krzysztof wrote some in his blog about this (<http://kmiesowicz.blogspot.com/p/esa-socis-2014.html>). Ensure that your base RTEMS tools are built with the RTEMS Source Builder and check on the development list if it builds a qemu with coverage support. This may have changed since he blogged.

#### Comment 1

1. **Joel Sherrill**, Wed, 11 Feb 2015 15:46:37 GMT
2. **description:** modified (diff)

#### Comment 2

1. **Joel Sherrill**, Wed, 11 Feb 2015 17:55:01 GMT
2. **milestone:** set to **5.0**

#### Comment 3

1. **Amar Takhar**, Wed, 11 Feb 2015 18:06:46 GMT

I think this should be added into the waf build rather than kept separately. The test suite is inside RTEMS it seems natural everything needed for coverage reporting is there too.

I know this requires modified tools -- RSB can build the tools the rest should go into waf.

#### Comment 4

1. **Chris Johns**, Sun, 13 Aug 2017 23:52:30 GMT
2. **version:** changed from **4.11** to **4.12**
3. **milestone:** changed from **5.0** to **4.12.0**

Moving to 4.12.0 as a milestone. The ticket can be updated once this years GSoC project wraps up.

#### Comment 5

1. **Joel Sherrill**, Thu, 12 Oct 2017 02:51:36 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

All code is now merged after GSoC.

#### Comment 6

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone:** changed from **4.12.0** to **5.1**

**Description**

Over the past few years, we have split out the BSP required methods into their own files with consistent names. `bsp_pretasking_hook()` is next on the list.

```
$ grep -rl bsp_pretasking_hook .
./sparc/shared/bsppretaskinghook.c
./powerpc/score603e/startup/bspstart.c
./powerpc/beatnik/startup/bspstart.c
./powerpc/virtex5/startup/bspstart.c
./powerpc/virtex5/start/start.S
./powerpc/shared/startup/pretaskinghook.c
./powerpc/virtex4/startup/bspstart.c
./powerpc/virtex4/start/start.S
./powerpc/ep1a/startup/bspstart.c
./arm/lpc176x/startup/bspstart.c
./arm/lpc24xx/startup/bspstart.c
./bfin/bf537Stamp/startup/bspstart.c
./bfin/TL6527M/startup/bspstart.c
./bfin/eZKit533/startup/bspstart.c
./shared/include/bootcard.h
./shared/bsppretaskinghook.c
./shared/bootcard.c
```

**Comment 1**

1. **Amar Takhar**, Fri, 13 Feb 2015 20:29:36 GMT

You really want to do this in milestone:4.11 and not milestone:5.0?

**Comment 2**

1. **Joel Sherrill**, Fri, 13 Feb 2015 20:31:02 GMT

2. **milestone**: changed from **4.11** to **5.0**

**Comment 3**

1. **Sebastian Huber**, Tue, 24 Jan 2017 07:37:25 GMT

2. **status**: changed from **new** to **closed**

3. **resolution**: set to **invalid**

The `bsp_pretasking_hook()` exists no longer, see #2408.

**Comment 4**

Duplicate of #2835.

**Comment 4**

1. **Sebastian Huber**, Tue, 23 May 2017 08:01:52 GMT
2. **status**: changed from **closed** to **reopened**
3. **version**: **4.11** deleted
4. **resolution**: **duplicate** deleted

One option is to use TLS, e.g.

```
diff --git a/gcc/ada/gcc-interface/Makefile.in b/gcc/ada/gcc-interface/Makefile.in
index 598b262d914..5e1c5286d63 100644
--- a/gcc/ada/gcc-interface/Makefile.in
+++ b/gcc/ada/gcc-interface/Makefile.in
@@ -1743,7 +1743,7 @@ ifeq ($(strip $(filter-out rtems%,$(target_os))),)
  s-parame.adb
```

Another option is to use POSIX keys:

```
diff --git a/gcc/ada/gcc-interface/Makefile.in b/gcc/ada/gcc-interface/Makefile.in
index 598b262d914..5e1c5286d63 100644
--- a/gcc/ada/gcc-interface/Makefile.in
+++ b/gcc/ada/gcc-interface/Makefile.in
@@ -1743,7 +1743,7 @@ ifeq ($(strip $(filter-out rtems%,$(target_os))),)
  s-parame.adb
```

I tend to use TLS since it has less overhead.

**Comment 5**

1. **Sebastian Huber**, Fri, 02 Jun 2017 08:32:56 GMT

In 3623c40/rtems:

```
ada-tests/spatchb01: New test
```

```
Update #2289.
```

**Comment 6**

1. **Sebastian Huber**, Wed, 07 Jun 2017 09:50:37 GMT

<https://gcc.gnu.org/viewcvs/gcc?view=revision&revision=248952>

**Comment 7**

1. **Joel Sherrill**, Wed, 07 Jun 2017 13:12:16 GMT

Just to be clear. We are using keys now for Ada. Does confdefs.h reflect this?

**Comment 8**

1. **Sebastian Huber**, Wed, 07 Jun 2017 13:19:36 GMT

No, we used a hand crafted task variable for this. I will update RTEMS once the RSB is updated. Need to backport the GCC change to GCC 7 branch before.

**Comment 9**

1. **Sebastian Huber**, Wed, 07 Jun 2017 13:52:17 GMT

This change breaks the x86 Ada support as long as x86 has no TLS support.

#### Comment 10

1. **Joel Sherrill**, Wed, 07 Jun 2017 17:49:23 GMT

So we are now using TLS for Ada.Self. I was thinking the POSIX default code used keys. That was the original implementation in GNAT. Is it TLS or POSIX keys?

#### Comment 11

1. **Sebastian Huber**, Thu, 08 Jun 2017 05:29:44 GMT

On Linux and vxWorks TLS is used.

#### Comment 12

1. **Sebastian Huber**, Mon, 12 Jun 2017 11:53:01 GMT
2. **status**: changed from **reopened** to **closed**
3. **resolution**: set to **fixed**

In c336dc9/rtems-source-builder:

```
4.12: Add SMP support for Ada of GCC 7.1
Close #2289.
```

#### Comment 13

1. **Sebastian Huber**, Mon, 12 Jun 2017 11:54:23 GMT
2. **milestone**: changed from **Indefinite** to **4.12.0**

#### Comment 14

1. **Sebastian Huber**, Wed, 14 Jun 2017 05:31:18 GMT

In 3dd67dd1/rtems:

```
score: Remove rtems_ada_self
This task variable is superfluous since we use thread-local storage now.
Update #2289.
```

#### Comment 15

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

## **2305 - sp07 needs to be split into a user extensions and a notepad test**

#### **Description**

I was reviewing all code in the tree which uses deprecated methods. I will fix most of the cases. This is going to take a little more time. This test needs to be split apart. I think the notepad usage can go into a new test spnotepad02. It is primarily ensuring that two threads can exchange values through notepads.

The remaining use of notepads in sp07 can probably just be a count down on the priority.

I am starting to move code to spnotepad02 from sp07 that is not related to the tasks counting down.

Hopefully I can resolve this without much feedback.

#### Comment 1

1. **Sebastian Huber**, Wed, 25 Jan 2017 12:22:55 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **wontfix**
4. **milestone**: changed from **4.11.1** to **4.12**

Notepads no longer exist in RTEMS 4.12.

#### Comment 2

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT

#### **Description**

I am addressing almost all uses of deprecated methods. They are mostly calls to `rtems_clock_get()` which can be easily corrected or test code which will be removed when the deprecated feature is removed.

This BSP however has what appears to be a unique feature -- the ability for a thread to add a unique exception fault handler. My inclination is to rip this out but I am not doing it now. I am just turning off deprecated warnings for the file.

#### Comment 1

1. **Sebastian Huber**, Tue, 15 Dec 2015 10:51:25 GMT

I suggest to remove the functionality of task specific exception handlers. In a multi-threaded environment exceptions affect the overall program, e.g. memory corruption.

#### Comment 2

1. **Joel Sherrill**, Tue, 29 Dec 2015 17:30:08 GMT

This code is disabled. It can't use notepads because they are obsoleted in 4.11 and removed after.

#### Comment 3

1. **Sebastian Huber**, Thu, 28 May 2015 08:02:11 GMT
2. **severity**: changed from **normal** to **blocker**
3. **summary**: changed from **Superfluous console driver infrastructure for SPARC** to **Broken console driver infrastructure for SPARC**

The console devices installed with this driver are broken on SMP (attribute changes are not properly synchronized). In case `RTEMS_DRVMGR_STARTUP` is defined, then the SMP capable console driver "c/src/lib/libbsp/sparc/leon3/console/console.c" is disabled.

**Comment 2**

1. **Ralph Holmes**, Wed, 30 Dec 2015 18:46:26 GMT

Upon further inspection, `c/src/lib/libbsp/sparc/shared/uart/cons.c` and `c/src/lib/libbsp/sparc/shared/include/cons.h` do not appear to be referenced from anywhere, and contain dead code. These can be removed safely.

**Comment 3**

1. **Joel Sherrill**, Wed, 30 Dec 2015 19:12:51 GMT

I don't think the files are referenced either.

**Comment 4**

1. **Sebastian Huber**, Mon, 04 Jan 2016 09:06:51 GMT

The file `cons.c` defines `console_initialize()` etc., so it is referenced in case you add a console driver to your application configuration.

**Comment 7**

1. **Chris Johns**, Mon, 14 Aug 2017 00:03:18 GMT
2. **version**: changed from **4.11** to **4.12**

Any updates for this ticket? The severity is blocker

**Comment 8**

1. **Daniel Hellstrom**, Tue, 22 Aug 2017 08:24:51 GMT

The `cons.c` is used by the `apbuart_cons.c` driver used with the driver manager. `cons.c` and `apbuart_cons.c` were updated for SMP and to use the new termios device registration in H1 2017 (see patches from `--author="maberg@..."`). Therefore I think we can close this ticket now.

**Description**

I don't think this is in line with POSIX.

**Comment 1**

1. **Joel Sherrill**, Tue, 12 May 2015 22:32:45 GMT

Would converting the second argument (interval) to ticks, saving it in a static variable, and using `_Watchdog_Insert_ticks()` in the TSR instead of `_Watchdog_Reset_ticks()` be enough to solve this?

Also this method was deprecated/obsoleted in one edition of POSIX but the current edition doesn't appear to mention that if I read the pages correctly.

**Comment 2**

1. **Sebastian Huber**, Wed, 13 May 2015 06:36:28 GMT

Something like this should do it. I added this report as a note since I don't have time for this currently.

## 2350 - One watchdog ticks header per scheduler instance

<b>Link</b>	<a href="https://devel.rtems.org/ticket/2350">https://devel.rtems.org/ticket/2350</a> ( <a href="https://devel.rtems.org/ticket/2350">https://devel.rtems.org/ticket/2350</a> )
<b>Id</b>	2350
<b>Reporter</b>	Sebastian Huber

<b>Version</b>	
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

Currently there is one watchdog header for all ticks based watchdogs. This is not scalable. For example on the Freescale T4240 platform with 24-processors we observe in the smptests/smpwakeafter01 test a maximum thread dispatch disabled time of 3.8ms on processor 0 and 1.7ms on the other processors.

```

1674926849
31604848
10574
8168
8578
31577528

```

The watchdog lock is highly contended and since the watchdog insert procedure acquires and releases the lock during the iteration of the watchdog chain several times, this yields the high thread dispatch disabled times.

To get rid of this bottleneck we should move the watchdog context into the scheduler context to use one watchdog context per scheduler instance. Take care that active watchdogs move in case of a scheduler change of a thread.

**Description**

The RTEMS red-black tree implementation is not as good as the BSD implementation which performs quite well in a benchmark:

<https://github.com/sebhub/rb-bench>

Proposal:

<https://github.com/sebhub/rb-bench/blob/master/test-rbtree-bsd-for-rtems.c>

One benefit is that the search/insert is done inline and the red-black tree fixup is done in a general purpose `_BSD_RBTree_Insert_color()` function (similar to the Linux red-black tree API).

This makes it possible to get rid of the red-black tree implementation used by the JFFS2 support.

**Description**

Several drivers in `c/src/lib/libbsp/sparc/shared/` use `interrupt disable/enable` for low-level mutual exclusion. This is not enough on SMP configurations.

**Comment 1**

1. **Sebastian Huber**, Wed, 25 Jan 2017 13:42:57 GMT
2. **milestone**: changed from **4.11** to **4.12**

**Comment 2**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

**Comment 3**

1. **Daniel Hellstrom**, Fri, 12 May 2017 09:57:36 GMT

With the most recent patches send to the devel-list most drivers have been fixed and now supports SMP.

Still there are a couple which has not been addressed, the focus has been on the device drivers that are present/used on multi-core LEON devices such as dual-core GR712RC and quad-core GR740.

The remaining drivers that generate warnings about this are:

`shared/spw/grspw.c` - old driver, better functionality and SMP support in `shared/spw/grspw_pkt.c`. I'm thinking we should disable this driver for SMP builds.  
`shared/1553/gr1553rt.c` - Used by GR740. Was considered of lower priority but will be fixed in June.

Related to this topic also important:

`sparc/shared/spw/grspw_router.c` - Central for GR740. Build does not produce warnings since HW does not generate interrupts. A patch is pending on this one including SMP support and more importantly API updates for the GR740.

Personally I think the current LEON3 BSP state regarding topic this should not be a blocker for a 4.12 branch?

**Comment 4**

1. **Sebastian Huber**, Fri, 12 May 2017 10:11:02 GMT

Do you want to release RTEMS 4.12 with the message that most drivers work on your SMP chips or all?

**Comment 5**

1. **Daniel Hellstrom**, Fri, 12 May 2017 10:22:16 GMT

I assumed that there will be some time after the branching until 4.12 is released? Maybe this is wrong? The two first should be quick to fix. The SpW router turned out to be more work than we initially expected.

**Comment 6**

1. **Chris Johns**, Mon, 15 May 2017 22:35:19 GMT

Replying to Daniel Hellstrom:

I assumed that there will be some time after the branching until 4.12 is released? Maybe this is wrong? The two first should be quick to fix. The SpW router turned out to be more work than we initially expected.

I would prefer we get things sorted and stable on master, make the branch and then release. The overheads for making a release are coming down each time it happens so a dot point release to add a fix for a driver is fine with me.

#### Comment 7

1. **Chris Johns**, Mon, 14 Aug 2017 00:07:22 GMT
2. **priority**: changed from **normal** to **highest**
3. **version**: changed from **4.11** to **4.12**

Milestone renamed

#### Comment 11

1. **Daniel Hellstrom**, Tue, 14 Nov 2017 09:58:39 GMT

Sorry for my late reply.

It seems that "Update #2355" in the commit message does not work when I push. But the text says "remote: 3: update trac" as if it working when pushing.

The following patches affect the status of this ticket since August:

1ccce05337be6e81f823039932a8a10d2b07c2d8 6b339b5af65b243ea32edce29dc5642440ba68d5 59af2cc58e37481f176cbea96e6a59e70a9f5598 (pushed today)

Status (libbsp/sparc/shared/):

[FIXED] spw/grspw.c - disabled on SMP builds via Makefiles. Only safe in UP configuration. [FIXED] spw/grspw\_router.c - SMP protection via spin-locks & semaphore. [TODO] 1533/gr1553rt.c - work not started yet. Is not SMP safe currently.

With the router patch it is only the GR1553B in RT mode that is not SMP safe on the GR740. We could disable the RT driver on SMP for now to avoid the warnings until SMP is fixed? My initial plan was to have this driver SMP safe a long time ago. I don't think the remaining is a blocking issue and I suggest to change this ticket from being a blocker into major?

#### Comment 12

1. **Sebastian Huber**, Tue, 14 Nov 2017 10:08:52 GMT

The Trac update via commits doesn't work if you push more than one commit at once.

How much work is it to fix the GR1553B driver?

#### Comment 13

1. **Daniel Hellstrom**, Mon, 20 Nov 2017 14:18:52 GMT

Thanks for information, I will test it with this RT patch.

Thats right, its not much work but its the testing that concerns me. I have posted a patch which fixes the RT driver with SMP support and closes this ticket:

<https://lists.rtems.org/pipermail/devel/2017-November/019556.html>

#### Comment 14

1. **Daniel Hellstrom**, Tue, 21 Nov 2017 09:29:21 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

In 4d7e4bb/rtems:

leon, gr1553rt: adding SMP protection

Add device spin-lock around internal data structures. Since the driver provides a low-level C API accessing the descriptors the application still needs to implement part of the SMP synchronization needed between Interrupt handler and tasks.

Close #2355.

### **Description**

On uni-processor configurations the post-switch actions (e.g. signal handlers) and context switch extensions may silently corrupt the floating point context. Set test sptests/spcontext01.

This problem exists for many years and might be working as intended. It is possible to fix this issue using the SPARC\_USE\_SAFE\_FP\_SUPPORT option. This is already used for the SMP configurations. The disadvantage is that this disables the deferred floating point support.

### **Comment 1**

<b>Blocked by</b>	

---

**Description**

Ticket #2364 regarded use of a pthread mutex in three graphics driver as basically an atomic flag to ensure only one open() was active at a time. This created an unnecessary dependency on the POSIX API being enabled. I changed the code to use score Atomic flags.

This highlighted the need for a public Atomic API.

The existing tests could be converted to the public API, a macro wrapper written for Classic API Atomics, and documentation added. This may be enough to be a small GSOC project.

**Comment 1**

1. **Sebastian Huber**, Mon, 23 Jan 2017 06:46:39 GMT

Why not simply use C11/C++11 atomic operations?

**Comment 2**

1. **Chris Johns**, Mon, 14 Aug 2017 00:06:50 GMT
2. **version:** changed from **4.11** to **4.12**
3. **milestone:** changed from **5.0** to **4.12.0**

Should the API in 'sys/locks.h' be used?

**Description**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

The documentation for User Extension sets in the C User's Guide could use some clarification. It discusses the multiple sets of extensions, but it is unclear as to whether or not the extensions are added or replaced when `rtems_extension_create()` is called. There is a section - 22.2.4 (Order of Invocation) that does discuss the operation of the sets, but it only makes sense once the reader understands that the sets are, in fact, additive.

#### Comment 1

1. **Joel Sherrill**, Tue, 16 Jun 2015 00:00:18 GMT

Any other questions you would like to see answered? The points you mention are relatively straightforward to address but the email thread had a lot going on and I wanted to make sure all your questions got reflected in the changes.

#### Comment 2

1. **mw**, Wed, 17 Jun 2015 16:53:23 GMT

No, I think all of my questions were stemming from that initial confusion. I thought I had to somehow extract the extensions that were previously installed in order to call them back myself; once I realized that they were layered (and the OS was doing the sequential calling), it all fell into place and I understood what was going on.

Replying to joel.sherrill:

Any other questions you would like to see answered? The points you mention are relatively straightforward to address but the email thread had a lot going on and I wanted to make sure all your questions got reflected in the changes.

**Description**

```
waf configure --prefix=/opt/rtems --rtems=/opt/rtems --rtems-tools=/opt/rtems --rtems-bsps=i386/pc686
Setting top to : /scratch/git-rtems-libbsd
Setting out to : /scratch/git-rtems-libbsd/build
Could not find any architectures
(complete log in /scratch/git-rtems-libbsd-upstream/build/config.log)
```

**Comment 1**

1. **Chris Johns**, Fri, 31 Jul 2015 22:17:34 GMT

I do not understand the issue. What does tools without a version mean ?

**Comment 2**

1. **Sebastian Huber**, Fri, 11 Sep 2015 09:03:45 GMT

For example sparc-rtems-gcc, etc.

This is used by some third-party tools, like the Gaisler RCC.

**Comment 3**

1. **Chris Johns**, Sun, 13 Sep 2015 22:49:42 GMT

The rtems\_waf module is designed to look at a standard versioned RTEMS tree that is built and installed. We have had versioning since 4.7. The module checks for the architectures requested are installed versioned. Changes to stop this adds complexity and increase testing in an area I would prefer not to do.

I understood Gaisler is supporting versioned tools. What other 3rd party tool set are you referring to ?

**Comment 4**

1. **Sebastian Huber**, Mon, 14 Sep 2015 06:18:41 GMT

The RCC archives use a version:

<http://gaisler.com/anonftp/rcc/bin/linux/>

However, the tools use all a sparc-rtems- prefix without a version.

I found it convenient to use this scheme for the RTEMS master as well. You can build the tools with an arbitrary string after the target-rtems, e.g. sparc-rtemsfoobarblug99.abc is also allowed.

**Comment 5**

1. **Chris Johns**, Mon, 14 Sep 2015 06:35:54 GMT

Replying to sebastian.huber:

The RCC archives use a version:

<http://gaisler.com/anonftp/rcc/bin/linux/>

These look like old tools. My understanding is un-versioned tools would not be part of any 4.11 version and the last un-versioned tools by Gaisler was 4.10.

However, the tools use all a sparc-rtems- prefix without a version.

We should not and really cannot support un-versioned tools in the project. I will discourage any efforts to make it supported.

I found it convenient to use this scheme for the RTEMS master as well. You can build the tools with an arbitrary string after the target-rtems, e.g. sparc-rtemsfoobarblug99.abc is also allowed.

Did you try the --rtems-version option, ie --rtems-version=foobarblug99.abc ?

I support any version label and encourage custom ones for a specific user build. It is just no versioning I wish to discourage.

Note, the waf based rtems-config support has a bug with a hardcoded version.

The preliminary RCC for 4.11 has still un-versioned tools:

<http://www.gaisler.com/anonftp/rcc/smp/nov2014/sparc-rtems-4.11-gcc-4.9.2-1.2.99.1-linux.tar.bz2>

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

However, the tools use all a sparc-rtems- prefix without a version.

Ok, then Gaisler should adjust their RCC structure.

I found it convenient to use this scheme for the RTEMS master as well. You can build the tools with an arbitrary string after the target-rtems, e.g. sparc-rtemsfoobarbug99.abc is also allowed.

Note, the waf based rtems-config support has a bug with a hardcoded version.

No, I didn't build the tools with such a version label.

Sigh. These being in the wild un-versioned is unfortunate.

However, the tools use all a sparc-rtems- prefix without a version.

We should not and really cannot support un-versioned tools in the project. I will discourage any efforts to make it supported.

Ok, then Gaisler should adjust their RCC structure.

Yes. We have to put an end to users appearing on the mailing list with questions and we are guessing the origin of the tools. This is the reason we have asked for the change. Joel and I are clear in our understanding of what was to happen. I checked with him last night his time.

#### Comment 8

1. **Daniel Hellstrom**, Thu, 17 Sep 2015 14:27:56 GMT

Hi,

Joel has discussed this with us some time ago and we agreed that we need to change the RCC naming. The temporary toolchain you can find via the gaisler.com homepage used still the old prefix and built by the old build scripts we have had. We were planning on using RSB initially but has not converted to it yet, however the old build script was updated recently which generates a toolchain with the prefix "sparc-rcc-rtems4.11-" as previously discussed. So next RCC release on rtems-4.11 will have that prefix. Please let me know if you see any trouble with us using that prefix.

Regards, Daniel

#### Comment 9

1. **Joel Sherrill**, Fri, 18 Sep 2015 21:07:42 GMT

The unversioned tools should still work with 4.11. There is no issue there because it is still only autoconf.

This is an issue with the waf build. That will be 4.12 or 5.x but not 4.11. We need to make sure the target used for the Gaisler tools (sparc-rcc-rtems4.11-) is accepted OK. That should only be a matter of the wildcard pattern recognizing the CPU-rtemsVERSION or CPU-vendor-rtemsVERSION form of the target. The is actually GNUitically correct since the target technically has three parts. When the vendor isn't provided, it is assumed to be unknown.

**Description**

In order to reduce the size of executables it is beneficial to put all global functions and data into separate sections. This enables the linker to perform a garbage collection which removes all items not directly referenced. The following steps are necessary:

- Modify the build system to use the following compiler and linker flags:

```
CFLAGS += -ffunction-sections -fdata-sections
LDFLAGS += -Wl,--gc-sections
```

- Review all linker command files and ensure that linker sets and global constructor sections are not affected by the garbage collection (e.g. use the KEEP() directive of GNU ld).

**Description**

Linker sets are used for example in Linux, FreeBSD (they are used in the RTEMS port of the FreeBSD network stack, e.g. libbsd), eCos and for global C++ constructors. They provide a space efficient and flexible means to initialize modules. A linker set consists of

- dedicated input sections for the linker (e.g. `.ctors` and `.ctors.*` in the case of global constructors),
- a begin marker (e.g. provided by `crtbegin.o`, and
- an end marker (e.g. provided by `crtend.o`).

A module may place a certain data item into the dedicated input section. The linker will collect all such data items in this section and creates a begin and end marker. The initialization code can then use the begin and end markers to find all the collected data items (e.g. function pointers).

Lets look how this works using a simple example. For this we need three files `myset.h`,

```
#ifndef MYSET_H
#define MYSET_H
/* The linker_set items */
typedef struct {
    void (*func)(void);
} item;
/*
 * Macro to create a linker set item. The first parameter is
 * the designator of the item. It must be unique within the
 * module scope. The second parameter is the desired function.
 */
#define MYSET_ITEM(i, f) \
    __attribute__((used)) \
    __attribute__((section(".rtemsroset.myset.content"))) \
    static item i = { f }
#endif /* MYSET_H */
```

**module.c**

```
#include "myset.h"
#include
/*
 * Some global function that needs a module specific
 * initialization done by f().
 */
void
g(void)
{
    printf("g()\n");
}
/* The module constructor */
static void
f(void)
{
    printf("f()\n");
}
/*
 * This registers the module constructor f()
 * in the linker set "myset".
 */
MYSET_ITEM(i, &f);
```

**and init.c.**

```
#include "myset.h"
#include
/* Should be in a proper header file */
void g(void);
/* Define the start marker */
__attribute__((used))
__attribute__((section(".rtemsroset.myset.begin")))
static volatile const item begin[0];
/* Define the end marker */
__attribute__((used))
__attribute__((section(".rtemsroset.myset.end")))
static volatile const item end[0];
int main(void)
{
    size_t n = &end[0] - &begin[0];
    size_t i;
    /* Call all functions of the linker set */
    for (i = 0; i < n; ++i) {
        (*begin[i].func)();
    }
    /*
     * This will pull in the module.c and register its item in the
     * linker set "myset". So g() can rely on f() being called first.
     */
    g();
    return (0);
}
```

In the linker command file of the GNU linker we need the following statement.

```
.rtmsroset : {
KEEP (*(SORT(.rtmsroset.*)))
}
```

The KEEP() ensures that a garbage collection by the linker will not discard the content of this section. This would be normally the case since the linker set items are not referenced directly. The SORT() directive sorts the input sections lexicographically. Please note the lexicographical order of the .begin, .content and .end section name parts in the previous example which ensures that the position of the begin and end markers are right. The interesting part of linker map file of the previous example may look like this.

```
.rtmsroset 0x000000001001990 0x4 load address 0x00000000002268c
*(SORT(.rtmsroset.*))
.rtmsroset.myset.begin 0x000000001001990 0x0 init.o
.rtmsroset.myset.content 0x000000001001990 0x4 module.o
.rtmsroset.myset.end 0x000000001001994 0x0 init.o
```

So what is the benefit of using linker sets to initialize modules? Currently in RTEMS all available managers (semaphore, message queue, barrier, etc.) are initialized since the initialization code doesn't know what is actually used by the application. With the linker set approach we need to initialize only those managers that are used by the application. In case an application uses message queues, then it must call `rtems_message_queue_create()`. In the module implementing this function we can place a linker set item and register the message queue handler constructor. Otherwise, in case the application doesn't use message queues, then there will be no reference to the `rtems_message_queue_create()` function and the constructor is not registered, thus nothing of the message queue handler will be in the final executable.

#### Comment 3

1. **Sebastian Huber**, Tue, 08 Dec 2015 12:53:24 GMT

In [b618d8cfc54f84d4ed03dc7b7fa510c872e6128a@rtems](mailto:b618d8cfc54f84d4ed03dc7b7fa510c872e6128a@rtems):

```
Add RTEMS linker sets
Update #2408.
```

#### Comment 4

1. **Sebastian Huber**, Wed, 09 Dec 2015 07:00:51 GMT

The POSIX API is disabled in 4.9 and 4.10. In 4.11 and 4.12 sizes are presented with POSIX enabled/disabled. The 4.12 without prefix is with the linker set based initialization. In 4.12 the Newlib internal locks are enabled. The PNOLS version is with POSIX enabled and the old initialization infrastructure.

Executable sizes for the SPARC/SIS ticker.exe.

```
Text Data BSS Workspace Non-Text 4.9 80384 2532 2996 51432 56960 4.10 124384 1828 2384 51056 55268 4.11 100592 1616 7008 44120 52744 4.11/POSIX
104608 1760 8528 45200 55488 4.12/PNOLS 105296 1872 8512 45376 55760 4.12/POSIX 101680 1808 6592 45336 53736 4.12 101472 1808 6528 44336 52672
```

The huge increase in the test size from 4.9 to 4.10 is mostly due to the introduction of the pipe() support which pulls in sprintf().

The increase of the BSS section from 4.10 to 4.11 is due to the static initialization of the scheduler data structures (move from workspace to BSS).

Executable sizes for the SPARC/SIS minimum.exe.

```
Text Data BSS Workspace Non-Text 4.9 45808 2324 2708 3288 8320 4.10 30032 1300 1296 3240 5836 4.11 34032 320 2976 2000 5296 4.11/POSIX 41664 1168
4480 2216 7864 4.12/PNOLS 39904 1232 4480 2136 7848 4.12/POSIX 29104 272 2304 2128 4704 4.12 28976 272 2240 1928 4440

### **Description**

#### Problem

The RTEMS mutexes implement only a very simple approximation of the priority inheritance protocol. The real priority of a thread is only restored once it releases its last mutex. Lets consider this scenario. We have a file system instance protected by one mutex (e.g. JFFS2) and a dynamic memory allocator protected by another mutex. A low priority thread performs writes some log data into a file, thus it acquires the file system instance mutex. The file system allocates dynamic memory. Now a high priority thread interrupts and tries to allocate dynamic memory. The allocator mutex is already owned, so the priority of the low priority thread is raised to the priority of the high priority thread. The memory allocation completes and the allocator mutex is released, since the low priority thread still owns the file system instance mutex it continues to execute with the high priority (the high priority thread is not scheduled). It may now perform complex and long file system operations (e.g. garbage collection, polled flash erase and write functions) with a high priority.

#### Functional requirements

- The mutex shall use the priority inheritance protocol to prevent priority inversion. On SMP configurations OMIP shall be used.
- The mutex shall allow vertical nesting (a thread owns multiple mutexes).
- The mutex shall allow horizontal nesting (a thread waits for ownership of a mutex those owner waits for ownership of a mutex, and so on).
- Threads from one scheduler instance shall wait in priority order. The highest priority thread shall be dequeued first.
- The highest priority waiting thread of each scheduler instance shall wait in FIFO order.

- The mutex shall provide an acquire operation with timeout.
- In case a mutex is released, then the previous owner shall no longer use the priorities inherited by this mutex.
- In case a mutex acquire operation timeout occurs, then the current owner of the mutex shall no longer use the priorities inherited by the acquiring thread.
- The order of the mutex release operations may differ from the order of the mutex acquire operations.
- Priority changes not originating due to the priority inheritance protocol shall take place immediately.
- Deadlock shall be detected. In case a deadlock would occur an error status shall be returned or a fatal error shall be generated.
- Deadlocks at application level shall not lead to a deadlock at operating system level.

#### Performance requirements

- The mutex acquire operation shall use only object-specific locks in case the mutex is not owned currently.
- The mutex release operation shall use only object-specific locks in case no threads wait for ownership of this mutex.

#### Invariants

- A mutex shall be owned by at most one thread.
- A thread shall wait for ownership of at most one mutex.

#### Possible implementation

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

```
typedef struct Thread_Priority_node {
    Priority_Control current_priority;
    Priority_Control real_priority;
    struct Thread_Priority_node *owner;
    RBTREE_Node Node;
    RBTREE_Control Inherited_priorities;
} Thread_Priority_node;
typedef struct {
    ...
    Thread_Priority_node *priority_nodes; /* One per scheduler instances */
    ...
} Thread_Control;
```

Initially a thread has a priority node reflecting its real priority. The Thread\_Priority\_node::owner is NULL. The Thread\_Priority\_node::current\_priority is set to the real priority. The Thread\_Priority\_node::Inherited\_priorities is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in Thread\_Priority\_node::Inherited\_priorities of the mutex owner.

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in Thread\_Priority\_node::Inherited\_priorities of the previous mutex owner (ownership transfer) or the current mutex owner (acquire timeout).

In case the minimum of Thread\_Priority\_node::real\_priority and Thread\_Priority\_node::Inherited\_priorities changes, then Thread\_Priority\_node::current\_priority is updated. In case the Thread\_Priority\_node::owner is not NULL, the priority change propagates to the owner, and so on. In case Thread\_Priority\_node::current\_priority changes, the corresponding scheduler is notified.

The biggest issue is the locking on SMP configurations in case of recursive minimum updates.

Somehow we must connect this to the scheduler helping protocol for OMIP. We may have to replace the return value based scheduler operations with a pre-context-switch action. Due to some recent implementation changes the run-time of the \_Thread\_Dispatch() function is no longer average-case performance critical.

score: Simplify `_Thread_queue_Boost_priority()`

Raise the priority under thread queue lock protection and omit the superfluous thread queue priority change, since the thread is extracted anyway. The unblock operation will pick up the new priority.

Update #2412. Update #2556. Update #2765.

**Comment 7**

1. **Sebastian Huber**, Wed, 27 Jul 2016 08:56:36 GMT

In 3a58dc863157bb21054a144c1a21b690544c0d23/rtems:

score: Priority inherit thread queue operations

Move the priority change due to priority inheritance to the thread queue enqueue operation to simplify the locking on SMP configurations.

Update #2412. Update #2556. Update #2765.

**Comment 8**

1. **Sebastian Huber**, Wed, 27 Jul 2016 08:56:46 GMT

In 1fcac5adc5ed38fb88ce4c6d24b2ca2e27e3cd10/rtems:

score: Turn thread lock into thread wait lock

The `_Thread_Lock_acquire()` function had a potentially infinite run-time due to the lack of fairness at atomic operations level.

Update #2412. Update #2556. Update #2765.

**Comment 9**

1. **Sebastian Huber**, Wed, 27 Jul 2016 08:56:57 GMT

In d79df38c2bea50112214ade95776cb90d693e390/rtems:

score: Add deadlock detection

The mutex objects use the owner field of the thread queues for the mutex owner. Use this and add a deadlock detection to `_Thread_queue_Enqueue_critical()` for thread queues with an owner.

Update #2412. Update #2556. Close #2765.

**Comment 10**

1. **Sebastian Huber**, Wed, 21 Sep 2016 07:05:43 GMT

In 300f6a481aaf9e6d29811faca71bf7104a01492c/rtems:

score: Rework thread priority management

Add priority nodes which contribute to the overall thread priority.

The actual priority of a thread is now an aggregation of priority nodes. The thread priority aggregation for the home scheduler instance of a thread consists of at least one priority node, which is normally the real priority of the thread. The locking protocols (e.g. priority ceiling and priority inheritance), rate-monotonic period objects and the POSIX sporadic server add, change and remove priority nodes.

A thread changes its priority now immediately, e.g. priority changes are not deferred until the thread releases its last resource.

Replace the `_Thread_Change_priority()` function with `_Thread_Priority_perform_actions()`, `_Thread_Priority_add()`, `_Thread_Priority_remove()`, `_Thread_Priority_change()`, and `_Thread_Priority_update()`.

Update #2412. Update #2556.

#### **Description**

It seems that the method for accessing an existing file repository both isn't covered much in the "manual", but it also fails to find it. Looking at the python code in download.py, it requires the format file:// to identify the local file protocol, but then tries to access the actual file/directory using that the entire url (including file://).

This unfortunately fails and I'm not familiar enough with Python to correct this, although it appears that the "file://" part should be cut from the URL before calling the "return path.isdir(url)" in the \_file\_downloader function.

#### **Comment 1**

1. **Gedare Bloom**, Mon, 14 Sep 2015 14:03:57 GMT
2. **owner:** set to **Chris Johns**
3. **status:** changed from **new** to **assigned**
4. **version:** changed from **4.10** to **4.11**

#### **Comment 2**

1. **Gedare Bloom**, Mon, 14 Sep 2015 14:05:11 GMT

Can you provide some more information about the failure? What are you trying to build, what is the config/bset being used, what %source directive fails? It may help to attach the log

#### **Comment 3**

1. **Jakob Viketoft**, Tue, 15 Sep 2015 08:45:29 GMT

Well, at the moment I'm chasing a build bug in newlib and have modified a bset to allow me to change the source code locally. This was a perfect match for the "file" type available for %source, but as I stated it doesn't seem to work completely. (I would also like to use it later to have git sources as submodules instead of cloned-on-demand.)

E.g., if I use a bset and modify the %source path for newlib from e.g. git:// to file:///full\_path\_to\_this\_dir/sources/git/newlib it doesn't find the directory. I added a printout of the url variable in \_file\_downloader in download.py, and the url contains the full given address as file:///full\_path\_to\_this\_dir/sources/git/newlib. This is then given to path.isdir and predictably fails.

Or am I missing something fundamental here?

#### **Comment 4**

1. **Chris Johns**, Tue, 15 Sep 2015 23:54:47 GMT

There maybe a bug in the 'file' implementation, but I think what you are asking for is something new. I think you are asking to use the source tree as is in the location it is and to build using it where the 'file' expects a tar type file. Using the source in the specified location is currently not implemented. It is an interesting feature to add and I like it. It however would require I take a look to see what it effects and currently time is limited.

**Comment 5**

<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

Typically when designing an API that calls a user callback there is a user private "void \*" pointer transparently passed through to the user callback so that the user can access his private state inside of his callback without being forced to employ a global variable. A global variable doesn't work very well if there are multiple objects instances created each of them using the same method with `rtems_iterate_over_all_threads`. This type of "void \*" private pointer is of course a standard approach allowing the user's callback to behave much the same way as a virtual method in C++, but nevertheless retaining a compatible C based API.

An enhanced version of the API might look like this.

```
void rtems_iterate_over_all_threads_xxx(
  rtems_per_thread_routine routine, void * const pUserPrivatePassThrogh
);
```

```
typedef void (*rtems_per_thread_routine_xxx)(
  Thread_Control *the_thread, void * const pUserPrivatePassThrogh
);
```

The `pUserPrivatePassThrogh` is not used by the library; it is retained for the duration of the `rtems_iterate_over_all_threads_xxx` function only so that it can be passed through to the user's callback.

thanks for your consideration of this matter

**Comment 1**

1. **Jeffrey Hill**, Tue, 22 Sep 2015 15:35:30 GMT

PS: I am using `rtems_iterate_over_all_threads` to implement a task mode, thread aware, Ethernet connected GDB stub. When GDB attaches it stops certain threads and sends their status depending on its operating modes, but this of course should not apply to the GDB communication threads. Therefore there needs to be a way to iterate through all of the threads checking each of them to determine if they are tagged as being GDB stop-mode immune.

**Comment 2**

1. **Jeffrey Hill**, Tue, 22 Sep 2015 20:02:27 GMT

PPS: In `thread.h` and `iterateoverthreads.c` one could create some code like this. A possible implementation.

/\_\_ This defines the type for a method which operates on a single thread. \_\_

```
*/
```

```
typedef void (*rtems_per_thread_routine)( Thread_Control * ); typedef void (*rtems_per_task_function)( Thread_Control *,
```

```
void * const pUserPrivate );
```

/\_\_ \_\_

This routine iterates over all threads regardless of API and invokes the specified routine. \*/

```
void rtems_iterate_over_all_threads(
```

```
    rtems_per_thread_routine routine
```

```
);
```

```
void rtems_thread_per_each_callback(rtems_per_task_function pFunction,
```

```
void * const pUserPrivate );
```

```
void rtems_thread_per_each_callback(rtems_per_task_function pFunction,
```

```
void * const pUserPrivate )
```

```
{
```

```
    uint32_t i; uint32_t api_index; Thread_Control *the_thread; Objects_Information *information;
```

```
    if ( !pFunction )
```

```
        return;
```

```
    for ( api_index = 1 ; api_index <= OBJECTS_APIS_LAST ; api_index++ ) {
```

```
        if ( !_Objects_Information_table[ api_index ] )
```

```
            continue;
```

```
        information = _Objects_Information_table[ api_index ][ 1 ]; if ( !information )
```

```
            continue;
```

```
        for ( i=1 ; i <= information->maximum ; i++ ) {
```

```
            the_thread = (Thread_Control *)information->local_table[ i];
```

```
            if ( !the_thread )
```

```
                continue;
```

```
            (*pFunction)(the_thread,pUserPrivate);
```

```
        }
```

```
    }
```

```
}
```

#### Comment 1

1. **Sebastian Huber**, Wed, 04 Nov 2015 06:44:51 GMT

This BSP is not maintained by us.

#### Comment 2

1. **Martin Galvan**, Thu, 05 Nov 2015 14:28:51 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

In 1d55e157ca9f4a9ff806f8fa5fcc79b03a7b8178/rtems:

LPC1768: Fix compilation error

The LPC1768 variants have a gpio.h file whose name clashes with the gpio.h from the new GPIO API. This results on the BSPs failing to compile.

This patch renames the LPC1768 gpio.\* files to lpc-gpio.\*, as it's done on other BSPs (e.g. Beaglebone).

Closes #2441.

#### **Description**

Remove the AVR port per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_Port](https://devel.rtems.org/wiki/Developer/Removing_a_Port).

All BSPa must be removed before the architectural port can be removed. These are tracked by the following tickets:

- #2442 - avrtest

Rationale: The AVR port is incomplete and the largest AVR CPU models are just barely large enough to run RTEMS. This by itself is not enough to drop the port. However, the state of GCC for this target is poor. It is marginally maintained. Atmel maintains their own patch set independent of GCC. Plus they use their own small (and unique) C Library. This makes avr-rtems the only user of AVR+newlib. The target size is a challenge but that was why the port was initially interesting. It provided a real goal. But the tool state is painful for a port which is incomplete and has neither users nor anyone interested in actively maintaining it for GCC or RTEMS.

**Description**

Remove the m68k/mvme136 BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: Although it is sad to see the BSP for the board that RTEMS was developed for be removed, this board was current in 1988-9. It has only 1MB RAM, 2 UARTS, and no NIC. It is unlikely to be available and without a NIC, isn't that useful.

### Description

Remove the m68k/sim68000 BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: This is a BSP for a simulator named BSVC (<http://www4.ncsu.edu/~bwmott/bsvc/>) that was never under a truly free license and has not been updated in a decade. Although a decent tool, it was extremely slow.

**Description**

Remove the M32R port per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_Port](https://devel.rtems.org/wiki/Developer/Removing_a_Port).

All BSPa must be removed before the architectural port can be removed.  
These are tracked by the following tickets:

#2447 - m32rsim

Rationale: The M32R port is incomplete, appears to have no users, and the CPU architecture is end-of-lifed.

 Grrr... you need to rebase your RTEMS tree. The rtems patch to remove the BSP does not apply.  
 git checkout master git pull git checkout am # assuming that's the name of the branch git rebase -i master # things may break or conflict, fix them. make a new patch  
 Please also delete all obsolete patches on this PR.

**Comment 3**

- 1. **Joel Sherrill, Wed, 09 Dec 2015 23:13:47 GMT**  
 Please combine all patches for rtems-testing into a single patch.  
 Also do not remove support for the m32r architecture in general. This means rtems-testing should not be modified.  
 Please resubmit

**Comment 4**

- 1. **Aun-Ali Zaidi, Thu, 10 Dec 2015 00:19:50 GMT**  
 I am not aware of a method of deleting the obsolete patches. As far as I know, that requires admin privileges.  
 Replying to joel.sherrill:

#### Comment 6

1. **Joel Sherrill**, Thu, 10 Dec 2015 01:00:32 GMT

I take back something I said. There maybe m32rsim references in the rtems-testing/gcc subdirectory. If so, kill them. But don't drop the entire m32r.

Sorry. This gets complicated.

Still hasn't been removed from rtems-testing.git.

#### Comment 11

1. **Joel Sherrill**, Sun, 03 Jan 2016 21:06:57 GMT

Do we remove the tests from sim-scripts even when supported by older ports? I am reasonably happy to do this because the three ports being removed this time are all but useless. But in general, we need to be more deliberate.

I suppose it is OK if there are release branches for this repo.

#### Description

Remove the m32r/m32rsim BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: This is a radiation hardened MIPS R3000 CPU that has only been used by a few missions. After discussions with various NASA and commercial engineers, we have learned that it is no longer considered an option for new missions and has not an option for a considerable length of time. The missions still underway (including New Horizons) are locked down on very old versions of their development infrastructure including hosts.

**Description**

Remove the arm/gba BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: This BSP is for very old Nintendo hardware and required the use of either a simulator or hard to obtain programmable game cartridge. Nintendo was aggressive in shutting down resellers of those cartridges. There is no real console input and it is hard to automate testing. This was a useful BSP when there were few ARM BSPs but with the Pi, Beagle, etc. these days are long past.

---

**Description**

Remove the arm/nds BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: This BSP is for very old Nintendo hardware and required the use of either a simulator or hard to obtain programmable game cartridge. Nintendo was aggressive in shutting down resellers of those cartridges. There is no real console input and it is hard to automate testing. This was a useful BSP when there were few ARM BSPs but with the Pi, Beagle, etc. these days are long past.

---

**Description**

Remove the arm/gp32 BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: This BSP is for an open source alternative to the Gameboy Advance introduced in 2001. Wikipedia notes that 30K units were sold but it has been unavailable since 2007. This was a useful BSP when there were few ARM BSPs and the openness was interesting but with the Pi, Beagle, etc. these days are long past.

---

**Description**

Remove the H8300 port per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_Port](https://devel.rtems.org/wiki/Developer/Removing_a_Port).

All BSPa must be removed before the architectural port can be removed. These are tracked by the following tickets:

#2453 - h8sim

Rationale: The h8 has been end of lifed. There do not appear to be any users based up questions and tickets filed. The architecture itself has issues which lead to breakages in gcc (which do get fixed though often slowly) and those same issues force us to disable some features like iconv in newlib. With no users, end of life, and tool issues, it is time to remove it.

**Comment 1**

**Description**

Remove the powerpc/ep1a BSP per the instructions at [https://devel.rtems.org/wiki/Developer/Removing\\_a\\_BSP](https://devel.rtems.org/wiki/Developer/Removing_a_BSP)

Rationale: AFAIK this BSP was only used on a program supported by OAR. That program is no longer in active development and is completely frozen. If that situation changes, the BSP can be resurrected. It was introduced 10 years ago and has not has a modification other than general maintenance in the last four years.

### Description

In rtems/config/rtems-urls.bset the tool patches are set to an RTEMS version dependent directory. This makes re-use of the general purpose files quite difficult.

**Comment 1**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

**Comment 2**

1. **Chris Johns**, Wed, 11 Oct 2017 23:17:34 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **wontfix**

We should use patches from tickets rather than using the rtems-tools.git repo. This means this any changed in the RSB can be avoided.

**Comment 3**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

**Description**

The x86 is one of the architectures which does not support Thread Local Storage. Each architecture requires target architecture specific support to provide this standard language feature.

Details on the implementation by the compiler may be found at [http://wiki.osdev.org/Thread\\_Local\\_Storage](http://wiki.osdev.org/Thread_Local_Storage).

Based on this information, I think a segment register needs to be added to the thread context and some hooks to the TLS implemented.

Architecture information on TLS implementation should be added to the CPU Supplement document as this is part of the ABI and context switch.

As part of effort, the documentation for the general procedure of adding target specific TLS support should be added to the porting guide or reviewed.

**Comment 1**

1. **Sebastian Huber**, Mon, 16 Nov 2015 06:36:48 GMT

For documentation see for example:

[https://docs.rtems.org/doc-current/share/rtems/html/cpu\\_supplement/Port-Specific-Information-Thread\\_002dLocal-Storage.html#Port-Specific-Information-Thread\\_002dLocal-Storage](https://docs.rtems.org/doc-current/share/rtems/html/cpu_supplement/Port-Specific-Information-Thread_002dLocal-Storage.html#Port-Specific-Information-Thread_002dLocal-Storage)

**Description**

RTEMS has an API for dynamic debug support in . This feature is sparely used:

```

cpukit/sapi/src/debug.c:  rtems_debug_disable( RTEMS_DEBUG_ALL_MASK );
cpukit/sapi/src/debug.c:void rtems_debug_enable (
cpukit/sapi/src/debug.c:  rtems_debug_control  to_be_enabled
cpukit/sapi/src/debug.c:void rtems_debug_disable (
cpukit/sapi/src/debug.c:  rtems_debug_control  to_be_disabled
cpukit/sapi/src/debug.c:bool rtems_debug_is_enabled(
cpukit/sapi/src/debug.c:  rtems_debug_control level
cpukit/rtems/include/rtems/rtems/regionimpl.h:  if ( rtems_debug_is_enabled( RTEMS_DEBUG_REGION ) ) \
cpukit/score/include/rtems/debug.h:typedef uint32_t  rtems_debug_control;
cpukit/score/include/rtems/debug.h:SCORE_EXTERN rtems_debug_control _Debug_Level;
cpukit/score/include/rtems/debug.h:void rtems_debug_enable(
cpukit/score/include/rtems/debug.h:  rtems_debug_control  to_be_enabled
cpukit/score/include/rtems/debug.h:void rtems_debug_disable(
cpukit/score/include/rtems/debug.h:  rtems_debug_control  to_be_disabled
cpukit/score/include/rtems/debug.h:bool rtems_debug_is_enabled(
cpukit/score/include/rtems/debug.h:  rtems_debug_control level
c/src/lib/libbsp/shared/bootcard.c: *      - rtems_debug_enable( RTEMS_DEBUG_ALL_MASK );
c/src/lib/libbsp/shared/bootcard.c:      rtems_debug_enable( RTEMS_DEBUG_ALL_MASK );
c/src/lib/libbsp/shared/include/bootcard.h: *      - rtems_debug_enable( RTEMS_DEBUG_ALL_MASK )
testsuites/sptestests/spreion_err01/init.c: puts( "TA1 - rtems_debug_disable - RTEMS_DEBUG_REGION" );
testsuites/sptestests/spreion_err01/init.c: rtems_debug_disable( RTEMS_DEBUG_REGION );
testsuites/sptestests/spreion_err01/init.c: puts( "TA1 - rtems_debug_enable - RTEMS_DEBUG_REGION" );
testsuites/sptestests/spreion_err01/init.c: rtems_debug_enable( RTEMS_DEBUG_REGION );
testsuites/sptestests/sp10/init.c: puts( "Init - rtems_debug_is_enabled - is 0x1 set? No" );
testsuites/sptestests/sp10/init.c: is_set = rtems_debug_is_enabled( 0x1 );
testsuites/sptestests/sp10/init.c: puts( "Init - rtems_debug_enable - set 0x1" );
testsuites/sptestests/sp10/init.c: rtems_debug_enable(0x1);
testsuites/sptestests/sp10/init.c: puts( "Init - rtems_debug_is_enabled - is 0x1 set? Yes" );
testsuites/sptestests/sp10/init.c: is_set = rtems_debug_is_enabled( 0x1 );
testsuites/sptestests/sp10/init.c: puts( "Init - rtems_debug_disable - clear 0x1" );
testsuites/sptestests/sp10/init.c: rtems_debug_disable(0x1);
testsuites/sptestests/sp10/init.c: puts( "Init - rtems_debug_is_enabled - is 0x1 set? No" );
testsuites/sptestests/sp10/init.c: is_set = rtems_debug_is_enabled( 0x1 );

```

The only user is the Classic Region and it is only active in case RTEMS\_DEBUG is defined. Due to the heap protection support which is also available in case RTEMS\_DEBUG is defined, the expensive heap walks are superfluous.

We should remove this API entirely to simplify the code base.

**Description**

Ben.. someone posted on IRC that they used your scripts but the clones point to your personal repos which are out of date I am guessing.  
Also is this discussed anywhere on the RTEMS wiki?

**Comment 1**

1. **Ben Gras**, Fri, 11 Dec 2015 11:43:05 GMT
- Drat. OK I am going to look into this.

**Comment 2**

1. **Ben Gras**, Sat, 12 Dec 2015 20:47:43 GMT

I have

. reproduced the problem

To fix some encountered problems, I

. rebased my RSB repo . changed to the 4.12 ARM bset . updated the qemu linaro commit id to accept newly passed configure options . rebased my rtems-tools repo . hard-coded an RTEMS module location in rtems-test so it could find rtemstoolkit - not sure what a clean fix is there

As a result, tests are passing using the bbxm linaro qemu, making it Very Likely that everything is fixed.

I have to go now but as far as I'm concerned this ticket can be closed once I (or anyone) verified with their own eyes that this newly built BSP boots on real hardware. All changes are pushed so anyone can try.

#### Comment 3

1. **Chris Johns**, Sun, 13 Dec 2015 01:46:38 GMT

. hard-coded an RTEMS module location in rtems-test so it could find rtemstoolkit - not sure what a clean fix is there

This has been fixed in a recent patch in the rtems-tools. Can you please test it?

#### Comment 4

1. **Ben Gras**, Sun, 13 Dec 2015 04:35:16 GMT

Replying to chrisj:

. hard-coded an RTEMS module location in rtems-test so it could find rtemstoolkit - not sure what a clean fix is there

This has been fixed in a recent path in the rtems-tools. Can you please test it?

Got it. It seemed to me I had fully rebased but I will re-investigate when I have some more time.

#### Comment 5

1. **Chris Johns**, Sun, 13 Dec 2015 04:38:56 GMT

These are the patches on master and 4.11:

<https://git.rtems.org/rtems-tools/commit/?id=a6f5f188ce61d586136c643125dfb857da64169f> <https://git.rtems.org/rtems-tools/commit/?h=4.11&id=3b9bfa4dfe6fe10fbaf1ebbf1ddca660c2f33167>

#### Comment 6

1. **Ben Gras**, Sun, 13 Dec 2015 04:53:13 GMT

Acknowledged. I have to get to bed, please let me update later..

#### Comment 7

1. **Ben Gras**, Sun, 27 Dec 2015 02:33:17 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

All build problems are fixed in my RSB repo. I have verified it works from scratch on real hw. I had to fix an additional build problem in uboot now that gcc has major version 6.

I am going to resolve this ticket and retry the tools test.

#### Comment 8

1. **Ben Gras**, Sun, 27 Dec 2015 03:18:58 GMT

@chris, it seems your later commit of running the tester from a git clone did the trick - i rebased and the tester works now too.

Unfortunately there is now yet another problem with a new uboot for the bbxm so the actual tests have started failing :(.

### Description

Notepads were marked as obsolete in #2265. Next step is to remove them. Documentation should mention that notepads are removed and list the alternatives, e.g. POSIX keys or thread local storage.

### Attachments:

1 **Aun-Ali Zaidi**, Wed, 23 Dec 2015 21:06:32 GMT

**attach:** set to [0001-api-Remove-deprecated-Notepads\\_patch](https://devel.rtems.org/ticket/2493/0001-api-Remove-deprecated-Notepads_patch) ([https://devel.rtems.org/ticket/2493/0001-api-Remove-deprecated-Notepads\\_patch](https://devel.rtems.org/ticket/2493/0001-api-Remove-deprecated-Notepads_patch))

### Comment 1

1. **Sebastian Huber**, Tue, 15 Dec 2015 10:54:46 GMT

Remove RTEMS\_API\_Control::Notepads Remove all rtems\_task\_note\*() functions and now unused dependencies. Build with all tests enabled and fix all compile and link time errors. Run tests without regressions. Remove RTEMS\_tasks\_MP\_Packet::note\*. Build with --enable-multiprocessing. Build with all tests enabled and fix all compile and link time errors. Run tests without regressions. Update documentation, to be defined.

### Comment 2

1. **Aun-Ali Zaidi**, Wed, 23 Dec 2015 21:10:03 GMT

Notepads were a feature of RTEMS' tasks that simply functioned in the same way as POSIX keys or threaded local storage (TLS). They were introduced well before per task variables, which are also deprecated, and were barely used in favor of their POSIX alternatives.

In addition to their scarce usage, Notepads took up unnecessary memory. For each task:

16 32-bit integers were allocated. A total of 64 bytes per task per thread.

This is especially critical in low memory and safety-critical applications.

They are also defined as uint32\_t, and therefore are not guaranteed to hold a pointer.

Lastly, they are not portable solutions for SMP and uniprocessor systems, like POSIX keys and TLS.

I am closing this ticket once the patch is committed.

#### **Description**

Notepads were marked as obsolete in 4.11. Next step is to remove them. Documentation should mention that notepads are removed and list the alternatives, e.g. POSIX keys or thread local storage.

#### **Comment 1**

1. **Sebastian Huber**, Tue, 15 Dec 2015 10:50:17 GMT

This ticket depends on #2306.

#### **Comment 2**

1. **Sebastian Huber**, Tue, 15 Dec 2015 10:56:21 GMT

Remove `Thread_Control::task_variables`. Remove all `rtems_task_*variable*()` functions and now unused dependencies. Build with all tests enabled and fix all compile and link time errors. Run tests without regressions. Update documentation, to be defined.

**Description**

The MVME5500 BSP uses Notepads in its exception handler and #2493 removes them. This is obviously not portable and requires a rewrite.

### **Description**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

The POSIX API is currently a build-time configuration option. In general it is beneficial to avoid build-time configuration options since this reduces the testing scope.

Applications not using the POSIX API should observe only a minimal overhead due to this change.

This enhancement depends on #2408.

```

#### Comment 6

1. **Sebastian Huber**, Tue, 31 Jan 2017 09:13:49 GMT

2. **version:** 4.12 deleted

3. **milestone:** changed from 4.12 to 5.0

#### Comment 7

1. **Sebastian Huber**, Thu, 11 May 2017 10:05:24 GMT

The signals implementation has some (severe) defects:

#2100 #2263 #2607 #2716 #2690

Fixing them is a major work package. I suggest to enable the non-signal related stuff of the POSIX API by default.

#### Comment 8

### Description

The file libcpu/i386/cpu.h provides functions referenced in rtems/score/i386.h. Relatedly, libcpu/i386/cpu.h is the only other consumer than score/cpu.h of the score/interrupts.h. The libcpu/i386/cpu.h should be refactored into rtems/score/i386.h, which could also then subsume rtems/score/interrupts.h.

---

### **Description**

In reviewing RTEMS+newlib POSIX conformance, I noticed that our newlib configuration does include the `exec*()` variants. All of these call `_execve()` which we already provided.

This ticket is just to explain the removal of the RTEMS copies. The functional behavior to the user is still to return ENOSYS.

### Comment 1

1. **Joel Sherrill**, Tue, 19 Jan 2016 18:33:27 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

In 22bb1b61cb4efe0c0dbe41057aac83bb5cfeb5d3/rtems:

```
posix/src/exec*: Remove all variants already in Newlib
```

```
The RTEMS build of Newlib includes implementations of all exec*() variants. They rely on the _execve() support method. RTEMS already had this and it returned ENOSYS. There is no functional change.
```

```
closes #2537.
```

### Description

It looks like some BSPs with their own linkcmds may have shrunk too much. Norm appears to be 50% while some went to 75-80%. A second look after catching the pattern indicates that the KEEP() section requirements in the linker scripts were not correct and it was missed.

Rather than reverting a bunch of patches, this ticket is to review all function-section patches from this one back in time for cxx\_iostream shrinking too much.

commit 6d21c13e5094d490280a941cf0e8333f91f85715 Author: Ralph Holmes  
Date: Sat Jan 23 21:15:40 2016 +0000

powerpc/gen5200: Add per-section compilation and linking support.

For the brs5l BSP variant:

### Comment 1

1. **Joel Sherrill**, Sat, 23 Jan 2016 22:25:02 GMT

The following commits were made before this was noticed. Only those with a large cxx\_iostream shrinkage or no cxx\_iostream size need review.

arm/beagle: Add per-section compilation and linking support arm/edb7312: Add per-section compilation and linking support arm/gdbarmsim: Add per-section compilation and linking support arm/gumstix: Add per-section compilation and linking support arm/lm3s69xx: Add per-section compilation and linking support arm/lpc176x: Add per-section compilation and linking support m68k/av5282: Add per-section compilation and linking support. m68k/av5282: Add per-section compilation and linking support. m68k/av5282: Add per-section compilation and linking support. m68k/gen68302: Add per-section compilation and linking support. m68k/gen68340: Add per-section compilation and linking support. m68k/gen68360: Add per-section compilation and linking support. m68k/gen68360: Add per-section compilation and linking support. m68k/genmcf548x: Add per-section compilation and linking support. m68k/mcf5206elite: Add per-section compilation and linking support. m68k/mcf52235: Add per-section compilation and linking support. m68k/mcf5225x: Add per-section compilation and linking support. m68k/mcf5235: Add per-section compilation and linking support. m68k/mcf5329: Add per-section compilation and linking support. m68k/mrm332: Add per-section compilation and linking support. m68k/mvme147: Add per-section compilation and linking support. m68k/mvme147s: Add per-section compilation and linking support. m68k/mvme162: Add per-section compilation and linking support. m68k/mvme167: Add per-section compilation and linking support. m68k/ods68302: Add per-section compilation and linking support. m68k/uC5282: Add per-section compilation and linking support. mips/csb350: Add per-section compilation and linking support. mips/hurricane: Add per-section compilation and linking support. mips/malta: Add per-section compilation and linking support. mips/rbt4925: Add per-section compilation and linking support. mips/rbt4938: Add per-section compilation and linking support. powerpc/beatnik: Add per-section compilation and linking support. powerpc/gen5200: Add per-section compilation and linking support. powerpc/haleakala: Add per-section compilation and linking support. powerpc/mbx8xx: Add per-section compilation and linking support. powerpc/mpc8260ads: Add per-section compilation and linking support. powerpc/mvme3100: Add per-section compilation and linking support. powerpc/mvme5500: Add per-section compilation and linking support. powerpc/qemuppc: Add per-section compilation and linking support. powerpc/ss555: Add per-section compilation and linking support. powerpc/t32mppc: Add per-section compilation and linking support. powerpc/tqm8xx: Add per-section compilation and linking support. powerpc/virtex4: Add per-section compilation and linking support. powerpc/virtex5: Add per-section compilation and linking support. powerpc/virtex: Add per-section compilation and linking support.

### Comment 3

1. **Joel Sherrill**, Sat, 23 Jan 2016 22:36:47 GMT

After a review of all potential BSPs, I have determined that these are the ones which are almost certainly missing KEEP() sections. This drops the set considerably.

As a practical matter, the BSPs will be converted to use a shared linkcmds.base or have the use of function-sections disabled by commenting out the added lines. We need to work out the details but the same comment should be added above those lines like this (review and approve):

```
# This BSP does not either (a) use a shared linkcmds base file or (b) include # proper KEEP() directives in its linkcmds* files. Because of these arguments # can not currently be enabled.
```

powerpc/mbx8xx: Add per-section compilation and linking support. - removed per #2545. powerpc/haleakala: Add per-section compilation and linking support. - #2561. powerpc/ss555: Add per-section compilation and linking support. - #2563. powerpc/gemuppc: Add per-section compilation and linking support. - #2564. powerpc/mpc8260ads: Add per-section compilation and linking support. #2565. m68k/mvme162: Add per-section compilation and linking support. - now uses shared m68k/gen68360: Add per-section compilation and linking support. - #2566. m68k/mvme147s: Add per-section compilation and linking support. - now uses shared m68k/mvme147: Add per-section compilation and linking support. - now uses shared m68k/mrm332: Add per-section compilation and linking support. - #2657. m68k/mcf5225x: Add per-section compilation and linking support. - #2568. m68k/mcf5329: Add per-section compilation and linking support. - #2569. m68k/mcf52235: Add per-section compilation and linking support. - #2570. m68k/mcf5235: Add per-section compilation and linking support. - #2571. m68k/mcf5206elite: Add per-section compilation and linking support. - #2572. m68k/gen68340: Add per-section compilation and linking support. - #2573. m68k/av5282: Add per-section compilation and linking support. - #2574. m68k/mvme167: Add per-section compilation and linking support. - now uses shared m68k/gen68302: Add per-section compilation and linking support. - removed per #2543. m68k/uC5282: Add per-section compilation and linking support. - #2575. m68k/ods68302: Add per-section compilation and linking support. - removed per #2544. arm/lpc176x: Add per-section compilation and linking support. - #2576.

**Comment 4**

1. **Joel Sherrill**, Mon, 25 Jan 2016 20:14:25 GMT

In 449905a8acaa5eac214c51ef2547b0321e86d6b2/rtems:

```
m68k/mvme*: switch to shared linkcmds.base
updates #2542.
```

**Comment 5**

1. **Joel Sherrill**, Sat, 06 Feb 2016 16:26:17 GMT

All BSPs which had function sections enabled and clearly broke `cxx_iostream` should now have per function section linking disabled and a separate ticket filed.

## 2554 - New watchdog handler implementation

## Description

### Background

The watchdog handler uses delta chains. The insert operation has a  $O(n)$  worst-case time complexity with  $n$  being the count of watchdogs in the delta chain. In each step of the insert operation, the SMP lock of the corresponding watchdog header is acquired and released. The profiling data obtain by test program `smptests/smpwakeafter01` showed that the current implementation leads to unacceptable latencies, thus it should be replaced by something else.

The use cases for the watchdog handler fall roughly into two categories.

- Timeouts - used to detect if some operations needs more time than expected. Since the unexpected happens hopefully rarely, timeout timers are usually removed before they expire. The critical operations are insert and removal. They are important for the performance of a network stack.
- Timers - used to carry out some work in the future. They usually expire and need a high resolution. An example user is a time driven scheduler, e.g. rate-monotonic or EDF.

One approach is to use a red-black tree with the expiration time as the key. This leads to  $O(\log(n))$  worst-case insert and removal operations. For each operation it is sufficient to acquire and release the lock only once. The drawback is that a 64-bit integer type must be used for the intervals to avoid a potential overflow of the key values. With a system tick interval of 1ns the system could run more than 500 years before an overflow happens. The EDF scheduler would also profit from a 64-bit interval representation, see #2173.

An alternative is the use of a timer wheel based algorithm which is used in Linux and FreeBSD for example. A timer wheel based algorithm offers  $O(1)$  worst-case time complexity for insert and removal operations. The drawback is that the run-time of the watchdog tick procedure is somewhat unpredictable due to the use of a hash table or cascading.

Which approach should we choose? Since the watchdog serves the timeout and timer services in RTEMS we have to make some trade-offs. We recommend to use the red-black tree approach which offers a more predictable run-time behaviour and sacrifice the constant insert and removal operations offered by the timer wheel algorithms, see also <https://www.kernel.org/doc/ols/2006/ols2006v1-pages-333-346.pdf>. We can reuse the red-black tree support already used for the thread priority queues.

The new watchdog handler implementation is a prerequisite to eliminate the Giant lock in the Classic Timer manager.

### Implementation

Change the `_Watchdog_Ticks` since boot to a 64-bit integer type. Keep the `Watchdog_Interval` at 32-bit for backward compatibility. Replace the delta chains with a red-black tree. Use the ticks for timers with a relative expiration time. Use `struct timespec` or `struct bintime` for timers with an absolute expiration time. This has the benefit that we do not have to adjust the data structures in case the absolute time changes, e.g. due to NTP. It simplifies the POSIX timer services, since no conversion to ticks is necessary.

The clock tick interval is 1ms (1000 ticks per second). We observe a maximum thread dispatch disabled time of 3.1ms on the first processor which serves the clock interrupt and 1.5ms on the other processors. There is no contention on the Giant lock. However, the watchdog lock is highly contended. The maximum acquire and section times are small compared to the maximum thread dispatch disabled time. The maximum interrupt time on the first processor is 0.012ms, so serving the clock interrupt is no a big deal This clearly indicates that the loop based updates of the delta chains are the main issue.

#### Comment 4

1. **Joel Sherrill**, Thu, 18 Feb 2016 19:58:15 GMT

I am not opposed to the use of RB Trees or the use of 64 bit time for absolute/calendar time.

I would like to see us move away from ticks on the relative timer and move to something more like CLOCK\_MONOTONIC based on uptime.

I assume the new ticks key value will be the "watchdog ticks since boot" value to trigger the watchdogs on. I think this is really still OK based on the math but limits the durations one can delay and the granularity.

The extra granularity may allow us to move to a tickless or variable clock tick in the future. Although I am still concerned that reprogramming the timer on the fly is potentially more dangerous and error prone than a fixed tick.

The maximum thread dispatch disabled time drops from 3ms to about 100us. There is now one watchdog header per-CPU. Profiling data is only shown for one of the watchdog locks. No contention is visible here. The new bottle neck is the scheduler lock, but this is a different issue. In addition the interrupt count on scheduler A is about two times the clock tick interrupt count. This means that each clock tick service results in an inter-processor interrupt. This highlights one of the known problems of a global priority based scheduler: massive thread migrations.

**Description**

## Background

The standard approach to turn a uni-processor operating system into an SMP-capable operating system is to encapsulate virtually the complete operating system state and protect it by one global recursive lock - the Giant lock. Thus, at most one processor can modify the operating system state at a time. Under Giant lock protection interrupt disable/enable critical sections still work. This approach is easy to realize and leads to something that runs on SMP with a minimal effort. Unfortunately, such an operating system does not scale with the processor count and offers very poor performance. It is quite useless for real applications.

The first steps to get rid of the Giant lock are tackled with the introduction of fine grained locking for the scheduler, watchdog handler, timestamps, thread queues, events, semaphores and message queues. The Giant lock is still used in a couple of places, e.g. all other objects using thread queues, thread life cycle changes (termination, restart) and scheduler changes. It is a straight forward task to eliminate it entirely, but it is also somewhat labour intensive since a lot of code must be changed.

## Implementation

Eliminate all remaining code areas that use

- `_ISR_Disable()`,
- `_ISR_Enable()`, and
- `_ISR_Flash()`.

Direct users of these macros are

- `_Chain_Append()`,
- `_Chain_Extract()`,
- `_Chain_Get()`,
- `_Chain_Insert()`, and
- `_Chain_Prepend()`.

Each spot must be dealt with individually. Once this is done, delete these macros since they are now superfluous. Rename `_ISR_Disable_without_giant()` into `_ISR_Locale_disable()`. Rename `_ISR_Enable_without_giant()` into `_ISR_Locale_enable()`.

Eliminate all remaining code areas that use

- `_Thread_Disable_dispatch()` and
- `_Thread_Enable_dispatch()`.

A prominent user of this functions is `_Objects_Get()`. The following components are affected by these functions

- Classic barrier handler,
- Classic dual-ported memory handler,
- Classic message queue handler,
- Classic partition handler,
- Classic rate-monotonic handler,
- Classic region handler,
- Classic semaphore handler,

In c8982e5f6a4857444676165deab1e08dc91a6847/rtems:

posix: Simplify message queues

The `mq_open()` function returns a descriptor to a POSIX message queue object identified by a name. This is similar to `sem_open()`. In contrast to the POSIX semaphore the POSIX message queues use a separate object for the descriptor. This extra object is superfluous, since the object identifier can be used directly for this purpose, just like for the semaphores.

Update #2702. Update #2555.

**Description**

Background

The O(m) Independence-Preserving Protocol (OMIP) is a generalization of the priority inheritance protocol to clustered scheduling which avoids the non-preemptive sections present with priority boosting. The m denotes the number of processors in the system. Its implementation requires an extension of the scheduler helping protocol already used for the MrsP semaphores. However, the current implementation of the scheduler helping protocol has two major issues, see Catellani, Sebastiano, Luca Bonato, Sebastian Huber, and Enrico Mezzetti: Challenges in the Implementation of MrsP. In Reliable Software Technologies - Ada-Europe 2015, pages 179–195, 2015. Firstly, the run-time of some scheduler operations depend on the size of the resource dependency tree. Secondly, the scheduler operations of threads which don't use shared resources must deal with the scheduler helping protocol in case an owner of a shared resource is somehow involved.

To illustrate the second issue, let us look at the following example. We have a system with eight processors and two L2 caches. We assign processor 0 to a partition P for latency sensitive real-time tasks (e.g. sensor and actuator handling), processors 1, 2 and 3 are assigned to a cluster CA and the remaining processors are assigned to a cluster CB for soft real-time worker tasks. The worker tasks use a shared resource, e.g. a file system for data storage. Let us suppose a task R of partition P sends a message to the workers. This may make a waiting worker ready, which in turn pre-empts the owner of a shared resource. In this case the scheduler helping protocol takes action and is carried out by the task R. This contradicts the intended isolation of scheduler instances.

The reason for this unfortunate coupling is a design issue of the scheduler helping protocol implementation. Some scheduler operations may return a thread in need of help. For example, if a thread is unblocked which pre-empts an owner of a shared resource, then the pre-empted thread is returned. Once a thread in need of help is returned, the ask for help operation of the scheduler is executed. An alternative to this return value based approach is the introduction of a pre-emption intervention during thread dispatching. Threads taking part in the scheduler helping protocol indicate this with a positive resource count value. In case a thread dispatch occurs and pre-empts an owner of a shared resource, the scheduler ask for help operation is invoked. So, the work is carried out on behalf of the thread which takes part in the scheduler helping protocol.

To overcome the first issue, an improved resource dependency tracking is required. One approach is to use a recursive red-black tree based data structure, see #2412.

#### Implementation

There are several steps necessary to implement OMIP.

- Introduce per-scheduler locks.
- Enable context switches with interrupts enabled.
- Add a pre-emption intervention to the thread dispatch.
- Add a table for priority nodes to the thread control block. For each scheduler instance there is one priority node.
- Update the table in case the thread blocks on a resource, a timeout while waiting for a resource occurs, or ownership of a resource is transferred to the thread.
- Use this table in the pre-emption intervention.
- Update the MrsP implementation to the new infrastructure.

Currently, only one scheduler lock for all scheduler instances is used. This simplified the MrsP implementation and due to the presence of a Giant lock, this was not an issue. With the elimination of the Giant lock, however, we need one scheduler lock per scheduler instance to really profit from a decoupled system due to clustered scheduling.

The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress.

If we add pre-emption intervention to the thread dispatch sequence, then there is an even greater need to avoid this issue with the interrupt latency. Interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame.

The pre-emption intervention should be added to `_Thread_Do_dispatch()` before the heir is read and perform the following pseudo-code actions.

```
pre_emption_intervention(executing):
  if executing.resource_count > 0:
    executing.lock()
    if executing.is_ready():
      for scheduler in executing.schedulers:
        scheduler.lock()
      if !executing.is_scheduled():
        for scheduler in executing.schedulers:
          scheduler.ask_for_help(executing)
      for scheduler in executing.schedulers:
        scheduler.unlock()
    else if executing.active_help_level > 0:
      idle.use(executing.scheduler_node)
    executing.unlock()
```

The scheduler help operation affects multiple scheduler instances. In terms of locking we have only two options,

- use a global scheduler lock, or
- obtain multiple per-scheduler locks at once.

A global scheduler lock is not an option. To avoid deadlocks obtain the per-scheduler locks in a fixed order. However, in this case the per-scheduler locks will observe different worst-case and average-case acquire times (depending on the order).

Use a recursive data structure to determine the highest priority available to a thread for each scheduler instance, e.g.

```
typedef struct Thread_Priority_node {
  Priority_Control current_priority;
  Priority_Control real_priority;
  struct Thread_Priority_node *owner;
  RBTNode Node;
  RBTControl Inherited_priorities;
} Thread_Priority_node;
typedef struct {
  ...
  Thread_Priority_node *priority_nodes; /* One per scheduler instances */
  ...
} Thread_Control;
```

Initially a thread has a priority node reflecting its real priority. The `Thread_Priority_node::owner` is NULL. The `Thread_Priority_node::current_priority` is set to the real priority. The `Thread_Priority_node::Inherited_priorities` is empty.

In case the thread must wait for ownership of a mutex, then it enqueues its priority node in `Thread_Priority_node::Inherited_priorities` of the mutex owner.

In case the thread is dequeued from the wait queue of a mutex, then it dequeues its priority node in `Thread_Priority_node::Inherited_priorities` of the previous mutex owner (ownership transfer) or the current mutex owner (acquire timeout).

In case the minimum of the `Thread_Priority_node::real_priority` and the `Thread_Priority_node::Inherited_priorities` changes, then `Thread_Priority_node::current_priority` is updated. In case the `Thread_Priority_node::owner` is not NULL, the priority change propagates to the owner, and so on. In case `Thread_Priority_node::current_priority` changes, the corresponding scheduler is notified.

Use the thread lock to protect the priority nodes.

1. **Sebastian Huber**, Wed, 27 Jan 2016 08:46:27 GMT
2. **description:** modified (diff)

**Comment 2**

1. **Sebastian Huber**, Wed, 27 Jan 2016 08:52:02 GMT

This is an example resource dependency tree with sixteen threads t0 up to t15 and sixteen resources r0 up to r15. The root of this tree is t0. The thread t0 owns the resources r0, r1, r2, r3, r6, r11 and r12 and is in the ready state. The threads t1 up to t15 wait directly or indirectly via resources owned by t0 and are in a blocked state. The colour of the thread nodes indicate the scheduler instance.

**Comment 3**

1. **Sebastian Huber**, Wed, 27 Jan 2016 08:54:45 GMT

This is an example of a table of priority nodes with sixteen threads t0 up to t15 and three scheduler instances s0 up to s2 corresponding to the previous example. The overall resource owner is t0. The colour of the nodes indicate the scheduler instance. Several threads of different scheduler instances depend on thread t10. So, the thread t10 contributes for example the highest priority node of scheduler instance s2 to thread t0 even though it uses scheduler instance s0.

```
score: Add per scheduler instance maximum priority
```

The priority values are only valid within a scheduler instance. Thus, the maximum priority value must be defined per scheduler instance. The first scheduler instance defines `PRIORITY_MAXIMUM`. This implies that `RTEMS_MAXIMUM_PRIORITY` and `POSIX_SCHEDULER_MAXIMUM_PRIORITY` are only valid for threads of the first scheduler instance. Further API/implementation changes are necessary to fix this.

**Comment 9**

1. **Sebastian Huber**, Wed, 22 Jun 2016 12:48:45 GMT

In 9bfad8cd519f17cbb26a672868169fcd304d5bd5/rtems:

score: Add thread priority to scheduler nodes

The thread priority is manifest in two independent areas. One area is the user visible thread priority along with a potential thread queue. The other is the scheduler. Currently, a thread priority update via `_Thread_Change_priority()` first updates the user visible thread priority and the thread queue, then the scheduler is notified if necessary. The priority is passed to the scheduler via a local variable. A generation counter ensures that the scheduler discards out-of-date priorities.

This use of a local variable ties the update in these two areas close together. For later enhancements and the OMIP locking protocol implementation we need more flexibility. Add a thread priority information block to `Scheduler_Node` and synchronize priority value updates via a sequence lock on SMP configurations.

Update #2556.

#### **Comment 54**

1. **Sebastian Huber**, Fri, 03 Feb 2017 09:58:05 GMT

In ca1e546e7772838b20d0792155e2c71514d6b5d3/rtems:

score: Improve scheduler helping protocol

Only register ask for help requests in the scheduler unblock and yield operations. The actual ask for help operation is carried out during `_Thread_Do_dispatch()` on a processor related to the thread. This yields a better separation of scheduler instances. A thread of one scheduler instance should not be forced to carry out too much work for threads on other scheduler instances.

Update #2556.

#### **Comment 55**

1. **Sebastian Huber**, Tue, 07 Mar 2017 12:21:24 GMT

In 088acbb0/rtems:

score: Fix scheduler yield in SMP configurations

Check that no ask help request is registered during unblock and yield scheduler operations. There is no need to ask for help if a scheduled thread yields, since this is already covered by the pre-emption detection.

Update #2556.

**Description****Comment 1**

1. **Chris Johns**, Sun, 31 Jan 2016 20:27:25 GMT

The word splitting needs to be in the index. At the moment the Sphinx generated PDF output's indexes overflow with the longer entries. We need to have these entries word split. The Texinfo indexes do this.

**Description**

The quick start in the RSB docs only refers to version 4.11 in the examples. It may be worth a brief paragraph about RTEMS version numbers here to help orient new users since, if they follow these directions, they will not be able to build the master.

That would be nice to have. Please update once Joel pushes his changes to the Quick Start. Thanks.

**Comment 4**

1. **shashvat jain**, Sun, 18 Nov 2018 14:04:04 GMT

I generalized the release version of RTEMS with "urversion" in rtems-docs/rsb and rtems-docs/user ,and specified a paragraph regarding the same below the commands. I also made a table in the Quick Start and rsb/project-sets page which displays the released versions and their status. here is the details of the table

\_\_release notes\_\_ \_\_status\_\_ 5 development 4.11 current release 4.10 previous release

here is what the note says

"In the above commands and all commands on this page, \_\_urversion\_\_ gives the version of RTEMS you are building or want to build. Replace it with reference to release version table on \*projects sets\* page ."

The patch with all changes made has been added to the attachments

**Comment 5**

1. **Chris Johns**, Sun, 18 Nov 2018 21:36:07 GMT

The user manual is for a single release. I think it would be confusing to mention others releases or to make the manual appear suitable for other releases. For example the manual has command lines for tools which vary between releases and so it will not be correct for at least one release.

May I suggest you run the commands listed and update the output for RTEMS 5.

**Comment 6**

1. **shashvat jain**, Wed, 21 Nov 2018 08:59:13 GMT

I have added a paragraph about version numbers in the quick start and updated the outputs of the commands at quick start I am unable to give the patch file because of spam message,please help me with this.

**Comment 7**

1. **Chris Johns**, Fri, 13 Dec 2019 15:36:10 GMT

Is this in the documentation? I cannot see it in the user of eng manuals.

**Description**

This BSP's linker script does not include KEEP() directives and thus cannot have per-function and per-data element section support enabled.

The preferred solution is to convert the BSP to use a shared base linker script. The acceptable solution is to add the proper KEEP directives to the existing linker script(s).

Shared linker scripts for the arm, m68k, and sparc have the proper KEEP sections and can serve as examples.

**Comment 1**

1. **Joel Sherrill**, Sat, 06 Feb 2016 16:26:47 GMT

In e41d8ce5a764d57952102009ff1c5e5ace69a1c8/rtems:

```
arm/.../lpc1768_embed.cfg: Disable per function sections
updates #2576.
```

**Comment 2**

1. **Marcos Diaz**, Thu, 17 Mar 2016 20:12:25 GMT

I looked into the linkerscript and it uses the shared for all arm's, which uses KEEP directives. Then I tested this BSP enabling the flags, and samples work ok:

```
hello.exe : section size addr .start 772 0 .text 79136 776 .rodata 4152 79936 .vector 1256 268435456 .data 1656 268436712 .bss 5656 268438368
```

```
With flags: hello.exe : section size addr .start 772 0 .text 61424 776 .rodata 3512 62224 .vector 1256 268435456 .data 1604 268436712 .bss 5592 268438336
```

And the same for the other samples.

**Comment 3**

1. **Marcos Diaz**, Tue, 22 Mar 2016 14:51:04 GMT

I suggest to apply the linker flags and deprecate this bug

**Description**

alarm() uses `_Watchdog_Insert_seconds()` and thus is affected by clock changes, e.g. via `_TOD_Set()`. This is wrong. The POSIX documentation is not that clear since it talks only about "realtime seconds". However, the FreeBSD implementation uses the uptime. This is also in line with the RTEMS `ualarm()` and `nanosleep()`.

#### **Description**

I am beginning to add support for the clock attribute to POSIX condition variables.

[http://pubs.opengroup.org/onlinepubs/9699919799/functions/pthread\\_condattr\\_getclock.html](http://pubs.opengroup.org/onlinepubs/9699919799/functions/pthread_condattr_getclock.html)

Since the clock can't be a CPU time clock, that leaves CLOCK\_MONOTONIC and CLOCK\_REALTIME. The thread queue is based on CLOCK\_MONOTONIC and does not have an option to use CLOCK\_REALTIME. Threads and timers waiting on CLOCK\_REALTIME should be impacted by time of day changes.

[https://docs.google.com/document/d/1GsGer0t84p-nUfZFim4Ty0LTDYNhgKBvlwip\\_gLQjTY/edit?usp=sharing](https://docs.google.com/document/d/1GsGer0t84p-nUfZFim4Ty0LTDYNhgKBvlwip_gLQjTY/edit?usp=sharing) is a Google doc with my notes so far in it on POSIX clocks. I will move it to the Wiki as it turns into something more concrete than notes and reflects plans/code.

So the first issue is how best to alter the thread queue to support using either clock source? And what does that do to the current ticks based API since you proposed different time representations for the ticks (relative/monotonic) and seconds (absolute/realtime) structures?

**Description**

The first parameter is `size_t` in the `.h` and `uintptr_t` in the body. This resulted in a compiler error on the m32c. But it is an inconsistency which should be fixed even if no architecture complained.

The `malloc.h` header file has this:

```
void *rtems_heap_allocate_aligned_with_boundary(
```

```
    size_t size,
    uintptr_t alignment,
    uintptr_t boundary
```

```
);
```

`malloc_deferred.c` has this:

```
void *rtems_heap_allocate_aligned_with_boundary(
```

```
    uintptr_t size,
    uintptr_t alignment,
    uintptr_t boundary
```

```
)
```

<b>Blocked by</b>	

---

**Description**

RTEMS uses currently a signed 32-bit integer for time\_t on Newlib. Thus, it is affected by the year 2038 problem. There are only 22 years left and this time span is within the realistic time frame of some RTEMS applications that are developed now.

The time\_t should be changed to int64\_t in Newlib. To make sure that all integer operations are carried out properly I suggest to temporarily do this

```
`#include
```

```
typedef struct {
```

```
    int64_t _val;
```

```
} time_t;
```

```
static inline time_t _time_add(time_t a, time_t b)
```

```
{
```

```
    time_t r = { a._val + b._val };
    return r;
```

```
}
```

```
static inline time_t _time_sub(time_t a, time_t b)
```

```
{
```

```
    time_t r = { a._val - b._val };
    return r;
```

```
}
```

```
static inline time_t _time_mul(time_t a, time_t b)
```

```
{
```

```
    time_t r = { a._val * b._val };
    return r;
```

```
}
```

```
static inline time_t _time_div(time_t a, time_t b)
```

```
{
```

```
    time_t r = { a._val / b._val };
    return r;
```

```
}
```

Make sure that RTEMS and Newlib build with this. Add test cases to highlight the time\_t integer limits.

**Comment 1**

1. **Nick Withers**, Mon, 07 Mar 2016 06:59:51 GMT

`__time_t__` 's required to be an integer or floating-point type by POSIX: <http://pubs.opengroup.org/onlinepubs/009696699/basedefs/sys/types.h.html>

#### **Comment 2**

1. **Sebastian Huber**, Mon, 07 Mar 2016 07:02:49 GMT

Yes, this is why I wrote temporarily. Once we are reasonably sure that all the integer operations are all right, we use

```
typedef int64_t time_t
```

I am not sure if we should keep the inline functions for clarity.

#### **Comment 3**

1. **Chris Johns**, Mon, 07 Mar 2016 23:01:46 GMT

What do you mean by "all integer operations are carried out properly"? How do you decide everything is done properly?

Is this specific to RTEMS and 3rd party code such as gcc and newlib RTEMS depends on? What happens to code such as `cpukit/ftpd/ftpd.c:1193` or `cpukit/libfs/src/jffs2/src/fs-rtems.c:1053`? The JFFS has `time_t` in it's struct `iatr` and I am not sure if this is embedded in the file system in the flash. The RFS has a special type for time in the inode on disk.

#### **Comment 4**

1. **Joel Sherrill**, Mon, 07 Mar 2016 23:11:34 GMT

I don't see the value of adding helper methods. Much of the code impacted would have to be altered to use them. Internal code using 64-bit `time_t` should just work. The issue is where there are interfaces to other representations or storage systems.

Analyse the cases Chris mentions, ask on newlib if there are any known places to be concerned about, and just try it.

Adding use of non-standard helper functions on a standard type is just extra work.

#### **Comment 5**

1. **Sebastian Huber**, Tue, 08 Mar 2016 16:58:06 GMT

I didn't assign the ticket to me because I don't work actively on this topic. Its a ticket to collect some ideas.

I just want to point out that its not as simple as `"typedef uint64_t time_t"`.

Joel, how would you ensure that you don't accidentally use maybe a long for `time_t` arithmetic in Newlib and RTEMS?

### Description

The CPU time used of a thread is currently maintained per-processor mostly during `_Thread_Dispatch()`. However, on SMP configurations the actual processor of a thread is difficult to figure out since thread dispatching is a highly asynchronous process (e.g. via inter-processor interrupts). Only the intended processor of a thread is known to the scheduler easily. Do the CPU usage accounting during thread heir updates in the context of the scheduler operations. Provide a function to get the CPU usage of a thread using proper locks to get a consistent value.

### Comment 1

1. **Chris Johns**, Tue, 08 Mar 2016 00:03:16 GMT

SMP introduces new challenges for users building applications.

I am struggling to understand what `__standard__` support RTEMS has for threads and processor performance accounting. When I last looked a while ago I found I needed to turn on profiling to get anything and I feel creating a special build is not a great option for some basic or `__standard__` performance accounting.

What do we consider as important?

Do we have things like context switches per core? Core idle time?

### Comment 2

1. **Sebastian Huber**, Wed, 09 Mar 2016 06:50:03 GMT

The profiling is optional since it may severely impact the performance of the operating system. Some SMP chips are not really well designed and offer no processor private access to timer and counter modules. Instead you must use on-chip peripheral over the system bus.

Adding some counters shouldn't be a big deal, but please create a new ticket for this. This ticket is about fixing an existing statistic so that it works on SMP.

Determining the per-processor idle time is difficult with the global fixed priority schedulers if they manage more than one processor and I don't think this value is interesting.

### Comment 3

1. **Chris Johns**, Wed, 09 Mar 2016 21:26:43 GMT

Replying to sebastian.huber:

The profiling is optional since it may severely impact the performance of the operating system. Some SMP chips are not really well designed and offer no processor private access to timer and counter modules. Instead you must use on-chip peripheral over the system bus.

Yes I agree profiling is not a normal user activity and may place extra demands on the system. We need to track this variant with buildbot.

Adding some counters shouldn't be a big deal, but please create a new ticket for this. This ticket is about fixing an existing statistic so that it works on SMP.

Good idea, I will do this.

Determining the per-processor idle time is difficult with the global fixed priority schedulers if they manage more than one processor and I don't think this value is interesting.

Maybe the stats collected are per scheduler and reflect what is important.

### Comment 4

#### Comment 1

1. **Pavel Pisa**, Wed, 09 Mar 2016 19:53:24 GMT

Hello all, I have attached proposal for fixup. I have checked that it compiles against 4.11 without warning but I have not test that it by run of compiled code under QEMU. I need to find more time for that in some of next days.

#### Comment 2

1. **Joel Sherrill**, Wed, 09 Mar 2016 20:59:53 GMT

2. cc: **Chris Johns** added

#### Comment 3

1. **Joel Sherrill**, Wed, 09 Mar 2016 21:03:07 GMT

Thanks. I don't know if I can test this or not.

The RSB build of qemu doesn't turn on the graphics module so I don't know if it hits this code or not. And from what my five minute at trying to turn it on made me think you needed Xen development files to use it and they were only available for 64-bit CentOS 6. If that's the case, the code isn't portable at all off of Linux so we should disable video, unfortunately.

The real PC I have been using to test on prints a message (from memory) that indicates it didn't initialize it or find it. Not sure which.

What setup is required to test this?

#### Comment 4

1. **Pavel Pisa**, Wed, 09 Mar 2016 21:44:22 GMT

Hello Chris, I have minimal experience with RSB based RTEMS OS builds, but regular configure make builds of RTEMS is by default with VESA graphic support which can be then initialized at runtime by RTEMS kernel option `--video=auto`. This result in switch to graphic mode early in RTEMS boot. But you need some graphic application to open frame-buffer a draw to it. Regular standard output to video console does not emulate characters drawing/text mode yet. Initial version of such text mode emulation on graphic frame-buffer is implemented in experimental branch of RPi support only till now and is in shape that it could be adapted to be generic for more architectures.

I use Microwindows/Nano?-X builds for testing (manual by RTEMS graphic toolkit `do_it -A`) or by RSB. Required packages recipes have been integrated to mainline RSB as a result of Qiao Yang GSoC project during 2015 autumn and previous work is already integrated to Microwindows mainline as well, so we can even switch scrips to use that directly instead of the Alex GSoC Microwindows fork. Microwindows demos can be run then on QEMU (VirtualBox? not tested but should work too) a we have run some tests on real PC hardware during driver development as well.

Documentation for (now default) VESA configuration is there

<https://devel.rtems.org/wiki/Projects/GraphicsToolkit#RTEMS4.11andVESABIOSExtensionVBE>

RSB build of graphic libraries against regular configure make installed RTEMS in `/opt`

```

./source-builder/sb-set-builder \
  --log=graphic-build-log.txt \
  --prefix=/opt/rtems4.11 \
  --rtems-bsp=i386/pc686 \
  --with-rtems-bsp=pc686 \
  --pkg-tar-files \
  4.11/graphics/graphics-all.bset

```

My QEMU command line

```

qemu-system-x86_64 -gdb tcp::1234 -enable-kvm -kernel $APP_BINARY \
  -vga cirrus \
  -net nic,vlan=0,model=e1000 -net user,vlan=0 \
  -serial stdio \
  -append "--console=com1 --video=auto"

```

where `$APP_BINARY` is RTEMS+application image.

I use serial output for messages and RTEMS standard output then and graphic frame-buffer for tested application.

Suitable QEMU (`qemu-system-x86_64` or `qemu-system-i386`) should be available in all GNU/Linux distributions.

#### Comment 5

1. **Pavel Pisa**, Wed, 09 Mar 2016 22:04:38 GMT

I have tested patched 4.11 build with some of my experimental applications and video setup seems OK. I need build tool-chains and switch to 4.12, I have it on my TODO, but ...

#### Comment 6

1. **Joel Sherrill**, Wed, 09 Mar 2016 22:26:07 GMT

If you have tested this patch on 4.11, we should just apply it to both branches. You just seemed concern it would break something.

**Description**

The pc386 BSP has an issue with "ld -r" when function-sections is enabled which does not seem to occur on any other BSP. The same lines were added to the custom .cfg file as on other BSPs. It is unknown at this point whether this is an x86 specific "ld -r" issue or a pc386 build configuration issue.

Per-function-section linking is disabled until this is addressed.

#### Description

When running configure with an incorrect bsp name the script does not cause an error. You can ever run make without getting any warning message.

The script should check the name of the bsp and continue only if it is a valid bsp. On the other hand if the bsp name given by the user is invalid the script should prompt a message.

**Description**

I know we reported this on the gdb list but we should have a ticket.  
Neither gdb nor run works for sis on gdb 4.11. Checked against RTEMS 4.11 tools (gdb 4.9) and it will run sis.  
Not sure about other simulators.

**Comment 1**

1. **Chris Johns**, Tue, 15 Mar 2016 22:24:32 GMT
2. **summary**: changed from **sis does not run on gdb 4.11 but does on gdb 4.9** to **sis does not run on gdb 7.11 but does on gdb 7.9**

There is 2 separate problems:

the run command does not work any more on Linux and OS X the simulator does not work

This patch <https://sourceware.org/git/gitweb.cgi?p=binutils-gdb.git;a=commit;h=465fb143> changed the sim/erc32 from the sim/common/run.c to sis.o for the run command so in effect made the run command the same as the sis command.

Our rtems-4.11 release uses gdb-7.9 with 23 patches (<https://git.rtems.org/rtems-tools/tree/tools/4.11/gdb/sparc/7.9?h=4.11>) so upgrading to gdb-7.11 was considered a better move than moving the rtems-4.11 patches to rtems-4.12. Of the 23 patches gdb-7.11 has patches 0001-0013 merged along with 0016 and the remaining patches are not merged. The 0014 patch is a gdb-7.9 version of my patch to clean up the output paths. Without that patch the erc32 does not support

MI mode and can block on input locking up when run in the test framework. The remaining patches are LEON2 and LEON3 support which I am not sure about and watchpoints.

Running on FreeBSD works with the sparc/sis BSP. Running on Linux gives:

```

chris@titi:~/development/rtems/test/gdb/sparc-rtems4.12$ /opt/rtems/4.12/bin/sparc-rtems4.12-gdb

(gdb)

```

I am not sure what broken this.

Back to the run command. The run command should be using sim/common/nrun.c and this moves the simulator to the common structure and that conflicts with the sim/erc32/infer.c code. The erc32 sim\_open is broken and needs to be fixed to return a real SIM\_DESC and that needs to be filled in correct. An issue I am not sure about is now the inferior's memory access routines link up with the SIS view of memory. I suspect they would be separate pieces of memory.

Also the sim/erc32 makes lots of printf calls and these needs to via GDB's filtered print calls. The direct printf calls break MI support.

## Comment 2

1. **Chris Johns**, Wed, 16 Mar 2016 04:51:02 GMT

In 0bbd2de7f5306ad15ce544f9c3e9a5d9bb00dc85/rtems-tools:

4.12: Patches for ERC simulator for gdb-7.11.

The patches fix the endian checks in the simulator, print filtering, and the run command.

Updates #2644.

## Comment 3

Description

In 4.11, the minimum executable did not include `open()` and `close()` because the methods `rtems_libio_post_driver()` and `rtems_libio_exit()` were not included in the executable. On the master, these two methods are showing up in minimum and pulling in these methods.

The dependency chain used to be if the console driver was installed, we needed to open and close `stdin`, `stdout`, and `stderr`. Now even without the console configured these are included.

FWIW the minimum size looks pretty good on the master for `sis`. Fixing this would likely drop it at least another 5%.

Comment 1

1. **Sebastian Huber**, Mon, 21 Mar 2016 06:47:24 GMT

This looks like a BSP-specific issue. On which BSP do you see this?

Comment 2

1. **Chris Johns**, Mon, 21 Mar 2016 06:50:32 GMT

SIS by the looks of "FWIW the minimum size looks pretty good on the master for `sis`. ...".

Comment 3

1. **Sebastian Huber**, Mon, 21 Mar 2016 06:52:49 GMT

Yes, but I don't see this problem on the `sis` BSP.

Comment 4

1. **Sebastian Huber**, Mon, 21 Mar 2016 07:41:18 GMT

It seems to be the `pc386` BSP. It pulls in a lot of stuff via `printk()` (e.g. `console_select.c`).

Comment 5

1. **Sebastian Huber**, Mon, 21 Mar 2016 07:57:49 GMT
2. **type**: changed from **defect** to **enhancement**
3. **version**: changed from **4.12** to **4.11**
4. **component**: changed from **RTEMS Configuration** to **bsps**

The `pc386` BSP has this problem also in 4.11.

Comment 6

1. **Sebastian Huber**, Mon, 21 Mar 2016 07:59:24 GMT
2. **summary**: changed from **Dependency on `open()` and `close()` reintroduced** to **pc386 BSP has complex dependencies**

Comment 7

1. **Joel Sherrill**, Mon, 21 Mar 2016 12:35:15 GMT

I saw this on sis. I was teaching a class and wouldn't use pc386 (or any BSP simulated on qemu) as my first choice since you want a simpler BSP and simpler way to execute it.

But I don't see it in sis minimum.exe now. I am going to close this.

#### Comment 8

1. **Joel Sherrill**, Mon, 21 Mar 2016 12:36:24 GMT

The pc386 and motorola\_powerpc probe for a lot of features and don't have them as optional. They aren't focused on low size but flexibility. The pc386 can have the console changed by boot arguments and this is the intention. Most BSPs don't have that kind of flexibility.

#### Comment 9

1. **Joel Sherrill**, Mon, 21 Mar 2016 12:36:39 GMT
2. **status**: changed from **new** to **closed**

---

**Description**

Lets assume we have two tasks A and B. Task A acquires a CORE spinlock. Now B somehow executes and tries to acquire the same CORE spinlock, then no progress can be made.

Alternative implementation:

Disable thread dispatching and interrupts while owning the spinlock. Forbid blocking calls while owning the spinlock.

Drawback: The test cases of the Linux Test Project would fail:

[https://github.com/linux-test-project/ltp/blob/master/testcases/open\\_posix\\_testsuite/conformance/interfaces/pthread\\_spin\\_lock/1-2.c](https://github.com/linux-test-project/ltp/blob/master/testcases/open_posix_testsuite/conformance/interfaces/pthread_spin_lock/1-2.c)

Optimization: User provided storage space for pthread\_spin\_t. In line with POSIX:

"Only the object referenced by lock may be used for performing synchronization."

[http://pubs.opengroup.org/onlinepubs/009695399/functions/pthread\\_spin\\_destroy.html](http://pubs.opengroup.org/onlinepubs/009695399/functions/pthread_spin_destroy.html)

### Comment 1

1. **Sebastian Huber**, Wed, 23 Nov 2016 11:55:03 GMT

In c42be504c92d76d2e06d0fc8ebd05fc913376d2d/rtems:

posix: Add self-contained pthread spinlock

Turn pthread\_spinlock\_t into a self-contained object. On uni-processor configurations, interrupts are disabled in the lock/trylock operations and the previous interrupt status is restored in the corresponding unlock operations. On SMP configurations, a ticket lock is aquired and released in addition.

The self-contained pthread\_spinlock\_t object is defined by Newlib in .

```
typedef struct {
```

```
    struct _Ticket_lock_Control _lock;    uint32_t        _interrupt_state;
```

```
} pthread_spinlock_t;
```

This implementation is simple and efficient. However, this test case of the Linux Test Project would fail due to call of printf() and sleep() during spin lock ownership:

[https://github.com/linux-test-project/ltp/blob/master/testcases/open\\_posix\\_testsuite/conformance/interfaces/pthread\\_spin\\_lock/1-2.c](https://github.com/linux-test-project/ltp/blob/master/testcases/open_posix_testsuite/conformance/interfaces/pthread_spin_lock/1-2.c)

There is only limited support for profiling on SMP configurations.

Delete CORE spinlock implementation.

Update #2674.

**Description**

The rtems\_configuration\_table has:

```
#ifdef RTEMS_SMP
bool                smp_enabled;
#endif
```

I would like the smp\_enabled variable to always be defined for 4.12 and always set to false when RTEMS\_SMP is not defined. It is impossible to parse the configuration table with external auditing tools with out this field always being present unless you examine the DWARF debug info.

I wonder if User\_multiprocessing\_table is the same so this means the members of the configuration table must always be defined.

Chris

**Comment 1**

1. **Chris Johns**, Mon, 04 Apr 2016 01:48:55 GMT
2. **description**: modified (diff)

**Comment 2**

1. **Sebastian Huber**, Mon, 04 Apr 2016 05:27:59 GMT

Yes, the top-level configuration tables should contain no pre-processor stuff.

**Comment 3**

1. **Joel Sherrill**, Mon, 04 Apr 2016 09:05:18 GMT

With per function/data element linking, will the smp enabled variable even make it to a linked uniprocessor exe if SMP is disabled and the variable is always false? There will be no code to reference it.

**Comment 4**

1. **Chris Johns**, Mon, 04 Apr 2016 21:23:58 GMT

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Replying to joel.sherrill:

With per function/data element linking, will the smp enabled variable even make it to a linked uniprocessor exe if SMP is disabled and the variable is always false? There will be no code to reference it.

It is in the configuration table. All that is being suggested to always have the elements in the table. There is no code.

#### Comment 5

1. **Sebastian Huber**, Wed, 15 Feb 2017 14:25:52 GMT
2. **owner**: set to **Sebastian Huber**
3. **status**: changed from **new** to **assigned**
4. **milestone**: changed from **4.12** to **Indefinite**

#### Comment 6

1. **Sebastian Huber**, Tue, 31 Mar 2020 10:59:06 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **invalid**
4. **milestone**: changed from **Indefinite** to **5.1**

The configuration table no longer exists. In particular, the SMP enabled indicator is no longer used. The User\_multiprocessing\_table no longer exists. In MPCl configurations, there is now an \_MPCl\_Configuration.

**Description**

POSIX key destructors must be called during thread restart. Just like the POSIX cleanup handlers. This ensures that the TLS object destructors are called during thread restart for example. It is important for the global construction, which uses a thread restart to run the Init task in a clean environment.

**Description**

When `-std=c99` is on the compile line, there is a linking error for undefined references to `htonl`, `htons`, `ntohl`, and `ntohs`. This test case is just for `htonl` but others should be similar.

This likely impacts the 4.11 branch of `rtems-libbsd` as well but I was testing on master.

Test case

```
=====
```

```
#include
```

```
int main(
```

```
    int argc,
    char __argv __
```

```
)
```

```
{
```

```
    uint32_t v = (uint32_t) argc;
    uint32_t rc = htonl(v);
    return v;
```

```
}
```

```
=====
```

This script was what I used to find what caused the linking error to go away.

```

#### **Description**

`_POSIX_Semaphore_Delete()` used `-1` for the thread queue flush status which in turn resulted in an invalid memory access in `_POSIX_Semaphore_Translate_core_semaphore_return_code()`.

#### Comment 1

1. **Joel Sherrill**, Tue, 19 Apr 2016 13:10:50 GMT

I went back to the 4.8 branch and the translation was a switch in `semaphorewaitsupp.c` which covered all cases. Also the error returned was not `-1` but `CORE_SEMAPHORE_WAS_DELETED`.

Somewhere along the line, the code was changed to a table lookup and range checking was moved to an `ifdef DEBUG`.

I have no idea why the status returned is no longer `CORE_SEMAPHORE_WAS_DELETED` which would likely not result in an out of range access.

Did the debug check catch this error? If not, then the debug check is insufficient.

#### Comment 2

1. **Sebastian Huber**, Tue, 19 Apr 2016 13:14:45 GMT

There was no test case, so the debug check was simply not triggered.

#### Comment 3

1. **Sebastian Huber**, Thu, 21 Apr 2016 05:33:39 GMT
2. **status:** changed from **new** to **closed**

/build/rtems-4.12/microblaze-rtems4.12/bin/ld: cannot open linker script file xilinx.ld: No such file or directory
collect2: error: ld returned 1 exit status
```

Reason:

```
gcc/config/microblaze/microblaze.h: %{!T*: -dT xilinx.ld%s}"
```

This should be somehow fixed in the RTEMS GCC configuration for microblaze.

### Comment 1

1. **Joel Sherrill**, Thu, 21 Apr 2016 14:54:47 GMT

This is in gcc/config/microblaze/microblaze.h:

```
===== /* Extra switches sometimes passed to the linker. */ /* -xl-mode-xmdstub
translated to -Zxl-mode-xmdstub -- deprecated. */
#define LINK_SPEC "%{shared:-shared} -N -relax \
```

```
%{mbig-endian:-EB --ofORMAT=elf32-microblaze} \ %{mlittle-endian:-EL --ofORMAT=elf32-microblazeel} \ %{Zxl-mode-xmdstub:-defsym
TEXT_START_ADDR=0x800} \ %{mxl-mode-xmdstub:-defsym _TEXT_START_ADDR=0x800} \ %{mxl-gp-opt:%{G*}} %{!mxl-gp-opt: -G 0} \ %{!T*: -
dT xilinx.ld%s}"
```

We can add an undef of LINK\_SPEC to gcc/config/microblaze/rtems.h as a minimum. Or we can redefine it to a subset of what it is by default.

Based on the set of libc.a's installed, I think we need at least the endian flags. I would tend to keep the mxl-gp-opt since it looks harmless enough. But I would redefine and drop the xmdstub and xilinx.ld ones (drop 3, keep rest). That results in:

```
#undef LINK_SPEC `#define LINK_SPEC "%{shared:-shared} -N -relax \
```

```
%{mbig-endian:-EB --ofORMAT=elf32-microblaze} \ %{mlittle-endian:-EL --ofORMAT=elf32-microblazeel} \ %{mxl-gp-opt:%{G*}} %{!mxl-gp-opt: -G 0}
```

How does that look?

### Comment 2

1. **Joel Sherrill**, Thu, 21 Apr 2016 15:41:04 GMT

I posted a patch which builds but I haven't tested it with RTEMS. Give this a try:

<https://lists.rtems.org/pipermail/devel/2016-April/014651.html>

**Description**

The `mq_open()` function returns a descriptor to a POSIX message queue object identified by a name. This is similar to `sem_open()`. In contrast to the POSIX semaphore the POSIX message queues use a separate object for the descriptor. This extra object is superfluous, since the object identifier can be used directly for this purpose, just like for the semaphores.

**Comment 1**

1. **Sebastian Huber**, Mon, 02 May 2016 10:07:53 GMT

In c8982e5f6a4857444676165deab1e08dc91a6847/rtems:

```
posix: Simplify message queues
```

The `mq_open()` function returns a descriptor to a POSIX message queue object identified by a name. This is similar to `sem_open()`. In contrast to the POSIX semaphore the POSIX message queues use a separate object for the descriptor. This extra object is superfluous, since the object identifier can be used directly for this purpose, just like for the semaphores.

<b>Blocked by</b>	

**Description**

The Classic binary semaphores without a locking protocol can be released by everyone, e.g. in contrast to the POSIX mutexes (all variants) or the Classic binary semaphores with priority inheritance or ceiling, there is no owner check in the release path.

This behaviour is a bit unexpected and not documented.

The following test case fails in case an owner check is added:

```
*** BEGIN OF TEST SP 42 ***
Exercising blocking discipline w/extract in FIFO order
Exercising blocking discipline w/unblock in FIFO order
TA00 - unblocked - OK
rtems_semaphore delete FAILED -- expected (RTEMS SUCCESSFUL) got (RTEMS RESOURCE IN USE)
```

This is actually a bug in the test, since an available mutex is released again.

### Comment 3

1. **Sebastian Huber**, Mon, 06 Jun 2016 11:17:00 GMT

In 3ad5f86cf6803204b98760cdce0c56ef6d79bccd/rtems:

rtems: Fix no protocol mutex release

The Classic binary semaphores without a locking protocol (RTEMS\_BINARY\_SEMAPHORE) could be released by everyone, e.g. in contrast to the POSIX mutexes (all variants) or the Classic binary semaphores with priority inheritance or ceiling, there was no owner check in the release path.

This behaviour was a bit unexpected and not documented. Add an owner check to the release path. Update sptests/sp42 accordingly.

This change has nothing to do with the simple binary semaphores (RTEMS\_SIMPLE\_BINARY\_SEMAPHORE) which have no owner at all.

Update #2725

**Description**

The `clock_nanosleep` function is provided to enable specifying the clock source (`CLOCK_REALTIME` or `CLOCK_MONOTONIC`) and to control whether or not to use an absolute or relative reference point via `TIMER_ABSTIME` flag.

See also: [http://pubs.opengroup.org/onlinepubs/009695399/functions/clock\\_nanosleep.html](http://pubs.opengroup.org/onlinepubs/009695399/functions/clock_nanosleep.html)

**Comment 1**

In e0f17fcf6f06d3383cd389d809ee4e3d6e0fb14d/rtems:

posix: fix `clock_nanosleep` and `nanosleep` clock use

Sleeping with `CLOCK_REALTIME` should use the `WATCHDOG_ABSOLUTE` clock discipline for the `threadq` so that the timeout interval may change in case the clock source changes. Similarly, `CLOCK_MONOTONIC` uses the `WATCHDOG_RELATIVE` `threadq` that will only wakeup the thread after the requested count of ticks elapse.

updates #2732

**Comment 2**

In 39d97ab78fcc37eb8b1e7d9f9717f51b249155b/rtems:

cpukit: refactor `nanosleep` and use 64-bit timeout for `threadq`

Fixes a bug with elapsed time calculations misusing absolute time arguments in `nanosleep_helper` by passing the requested relative interval. Fixes a bug with truncation of absolute timeouts by passing the full 64-bit value to `Thread_queue_Enqueue`. Share yield logic between `nanosleep` and `clock_nanosleep`.

**Description**

Add CLOCK\_DRIVER\_USE\_ONLY\_BOOT\_PROCESSOR clock driver option. If defined, then do the clock tick processing on the boot processor on behalf of all other processors. Currently, this is intended as a workaround for a Qemu shortcoming on ARM.

## Description

Task priorities are only valid within a scheduler instance. The `rtems_task_set_scheduler()` directive moves a task from one scheduler instance to another using the current priority of the thread. However, the current task priority of the source scheduler instance is undefined in the target scheduler instance. Add a third parameter to specify the priority.

```

/**
 * @brief Sets the scheduler instance of a task.
 *
 * Initially, the scheduler instance of a task is set to the scheduler instance
 * of the task that created it. This directive allows to move a task from its
 * current scheduler instance to another specified by the scheduler identifier.
 *
 * @param[in] task_id Identifier of the task. Use @ref RTEMS_SELF to select
 * the executing task.
 * @param[in] scheduler_id Identifier of the scheduler instance.
 * @param[in] priority The task priority with respect to the new scheduler
 * instance. The real and initial priority of the task is set to this value.
 * The initial priority is used by rtems_task_restart() for example.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_ILLEGAL_ON_REMOTE_OBJECT Directive is illegal on remote tasks.
 * @retval RTEMS_INVALID_ID Invalid task or scheduler identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid priority.
 * @retval RTEMS_RESOURCE_IN_USE The task owns resources which deny a scheduler
 * change.
 *
 * @see rtems_scheduler_ident().
 */
rtems_status_code rtems_task_set_scheduler(
  rtems_id task_id,
  rtems_id scheduler_id,
  rtems_task_priority priority
);

**Description**

The ARM and PowerPC interrupt epilogues call `_Thread_Dispatch()` with interrupts disabled (counter example: SPARC).

On SMP configurations, since inter-processor interrupts set the thread dispatch necessary indicator this prevents a thread dispatch notification in post-switch handlers (which all run with interrupts disabled).

On all configurations, this is a serious issue for the interrupt latency.

```
score: Add and use _Thread_Dispatch_direct()
This function is useful for operations which synchronously block, e.g. self restart, self deletion, yield, sleep. It helps to detect if these operations are called in the wrong context. Since the thread dispatch necessary indicator is not used, this is more robust in some SMP situations.
Update #2751.

**Description**

Currently, the thread begin extensions are invoked with thread dispatching disabled. There is an explanation for this in the code

```

/*
 * Take care that 'begin' extensions get to complete before
 * 'switch' extensions can run. This means must keep dispatch
 * disabled until all 'begin' extensions complete.
 */
User_extensions Thread begin( executing );

```

However, the switch extension is always invoked before the thread begin extension for all threads except the initialization thread. A thread dispatch disabled contexts drastically limits the work which can be carried out in the thread begin extensions. It is for example not possible to call malloc(), create POSIX keys or access C++ thread local storage.

The thread begin extension should execute in a normal thread context. Thread begin extensions that are disturbed by a thread dispatch should deal with this locally.

With the availability of C++ thread local storage in RTEMS being able to pre-initialize such objects in the thread begin extension would be quite handy.

## Description

dlopen on the object generated by libfoo.cpp in the attached test case fails and results in the error no .strtab section. readelf shows that the section is present, though:

```
readelf -S libfoo.o | grep strtab
(standard input):97: [92] .shstrtab          STRTAB          00000000 001fb0 00040c 00      0  0  1
(standard input):99: [94] .strtab           STRTAB          00000000 0018b0 00019e 00      0  0  1
```

Steps to Reproduce (you may have to edit BSP\_DIR in the Makefile):

```
make clean all
qemu-system-arm -m 256M -M xilinx-zynq-a9 -serial null -serial mon:stdio \
-nographic -no-reboot -kernel libdl-strtab-test.exe
```

Expected Output:

```
TEST BEGIN
dlopen: no .strtab section
assertion "handle != NULL" failed: file "libdl-strtab-test.c", line 46, function: POSIX Init
```

Development Environment:

- \_\_RTEMS Version\_\_: 4.11 (Branch "4.11", commit 3f72dda6e518d3ea04341ad4df079ecb1895ef7) with the dlerror patches from #2747, and the attached ARM PREL31 support patch (I will be making a separate ticket for this with test code soon).
- \_\_System Type\_\_: ARM Cortex-A9, xilinx\_zynq\_a9\_qemu BSP
- \_\_GCC Version\_\_:

```
arm-rtems4.11-gcc (GCC) 4.9.3 20150626 (RTEMS 4.11, RSB 1675a733536d1aec2020011e5e522497a442561a (HEAD, origin/4.11, 4.11), Newlib 2.2.0.20150423)
```

- \_\_RTEMS Configure Options\_\_:

```
--target=arm-rtems4.11 --enable-rtemsbsp="xilinx_zynq_a9_qemu xilinx_zynq_zedboard xilinx_zynq_csp_cots xilinx_zynq_csp_hybrid" --enable-tests=samples --enable-posix --prefix=$HOME/development/rtems/4.11 --disable-networking

## Comment 1

- Patrick Gauvin, Wed, 20 Jul 2016 20:26:35 GMT**

I've narrowed down the problem to a corrupted section name for .strtab being retrieved by rtems\_rtl\_obj\_cache\_read in rtems\_rtl\_elf\_parse\_sections. The offset to the name in the file was correct, but garbage was returned. The attached patch effectively disables the caching functionality of rtems\_rtl\_obj\_cache\_read, allowing the test to load the object successfully and generate this output:

```
TEST BEGIN
dlopen:
TEST END
```

## Comment 2

- Chris Johns, Fri, 12 Aug 2016 09:31:12 GMT**

Is this to be fixed on the 4.11 branch as well?

## Comment 3

- Joel Sherrill, Fri, 12 Aug 2016 15:58:59 GMT**

Patrick should answer from their perspective. But I think it should.

But from what I know of Patrick's application, we would strongly encourage them to move to the master to get greater stability on the SMP and maturity on rtems-libbsd.

#### Comment 4

1. **Patrick Gauvin**, Sat, 13 Aug 2016 18:07:54 GMT

chrisj:

Is this to be fixed on the 4.11 branch as well?

It is desirable, especially if the patches for master don't apply cleanly to 4.11.

joel.sherrill:

Patrick should answer from their perspective. But I think it should.

But from what I know of Patrick's application, we would strongly encourage them to move to the master to get greater stability on the SMP and maturity on rtems-libbsd.

This project is likely locked to 4.11, but I will recommend it.

2. **milestone:** changed from **4.12** to **4.12.0**

### Comment 2

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone:** changed from **4.12.0** to **5.1**

Milestone renamed

### Comment 3

1. **Chris Johns**, Thu, 12 Apr 2018 23:30:08 GMT

In 2a61542/rtems:

```
libdl: RAP format fixes.
Do not error if a RAP section is not found. Free a symbol table via the RTL allocator interface. Add the symbols to the global symbol table.
Update #2769
```

### Comment 4

1. **Chris Johns**, Thu, 12 Apr 2018 23:30:27 GMT

In 31cd205d/rtems:

```
tools: Add a -N option to force a name on the array.
This can be used to have a different file name for the same data name.
Update #2769
```

### Comment 5

1. **Chris Johns**, Thu, 12 Apr 2018 23:30:41 GMT

In 86e79d7/rtems:

```
testsuites/dl06: Add a test for RAP format.
```

```
This test loads a RAP format file that contains calls that are not in the kernel and linked from libm. It uses and test rtems-ld.
```

```
Update #2769
```

#### **Comment 6**

1. **Chris Johns**, Fri, 13 Apr 2018 00:30:33 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **invalid**

I have add rtems-ld to the testsuite so it and rtems-syms are both run and I cannot see any temp files being left. I wonder if this happens when there is an error?

I am going to close the ticket with invalid and it can be opened again if this appears again.

## **2770 - Missing documentation for RTEMS\_LINKER\_ROSET\_CONTENT and RTEMS\_LINKER\_RWSET\_CONTENT**

#### Description

I have an application that does not build.

The following C++ file:

```
$ cat t1.cpp
#include
```

does not compile with git head 5fe6d07ad5690e3d9c6445ca3a465a700a5a5015 on Zynq ARM. Build with:

```
$ /opt/work/rtems/4.12/bin/arm-rtems4.12-g++ \
-B/opt/work/rtems/4.12/arm-rtems4.12/xilinx_zynq_zc706/lib \
-B/opt/work/bsps/rtems/4.12/arm-rtems4.12/xilinx_zynq_zc706/lib \
-specs bsp_specs -qrtems \
-march=armv7-a -mthumb -mcpu=neon -mfloat-abi=hard -mtune=cortex-a9 \
-g -O2 -DNDEBUG -std=c++11 \
-Werror -Wall -Wextra \
-o t1.o \
-c t1.cpp
```

Some (too much to post) of the output is:

```
In file included from /opt/work/bsps/rtems/4.12/arm-rtems4.12/xilinx_zynq_zc706/lib/include/rtems/score/thread.h:36:0,

2. **description:** modified (diff)

#### Comment 2

1. **Chris Johns**, Thu, 04 Aug 2016 00:23:37 GMT

2. **summary:** changed from **Empty C++ file does not compile with HEAD.** to **Empty C++ file with just does not compile with HEAD.**

### Comment 3

1. **Sebastian Huber**, Thu, 04 Aug 2016 05:19:19 GMT

I cannot reproduce this problem. The C++ tests build fine.

### Comment 4

1. **Chris Johns**, Thu, 04 Aug 2016 05:33:46 GMT

Replying to sebastian.huber:

I cannot reproduce this problem.

Is this your build or the RSB?

The C++ tests build fine.

Which tests?

### Comment 5

1. **Sebastian Huber**, Thu, 04 Aug 2016 05:40:29 GMT

Replying to chrisj:

Replying to sebastian.huber:

I cannot reproduce this problem.

Is this your build or the RSB?

arm-rtems4.12-g++ --version arm-rtems4.12-g++ (GCC) 6.1.1 20160609 (RTEMS 4.12, RSB c476de6150f39afdf142c6f4420c59ba2f1aa2fe, Newlib 2.4.0.20160527)

The C++ tests build fine.

Which tests?

For example the iostream test (--enable-tests --enable-cxx).

### Comment 6

1. **Chris Johns**, Thu, 04 Aug 2016 05:50:55 GMT

I have:

arm-rtems4.12-g++ (GCC) 6.1.1 20160609 (RTEMS 4.12, RSB cac72a2aea711f671816d7c41bb1cfe66d54ee37, Newlib 2.4.0.20160527)

and the tests build OK as well. The problem still exists.

### Comment 7

1. **Sebastian Huber**, Thu, 04 Aug 2016 05:54:46 GMT

I guess it is a problem with your local BSP/RTEMS installation or command line. Do you have a double "-specs bsp\_specs" for example? You must specify the specs exactly once on the command line.

### Comment 8

1. **Chris Johns**, Thu, 04 Aug 2016 05:56:02 GMT

The second issue with the bsp\_specs was a command issue where it was not being shown correctly on the terminal. The first issue exists. I will update a .i file.

### Comment 9

1. **Sebastian Huber**, Thu, 04 Aug 2016 05:59:24 GMT

It uses BSD extensions, e.g. struct bintime, thus it doesn't work with -std=c++11.

The main problem is that it includes way too many implementation details.

### Comment 10

1. **Chris Johns**, Thu, 04 Aug 2016 06:00:11 GMT

Ah ok this is the problem. Is this something that needs to be fixed?

**Comment 11**

1. **Sebastian Huber**, Thu, 04 Aug 2016 06:03:08 GMT

Yes, but it has very low priority for me. Its probably something for the new-build-system era.

**Comment 12**

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	ARM
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

If the TTB is held in the text section and the section is set to read-only, and cached when booting no section change happen at run time because the table cannot be written too to change. The table cannot be changed unless the MMU is disabled.

I suggest the MMU be disabled, the table updated and then the MMU enabled.

Note, the issue only shows up on real hardware, qemu does not complain.

**Comment 1**

1. **Pavel Pisa**, Sun, 14 Aug 2016 21:51:15 GMT

I think that disabling of MMU at runtime is highly problematic. You need to stop all parallel processes to ensure that all modifications held in cache are propagated to memory and then switch MMU off. If multiple CPUs are running (SMP) then there is almost no way hot to ensure fully synchronized case for at least some ARM architecture members. Coherency is maintained through MMU and guaranteed only for cache clean through VMA. The cache clean by level+set+way does not need to generate required snoop operations.

On the other hand, ARM architecture is prepared and operations are optimized for runtime page tables updates and switching and there are defined operations sequences to ensure correct page tables changes propagations in ARM architecture manuals. So I vote for this direction.

**Comment 2**

1. **Chris Johns**, Sun, 14 Aug 2016 22:38:09 GMT

I agree it is problematic for a running system. I had not seen the note in your git commit about adding the MMU tables section. I have a patch which add this to the default set. It removes the current issue we are facing.

**Comment 3**

1. **Chris Johns**, Sun, 14 Aug 2016 23:23:05 GMT
2. **owner**: set to **Chris Johns** <chrisj@...>
3. **status**: changed from **new** to **closed**

**4. resolution: set to fixed**

In 01aa1ba34a1696736ed5200ffa1d4be9963d99b3/rtems:

```
libbsp/arm: Add the TTb table to the default MMU set up as read/write.  
This lets the table be changed at runtime for dynamic loading and debugger support.  
Closes #2775.
```

**Comment 4**

1. **Sebastian Huber**, Wed, 17 Aug 2016 07:34:22 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution: fixed** deleted

This change breaks a lot of ARM BSPs since `bsp_translation_table_end` is not defined.

**Comment 5**

1. **Chris Johns**, Wed, 17 Aug 2016 07:41:49 GMT

If you have a list I can add them to <https://git.rtems.org/rtems-tools/tree/tester/rtems/rtems-bsps.ini> and then they can be built.

Thanks.

**Comment 6**

1. **Sebastian Huber**, Wed, 17 Aug 2016 08:18:38 GMT

You can use `"/path/to/rtems/configure --target=arm-rtems4.12 --enable-maintainer-mode --enable-tests=samples"` to build all ARM BSPs.

**Comment 7**

1. **Chris Johns**, Tue, 23 Aug 2016 01:14:16 GMT
2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**

In 89a319a0f8bb9374e5a23358b266db3745268a3a/rtems:

```
libbsp/arm: Fix ARM BSPs missing the bsp_translation_table_end symbol.

**Description**

The RTEMS I2C API as defined in `cpukit/dev/include/dev/i2c/i2c.h` only defines the bus speed as Standard-mode (Sm) as defined by the I2C standard. This is set as `I2C_BUS_CLOCK_DEFAULT`. The default speed is defined by the hardware, ie the devices connected, and not this API.

The API should define the speeds as defined in the I2C standard and there should be no default. Drivers like the Cadence driver for the Zynq should be modified to require the bus speed be provided and all future drivers need to provide the speed.

**Comment 1**

1. **Sebastian Huber**, Wed, 21 Sep 2016 08:19:21 GMT

The `cpukit/dev/include/dev/i2c/i2c.h` is an I2C bus implementation header file not a part of the user API ( and . A driver must have an initial speed. The `I2C_BUS_CLOCK_DEFAULT` is the recommended initial speed.

**Comment 2**

1. **Chris Johns**, Wed, 21 Sep 2016 08:21:58 GMT

A driver's initial speed needs to match the hardware. There is nothing that can be recommended. It requires analysis and a real value.

**Comment 3**

1. **Sebastian Huber**, Wed, 21 Sep 2016 08:28:57 GMT

Ok, the set clock IO control is not part of the Linux user-space API. You can set it via the RTEMS specific `I2C_BUS_SET_CLOCK` IO control.

It is up to the application/board initialization code to set the right speed for a particular I2C bus. The generic I2C bus driver cannot and should not know this. They have to choose an arbitrary initial value.

**Comment 4**

1. **Chris Johns**, Wed, 21 Sep 2016 22:38:07 GMT

2. **status**: changed from **new** to **closed**

Replying to sebastian.huber:

Ok, the set clock IO control is not part of the Linux user-space API. You can set it via the RTEMS specific `I2C_BUS_SET_CLOCK` IO control.

I did not pick up this interface to control the clock speed.

This approach fits with the Xilinx AXI I2C controller where the bus speed is best handled by the IP integrator placing the IP into the FPGA. There is no point having software control the clock speed, the FPGA needs to do this. In this case setting the clock speed will fail, which is the default.

Thanks.

**Comment 5**

1. **Sebastian Huber**, Tue, 27 Sep 2016 05:36:27 GMT

There is an I2C bus driver handler for the clock setting. You can return an error code, if the user wants an unavailable clock frequency:

```
/**
 * @brief Sets the bus clock.
 *
 * @param[in] bus The bus control.
 * @param[in] clock The desired bus clock in Hz.
 *
 * @retval 0 Successful operation.
 * @retval negative Negative error number in case of an error.
 */
int (*set_clock)(i2c bus *bus, unsigned long clock);
```

### Description

In the current implementation, if a task period is time out, the next call of `rtems_rate_monotonic_period()` will only release one following job and manipulate the task period with the calling moment + the next length of period. With the assumption that implicit/constraint deadline and hard real-time model, the above mechanism is okay.

However, it may not be applicable for general task models, e.g., soft real-time task, arbitrary deadline, mixed-criticality system [1-4]. It is usually assumed that multiple task jobs of a task are executed in a first-come-first-serve manner. Thus, it is sufficient to release the second task job at the moment the first task job finishes according to a strictly periodic release pattern. The current design in fact shifts the release pattern of periodic/sporadic tasks. Since there maybe more than one postponed jobs due to the preemption, these postponed jobs that should be released are never released to the system.

Although there is no standard requirement in reality for deadline misses, with this enhancement, the postponed jobs will be released with the correct number without periodic release shifting. This way of handling is already widely considered in academia from 90s [2] until now [3] or even on multicores as well [4].

I refine the following four files and handle this requirement individually. The overhead seems to me negligible.

```
cpukit/rtems/include/rtems/rtems/ratemon.h
cpukit/rtems/include/rtems/rtems/ratemonimpl.h
cpukit/rtems/src/ratemontimeout.c
cpukit/rtems/src/ratemonperiod.c
```

I have tested the enhancement on Qemu and Raspberry Pi Model B+ with corresponding BSPs.

I believe this patch as a basis is required for further use for more general real-time task models. This enhancement only affect those timeout cases without changing any behaviour in normal cases. This enhancement is accepted in workshop mixed-criticality (WMC 2016) along with RTSS'16 this year [5].

To demonstrate the differences, a heuristic example is prepared in testsuites/sptests/sprmsched01 to show the benefit of the enhancement:

Given two tasks with implicit deadline that task deadline is equal to its period.

Task 1 period is 10000 ticks, whereas task 2 is 2000 ticks.

Task 1 has the execution time 6000 ticks, and task 2 has 1000 ticks.

Assume Task 1 has a higher priority than task 2. Task 1 only executes 2 times.

In the expected result, we can observe that the postponed jobs are continuously released till there is no postponed job left, and the task period will still keep as it is.

(Job 3-7 in task 2 are postponed jobs)

### Comment 1

- 1. Kuan, Sat, 08 Oct 2016 12:03:59 GMT**
- 2. keywords: Overrun RMS SP Scheduler Periodicity added; overrun removed**

### Comment 2

- 1. Sebastian Huber, Wed, 12 Oct 2016 06:01:30 GMT**

In RTEMS the behaviour of the rate-monotonic periods depends on the scheduler. We have a fix-priority scheduler (default scheduler) and a job-level fixed-priority scheduler (EDF).

In your test case you have  $6000/10000 + 1000/2000 = 110\%$  processor utilization, so your task set is not schedulable.

In case of the default scheduler, the priority assignment is not according to the rules:

[https://docs.rtems.org/doc-current/share/rtems/html/c\\_user/Rate-Monotonic-Manager-Rate-Monotonic-Scheduling-Algorithm.html#Rate-Monotonic-Manager-Rate-Monotonic-Scheduling-Algorithm](https://docs.rtems.org/doc-current/share/rtems/html/c_user/Rate-Monotonic-Manager-Rate-Monotonic-Scheduling-Algorithm.html#Rate-Monotonic-Manager-Rate-Monotonic-Scheduling-Algorithm)

Task 2 has a shorter period compared to task 1, so it must have a higher priority.

What changes your patch? You automatically restart the watchdog in case of a timeout and count the number of timeouts?

### Comment 3

1. **Kuan-Hsun Chen**, Wed, 12 Oct 2016 08:04:20 GMT

Yes, as the utilization is over 100%, my test case has deadline misses definitely. However, the test case is designed on purpose to present what is the proper overrun handling within 30000 ticks. (Otherwise, domino effect will hide the enhancement in the worst case.) Please note that, \_\_Task 1 only executes 2 times\_\_ in my test case. Let's only focus on the periodic behavior of task 2.

Please refer to my paper [5]: <http://ls12-www.cs.tu-dortmund.de/daes/media/documents/publications/downloads/2016-wmc.pdf> In the following examples, the time unit is 1000 ticks. ( $1 = 1000$  ticks)

With the original design of overrun handling, there is only one postponed job and the release pattern is not periodic. As shown in Fig.2 (a) of [5], the arrival pattern from 16 is changed due to the lateness of the red job, by which the orange job and the following jobs are all released earlier.

With this enhancement, the behaviour of task 2 with the enhancement is shown in Fig. 2 (b) of [5]. The postponed jobs due to the execution of task 1 are marked red. The jobs postponed due to the execution of previous jobs of task 2 are marked orange. The yellow job is postponed due to the orange job in the same period but can still finish its execution on time.

In fact the example can be \_\_schedule\_\_ if the system has dynamic real-time guarantees [3] for mixed-criticality system. Suppose that task 1 requires a full timing guarantee with the abnormal execution time  $C_{\{1,A\}} = 6$ , and the normal execution time  $C_{\{1,N\}} = 1$ . Task 2 is a timing tolerable task with  $C_{\{2,A\}} = C_{\{2,N\}} = 1$  as shown in Fig. 2 (c) of [5]. The second job of task 1 needs 6 time units for its execution time due to fault detection and recovery. We can see that after all the postponed jobs of task 2 are finished at 24, the release of task 2 turns back according to the original periodic pattern again. Since this example is a bit complicated for normal users, I didn't implement it in the example case.

In my patch, I automatically \_\_restart the watchdog\_\_ in case of a timeout and \_\_keep updating the number of postponed jobs\_\_ (increase). If the number of postponed jobs is not 0, the default scheduler will decrease the number of postponed jobs and release the postponed jobs accordingly. Please note that, \_\_the deadline of watchdog is not updated by the job releasing unless the targeted task has no more postponed jobs.\_\_

We all know that the schedulability researches always talking about WCET and the worst case rarely happens in reality. However the overrun handling is still useful to isolate the effect of the abrupt overrun without disturbing the other normal tasks.

### Comment 4

1. **Sebastian Huber**, Wed, 12 Oct 2016 08:12:43 GMT

Ok, I will have a closer look at your paper and the patch. However, I am on a business trip next week, so this will take at least two weeks.

Your patch changes the existing behaviour. We must decide if this is acceptable or if we need a new option, e.g. explicitly enable the watchdog restart plus counter.

### Comment 5

1. **Kuan-Hsun Chen**, Wed, 12 Oct 2016 08:25:49 GMT

Replying to sebastian.huber:

Ok, I will have a closer look at your paper and the patch. However, I am on a business trip next week, so this will take at least two weeks.

Thanks a lot.

Your patch changes the existing behaviour. We must decide if this is acceptable or if we need a new option, e.g. explicitly enable the watchdog restart plus counter.

Yes, I know. We have discussed this in user mailing list before. Please let me know if there is anything I can do.

#### **Comment 14**

1. **Sebastian Huber**, Tue, 24 Jan 2017 14:40:46 GMT

The output of sprmsched01 depends on the target timing:

```

*** BEGIN OF TEST SPRMSCHED 1 ***
Ticks per second in your system: 1000
Task 0 starts at tick 10.

Job 1 Task 1 starts at tick 6144.          Job 1 Task 0 ends at tick 6141.
Job 2 Task 1 starts at tick 8144.          Job 1 Task 1 ends at tick 7169.
Task 0 starts at tick 10009.              Job 2 Task 1 ends at tick 9168.
Job 3 Task 1 starts at tick 16145.         Job 2 Task 0 ends at tick 16140.
Job 3 Task 1 ends at tick 17169.          Job 3 Task 1 ends at tick 17169.
RTEMS_TIMEOUT
Job 4 Task 1 starts at tick 17172.         Job 4 Task 1 ends at tick 18196.
Job 5 Task 1 starts at tick 18199.         Job 5 Task 1 ends at tick 19223.
Job 6 Task 1 starts at tick 19226.         Job 6 Task 1 ends at tick 20250.
Job 7 Task 1 starts at tick 20253.         Job 7 Task 1 ends at tick 21277.
Job 8 Task 1 starts at tick 21280.         Job 8 Task 1 ends at tick 22304.
Job 9 Task 1 starts at tick 22307.         Job 9 Task 1 ends at tick 23331.
RTEMS_SUCCESSFUL
Job 10 Task 1 starts at tick 24145.        Job 10 Task 1 ends at tick 25169.
Job 11 Task 1 starts at tick 26144.        Job 11 Task 1 ends at tick 27168.
Job 12 Task 1 starts at tick 28144.        Job 12 Task 1 ends at tick 29168.
*** END OF TEST SPRMSCHED 1 ***

```

Its not clear if the test objectives are checked. Why is `rtems_rate_monotonic_postponed_jobs_count()` not used at all?

#### Comment 15

1. **Kuan-Hsun Chen**, Tue, 24 Jan 2017 14:46:59 GMT

Replying to sebastian.huber:

The output of `sprmsched01` depends on the target timing:

```

*** BEGIN OF TEST SPRMSCHED 1 ***
Ticks per second in your system: 1000
Task 0 starts at tick 10.

Job 1 Task 1 starts at tick 6144.          Job 1 Task 0 ends at tick 6141.
Job 2 Task 1 starts at tick 8144.          Job 1 Task 1 ends at tick 7169.
Task 0 starts at tick 10009.              Job 2 Task 1 ends at tick 9168.
Job 3 Task 1 starts at tick 16145.         Job 2 Task 0 ends at tick 16140.
Job 3 Task 1 ends at tick 17169.          Job 3 Task 1 ends at tick 17169.
RTEMS_TIMEOUT
Job 4 Task 1 starts at tick 17172.         Job 4 Task 1 ends at tick 18196.
Job 5 Task 1 starts at tick 18199.         Job 5 Task 1 ends at tick 19223.
Job 6 Task 1 starts at tick 19226.         Job 6 Task 1 ends at tick 20250.
Job 7 Task 1 starts at tick 20253.         Job 7 Task 1 ends at tick 21277.
Job 8 Task 1 starts at tick 21280.         Job 8 Task 1 ends at tick 22304.
Job 9 Task 1 starts at tick 22307.         Job 9 Task 1 ends at tick 23331.
RTEMS_SUCCESSFUL
Job 10 Task 1 starts at tick 24145.        Job 10 Task 1 ends at tick 25169.
Job 11 Task 1 starts at tick 26144.        Job 11 Task 1 ends at tick 27168.
Job 12 Task 1 starts at tick 28144.        Job 12 Task 1 ends at tick 29168.
*** END OF TEST SPRMSCHED 1 ***

```

Its not clear if the test objectives are checked. Why is `rtems_rate_monotonic_postponed_jobs_count()` not used at all?

That function I prepared is for the requirement from the application layer. It will not be used directly within the overrun handling. Since I only focused on the timing behaviors before, so I prepared this test without testing that.

Now I can add in the test and print out the number of postponed jobs.

#### Comment 16

1. **Sebastian Huber**, Tue, 24 Jan 2017 14:53:07 GMT

The `rtems_rate_monotonic_postponed_jobs_count()` is not tested at all, see #2885.

There is a potential integer overflow in `_Rate_monotonic_Renew_deadline()`. It should be documented what happens in this case.

#### Comment 17

1. **Kuan-Hsun Chen**, Tue, 24 Jan 2017 15:07:46 GMT

How about the potential overflow for `uint32_t` variables "missed\_count" and "count" in `rtems_rate_monotonic_period_statistics`? I didn't find related means in the current version. `stats->missed_count++` in `cpukit/rtems/src/ratemonperiod.c` could also incur this problem right?

The trivial solution is to add assertion to avoid this situation or shut down the system...

#### Comment 18

1. **Sebastian Huber**, Wed, 25 Jan 2017 06:33:58 GMT

The missed count is just a statistic.

For the integer overflow in

```
static void _Rate_monotonic_Renew_deadline(
  Rate_monotonic_Control *the_period,
  Thread_Control *owner,
  ISR_lock_Context *lock_context
)
{
  uint64_t deadline;
  ++the_period->postponed_jobs;
  the_period->state = RATE_MONOTONIC_EXPIRED;
  deadline = _Watchdog_Per_CPU_insert_relative(
    &the_period->Timer,
    _Per_CPU_Get(),
    the_period->next_length
  );
  the_period->latest_deadline = deadline;
  _Rate_monotonic_Release( the_period, lock_context );
}
```

we have some options.

Ignore it, then postponed jobs count will be zero again. Issue a new fatal error. Saturate, e.g. stay at 0xffffffff.

I am in favour of 3. It should be documented in any way.

#### **Comment 19**

1. **Sebastian Huber**, Wed, 25 Jan 2017 07:33:32 GMT

The references mentioned in the ticket should be added to the documentation:

<https://git.rtems.org/rtems-docs/tree/common/refs.bib>

They should show up in the documentation somewhere:

[https://git.rtems.org/rtems-docs/tree/c-user/rate\\_monotonic\\_manager.rst](https://git.rtems.org/rtems-docs/tree/c-user/rate_monotonic_manager.rst)

The "Further Reading" should be changed to references.

#### **Comment 20**

1. **Kuan-Hsun Chen**, Wed, 25 Jan 2017 08:30:40 GMT

I will set a precondition for saturating before ++the\_period->postponed\_jobs, and update the documentation.

#### **Comment 21**

#### **Comment 24**

1. **Sebastian Huber**, Mon, 30 Jan 2017 07:15:11 GMT

The tests sprmsched01 and spedfsched01 should use rtems\_rate\_monotonic\_get\_status() to check that the postponed\_jobs\_count has the expected value.

Ideally, the test output should be independent of the target timing and console driver.

#### **Comment 25**

1. **Kuan-Hsun Chen**, Mon, 30 Jan 2017 10:03:29 GMT

Replying to sebastian.huber:

The tests sprmsched01 and spedfsched01 should use `rtems_rate_monotonic_get_status()` to check that the `postponed_jobs_count` has the expected value. Ideally, the test output should be independent of the target timing and console driver.

Okay, I will fix them. Before the examples were prepared for showing the diagrams on the paper. I will use only assertions and `rtems_rate_monotonic_get_status()` to check the expected value of postponed jobs instead of showing the whole simulated executions.

#### **Comment 26**

1. **Kuan-Hsun Chen**, Tue, 31 Jan 2017 06:20:41 GMT
2. **status**: changed from **reopened** to **closed**
3. **resolution**: set to **fixed**

In 166a9f67cde9085a74d6d5d962160b3c92b3e3d7/rtems:

sprmsched01/spedfsched04: Revise

Instead of using the target time and console driver, both tests now use assertions and `rtems_rate_monotonic_get_status()` to verify the count of postponed jobs. The setting of `spedfsched04` is slightly changed.

Close #2795.

#### **Description**

The scheduler configuration is done at link-time. In order to support run-time re-configuration add functions to `dd/remove` processors to/from a scheduler instance.

```

/**
 * @brief Adds a processor the set of processors owned by the scheduler.
 *
 * Must be called from task context. This operation obtains and releases the
 * objects allocator lock.
 *
 * @param[in] scheduler_id Identifier of the scheduler.
 * @param[in] cpu_index Index of the processor to add.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ID Invalid scheduler identifier.
 * @retval RTEMS_NOT_CONFIGURED The processor is not configured to be used by
 * the application.
 * @retval RTEMS_INCORRECT_STATE The processor is configured to be used by
 * the application, however, it is not available.
 */
rtems_status_code rtems_scheduler_add_processor(
  rtems_id scheduler_id,
  uint32_t cpu_index
);
/**
 * @brief Removes a processor from set of processors owned by the scheduler.
 *
 * Must be called from task context. This operation obtains and releases the
 * objects allocator lock. Removing a processor from a scheduler is a complex
 * operation that involves all tasks in the system.
 *
 * @param[in] scheduler_id Identifier of the scheduler.
 * @param[in] cpu_index Index of the processor to add.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ID Invalid scheduler identifier.
 * @retval RTEMS_INVALID_NUMBER The processor is not owned by the scheduler.
 * @retval RTEMS_RESOURCE_IN_USE The set of processors owned by the scheduler
 * would be empty after the processor removal and there exists a non-idle
 * task that uses this scheduler as its home scheduler.
 */

```
Just back to RTEMS after a long time. I've build the last version (Git)
with last compiler (4.12) and looks like a simple POSIX timer doen't
work anymore... It should display "Signal 14" every second but period is
veryyyy short...and display very fast :(
Any idea? any change in the way to use POSIX with RTEMS?
See my program attached (it works fine with Linux).
I have tested with Raspberry Pi and QEMU/i386.
thx by advance

### Description

On GR740 I get:

```
rtl: RELOC_32 0x60ae8 @ 0x86edc in /dl-o5.o
rtl: relocation: .rela.eh_frame, syms:.symtab
rtl: rela: sym: gxx_personality_v0(20)=00001dec type:3 off:00000013 addend:0
CPU 0: IU in error mode (tt = 0x07, mem address not aligned)
0x0001fa9c: c4040000 ld [%l0], %g2
CPU 1: Power down mode
CPU 2: Power down mode
CPU 3: Power down mode
```

On GR712RC I get:

```
rtl: WDISP_30 0x7ffe2ccd @ 0x40087108 in /dl-o5.o
rtl: relocation: .rela.gcc_except_table.exception_d1, syms:.symtab
rtl: rela: sym: ZTISt9exception(32)=40060ae8 type:3 off:00000034 addend:0
rtl: RELOC_32 0x40060ae8 @ 0x400871b4 in /dl-o5.o
rtl: relocation: .rela.eh_frame, syms:.symtab
rtl: rela: sym: gxx_personality_v0(20)=40001dec type:3 off:00000013 addend:0
```

Target resets now.

### Attachments:

- 
- Chris Johns, Fri, 11 Nov 2016 06:09:35 GMT**  
attach: set to [libdl-sparc-R\\_SPARC\\_32-missaligned.patch](https://devel.rtems.org/ticket/2802/libdl-sparc-R_SPARC_32-missaligned.patch) ([https://devel.rtems.org/ticket/2802/libdl-sparc-R\\_SPARC\\_32-missaligned.patch](https://devel.rtems.org/ticket/2802/libdl-sparc-R_SPARC_32-missaligned.patch))
- 

### Comment 1

- Chris Johns, Thu, 10 Nov 2016 05:39:59 GMT**

This is due to the following relocation record:

```
Relocation section '.rela.eh_frame' at offset 0x5fe8 contains 3 entries:
Offset      Info      Type           Sym.Value      Sym. Name + Addend
00000013    00001403  R_SPARC_32      00000000      gxx_personality_v0 + 0
```

The type is R\_SPARC\_32 is declared as being aligned however the offset is 0x13 and this causes a misaligned access.

### Comment 2

- Sebastian Huber, Thu, 10 Nov 2016 07:32:09 GMT**

Is this a bug in the tool chain or the libdl?

### Comment 3

- Chris Johns, Thu, 10 Nov 2016 07:46:01 GMT**

I am investigating. At this stage it looks like a bug in gas. Binutils contain code that checks the lower bits of the address and selects either R\_SPARC\_32 or UA32. I am looking to make a suitable test case so I can see what is happening.

### Comment 4

- Chris Johns, Fri, 11 Nov 2016 05:50:10 GMT**

[https://sourceware.org/bugzilla/show\\_bug.cgi?id=20803](https://sourceware.org/bugzilla/show_bug.cgi?id=20803)

### Comment 5

- Chris Johns, Fri, 11 Nov 2016 06:10:48 GMT**

I have attached a work-around which allows dl05 to run and fail in the expected manner.

We can review the status of this patch once we get some feedback from the binutil's community.

#### Comment 6

1. **Jiri Gaisler**, Mon, 14 Nov 2016 14:24:08 GMT

In 316da9356ad7b612f6df6ed1e47b62268450438e/rtems:

```
rtl-mdreloc-sparc.c: Do not print unaligned pointer and cause unaligned access.
updates #2802.
```

#### Comment 7

1. **Sebastian Huber**, Tue, 22 Nov 2016 06:41:39 GMT

Now the test terminates with

```
rtl: UA 32 0x8c6d8 @ 0x8c755 in /dl-o5.o
rtl: alloc: del: SYMBOL addr=0x8c780
rtl: alloc: new: OBJECT addr=0x8c7e8 size=132
rtl: linkmap add
rtl: unresolv: global resolve
dlopen:
dlsym:
exception base called
exception_dl: throwing
terminate called after throwing an instance of 'std::runtime_error'
what(): exception dl throw
```

#### Comment 8

1. **Chris Johns**, Tue, 22 Nov 2016 21:26:11 GMT

This error is the expected result of the test. It does not pass. See #2767 for the original issue that raised the problem.

**Comment 5**

1. **Joel Sherrill**, Tue, 24 Jan 2017 14:26:47 GMT
- Is this mentioned in the porting guide? If so, that needs touching as well.  
If this topic isn't mentioned (which would surprise me), then we need a ticket to discuss endian issues in porting.

**Comment 6**

1. **Sebastian Huber**, Tue, 24 Jan 2017 14:31:59 GMT
- Where can I find the porting guide?

**Comment 7**

- <https://git.rtems.org/rtems-docs/tree/porting>

**Comment 8**

1. **Sebastian Huber**, Wed, 25 Jan 2017 10:23:37 GMT

I never used this guide before. My main reference for CPU ports is [https://git.rtems.org/rtems/tree/cpukit/score/cpu/no\\_cpu/rtems/score/cpu.h](https://git.rtems.org/rtems/tree/cpukit/score/cpu/no_cpu/rtems/score/cpu.h). It seems that it is not even built in the rtems-docs. Without looking at it, I guess it is out of date and I would need several days to fix this.

#### Description

The following constants in confdefs.h that are available for users to use are not defined in the Sphinx documentation.

- `CONFIGURE_APPLICATION_NEEDS_ATA_DRIVER` - internal and `CONFIGURE_APPLICATION_NEEDS_IDE_DRIVER` turns into this. Should we recognize both?
- `CONFIGURE_ATA_DRIVER_TASK_PRIORITY` - Document this. Looks like `CONFIGURE_APPLICATION_NEEDS_ATA_DRIVER` should replace `CONFIGURE_APPLICATION_NEEDS_IDE_DRIVER` based on this name. There is no "IDE task priority" configure option.
- `CONFIGURE_CBS_MAXIMUM_SERVERS` - document this.
- `CONFIGURE_EXECUTIVE_RAM_SIZE` - do we want users to define this anymore?
- `CONFIGURE_EXTRA_MPCI_RECEIVE_SERVER_STACK`
- `CONFIGURE_MAXIMUM_POSIX_KEY_VALUE_PAIRS` - document this.
- `CONFIGURE_MAXIMUM_PTYS` - document this. Used by telnetd. Is this the same on old and new TCP/IP stacks?
- `CONFIGURE_MAXIMUM_TASK_VARIABLES` - document for 4.11, not master
- `CONFIGURE_TIMER_FOR_SHARED_MEMORY_DRIVER` - internal only, do not document

#### Comment 1

1. **Sebastian Huber**, Thu, 19 Jan 2017 12:08:02 GMT

For `CONFIGURE_MAXIMUM_PTYS` see #2872.

## 2809 - Reduce interrupt latency on SMP configurations during thread dispatch

#### Description

Currently we have this situation:

[https://docs.rtems.org/doc-current/share/rtems/html/c\\_user/Symmetric-Multiprocessing-Services-Thread-Dispatch-Details.html#Symmetric-Multiprocessing-Services-Thread-Dispatch-Details](https://docs.rtems.org/doc-current/share/rtems/html/c_user/Symmetric-Multiprocessing-Services-Thread-Dispatch-Details.html#Symmetric-Multiprocessing-Services-Thread-Dispatch-Details)

"On SMP systems, scheduling decisions on one processor must be propagated to other processors through inter-processor interrupts. So, a thread dispatch which must be carried out on another processor happens not instantaneous. Thus several thread dispatch requests might be in the air and it is possible that some of them may be out of date before the corresponding processor has time to deal with them. The thread dispatch mechanism uses three per-processor variables,

- the executing thread,
- the heir thread, and
- an boolean flag indicating if a thread dispatch is necessary or not.

Updates of the heir thread and the thread dispatch necessary indicator are synchronized via explicit memory barriers without the use of locks. A thread can be an heir thread on at most one processor in the system. The thread context is protected by a TTAS lock embedded in the context to ensure that it is used on at most one processor at a time. The thread post-switch actions use a per-processor lock. This implementation turned out to be quite efficient and no lock contention was observed in the test suite.

The current implementation of thread dispatching has some implications with respect to the interrupt latency. It is crucial to preserve the system invariant that a thread can execute on at most one processor in the system at a time. This is accomplished with a boolean indicator in the thread context. The processor architecture specific context switch code will mark that a thread context is no longer executing and waits that the heir context stopped execution before it restores the heir context and resumes execution of the heir thread (the boolean indicator is basically a TTAS lock). So, there is one point in time in which a processor is without a thread. This is essential to avoid cyclic dependencies in case multiple threads migrate at once. Otherwise some supervising entity is necessary to prevent deadlocks. Such a global supervisor would lead to scalability problems so this approach is not used. Currently the context switch is performed with interrupts disabled. Thus in case the heir thread is currently executing on another processor, the time of disabled interrupts is prolonged since one processor has to wait for another processor to make progress.

It is difficult to avoid this issue with the interrupt latency since interrupts normally store the context of the interrupted thread on its stack. In case a thread is marked as not executing, we must not use its thread stack to store such an interrupt context. We cannot use the heir stack before it stopped execution on another processor. If we enable interrupts during this transition, then we have to provide an alternative thread independent stack for interrupts in this time frame. This issue needs further investigation.

The problematic situation occurs in case we have a thread which executes with thread dispatching disabled and should execute on another processor (e.g. it is an heir thread on another processor). In this case the interrupts on this other processor are disabled until the thread enables thread dispatching and starts the thread dispatch sequence. The scheduler (an exception is the scheduler with thread processor affinity support) tries to avoid such a situation and checks if a new scheduled thread already executes on a processor. In case the assigned processor differs from the processor on which the thread already executes and this processor is a member of the processor set managed by this scheduler instance, it will reassign the processors to keep the already executing thread in place. Therefore normal scheduler requests will not lead to such a situation. Explicit thread migration requests, however, can lead to this situation. Explicit thread migrations may occur due to the scheduler helping protocol or explicit scheduler instance changes. The situation can also be provoked by interrupts which suspend and resume threads multiple times and produce stale asynchronous thread dispatch requests in the system."

Add an interrupt frame to the per-CPU control which can be used during context switches on SMP configurations.

### Description

On SMP configurations, it is a fatal error to call blocking operating system with interrupts disabled, since this prevents delivery of inter-processor interrupts. This could lead to executing threads which are not allowed to execute resulting in undefined behaviour.

The ARM Cortex-M port has a similar problem, since the interrupt state is not a part of the thread context.

Add a new CPU port function:

```
/**
 * @brief Returns true if interrupts are enabled in the specified ISR level,
 * otherwise returns false.
 *
 * @param[in] level The ISR level.
 *
 * @retval true Interrupts are enabled in the ISR level.
 * @retval false Otherwise.
 */
RTEMS_INLINE_ROUTINE bool _CPU_ISR_Is_enabled( uint32_t level )
{
    return false;
}
```

Use this function to ensure that `_Thread_Do_dispatch()` is called with an interrupt level with enabled interrupts, otherwise call `_Terminate()`.

### Comment 1

1. **Chris Johns**, Tue, 15 Nov 2016 06:47:40 GMT

Is this specific to an SMP build?

### Comment 2

1. **Sebastian Huber**, Tue, 15 Nov 2016 06:50:03 GMT

I will add `_CPU_ISR_Is_enabled()` unconditionally. The fatal error will be limited to SMP and ARM Cortex-M. However, its an application bug in general to call blocking operations with interrupts disabled.

### Comment 3

1. **Chris Johns**, Tue, 15 Nov 2016 20:54:24 GMT

Replying to sebastian.huber:

I will add `_CPU_ISR_Is_enabled()` unconditionally. The fatal error will be limited to SMP and ARM Cortex-M.

I would prefer to see an error code returned. Fatal errors should be limited to internal issues like inconsistencies where the kernel cannot reasonable continue and not user errors with an API. Fatal errors can also be difficult to track down with threading unless you have a thread aware debugger. Not all users or BSPs have this support.

However, its an application bug in general to call blocking operations with interrupts disabled.

Yes I would agree and if a user makes a call to RTEMS that is not valid we should return a suitable error or status code. For a single core system we have allowed this in past release so as a general change this is something that changes our current behavior.

### Comment 4

1. **Sebastian Huber**, Wed, 16 Nov 2016 06:17:31 GMT

I think a fatal error is more appropriate here.

Applications which have this usage error needs to be fixed at compile-time. It makes no sense to ship an SMP application with this bug. Return codes can be ignored. I definitely have seen code like this before:

```
/* This cannot fail, we know the identifier is valid */
(void) pthread_mutex_lock(&mtx);
```

This ticket is a result of porting a real world application from uni-processor to SMP. If you are not an expert of the operating system internals and your application has this bug, then you need easily a couple of days to figure out the problem. So, it is important to make sure it gets detected. To figure out what caused a fatal error is easy. The (source, error) pair uniquely identifies the source code location of the error. With a stack trace and the executing thread you get enough information to locate the problem in the code. There is no need for a thread aware debugger. This is a new constraint specific to SMP. Existing software may be simply unaware of this issue. However, its important to detect this constraint violation. `_Thread_Do_dispatch()` has no return value. Adding this check to other places would be much more difficult, error prone. with more space and time overhead, and labour intensive to test.

1. **Chris Johns**, Wed, 16 Nov 2016 07:43:30 GMT

Replying to sebastian.huber:

I think a fatal error is more appropriate here.

Applications which have this usage error needs to be fixed at compile-time. It makes no sense to ship an SMP application with this bug.

A fatal error is still run-time and not a compile time error so you have lost me here.

Return codes can be ignored. I definitely have seen code like this before:

```
/* This cannot fail, we know the identifier is valid */
(void) pthread_mutex_lock(&mtx);
```

This is a different issue and a change of topic. We provide the means for errors to be analyzed and that is our boundary.

This ticket is a result of porting a real world application from uni-processor to SMP. If you are not an expert of the operating system internals and your application has this bug, then you need easily a couple of days to figure out the problem. So, it is important to make sure it gets detected.

I agree with detecting the issue and there being an error. It is the delivery we are discussing.

The error code should provide some help just like the fatal error code. If one can the other can.

How many fatal errors instance are there in RTEMS in the kernel? Not the number of error code, but the specific locations a fatal error can appear, ie code/line pairs? I have never audited this.

To figure out what caused a fatal error is easy. The (source, error) pair uniquely identifies the source code location of the error.

The source location is a line the kernel's core code which means users need to step into this code and figure out the answer. I have been hit by this with SMP and it is hard.

With a stack trace and the executing thread you get enough information to locate the problem in the code. There is no need for a thread aware debugger.

This implies testing will highlight the issue because you have a debugger to give you this data. Currently RTEMS standard or default stack traces that get called on a fatal error provide little if any information that could be used to resolve the exact source, eg the thread id executing or even better an unwinder (dreaming here). Better support for tier 1 archs would help.

This is a new constraint specific to SMP. Existing software may be simply unaware of this issue. However, its important to detect this constraint violation.

I agree it is important.

\_Thread\_Do\_dispatch() has no return value. Adding this check to other places would be much more difficult, error prone. with more space and time overhead, and labour intensive to test.

There are no other similar tests happening now on the blocking paths?

Improved fatal error diagnostics is a different topic. With a debugger is a matter of seconds to figure out the problem spot of a fatal error.

This is a new constraint specific to SMP. Existing software may be simply unaware of this issue. However, its important to detect this constraint violation.

I agree it is important.

`_Thread_Do_dispatch()` has no return value. Adding this check to other places would be much more difficult, error prone. with more space and time overhead, and labour intensive to test.

There are no other similar tests happening now on the blocking paths?

No, this is a weak area in RTEMS. For example call `rtems_task_wake_after()` in an interrupt service routine. You don't get any status information that this is stupid.

For now, I think a fatal error is sufficient. In case there is really a problem with this in the field, we can still improve things. What matters is that this constraint violation gets detected, otherwise you can spend hours on debugging.

It is an error that must be fixed during development. Otherwise you have a broken product.

This goes for checking returned error codes as well.

The logical end to this path of discussion is to remove all fatal error checks from the kernel in production because they should never appear. I am sure you would agree this is not practical therefore there is always a finite chance of a fatal error happening and robust systems need to take this issue seriously.

In the case of this specific check or test we need to find what is practical. The issues are how it effects a user who encounters it, what it does to the kernel in terms of overhead and complexity, and what can be implemented now and and what could be implemented given the time and resources.

How many fatal errors instance are there in RTEMS in the kernel? Not the number of error code, but the specific locations a fatal error can appear, ie code/line pairs? I have never audited this.

See `Internal_errors_Core_list`, we have a test for every fatal internal error.

Where is the user documentation? The C User guide is lacking detail for this and the other generic errors cases.

Looking further into this we have around 300 calls to `rtems_fatal_error_occurred` less some for noise due to an approximate count. Of this around 200 are in the `c/src` tree with about 50 under the `cpukit`. For example we have `rtems_fatal_error_occurred(0xdeadbeef);` in `cpukit/libfs/src/nfsclient/src/nfs.c`.

The we have the family of \* Fatal\* calls. Getting decent counts is not easy so I will not put them there. We have `_CPU_Fatal_halt`, `_BSP_Fatal_error`, `_POSIX_Fatal_error`, `MPCI_Fatal`, and `_SMP_Fatal`. Without decent control we end up with `_CPU_Fatal_halt(RTEMS_FATAL_SOURCE_EXCEPTION, 0xECC0)`; which is in the NIOS2 interrupt handler.

I am concerned about adding to this without a suitable means to provide accessible user documentation on what we do.

This implies testing will highlight the issue because you have a debugger to give you this data. Currently RTEMS standard or default stack traces that get called on a fatal error provide little if any information that could be used to resolve the exact source, eg the thread id executing or even better an unwinder (dreaming here). Better support for tier 1 archs would help.

Improved fatal error diagnostics is a different topic.

I do not agree. If you argue a case for using fatal errors then I see it as reasonable we discuss how this impacts users.

With a debugger is a matter of seconds to figure out the problem spot of a fatal error.

Yes, however the time needed to understand the issue depends on the person looking and you and I are not suitable to judge this.

A fatal error could occur in production simply due to the fact there is code in the build that can generate them, and they do happen when performing system integration when there are no debuggers connected. How the error gets translated by a user with no knowledge of the RTEMS internals is the question being proposed. The more fatal errors we add the more of a problem this becomes and this ticket wants to add another.

This is a new constraint specific to SMP. Existing software may be simply unaware of this issue. However, its important to detect this constraint violation.

I agree it is important.

\_Thread\_Do\_dispatch() has no return value. Adding this check to other places would be much more difficult, error prone. with more space and time overhead, and labour intensive to test.

There are no other similar tests happening now on the blocking paths?

No, this is a weak area in RTEMS. For example call rtems\_task\_wake\_after() in an interrupt service routine. You don't get any status information that this is stupid.

Yes we have a few cases like this.

For now, I think a fatal error is sufficient.

Ok, however there is a need for documentation on the error aimed at the user being added to our user manuals.

I would like to see better default exception output and after this discussion I can see a real need for the debug server needing to catch any fatal errors and break the system leaving the user in the thread stack frame with the error.

In case there is really a problem with this in the field, we can still improve things.

In terms of the implementation, sure, in terms of supporting users with suitable documentation I believe we have a problem now.

What matters is that this constraint violation gets detected, otherwise you can spend hours on debugging.

Yes this is the most important item to get resolved.

### **Comment 8**

1. **Sebastian Huber**, Thu, 17 Nov 2016 14:51:24 GMT

I will focus on fatal error documentation improvements. At least for this particular new one.

#### Comment 1

1. **Sebastian Huber**, Tue, 22 Nov 2016 06:06:50 GMT

Replying to joel.sherrill:

I have the latest tools.

All BSPs appear to fail like this:

```
powerpc-rtems4.11-gcc --pipe -DHAVE_CONFIG_H -I.. -I../../../../cpukit/../../../../psim/lib/include
```

[...]

Maybe you tried to build the master with the 4.11 tool chain?

#### Comment 2

1. **Joel Sherrill**, Tue, 22 Nov 2016 16:58:06 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **invalid**

Slaps head.. Doh! I switched the testing scripts over to 4.11 to get a warnings report and forgot to switch them back.

Thanks.

#### Comment 3

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

#### Comment 4

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT

**Description**

The `posix_devctl()` method is defined in POSIX 1003.26 and required by the FACE POSIX profiles. The only use case that needs to be supported is FIONBIO on sockets per the FACE Technical Standard.

`ioctl()` is not a standardized method per POSIX and is not included in the FACE Profiles.

Making operations non-blocking can also be done with `fcntl()` but due to RTOS qualification concerns, `fcntl()` is not included in the more stringent FACE profiles. Specifically, it is not in the Safety Base profile which matches the RTEMS POSIX capabilities.

This requires adding the file to `newlib`. That has been done. I am testing my implementation but a tool update will be needed before this can be pushed to the community. This is OK because we have other reasons to move to a new `gcc` and `newlib` version soon.

#### Description

Termios has a task driven mode (TERMIOS\_TASK\_DRIVEN). This mode aims to avoid long sections with disabled interrupts. This is only partly implemented since the device level state is still protected by disabled interrupts. Use a mutex to protect the device level state in task driven mode to fix this issue.

#### Comment 1

1. **Sebastian Huber**, Fri, 16 Dec 2016 10:29:41 GMT

In c3764ce80588461d086e844e68002142dbd1ead9/rtems:

```
termios: Use mutex for task driven mode
```

Termios has a task driven mode (TERMIOS\_TASK\_DRIVEN). This mode aims to avoid long sections with disabled interrupts. This is only partly implemented since the device level state is still protected by disabled interrupts. Use a mutex to protect the device level state in task driven mode to fix this issue.

Update #2838.

#### Description

Add a new new interrupt server driven Termios mode (TERMIOS\_IRQ\_DRIVEN). This mode is identical to the interrupt driven mode except that a mutex is used for device level locking. The intended use case for this mode are device drivers that use the interrupt server, e.g. SPI or I2C connected devices.

**Description**

Use C11 mutexes instead of Classic semaphores as a performance optimization and to simplify the application configuration.

A performance of Classic semaphores vs. C11 mutexes was measured on the arm/atsam BSP. A NXP SC16IS752 was connected via SPI. The RTEMS application used one task to read from the device and write it immediately back (look back via task). A development system constantly transmitted data at 115200 bits per second.

CPU usage by function with Classic semaphores:

name	ratio	1%	2%	5%	10%	20%	50%	100%	
CPU_Thread_Idle_body	22.454%	=====							
atsam_spi_setup_transfer	6.767%	=====							
Objects_Get	5.859%	=====							
atsam_spi_interrupt	4.483%	=====							
Event_Seize	3.867%	=====							
rtems_termios_enqueue_raw_characters	3.804%	=====							
Timecounter_Binuptime	3.715%	=====							
Scheduler_priority_Block	3.104%	=====							
rtems_semaphore_release	3.018%	=====							
Scheduler_priority_Unblock	2.901%	=====							
rtems_termios_read_tty	2.777%	=====							
ARMV7M_NVIC_Interrupt_dispatch	2.750%	=====							
rtems_semaphore_obtain	2.627%	=====							
Thread_Do_dispatch	2.351%	=====							
ARMV7M_Interrupt_service_leave	2.086%	=====							
iproc	1.919%	=====							
CPU_Context_switch									

CPU usage by function with C11 mutexes:

name	ratio	1%	2%	5%	10%	20%	50%	100%	
CPU_Thread_Idle_body	33.395%	=====							
atsam_spi_setup_transfer	6.061%	=====							
atsam_spi_interrupt	4.690%	=====							
Mutex_recursive_Release	3.011%	=====							
Event_Seize	2.955%	=====							
ARMV7M_NVIC_Interrupt_dispatch	2.885%	=====							
rtems_termios_enqueue_raw_characters	2.771%	=====							
rtems_termios_read_tty	2.722%	=====							
Timecounter_Binuptime	2.653%	=====							
Thread_Do_dispatch	2.240%	=====							
Scheduler_priority_Block	2.112%	=====							
ARMV7M_Interrupt_service_leave	2.100%	=====							
Scheduler_priority_Unblock	1.919%	=====							
Mutex_recursive_Acquire	1.876%	=====							
iproc	1.773%	=====							
CPU_Context_switch									

The change resulted in 10% more total idle time on the system.

**Comment 5**

1. **Chris Johns**, Thu, 13 Aug 2020 01:42:07 GMT
- Is the configure option for POSIX going to be removed in the waf build system?

**Comment 6**

1. **Sebastian Huber**, Thu, 13 Aug 2020 04:46:37 GMT
- Replying to Chris Johns:
- Is the configure option for POSIX going to be removed in the waf build system?

No, this CPU option exists also in the new build system.

**Comment 7**

1. **Sebastian Huber**, Thu, 13 Aug 2020 04:48:22 GMT
2. **status**: changed from **new** to **closed**
3. **version**: set to **4.11**
4. **resolution**: set to **fixed**
5. **milestone**: changed from **Indefinite** to **5.1**

The POSIX thread support is always enabled in RTEMS 5.1. There is no need to change the implementation of C11 threads.

## Description

The Classic API has some weaknesses:

- Dynamic memory (the workspace) is used to allocate object pools. This requires a complex configuration with heavy use of the C pre-processor.
- Objects are created via function calls which return an object identifier. The object operations use this identifier and map it internally to an object representation.
- The objects reside in a table, e.g. they are suspect to false sharing of cache lines.
- The object operations use a rich set of options and attributes. For each object operation these parameters must be evaluated and validated at run-time to figure out what to do exactly for this operation.

The overhead for Classic API mutexes used for example in Termios and the SPI framework is significant, see discussion:

<https://lists.rtems.org/pipermail/devel/2016-December/016543.html>

There are some API options available:

- Use C11 mutexes and condition variables.
- Turn the POSIX synchronization objects into self-contained objects and use them.
- Use FreeBSD synchronization objects like MUTEX(9) or CONDVAR(9).
- Add RTEMS-specific self-contained synchronization objects and use them.

Option 1. and 2. lack support for binary semaphores which are used for task/interrupt synchronization, e.g. Termios.

Option 2. needs run-time evaluation to figure out the actual object variant, e.g. non-recursive, recursive, ceiling, error-checking, robust POSIX mutex.

Option 3. uses hash tables, thus it is not suitable for real-time systems.

Option 1. and 2. lack support for user-defined object names that may help for system diagnostic, tracing and debugging.

Option 4. could be used to avoid all shortcomings of options 1-3. It would be trivial to implement, test and document.

In order to enable user-defined object names one option is to add a const char \*name member to Thread\_queue\_Queue.

## Comment 1

1. **Sebastian Huber**, Tue, 20 Dec 2016 08:15:06 GMT
2. **description:** modified (diff)
3. **summary:** changed from **Use C11 mutexes instead of Classic API priority inheritance semaphores** to **Use self-contained objects instead of Classic API for drivers and support libraries**

## Comment 2

1. **Chris Johns**, Tue, 20 Dec 2016 10:23:41 GMT
- Can Option 4 be NP extensions to POSIX after Option 2 is done?

## Comment 3

1. **Sebastian Huber**, Tue, 20 Dec 2016 10:28:54 GMT

Replying to chrisj:

Can Option 4 be NP extensions to POSIX after Option 2 is done?

Binary semaphores are not available out of the box with POSIX. You need a mutex and a condition variable for this, e.g. <http://stackoverflow.com/questions/7478684/how-to-initialise-a-binary-semaphore-in-c>.

Option 4. should be implementable via POSIX to allow to run the software without RTEMS, however, it should use a specialized implementation on RTEMS to minimize run-time and space overheads.

## Comment 4

1. **Gedare Bloom**, Tue, 20 Dec 2016 19:34:28 GMT

What are the downsides for self-contained objects? (Is there a clear definition of what self-contained objects are?)

## Comment 5

1. **Sebastian Huber**, Wed, 21 Dec 2016 06:43:21 GMT

Self-contained means the user must provide the storage for the object.

<https://sourceware.org/git/gitweb.cgi?p=newlib-cygwin.git;a=blob;f=newlib/libc/sys/rtems/include/sys/lock.h;h=c0549db67cbb559edacbef49584156fb8ac346fd;hb=HEAD>

What you cannot do with self-contained objects is using them in a distributed system with distinct address spaces, e.g. a usage case RTEMS was initially designed for. Here you need one level of indirection to identify objects globally.

With object identifiers you can detect a use of deleted objects under certain conditions. You cannot detect use of a deleted and re-used object. To detect/prevent the use of deleted objects in SMP configurations is quite difficult (e.g. hazard pointers) and not implemented in RTEMS.

From my point of view the advantages of self-contained objects are apparent.

#### Comment 6

#### Description

Some applications need to control the garbage collection of the JFFS2 filesystem. For example during bootloader to application transitions with execute in place flashes (XIP).

#### Comment 1

1. **Chris Johns**, Mon, 19 Dec 2016 21:28:42 GMT

When does JFFS2 garbage collect at the moment?

Does this mean we can mount a JFFS2 disk and not start the garbage collection and defer it to later?

If so does this mean a user needs to enable garbage collection at some later time or will the JFFS be configured to start garbage collection automatically?

#### Comment 2

1. **Sebastian Huber**, Tue, 20 Dec 2016 06:29:55 GMT

Garbage collection is done on demand automatically as late as possible. Every operation can result in a garbage collection. We don't have a garbage collection thread like on Linux.

This operation gives you a bit more control when the garbage collection takes place.

#### Comment 3

1. **Sebastian Huber**, Tue, 20 Dec 2016 07:32:35 GMT

1. **Chris Johns**, Tue, 20 Dec 2016 07:49:54 GMT

Replying to sebastian.huber:

Garbage collection is done on demand automatically as late as possible. Every operation can result in a garbage collection. We don't have a garbage collection thread like on Linux.

Is there a special reason we do not have a thread?

This operation gives you a bit more control when the garbage collection takes place.

I see it forces a garbage collection so how do you suspend it?

Your original post suggested it could be suspended and this would be good. After a large delete and reboot the start up can hang on the mount. It would be nice to hold this until we have initialised and then let the clean up happen.

#### Comment 8

1. **Sebastian Huber**, Tue, 20 Dec 2016 07:54:55 GMT

**Description**

Add user defined thread names to ease debugging, enhance the system diagnostics and improve compatibility to other systems, e.g. Linux and FreeBSD. Implement `pthread_setname_np()` and `pthread_getname_np()`. Add `CONFIGURE_MAXIMUM_THREAD_NAME_SIZE` to the application configuration options. Add a application configuration dependent storage area for thread names to the thread control block.

**Comment 1**

1. **Joel Sherrill**, Thu, 12 Jan 2017 13:41:01 GMT

This shouldn't be hard to add since `rtems_object_[gs]et_name()` were added to do the same thing. These have been in since before 4.10. See `psx14` for an example usage of `rtems_object_set_name()` on a `pthread`.

**Comment 2**

1. **Sebastian Huber**, Thu, 12 Jan 2017 14:50:47 GMT

The problem with the object set/get name is that the interpretation of the `Objects_Name` depends on `Objects_Information::is_string` which is false for Classic and true for POSIX.

**Comment 3**

1. **Sebastian Huber**, Thu, 12 Jan 2017 14:53:20 GMT

With the new thread name support I get now

```
[/] # cpuseuse
-----
                                CPU USAGE BY THREAD

```

Before all the libbsd threads had the name "\_BSD".

**Comment 4**

1. **Joel Sherrill**, Thu, 12 Jan 2017 16:18:27 GMT

I am missing something in the code about how a Classic API task can have a string name.

What about names for threads created using the new lightweight API? And do they show up in these lists.

**Comment 5**

1. **Sebastian Huber**, Thu, 12 Jan 2017 16:33:21 GMT

See patch:

<https://lists.rtems.org/pipermail/devel/2017-January/016680.html>

The optional string name is accessible via `Thread_Control::Join_queue::Queue::name`.

#### Comment 6

1. **Sebastian Huber**, Fri, 13 Jan 2017 07:34:32 GMT

In b8bcebea186e2d02334a014d5e792a0dde8007fc/rtems:

Use thread name support  
Update #2858.

#### Comment 12

1. **Sebastian Huber**, Tue, 31 Jan 2017 09:11:16 GMT

In e366f774a76d3607ad41dc0992e787ce38df980d/rtems:

score: Add `_Thread_queue_Object_name`  
Add the special thread queue name `_Thread_queue_Object_name` to mark thread queues embedded in an object with identifier. Using the special thread state `STATES_THREAD_QUEUE_WITH_IDENTIFIER` is not reliable for this purpose since the thread wait information and thread state are protected by different SMP locks in separate critical sections. Remove `STATES_THREAD_QUEUE_WITH_IDENTIFIER`.

Add and use `_Thread_queue_Object_initialize()`.  
Update #2858.

**Description**

POSIX Shared Memory is a widely used API for inter-process communication. The functions in the API include:

- `shm_open`
- `ftuncate`
- `mmap`
- `munmap`
- `shm_unlink`
- `close`
- `fstat`
- `fchown`
- `fchmod`

```

### Comment 8

1. **Kevin Kirspe**, Thu, 20 Jul 2017 05:30:57 GMT

In bb01a36/rtems:

```
Fixed issue with searching mapped addresses
```

The loop that checks if the current address is already mapped uses the same local variable for the chanin node as the newly allocated chain node so the allocated chain node gets over written.

Added a new local variable for the loop that checks the address

Updates #2859.

### Comment 9

1. **Sebastian Huber**, Thu, 20 Jul 2017 05:31:10 GMT

In b965f461/rtems:

```
posix: Use unprotected chain operations
Operations are already protected by mmap_mappings_lock.
Updates #2859.
```

### Comment 10

1. **Sebastian Huber**, Thu, 20 Jul 2017 05:33:50 GMT

The mmap\_mappings\_lock attributes don't create a mutex:

```
#define RTEMS_MUTEX_ATTRIBS \
```

```
(RTEMS_PRIORITY | RTEMS_SIMPLE_BINARY_SEMAPHORE | \
RTEMS_NO_INHERIT_PRIORITY | RTEMS_NO_PRIORITY_CEILING | RTEMS_LOCAL)
```

I suggest to use the libio mutex and keep the specialized lock/unlock functions. Mutex lock/unlock should not return a status code to simplify the error handling.

### Comment 11

1. **Gedare Bloom**, Mon, 24 Jul 2017 19:01:33 GMT

In b264998/rtems:

```
posix: replace mmap mappings lock with libio lock
Use the libio mutex lock instead of the mmap mappings lock.
Updates #2859.
```

### Comment 12

1. **Gedare Bloom**, Mon, 24 Jul 2017 19:14:54 GMT

In c6d897e5/rtems:

```
posix: fix warnings with mmap from heap/wkspac
Avoid void pointer arithmetic.
Updates #2859.
```

### Comment 13

1. **Sebastian Huber**, Fri, 28 Jul 2017 11:54:11 GMT

In 77cbb2a/rtems:

```
psxtests/psxmmap01: Fix warning
Update #2859.
```

### Comment 14

1. **Gedare Bloom**, Fri, 28 Jul 2017 19:16:13 GMT

2. **status**: changed from **new** to **closed**

3. **resolution**: set to **fixed**

In 1ab6d59/rtems-docs:

```
memory_management: update mmap, munmap, shm_open, shm_unlink
Close #2859.
```

**Comment 15**

1. **Gedare Bloom**, Fri, 28 Jul 2017 19:19:00 GMT

I consider this basically complete. Open new tickets against any bugs or added features.

**Comment 16**

1. **Sebastian Huber**, Thu, 14 Sep 2017 05:03:21 GMT

In 694e946/rtems:

```
libio: Remove special-case reference count
The top-level IO library structures should contain no special-case data.
Update #2859.
```

**Description**

Add support to the releases section of the web site to handle ReST packages. The catalogues have a legacy field for texinfo docs. The 4.11.0 and 4.11.1 releases need to have a catalogue added because this did not exist when those releases were created.

**Comment 1**

**Description**

The POSIX 1003.1 Compliance Guide should be auto-generated from a spreadsheet into the ReST format. My vague recollection is that we used shell scripts to do this for texinfo output.

I will have to decipher what we used to do and define a new procedure.

This impacts 4.11 and newer. One issue is having correct information for what methods are present on a branch. The FACE Conformance Test Suite can be used for ~800 of the methods.

**Comment 1**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT

**Description**

Add support to automatically update the branches when a git commit happens.

**Comment 1**

1. **Amar Takhar**, Mon, 16 Jan 2017 06:00:41 GMT

You mean automatically build the docs when someone makes a commit to them?

A little confused by the description. :)

**Comment 2**

1. **Chris Johns**, Mon, 16 Jan 2017 06:23:20 GMT
2. **summary:** changed from **docs.rtems.org Automatic update of branches.** to **docs.rtems.org Automatic update of branches content when a rtems-doc.git change is made.**

Replying to amar:

You mean automatically build the docs when someone makes a commit to them?

Yes and publish the build on the docs.rtems.org website. The website is driven off an XML catalogue created when building the docs so document changes, additions, renames and removals are handled within the built package.

A little confused by the description. :)

Sorry, I have amended the Summary. I hope this is better.

I intend to build on sync.rtems.org when a hash on a branch changes, tar the content then transfer to docs.rtems.org. I have a script to manage the git hash checking and to build the content. A job on docs will pick up the new package and install it. All I need a way to move the package from sync to docs.

**Comment 3**

1. **Amar Takhar**, Mon, 16 Jan 2017 14:09:42 GMT

I have already written something like this for the new docs.rtems.org. Incremental builds (by commit) and release builds.

It needs to be managed properly, most projects overwrite their 'devel' documentation with new versions. I want to keep around every single built version for comparison this is more useful for contributors.

**Comment 4**

1. **Chris Johns**, Mon, 16 Jan 2017 22:42:15 GMT

Replying to amar:

I have already written something like this for the new docs.rtems.org. Incremental builds (by commit) and release builds.

Release builds are part of the release process which is a separate from this web site. The released documents are loaded on the the web site and the website's configuration updated to include the release details and the site is regenerated.

For building from git I was told to sort out building by cron so this is what I have done.

Is it possible to set up a share on the TrueNAS to be a clearing house between sync and docs?

It needs to be managed properly, most projects overwrite their 'devel' documentation with new versions.

I am concerned it places extra stress on the limit resources we have so do not see holding builds as a priority. We have the source in git so someone can get that release and build it.

I want to keep around every single built version for comparison this is more useful for contributors.

How is this more useful for contributors?

#### Comment 5

1. **Amar Takhar**, Tue, 17 Jan 2017 00:15:53 GMT

Replying to chrisj:

Release builds are part of the release process which is a separate from this web site. The released documents are loaded on the the web site and the website's configuration updated to include the release details and the site is regenerated.

They'll all be built from the same location using the same tools and same process the only difference is one will be a tag and the other a branch. If you are talking about what 'triggers' a build then yes they are different.

For building from git I was told to sort out building by cron so this is what I have done.

Is it possible to set up a share on the TrueNAS to be a clearing house between sync and docs?

How long is this going to be setup for? I suggested this before you mentioned building after every commit...

It needs to be managed properly, most projects overwrite their 'devel' documentation with new versions.

I am concerned it places extra stress on the limit resources we have so do not see holding builds as a priority. We have the source in git so someone can get that release and build it.

Space isn't an issue it will be a decade worth of builds before it will be a problem.

The other nice feature is if someone builds from a commit in source they'll have the corresponding documentation available that is as close to that version as possible -- I have a way to track this it's a tool I wrote some time ago.

I want to keep around every single built version for comparison this is more useful for contributors.

How is this more useful for contributors?

Not all errors are build errors some are formatting/syntax. Lots of contributors don't have the ability to build docs from source -- I don't think that is a pre requisit to make changes since they need to be tested before commit anyway.

Docs are unique in that regard.

#### Comment 6

1. **Joel Sherrill**, Tue, 17 Jan 2017 01:40:43 GMT

What is the problem with providing a way to get content from a "build jail" to a "offer to the world jail"? AFAIK all solutions include either making a directory on the TrueNAS available to the "offer to the world jail" or push via ssh. Please help Chris.

Providing this path from "build to "offer to the world" is not an unusual requirement. It is needed for multiple offerings.

There is negative value in keeping builds of documentation on every commit.

#### Comment 7

1. **Chris Johns**, Tue, 17 Jan 2017 05:14:41 GMT

Replying to amar:

Replying to chrisj:

I am not sure if we are saying the same thing or not.

A release of RTEMS contains released documentation and the formally released procedure creates that tar file of documentation. The rtems-release.git repo contains the format release scripts. Released documentation must be created as part of that formal release procedure.

For building from git I was told to sort out building by cron so this is what I have done.

Is it possible to set up a share on the TrueNAS to be a clearing house between sync and docs?

How long is this going to be setup for?

I am sorry I have no idea how long. I am just wanting to fill a gap that currently exists as best I can. I am after a simple, secure method to complete this task. As Joel says, if a simple solution can be found and this can be done that would be excellent. We would also be free to move on and sort other issues out, eg buildbot of the RTEMS code, new website, etc and we can come back to this when we have time, funding etc. We are working hard and openly to try to get this to happen but is hard.

I suggested this before you mentioned building after every commit...

I did not know sphinx could not be installed on docs.rtems.org and the docs built in that jail. I just assumed the docs could be built on each commit on docs.rtems.org. When I looked at the jail I saw you had installed tex alive and other packages and you had been building documentation there.

It needs to be managed properly, most projects overwrite their 'devel' documentation with new versions.

I am concerned it places extra stress on the limit resources we have so do not see holding builds as a priority. We have the source in git so someone can get that release and build it.

Space isn't an issue it will be a decade worth of builds before it will be a problem.

The other nice feature is if someone builds from a commit in source they'll have the corresponding documentation available that is as close to that version as possible -- I have a way to track this it's a tool I wrote some time ago.

Sorry, I do not follow. How would someone with a local build compare and what would the value be in doing this?

I want to keep around every single built version for comparison this is more useful for contributors.

How is this more useful for contributors?

Not all errors are build errors some are formatting/syntax. Lots of contributors don't have the ability to build docs from source -- I don't think that is a pre requisit to make changes since they need to be tested before commit anyway.

Docs are unique in that regard.

We have been testing on a number of hosts and it builds ok. I have not built PDF on OS X as tex alive is too hard without something like brew or macports, HTML works.

**Description**

rtems-test-check is responsible of checking the testsuite configuration of a given BSP and adapt it based on a given "command". Currently for the "exclude" command, we never exclude anything, the output of the script is always the whole list of the input tests.

This happens because the script always starts with output = \$tests and appends on the list the tests that are not excluded, so the output is always all the tests.

**Attachments:**

1. **Stavros Passas, Mon, 16 Jan 2017 15:44:43 GMT**  
**attach**: set to [fix-2867.patch](https://devel.rtems.org/ticket/2867/fix-2867.patch) (<https://devel.rtems.org/ticket/2867/fix-2867.patch>)

**Comment 1**

1. **Stavros Passas**, Mon, 16 Jan 2017 15:48:37 GMT

I attached a simple fix that would solve the described issue. The issue is created because we want to provide a full list of tests in case the exclude file from the BSP is non-existing, thus a simple fix would be to start with an empty list if the BSP file exists, or with a full list there is nothing to exclude.

**Comment 2**

1. **Joel Sherrill**, Mon, 16 Jan 2017 17:08:47 GMT

Thanks. I had reported that a LOT of BSPs failed to complete building all tests but hadn't tracked it down completely. I am testing this patch. Does it look OK?

;;
flags)
    if [ $test_count != 1 ]; then
```

#### Comment 3

1. **Stavros Passas**, Mon, 16 Jan 2017 17:21:06 GMT

Hi Joel, no this will not work, because for the BSPs that do not have an exclude testsuite list, the output will be returned immediately as \${output} (that will be ""), and the BSP will not compile any test!

#### Comment 4

1. **Joel Sherrill**, Mon, 16 Jan 2017 18:23:31 GMT

Unfortunately, it looks like this script has grown complicated enough where some test cases are needed that are independent of the BSPs and testsuite.

I will try to look at it some more but am assigning this to Chris since he wrote the script.

#### Comment 5

1. **Joel Sherrill**, Mon, 16 Jan 2017 18:23:55 GMT

3. **status:** changed from **new** to **assigned**

#### Comment 6

1. **Joel Sherrill**, Mon, 16 Jan 2017 19:25:48 GMT

I posted a patch to devel which works for gensh1 (has .tcfg file with excludes) and pc686 which doesn't have a .tcfg file. I will build all BSPs before I consider pushing this.

Feedback appreciated.

#### Comment 7

1. **Joel Sherrill**, Wed, 18 Jan 2017 00:06:34 GMT

2. **status:** changed from **assigned** to **closed**

3. **resolution:** set to **fixed**

I have built all BSPs with your patch and my additions to some .tcfg files.

The only BSPs with build issues are those which are gcc < 5.0 due to using restrict and not restrict in devctl.h. This is fixed in newlib and the next newlib snapshot and tool bump will fix those.

Reopen if you think this isn't OK.

### Comment 3

1. **David Binderman**, Sun, 05 Feb 2017 09:06:38 GMT

I would like to know what you are running to spot these issues and what settings.

I run a static C / C++ analyser called cppcheck, available from sourceforge.

<http://cppcheck.sourceforge.net/>

The latest released version would probably work ok, but I use the current development version. I use flag --enable=all and I've tweaked the source of cppcheck as well.

BTW, if I could figure out how to build rtems on Linux, then I could run the latest development versions of clang and gcc over rtems and possibly get some interesting warnings.

I would like to make sure that eventually we are running the same thing as a project.

I have been doing this myself for about a year or so. I'd be more than happy to help and share my results.

I would have emailed directly but couldn't find your email.

dcb 314 at hotmail dot com. Feel free to chat offline.

**Description**

What happens is that on networks with more than one DHCP servers, or on networks that use multiple vlans it can happen that After a DHCP discover our client broadcasts, it receives multiple offers, which is perfectly fine based on the DHCP RFC.

However our implementation of a DHCP client, expects a linear execution flow:

- Broadcast a DHCP discover;
- Wait for a DHCP offer;
- Transmit a DHCP request;
- Wait for a DHCP ack;

However the network stack is not cleaned between the reception of a DHCP offer and a DHCP ack, so if multiple offers are received, just the first one will be processed during the "Receive DHCP offer" phase, and the next one will be received when we expect a "DHCP ack", which makes our implementation assume the DHCP handshake is invalid and fail. Thus we restart the network and retry the whole process from the beginning which will cause the same issue again.

This issue that is present from when I remember in RTEMS, definitely from 4.10 up to now.

**attach**: set to [fix-2877.patch](https://devel.rtems.org/ticket/2877/fix-2877.patch) (<https://devel.rtems.org/ticket/2877/fix-2877.patch>)
- 

**Comment 1**

1. **Sebastian Huber**, Fri, 20 Jan 2017 09:25:37 GMT

The DHCP client used by libbsd is probably not affected by this problem.

**Comment 2**

1. **Stavros Passas**, Fri, 20 Jan 2017 09:27:16 GMT

Correct, this affects just cpukit/libnetworking/rtems/rtems\_dhcp.c

**Comment 3**

1. **Stavros Passas**, Fri, 20 Jan 2017 09:33:55 GMT

I attach a file with a proposed fix for this DHCP client. mainly what the fix does is extend bootp\_call to be able to expect a specific message as response. If it receives any other message, it will just ignore it, and it will timeout as it is expected to do in the first place.

Then with the extended bootp\_call, I extended the dhcp client implementation to strictly expect a dhcp offer after a discover message and a DHCP ack after a request message. This way, the DHCP protocol does not fail if there are multiple DHCP messages on the network and it will finish successfully a DHCP handshake even when multiple messages are received from our client.

### Description

rtems\_rate\_monotonic\_postponed\_job\_count() should return an RTEMS status code. It should be renamed to rtems\_rate\_monotonic\_get\_postponed\_job\_count() or rtems\_rate\_monotonic\_get\_postponed\_jobs() (similar to rtems\_rate\_monotonic\_get\_statistics()).

### Comment 1

1. **Sebastian Huber**, Tue, 24 Jan 2017 14:13:27 GMT

There is no test case for this function.

### Comment 2

1. **Kuan-Hsun Chen**, Tue, 24 Jan 2017 15:44:34 GMT

I think we should rename it as rtems\_rate\_monotonic\_get\_postponed\_job\_count(uint32\_t \*count), though the name is really long. The RTEMS status codes could be: RTEMS\_SUCCESSFUL - count returned successfully RTEMS\_INVALID\_ID - invalid rate monotonic period id RTEMS\_INVALID\_ADDRESS - invalid address of count

### Comment 3

1. **Sebastian Huber**, Wed, 25 Jan 2017 06:28:28 GMT

My preferred option: just add this to rtems\_rate\_monotonic\_period\_status and return it via rtems\_rate\_monotonic\_get\_status().

### Comment 4

1. **Kuan-Hsun Chen**, Wed, 25 Jan 2017 08:28:16 GMT

I can do this. I will add the count into the structure of rtems\_rate\_monotonic\_period\_status, remove rtems\_rate\_monotonic\_get\_postponed\_job\_count(), and extend rtems\_rate\_monotonic\_get\_status().

### Comment 5

1. **Kuan-Hsun Chen**, Wed, 25 Jan 2017 13:19:19 GMT

Sp69 is also planned to be updated, which is the test for rtems\_rate\_monotonic\_get\_status()

### Comment 6

1. **Kuan-Hsun Chen**, Mon, 30 Jan 2017 06:53:30 GMT

In 0794197f729f5ee9551dc7b2e14867f394cbc327/rtems:

```
rtems: Fix _Rate_monotonic_Renew_deadline()
Prepare a precondition to prevent the potential integer overflow.
Remove one redundant parameter in _Rate_monotonic_Renew_deadline().
sptestests/sprmsched02: Create A test case for checking the overflow condition of postponed_jobs in rtems_rate_monotonic_period_status.
Update #2885.
```

**Description**

The extension for the stack checker defines 8 entries, while the structure for RTEMS extensions gets 9 arguments. This causes warnings to appear on applications compiled with `-Werror`, or similar flags.

The handler that is missing is for the terminate callback, so a 0 entry would be enough to fix this error.

**Description**

Currently, when `_RbTree_Initialize_node` is used, it generates warnings of unused variables. I traced the issue down to the variable being used only if `RTEMS_DEBUG` is set.

Thus, the argument should be marked as `RTEMS_UNUSED`, if `RTEMS_DEBUG` is not set.

**Description**

Prefix the confdefs.h internal defines with an underscore to simplify the review of this extremely complex header file.

**Comment 1**

1. **Chris Johns**, Wed, 01 Feb 2017 23:51:32 GMT

Could you please provide more detail about this change, why it helps and the user impact?

Thanks

**Comment 2**

1. **Sebastian Huber**, Thu, 02 Feb 2017 05:45:24 GMT

It is common practice in RTEMS to prefix internal things with an underscore. The confdefs.h header file became quite complex over time. It uses a lot of internal defines and up to now everything starts with CONFIGURE\_\*. It helps to identify undocumented configuration options.

**Description**

Loading a new VM, I noticed that pax is needed. It isn't mentioned in the RSB manual at all.

I can only accurately fix this for Centos 7 but we can safely assume that advice applies to Centos 6, Fedora, and RHEL.

Can users of other distributions check about pax. Please

**Comment 1**

1. **Joel Sherrill**, Wed, 01 Feb 2017 16:47:05 GMT

**Description**

The FREEBSD struct termios separates out the input and output baud rates into individual speed\_t variables. It also supports more flag options. The big benefit is that the rtems-libbsd tty code can be ported cleanly without the need to fixup the input and output baud rates. This should be a transparent change unless someone was manipulating the baud rates directly through the c\_cflags (not using the cfgetspeed, cfgetospeed, cfsetispeed, cfsetospeed functions).

Merge LEON

\_\_ Students: \_\_ Past, Present, and Potential Students

\_\_ Status: \_\_ Some work may be done.

\_\_ Introduction: \_\_ Merge Leon RTEMS and mainstream RTEMS merge the Leon DriverManager, samples, and LEON-RTEMS into mainstream RTEMS.

\_\_ Goal: \_\_ Concise statement of the overall goal of the project. Refine this initial statement to include: project deliverables (code, docs, testing), required/suggested methodology, standards of quality, possible goal extensions beyond the main objective.

\_\_ Requirements: \_\_ List the requirements and level of expertise you estimate are required by the developer tackling this project will have to have: Required level of programming language(s), specific areas of RTEMS or tools, level of familiarity with RTEMS, cross-development, GNU/Linux, etc., development/documentation/testing tools, mathematical/algorithmic background, other desirable skills.

\_\_Resources:\_\_ Current RTEMS developers, papers, etc that may help you in this project.

\_\_Acknowledgements\_\_

- who helped and did work

Miscellaneous Sections

As the project progresses, you will need to add build instructions, etc and this page will evolve from a project description into a HOWTO.

References

- TBD

\_\_Other sections:\_\_ If you have more to say about the project that doesn't fit in the proposed sections of this template, feel free to add other sections at will.

**Description**

The rtems-docs requires the Sphinx contribution extension for bibtex to build.

A configure check should be added to see if the extension is installed and an error raised or the documentation conditionally built.

It is not clear to me if bibtex needs Tex Alive. Requiring Tex on all hosts to build the documentation is a regression so the extension will need to be removed or a fall back position taken where degraded quality documentation in HTML is created.

**Description**

Coverity URL:

<https://scan5.coverity.com/reports.htm#v29808/p10069/fileInstanceId=108958257&defectInstanceId=30877219&mergedDefectId=1399703>

Coverity Scan doesn't like taking the address of a single `uint32_t` and then treating it as an array pointer. I think the code is likely doing what is intended but there is an implicit linkable between the order of the fields in the structure here and the class numbers used in the object IDs. Is there a way to improve this code and reduce the linkage?

141

- `address_of`: Taking address with `&snapshot->active_posix_keys` yields a singleton pointer.
- `assign`: Assigning: `active = &snapshot->active_posix_keys`.

```
142 active = &snapshot->active_posix_keys;
143
```

- Condition `i < 19U /* sizeof (objects_info_table) / sizeof (objects_info_table[0]) */`, taking true branch.

```
144 for (i = 0; i < RTEMS_ARRAY_SIZE(objects_info_table); ++i) {
145   const Objects_Information *information;
146
147   information = _Objects_Get_information(
148     objects_info_table[i].api,
149     objects_info_table[i].cls
150   );
151
```

- Condition `information != NULL`, taking true branch.

```
152 if (information != NULL) {
CID 1399703 (#1 of 1): Out-of-bounds access (ARRAY_VS_SINGLETON)
```

- `ptr_arith`: Using `active` as an array. This might corrupt or misinterpret adjacent memory locations.

```
153 active[i] = _Objects_Active_count(information);
```

**Comment 1**

1. **Joel Sherrill**, Fri, 10 Mar 2017 18:13:45 GMT

3. **status:** changed from **new** to **assigned**

#### Comment 2

1. **Sebastian Huber**, Mon, 13 Mar 2017 06:00:40 GMT

Yes, the code is ugly, but it works quite well.

#### Comment 3

1. **Gedare Bloom**, Mon, 13 Mar 2017 15:08:59 GMT

Very ugly. The hack might be a bit more clear if we use

```
typedef struct {
  Heap_Information_block workspace_info;
  Heap_Information_block heap_info;
  uint32_t active_posix_key_value_pairs;
  union {
    uint32_t anonymous[ 1 + ( sizeof(rtems_resource_rtems_api) + sizeof(rtems_resource_posix_api) ) / sizeof(uint32_t) ];
    struct {
      uint32_t active_posix_keys;
      rtems_resource_rtems_api rtems_api;
      rtems_resource_posix_api posix_api;
    }
  }
  int open_files;
} rtems_resource_snapshot;
```

#### Comment 4

1. **Sebastian Huber**, Tue, 14 Mar 2017 06:28:40 GMT

Replying to Gedare:

Very ugly. The hack might be a bit more clear if we use

```
typedef struct {
  Heap_Information_block workspace_info;
  Heap_Information_block heap_info;
  uint32_t active_posix_key_value_pairs;
  union {
    uint32_t anonymous[ 1 + ( sizeof(rtems_resource_rtems_api) + sizeof(rtems_resource_posix_api) ) / sizeof(uint32_t) ];
    struct {
      uint32_t active_posix_keys;
      rtems_resource_rtems_api rtems_api;
      rtems_resource_posix_api posix_api;
    }
  }
  int open_files;
} rtems_resource_snapshot;
```

The `rtems_resource_snapshot` structure is supposed to be easy to understand for the user and should not make implementation details visible. With the union you still assume a certain mapping of array elements and normal structure members. It is an out-of-bounds access, so Coverity is right, but it is intentional. I don't think this should be changed.

### Description

<https://scan5.coverity.com/reports.htm#v29808/p10069/fileInstanceId=109359850&defectInstanceId=30967449&mergedDefectId=1399730>

```
354 printf(" DRIVER ID: 0x%llx\n", drv->drv_id);
```

- Condition `drv->name`, taking true branch.

```
355 printf(" NAME: %s\n", drv->name ? drv->name : "NO_NAME");
356 printf(" BUS TYPE: %d\n", drv->bus_type);
357 printf(" OPERATIONS:\n");
```

- alias: Assigning: `ppfunc = &drv->ops->init[0]`. `ppfunc` now points to element 0 of `drv->ops->init` (which consists of 4 4-byte elements).
- Condition `i < 6U /* sizeof (struct drvmgr_drv_ops) / sizeof (void *) (void) */`, taking true branch.
- Condition `i < 6U /* sizeof (struct drvmgr_drv_ops) / sizeof (void *) (void) */`, taking true branch.
- `cond_at_most`: Checking `i < 6U` implies that `i` may be up to 5 on the true branch.

```
358 for (i = 0, ppfunc = (fun_ptr *)&drv->ops->init[0];
359 i < DRVMGR_OPS_NUM(struct drvmgr_drv_ops); i++)
```

- Jumping back to the beginning of the loop.

CID 1399730 (#1 of 1): Out-of-bounds read (OVERRUN)

- `ovrrun-local`: Overrunning array of 4 4-byte elements at element index 5 (byte offset 20) by dereferencing pointer `ppfunc + i`.

```
360 printf(" %s %p\n", drv_ops_names[i], ppfunc[i]);
361 printf(" NO. DEVICES: %d\n", drv->dev_cnt);
362
```

### Comment 1

1. **Joel Sherrill**, Wed, 15 Mar 2017 16:03:24 GMT
2. **owner**: changed from `joel.sherrill@...` to **Daniel Hellstrom**
3. **status**: changed from **new** to **assigned**

### Comment 2

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

### Comment 3

1. **Daniel Hellstrom**, Tue, 29 Aug 2017 07:09:36 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 3663be53/rtems:

```
drvmgr: clean up info_drv print
Fixes #2930
```

### Comment 4

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

**Description**

When the Termios task driven functioning mode is used, `rtems_termios_open_tty()` calls `rtems_task_create()` with `RTEMS_NO_PREEMPT` in the initial task mode parameter. `RTEMS_NO_PREEMPT` is not supported on SMP.

`rtems_task_create()` returns `RTEMS_UNSATISFIED` in this SMP scenario and Termios ends up in `rtems_fatal_error_occurred()`.

Termios starts the RX and TX tasks successfully on SMP if `RTEMS_NO_PREEMPT` is removed from the initial task modes of these tasks. However, I suspect there may be assumptions on the `NO_PREEMPT` mode for the RX and TX tasks in other parts of Termios.

**Comment 1**

1. **Sebastian Huber**, Thu, 16 Mar 2017 14:39:51 GMT

The task driven mode in general needs a review and possibly a re-implementation. A good alternative is the `TERMIOS_IRQ_SERVER_DRIVEN` mode in case the interrupt server is available.

**Comment 2**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

**Comment 3**

1. **Sebastian Huber**, Thu, 08 Jun 2017 07:42:07 GMT

In f7a2dcf/rtems-docs:

```
bsp-howto: Warn about TERMIO_TASK_DRIVEN
Update #2935.
```

**Comment 4**

1. **Sebastian Huber**, Thu, 08 Jun 2017 07:43:12 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **wontfix**

We should keep the task driven mode as is. Maybe remove it in the future.

**Comment 5**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

#### Comment 1

1. **Joel Sherrill**, Fri, 17 Mar 2017 13:03:41 GMT

Depending on the speed of the computer, building tools for an architecture can easily take an hour. You should run top in another windows land see how active your computer is. There is also a detailed log file you can tail. But I don't remember the details of that offhand.

#### Comment 2

1. **Gedare Bloom**, Fri, 17 Mar 2017 19:33:57 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **invalid**

Yeah this looks perfectly normal so far. Let it continue going.

I'm closing this. OP can re-open and post an rsb-error / log file if there is a problem.

**Comment 1**

1. **Gedare Bloom**, Fri, 17 Mar 2017 19:37:30 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **invalid**

This says there is no file found at the location of \$HOME/development/rtems/rsb/source-builder/sb-bootstrap

Please check your file system to see where you have checked out RSB. (I see from your other ticket you filed that it is in fact \$HOME/development/rtems/rsb/rtems-source-builder/source-builder/sb-bootstrap that you need.

Also, it is not recommended to run the source builder as the root user, or even as sudo.

I am sorry, I do not understand the purpose of the ticket.

Tickets are for bugs or issues in RTEMS or one of its packages. If you need support please ask on the RTEMS User's mailing list.

### **Description**

There are approximately ~100 failures, timeouts, etc on the LEON3 BSP. See this thread for some discussion where Jiri notes it is broken on his checkout from December:

<https://lists.rtems.org/pipermail/devel/2017-March/017277.html>

Passed: 458  
 Failed: 20  
 Timeouts: 73  
 Invalid: 3

Total: 554

Failures:

```

#### Comment 1

1. **Joel Sherrill**, Mon, 20 Mar 2017 22:54:56 GMT
2. **owner:** changed from **daniel h** to **Daniel Hellstrom**

#### Comment 2

1. **Chris Johns**, Tue, 21 Mar 2017 00:07:52 GMT

Replying to Joel Sherrill:

There are approximately ~100 failures, timeouts, etc on the LEON3 BSP. See this thread for some discussion where Jiri notes it is broken on his checkout from December:

<https://lists.rtems.org/pipermail/devel/2017-March/017277.html>

Passed: 458 Failed: 20 Timeouts: 73 Invalid: 3

Total: 554

What are the results with SMP enabled?

### Comment 3

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone**: changed from **4.12** to **4.12.0**

### Comment 4

1. **Daniel Hellstrom**, Fri, 12 May 2017 09:42:39 GMT

I have not managed to reproduce so many failures on GR712RC, GR740 or TSIM. Below are the failures I get from the run yesterday on non-SMP RTEMS configuration at GR712RC LEON3. The five fstests below have been discussed before and I believe they are related to the same faulty newlib configure used when the toolchain was built. Left is 4 tests which we will have to analyse.

I'm would argue that this should not block the 4.12 branching?

```
[usr1] ##### [usr1] # RTEMS TESTSUITE FAILURE SUMMARY [usr1] # [usr1] # Result Test
ExecRes? ConsoleRes? ExitCode1 ExitCode2 [usr1] # FAIL: ./fstests/imfs_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/jfs2_fsscandir01 OK FAIL 5 0 [usr1] #
FAIL: ./fstests/mdosfs_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/mimfs_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/mrfs_fsscandir01 OK FAIL 5 0 [usr1] #
# FAIL: ./libtests/tar01 OK FAIL 5 0 [usr1] # FAIL: ./psxtests/psxsem01 OK FAIL 5 11 [usr1] # FAIL: ./sptests/spinternalerror01 OK N/A -559038737 1611526157
[usr1] # FAIL: ./sptests/sptimecounter01 OK N/A 5 0 [usr1] # [usr1] # SUMMARY [usr1] # Tests failing: 9 [usr1] # Tests successful: 534 [usr1] # [usr1]
#####
```

### Comment 5

1. **Daniel Hellstrom**, Fri, 12 May 2017 09:46:03 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **worksforme**

### Comment 6

1. **Sebastian Huber**, Fri, 12 May 2017 09:53:58 GMT

Which tool chain did you use?

Why are there fsscandir01 failures?

### Comment 7

1. **Daniel Hellstrom**, Fri, 12 May 2017 10:03:05 GMT

It happens on both GCC-6 and GCC-7 series. It is our own build, I think it is the configuration of it that is an issue.

```
[usr1] # FAIL: ./fstests/imfs_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/jfs2_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/mdosfs_fsscandir01 OK FAIL 5 0
[usr1] # FAIL: ./fstests/mimfs_fsscandir01 OK FAIL 5 0 [usr1] # FAIL: ./fstests/mrfs_fsscandir01 OK FAIL 5 0
```

all fail with similar error message:

```
[term1] __* BEGIN OF TEST FSSCANDIR ROOT IMFS __* [term1] Initializing filesystem ROOT IMFS [term1] scandir: Success [term1] /opt/rtems-4.12/src/rtems-
4.12/c/src/././testsuites/fstests/imfs_fsscandir01/./fsscandir01/init.c: 47 MAXNAMLEN == NAME_MAX
```

### Comment 8

1. **Sebastian Huber**, Fri, 12 May 2017 10:08:13 GMT

It would be quite nice if your RCC is next to identical to the tool chain produced by the RSB. This issue was fixed in January 2017 in the RTEMS master.

**Description**

Adding a top level testsuite configuration file lets us specify tests that have a common test state across all BSPs.

Adding the test state 'user-input' clearly tags the test as needing user input and test result tools can correctly determine the test result. The current practice of passing a test needing user input is actually hiding the real result of the test.

**Description**

Patches for RTEMS tools are available via the RTEMS tools repository:

<https://git.rtems.org/rtems-tools/tree/tools>

They are organized using subdirectories.

The RSB uses these patches. It removes the subdirectories and collects everything in a "patches" directory, e.g.

download: <https://git.rtems.org/rtems-tools/plain/tools/4.11/newlib/arm/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff> -> patches/newlib-ARM-Optimize-IEEE-754-sqrt-implementation.diff

This works only in case the patch file names are unique. So, the use of subdirectories in the RTEMS tools is questionable.

#### Comment 1

1. **Amar Takhar**, Wed, 22 Mar 2017 12:25:02 GMT

This should be easily solved by preserving the subdirectories when downloading. Keeping the subdirectories is good for organisation and still handy when they've been downloaded.

#### Comment 2

1. **Chris Johns**, Wed, 22 Mar 2017 23:42:36 GMT

Is the issue switching between branches when testing?

There is the patch option of `--rsb-file=` that overrides the RSB's detection of a file name from the URL. This option assumes a file name and not a file path.

I question the need for patches being in rtems-tools, the less we have the better off we are. I cannot see how we can remove the ones we have without needing to update the 4.11 and master branches.

The RSB has evolved to being able to download patches from a range of sources. I prefer to see patches referenced from upstream sources where ever possible. Mailing list archives are a good source of patches and I wonder if this is a better place for us to hold any patches we need?

The ability to support a download directory structure would mean the RSB would need to more complex code to handle some of sites we currently download from. I am not sure how to do this.

#### Comment 3

1. **Gedare Bloom**, Thu, 23 Mar 2017 15:53:24 GMT

The problem of multiple patches with the same name would be a problem regardless of the source of the patches. This namespace problem could be solved by renaming all patches to something that should be unique, e.g. the hash value of the file.

#### Comment 4

1. **Chris Johns**, Fri, 24 Mar 2017 01:28:52 GMT

Replying to Gedare:

The problem of multiple patches with the same name would be a problem regardless of the source of the patches. This namespace problem could be solved by renaming all patches to something that should be unique, e.g. the hash value of the file.

The hash value of the file would work and a good idea. I was concerned about making it difficult to find the patch or file from the error or log but a hash is something you can grep the config tree for.

If no hash is provided the file name can be used. This keeps the bootstrap of adding new files like it currently is, ie a warning.

This would be common to the source and patch directories. Is that OK?

#### Comment 5

1. **Chris Johns**, Fri, 24 Mar 2017 04:29:59 GMT

A problem with using the hashes is releases, that is:

<https://ftp.rtems.org/pub/rtems/releases/4.11/4.11.1/sources/>

The release procedure uses the RSB in a download only mode to collect all the source needed in a release.

I am not sure how to handle this.

#### Comment 6

1. **Sebastian Huber**, Fri, 24 Mar 2017 10:27:31 GMT

I think we should stop to use subdirectories in the RTEMS tools for the patches.

#### Comment 7

1. **Chris Johns**, Fri, 24 Mar 2017 22:27:34 GMT

Sebastian, I did not understand your last comment.

#### Comment 8

1. **Chris Johns**, Mon, 27 Mar 2017 04:37:32 GMT

I fixed #2951 using the patch from the newlib mailing list:

<https://git.rtems.org/rtems-source-builder/commit/?id=b47a811955e427f945f8958de87158e9990dc7da>

I like this approach. The `--rsb-file` option can be used to make a patch name unique such as pre-pending rtems-4.11- to the start.

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

**Comment 9**

1. **Sebastian Huber**, Mon, 27 Mar 2017 05:18:29 GMT

I think we should copy everything we need to a place we can control. URLs may get out of date and web servers may disappear. GCC snapshots seem to be only available for six months or so.

**Comment 10**

1. **Sebastian Huber**, Mon, 27 Mar 2017 05:20:21 GMT

Replying to Sebastian Huber:

I think we should stop to use subdirectories in the RTEMS tools for the patches.

In case we copy everything into one directory on the patch consumer side, e.g. RSB, release directory, then we should not use subdirectories to make a patch unique on the patch provider side, e.g. RTEMS tools.

**Comment 11**

1. **Chris Johns**, Mon, 27 Mar 2017 05:42:35 GMT

Replying to Sebastian Huber:

I think we should copy everything we need to a place we can control. URLs may get out of date and web servers may disappear.

For a release this is what happens. The directory for 4.11.1 is:

<https://ftp.rtems.org/pub/rtems/releases/4.11/4.11.1/sources/>

and this is all the source for that release.

I am not sure I follow the context of "copy everything". In terms of a time line the only points that matter are the release branch heads for the active and previous branch and master. I do not see any value in a single collection point for any and every patch the RSB references over time.

Attempting to make sure all commits in the RSB are functional does not make sense. Hosts change and this effects the RSB so there are 2 dependent variables in play.

GCC snapshots seem to be only available for six months or so.

Yes as we have discovered. I am fine with an FTP area on the ftp.rtems.org being set up for special cases if we have a need and gcc fills this role. If a release references a GCC snapshot when the release will contain a copy. The downside of this is a clutter of files that are of no value sitting around.

In case we copy everything into one directory on the patch consumer side, e.g. RSB, release directory, then we should not use subdirectories to make a patch unique on the patch provider side, e.g. RTEMS tools.

Yes, and I am for us not using rtems-tools for patches any more.

**Comment 12**

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT

2. **milestone**: changed from **4.12** to **4.12.0**

```

**Comment 1**

1. **Gedare Bloom**, Tue, 28 Mar 2017 19:39:49 GMT

Yes: the shm code has some rather questionable design choices in its locking patterns. Here it acquires a thread\_queue and then calls a user plugin function, in this case malloc is called which eventually leads to the error shown.

Is there somewhere with guidance written for how to use the various lock constructs available in RTEMS? Or what are their constraints on use. Because I didn't even know this was a problem, and apparently did not spend much time thinking about this while writing the code.

The shm code uses 2 locking patterns. The one causing a problem here is the use of a thread\_queue to protect the invocations to operations on the shared-memory object. This should be some fine-grained mutex lock that allows the operation invoked to also acquire/release internal locks such as is needed by malloc.

The other lock used is the \_Objects\_Allocator\_lock to protect the integrity of the POSIX\_Shmem\_Control Object. I think this one is fine.

**Comment 2**

1. **Sebastian Huber**, Wed, 29 Mar 2017 05:34:52 GMT

Replying to Gedare:

Yes: the shm code has some rather questionable design choices in its locking patterns. Here it acquires a thread\_queue and then calls a user plugin function, in this case malloc is called which eventually leads to the error shown.

Is there somewhere with guidance written for how to use the various lock constructs available in RTEMS? Or what are their constraints on use. Because I didn't even know this was a problem, and apparently did not spend much time thinking about this while writing the code.

Good question, maybe we should something add to the manual, e.g. in Key Concepts, 3.3 Communication and Synchronization.

The shm code uses 2 locking patterns. The one causing a problem here is the use of a thread\_queue to protect the invocations to operations on the shared-memory object. This should be some fine-grained mutex lock that allows the operation invoked to also acquire/release internal locks such as is needed by malloc.

The thread queue should be replaced with a mutex. For simplicity, maybe just the allocator mutex. We really need the self-contained mutexes for internal use.

The other lock used is the \_Objects\_Allocator\_lock to protect the integrity of the POSIX\_Shmem\_Control Object. I think this one is fine.

Yes.

<b>Blocked by</b>	

#### Description

The ARM EXIDX sections have the SHF\_LINK\_ORDER flag set and this is not honored by libdl which means the section order in the ELF file needs to be the correct order of the functions in the address map.

Add support to libdl to follow the link-to order.

#### Comment 1

1. **Chris Johns**, Fri, 31 Mar 2017 02:57:18 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In bba48d9/rtems:

libdl: Support link ordered loading of ELF sections.

The ARM C++ exception ABI uses an address ordered index table to locate the correct frame data and this requires the EXIDX sections are loaded in the order the order the matching text is loaded.

The EXIDX sections set the SHF\_LINK\_ORDER flag and link field. This patch adds support to load those flagged sections in the linked-to section order.

Updates #2955. Closes #2959

### Description

Tests can be set to the result we expect such as expected-fail, user-input and indeterminate as well as excluded so we can maintain accurate results for the testsuite.

This ticket covers setting of the correct state for all tests for tier 1 BSPs. Please add an "Updates #" for this ticket to any related commits and once done we can close this ticket.

Note: I have add a top level test configuration file called testsuites/rtems.tcfg that lets us specify a test configuration for all BSPs.

#### **Description**

Add the file testsuites/rtems.tcfg to hold test states common to all BSPs. This lets us globally set a test state.

For example fileio is user-input.

Note, user-input will be added a test state to test this file.

#### **Comment 1**

1. **Sebastian Huber**, Fri, 31 Mar 2017 04:59:42 GMT

I am not very fond of global files. The tests should be self contained. Maybe add some special comments to the test sources like in the GCC test suite?

```
/* { dg-options "-mthumb -Os" } */
/* { dg-require-effective-target arm_thumb2_ok } */
/* { dg-final { scan-assembler "ands" } } */
```

#### **Comment 2**

1. **Chris Johns**, Fri, 31 Mar 2017 06:26:42 GMT

I have never looked at the gcc testsuite and from what I have read about it was not flattering.

I do not think adding 500+ files to state fileio is a user-input test and will never complete is not good. Maybe global is not a great word, maybe common is better. We need accurate data to determine the results of tests.

It is similar to the work you have been doing to have a common linkercmd file where ever possible. It is the same thing or are you saying we should create a separate linker command file for every bsp as well? ;)

Look at the results with a work in progress rtems-test for erc32-run:

```

Passed:      546
Failed:      1
User Input:  4
Expected Fail: 0
Indeterminate: 0
Timeout:     6
Invalid:     1
-----
Total:      558
Failures:
  spcontext01.exe
User Input:
  fileio.exe
  top.exe
  termios.exe
  monitor.exe
Timeouts:
  jffs2_fssymlink.exe
  mrfs_fserror.exe
  dhrystone.exe
  fsdosfsformat01.exe
  imfs_fsrdrw.exe
  whetstone.exe
Invalid:
  minimum.exe
Average test time: 0:00:00.481800
Testing time      : 0:04:28.844749

```

Note, the benchmark tests have broken parallel testing because of the time they now take.

### Comment 3

1. **Sebastian Huber**, Fri, 31 Mar 2017 06:32:12 GMT

Replying to Chris Johns:

I have never looked at the gcc testsuite and from what I have read about it was not flattering.

My comment was not about the GCC testsuite in general.

I do not think adding 500+ files to state fileio is a user-input test and will never complete is not good. Maybe global is not a great word, maybe common is better. We need accurate data to determine the results of tests.

Why 500+ files, its just one:

Sure I thought you were talking about tcfg files. There is no standard for this plus and how does the comment get to rtems-test.

I am leveraging the expected-fail mechanism to handle this. That needs to be external to test.

All I am doing is collecting these things into a common place and a common framework.

It is similar to the work you have been doing to have a common linkercmd file where ever possible. It is the same thing or are you saying we should create a separate linker command file for every bsp as well? ;)

#### Comment 6

1. **Chris Johns**, Mon, 03 Apr 2017 23:52:54 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 258bda3/rtems:

```
testsuite: Add a common test configuration. Fix configure.ac and Makefile.am errors.
Add a top level test configuration file for test states that are common
to all BSPs. This saves adding a test configuration (tcfg) file for
every BSP. Add the test states 'user-input' and 'benchmark'. This
lets 'rtems-test' stop the test rather than waiting for a timeout or
letting a benchmark run without the user asking for it to run. Implement rtems-test-check in Python to make it faster. The shell script
had grown to a point it was noticeably slowing the build down. Fix the configure.ac and Makefile.am files for a number of the
test directories. The files are difficult to keep in sync with the
number of tests and mistakes can happen such as tests being left
out of the build. The test fsrofs01 is an example. Also a there was
a mix of SUBDIRS and _SUBDIRS being used and only _SUBDIRS should be
used. Fix the test fsrofs01 so it compiles.
Closes #2963.
```

**Description**

Whether enums are short or not is left open in the ARM EABI. On Linux and FreeBSD no short enums are used. Otherwise short enums are enabled by default.

Short enums may cause hard to find issues with 3rd party software, since they are quite unusual in general, e.g.

<https://git.rtems.org/rtems-libbsd/commit/freebsd/include/rpc?id=9880635f2e642380b69b85e00271649b3a2fc2de>

The data and structure layout may suddenly change in case enumeration values are added/removed. The benefit of short enums is probably not worth the trouble, since the packed compiler attribute can be used to individually make an enum short.

The reason for not choosing no short enums during the ARM EABI introduction was an issue with Newlib. This is addressed with the following patch:

<https://sourceware.org/ml/newlib/2017/msg00238.html>

### Description

inttypes.h defines some methods which are not present but required for POSIX compliance. They are also included in the FACE General Purpose Profile.

```
intmax_t imaxabs(intmax_t);
imaxdiv_t imaxdiv(intmax_t, intmax_t);
intmax_t strtoumax(const char *restrict, char **restrict, int);
uintmax_t strtoumax(const char *restrict, char **restrict, int);
intmax_t wcstoumax(const wchar_t *restrict, wchar_t **restrict, int);
uintmax_t wcstoumax(const wchar_t *restrict, wchar_t **restrict, int);
```

This was originally discussed here (<https://sourceware.org/ml/newlib/2013/msg00626.html>) with follow up discussion here (<https://sourceware.org/ml/newlib/2017/msg00240.html>).

The consensus seems to be that the methods as currently implemented in FreeBSD address the concerns raised in that email thread.

This ticket is complete when:

- source for these methods is merged into newlib
- methods are documented in newlib
- RSB is updated appropriately
- tests are added to RTEMS
- RTEMS POSIX Compliance spreadsheet (<https://goo.gl/AXrnXO>) is updated

### Comment 1

**Description**

The following BSPs do not successfully build on the master because they use UBoot's mkimage which is not part of the standard RTEMS tools.

```
qoriq_core_0
qoriq_core_1
qoriq_p1020rdb
```

**Comment 1**

1. **Joel Sherrill**, Mon, 03 Apr 2017 19:16:05 GMT
2. **owner**: set to **Sebastian Huber**
3. **status**: changed from **new** to **assigned**

**Comment 2**

1. **Sebastian Huber**, Tue, 04 Apr 2017 05:09:35 GMT

Ok, now I know why I didn't commit this patch years ago.

Should we add the U-Boot mkimage to the RTEMS tools? It is GPL software.

**Comment 3**

1. **Chris Johns**, Tue, 04 Apr 2017 06:04:04 GMT

Replying to Sebastian Huber:

Should we add the U-Boot mkimage to the RTEMS tools? It is GPL software.

No. The RSB is fine, maybe a `rtems/config/bsps/qoriq` build set could be added which builds everything for the user of the BSP including uboot.

You could see if you can craft a configure test to detect the tool then update the build rule. This would allow those who do not have the tool to build and regression test building.

I also suggest you provide instructions in the Wiki under <https://devel.rtems.org/wiki/Boards> on how to get and build uboot, create images etc.

I see any post rules or stages as a wasted effort, even the size command. This should be handled outside of RTEMS. It is difficult to handle generically.

**Comment 4**

1. **Sebastian Huber**, Tue, 04 Apr 2017 06:08:25 GMT

I am not sure if its easily possible to adjust anything in `make/custom/*` via the configure script.

**Comment 5**

1. **Chris Johns**, Tue, 04 Apr 2017 06:12:15 GMT

Replying to Sebastian Huber:

I am not sure if its easily possible to adjust anything in `make/custom/*` via the configure script.

I am sure a bit of `m4` and whole lot of `../` is all you need ;)

**Comment 6**

1. **Sebastian Huber**, Wed, 05 Apr 2017 05:10:15 GMT
2. **status**: changed from **assigned** to **closed**

### Description

Per discussion at <https://lists.rtems.org/pipermail/devel/2017-April/017483.html>, create to consolidate extensions to the C99 file. A quick search shows that there are the following set of defines which could be consolidated as a starting point. Then these are available to address other printf() format warnings.

```
$ grep -r "#define PRI" . | grep -v PRIORITY | grep -v PRINT
./cpukit/libmisc/shell/main_time.c:#define PRIdtime_t PRId64

**Description**

The source Builder Fails to build 4.11 tools under MSYS2 and windows. Newer versions of MSYS use a version of gcc greater than 6.0 which can no longer be used to build older version of gcc.

The attached patch is from the gcc mailing list and originally was for gcc version 5.3. It has been adjusted so that it applies to 4.9.3.

This problem should also apply to linux and other systems that use newer gcc 6.0 and above.

**Attachments:**

1. **Chris Johns**, Wed, 12 Apr 2017 10:27:08 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In e85c673/rtems-source-builder:

```
MSYS2: Patch to support newer packages.
The patch is contributed by Worth Burruss.
Closes #2990.
```

**Comment 3**

1. **Chris Johns**, Thu, 13 Apr 2017 07:48:24 GMT
2. **status**: changed from **closed** to **reopened**
3. **resolution**: **fixed** deleted

Building 4.11.2-rc4 on Windows with a new MSYS2 install has an error on rtems-arm:

```
In file included from ../../gcc-4.9.3/gcc/cp/except.c:1013:0:
cfns.gperf: In function 'const char* libc_name_p(const char*, unsigned int)':
cfns.gperf:101:1: error: 'const char* libc_name_p(const char*, unsigned int)' redeclared inline with 'gnu_inline' attribute
cfns.gperf:26:14: note: 'const char* libc_name_p(const char*, unsigned int)' previously declared here
cfns.gperf: At global scope:
cfns.gperf:26:14: warning: inline function 'const char* libc_name_p(const char*, unsigned int)' used but never defined
make[2]: *** [Makefile:1059: cp/except.o] Error 1
```

I am not sure the patch is ok so I am reopening this ticket.

#### Comment 4

1. **Chris Johns**, Fri, 26 May 2017 03:07:34 GMT

The problem with ARM is the bset file includes an arch specific cfg file. This patch needs to be added to that file.

I suggest you create a new cfg file with just this patch, remove it from config/tools/rtems-gcc-4.9-newlib-2.2.0-1.cfg, then include the file. Also add the include to config/tools/rtems-arm-gcc-4.9.3-newlib-2.2.0-20150423-1.cfg.

#### Comment 5

1. **Chris Johns**, Thu, 15 Jun 2017 02:50:23 GMT
2. **status**: changed from **reopened** to **closed**
3. **resolution**: set to **fixed**

Fixed with patch 2433c4b/rtems-source-builder.

#### Comment 6

1. **Chris Johns**, Mon, 07 Aug 2017 01:33:45 GMT
2. **status**: changed from **closed** to **reopened**
3. **version**: changed from **4.11** to **4.12**
4. **resolution**: **fixed** deleted
5. **milestone**: changed from **4.11.2** to **4.12.0**

This bug effects m32c on the 4.12 (master) branch.

#### Comment 7

1. **Chris Johns**, Mon, 07 Aug 2017 23:41:35 GMT

Windows (10 64bit) failures:

dtc-1.4.1 epiphany gdb-7.8.1 lm32 gdb-7.12 microblaze gdb-7.12 nios2 gcc-7.1.0, newlib-2.5.0.20170623 powerpc gdb-7.12 sparc gdb-7.12

We need all these issues resolved to branch 4.12.

#### Comment 8

1. **Chris Johns**, Mon, 07 Aug 2017 23:42:56 GMT

dtc-1.4.1:

```
convert-dtsv0-lexer.lex.c:398:0: error: "yywrap" redefined [-Werror]
convert-dtsv0-lexer.lex.c:74:0: note: this is the location of the previous definition
convert-dtsv0-lexer.l:41:21: fatal error: fnmatch.h: No such file or directory
#include `
      ^
```

#### Comment 9

1. **Joel Sherrill**, Mon, 07 Aug 2017 23:51:44 GMT

What's the gdb problem? Is it the same on all the targets failing?

What about the nios2? That would seem to be a different issue.

#### Comment 10

1. **Chris Johns**, Mon, 07 Aug 2017 23:54:56 GMT

lm32 gdb-7.12:

```
../../../../gdb-7.12/sim/lm32/dv-lm32uart.c: In function 'lm32uart_io_read_buffer':
../../../../gdb-7.12/sim/lm32/dv-lm32uart.c:207:3: error: unknown type name 'fd_set'
    fd_set fd;
    ^~~~~~
```

#### Comment 11

1. **Chris Johns**, Mon, 07 Aug 2017 23:55:49 GMT

microblaze gdb-7.12:

```

**Comment 17**

1. **Chris Johns**, Fri, 25 Aug 2017 03:04:42 GMT

DTC uses fnmatch and this function is not available on Windows in the MinGW environment. The use of this function makes it difficult to get this tool to work on native Windows.

A couple of solutions come to mind:

Fix the DTC tool. Commit a DTB to the moxie project for the DTS and remove the dependency.

#### Comment 1

1. **Chris Johns**, Tue, 18 Apr 2017 00:34:38 GMT

I have looked into this issue in detail and it is complicated. At the heart of the problem is the inherent path limit in the WIN32 API which is documented in Naming Files, Paths, and Namespaces. There is also Python Issue 27731 which details how Python will respond.

I see a couple of solution, one complicated and full of potential issues which others have solved, for example the MSYS2 shell, and the second is a simple hack. The complex solution is to step down to the Win32 API and selectively use Win32 API calls that support the Unicode extension to let the RSB work. I feel this is a lot of work and difficult to get to work. The second solution is to generate a script and to run it and let the shell on the host manage the issue. The RSB needs a shell to build most packages so it has to be present.

We see the long file name issue when copying a tree and removing a tree.

#### Comment 2

1. **Chris Johns**, Thu, 15 Jun 2017 02:46:32 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

Fixed with the patch 78c1524/rtems-source-builder.

#### Comment 3

1. **Chris Johns**, Mon, 07 Aug 2017 02:16:18 GMT
2. **status:** changed from **closed** to **reopened**
3. **version:** changed from **4.11** to **4.12**
4. **resolution:** **fixed** deleted
5. **milestone:** changed from **4.11.2** to **4.12.0**

This 4.11 fix needs to be ported to 4.12.

### Description

The target code in libdebugger has support to recover from exceptions related to invalid memory accesses. GDB may request the server access memory on the target that results in an exception. The exception occurs on the server's remote connection thread and the server needs to recover and return an error to GDB.

Running the debugger01 test with an SMP build of RTEMS and libbsd for xilinx\_zedboard and issuing bt in GDB results in:

```
*** LIBBSD DEBUGGER 1 TEST ***
[144/1950]
shell:cannot set terminal attributes(/dev/console)
RTEMS Shell on /devn/ecxounss0o:1 e<.R TUEsMeS 'Nheexlups' dteov ilcies>t
|ccogmemma0n:d s<.C
adence CGEM Gigabit Ethernet Interface> on nexus0

[ ] CPSR = 08010173 ----Q--A-FT GE:0 IT:01 M:13 SVC
[ ] target exception: 0 0 0
[ ] tid:0A01000A: thread:0041F5B0 frame:005664EC
[ ] server access fault
```

The following lines first two values are cpu\_self->thread\_dispatch\_disable\_level and \_ISR\_Get\_level() which are both 0 so I cannot see a reason the assert is happening:

```
[ ] target exception: 0 0 0
```

### Attachments:

**Comment 1**

1. **Chris Johns**, Sat, 15 Apr 2017 00:44:35 GMT

In b53ad46/rtems:

```
libdebugger: Work around assert when using _Thread_Executing.
Using _Thread_Executing with RTEMS_DEBUG results in an assert if the server accesses invalid memory.
Updates #2993.
```

**Comment 2**

1. **Sebastian Huber**, Tue, 02 May 2017 05:27:20 GMT

What prevents a thread dispatch in this context?

**Comment 3**

1. **Chris Johns**, Tue, 02 May 2017 06:27:02 GMT

I think it was the mode and attributes being the wrong way around in the create call.

Maybe the create call should detect this and return an error rather than the internal error.

**Comment 4**

1. **Joel Sherrill**, Tue, 02 May 2017 14:17:14 GMT

It would take making the attribute and mode bits mutually exclusive so overlap can be detected. I considered this also. We would have to be careful to document/check that they stay overlapping.

**Description**

When I went to rebuild based on 4.12, I cloned from github.  
 I am no longer getting all of the b-sets that I was expecting. Specifically, 4.12/rtems-sparc

Chris Johns said to submit it as a bug. It must have happened within the last couple of weeks. As my scripts that automated these tasks were working as of around 3/1/2017

```
git clone git://git.rtems.org/rtems-source-builder.git $SETBLDRSCRIPTDIR/sb-set-builder --list-bsets
```

```
RTEMS Source Builder - Set Builder, 4.12 (2074bd1168ee)
Examining: config
Examining: ../rtems/src/rtems-source-builder/source-builder/config
Examining: ../rtems/src/rtems-source-builder/bare/config
devel/autotools-base.bset
devel/autotools-internal.bset
devel/autotools.bset
devel/dtc.bset
devel/libtool.bset
devel/libusb.bset
devel/or1ksim.bset
devel/qemu.bset
gnu-tools-4.6.bset
gnu-tools-4.8.2.bset
lang/gcc491.bset
```

**Comment 1**

1. **Joel Sherrill**, Mon, 17 Apr 2017 03:29:20 GMT

When you mentioned GitHub?, I wondered if the mirroring was broken. It is not. And it looks like rtems/config/4.12 has the right content. I will try the script in the morning to see what it lists on my computer.

**Comment 2**

1. **Hassan Karim**, Mon, 17 Apr 2017 03:44:58 GMT

What could I look for specifically by hand in the git repository?

**Comment 3**

1. **Joel Sherrill**, Mon, 17 Apr 2017 14:32:04 GMT

I don't think you need to look at anything. I can confirm the script doesn't find the RTEMS 4.12 bsets. It isn't seeing anything in the rtems/ directory.

```
$ ./source-builder/sb-set-builder --list-bsets RTEMS Source Builder - Set Builder, 4.12 (2074bd1168ee) Examining: config Examining: source-builder/config Examining: bare/config
```

```
devel/autotools-base.bset devel/autotools-internal.bset devel/autotools.bset devel/dtc.bset devel/libtool.bset devel/libusb.bset devel/or1ksim.bset
devel/qemu.bset gnu-tools-4.6.bset gnu-tools-4.8.2.bset lang/gcc491.bset
```

The rtems 4.12 bset's are:

```
$ ls rtems/config/4.12 rtems-aarch64.bset rtems-i386.bset rtems-powerpc.bset rtems-all.bset rtems-lm32.bset rtems-sh.bset rtems-arm.bset rtems-m32c.bset
rtems-sparc64.bset rtems-autotools-base.bset rtems-m68k.bset rtems-sparc.bset rtems-autotools.bset rtems-microblaze.bset rtems-tools.bset rtems-autotools-
internal.bset rtems-mips.bset rtems-v850.bset rtems-bfin.bset rtems-moxie.bset rtems-x86_64.bset rtems-default.bset rtems-nios2.bset rtems-epiphany.bset
rtems-or1k.bset
```

cd into rtems/ and then run set-builder using any of those. This is just a problem with the --list-bsets.

It looks like there are two issues in windows.py

- Probes for programs like bison and flex as required.
- tar - bsdtar must be on mingw. It doesn't appear to exist on cygwin.

I think the fix is pretty simple code-wise but I wanted to get some feedback on why there were a lot more required programs in this file than on other OS.py files.

#### Comment 1

1. **Chris Johns**, Tue, 18 Apr 2017 23:43:22 GMT

Replying to Joel Sherrill:

It looks like there are two issues in windows.py

Probes for programs like bison and flex as required. tar - bsdtar must be on mingw. It doesn't appear to exist on cygwin.

Correct. Getting a suitable bug free tar on Windows is not as easy as it looks.

I have no interest in supporting Cygwin. In the past it has never been able to complete a build of the tools in a reliable way while MSYS2 does. Cygwin complicates the Windows environment, machine set up, documentation and what user's should use.

I do not want to run parallel MSYS2 and Cygwin environments to check both are working. I have supported Cygwin the past and found it a major effort and distraction.

I think the new Microsoft Unix layer, what ever that is called, is a better path for us to follow.

I think the fix is pretty simple code-wise

If you wish to support Cygwin then I ask you test all changes to this file on MSYS2 as this is the primary set up for Windows.

but I wanted to get some feedback on why there were a lot more required programs in this file than on other OS.py files.

Typically a default entry is overridden by creating an entry in the host's OS file. Entries are overridden if the paths do not match.

## 3000 - Setting interrupt level in the mode arg on SMP returns RTEMS\_UNSATISFIED

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3000">https://devel.rtems.org/ticket/3000</a> ( <a href="https://devel.rtems.org/ticket/3000">https://devel.rtems.org/ticket/3000</a> )
<b>Id</b>	3000
<b>Reporter</b>	Chris Johns
<b>Created</b>	19 April 2017 02:11:59

<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

If for any reason a user sets the interrupt level in the mode on an SMP build the error RTEMS\_UNSATISFIED is returned. The documentation indicates this is a lack of stack and this confusing.

The reason this happens is the SMP check for an interrupt level being set is in the score's `_Thread_Initialize`. I propose that and `is_preemptible` check be converted to an assert and checks be added to the Classic API to catch these errors and report suitable error codes.

There is no meaningful error code available without abusing an existing one so I propose adding `RTEMS_INVALID_MODE`.

#### Comment 1

1. **Joel Sherrill**, Wed, 19 Apr 2017 03:28:50 GMT

I think this is a generally a good idea but there are a number of pieces to do this completely:

the status has to also be returned by `rtems_task_mode()` add status to list in rtems status to string add status to list in Ada binding. Should be mechanical. add status to status table in Classic API manual add new status to `rtems_task_create()` documentation add new status to `rtems_task_mode()` documentation add test for `rtems_task_create()` new error add test for `rtems_task_mode()` new error

I am unsure if the `assert()` is debug mode only. That needs to be clarified.

Sorry to be pedantic with the list but this looks like the type of change that is small but has tentacles that would be easy to miss pieces. I suspect my list isn't complete yet.

#### Comment 2

1. **Chris Johns**, Wed, 19 Apr 2017 04:42:23 GMT

Replying to Joel Sherrill:

I think this is a generally a good idea but there are a number of pieces to do this completely:

Great and yes.

the status has to also be returned by `rtems_task_mode()`

OK.

add status to list in `rtems status to string`

Done in the posted patch.

add status to list in Ada binding. Should be mechanical.

Is there any documentation on how to do this?

Answer: Edit `rtems.ads` and add it. It is just an enumerated list. You won't have trouble. `c/src/ada/rtems.ads` around line 353.

add status to status table in Classic API manual add new status to `rtems_task_create()` documentation add new status to `rtems_task_mode()` documentation

I will create a docs patch once I have a suitable patch for master.

add test for `rtems_task_create()` new error add test for `rtems_task_mode()` new error

Yes however the tests are only running in the single core mode even when built with SMP so the error is not able to be tripped.

ANSWER: Sounds like a new SMP test is needed.

I am unsure if the `assert()` is debug mode only. That needs to be clarified.

That is correct. The `assert()` catch a bug in a user of the score API when built with `RTEMS_DEBUG`. The users of the call need to protect the score thread initialise call.

Sorry to be pedantic with the list but this looks like the type of change that is small but has tentacles that would be easy to miss pieces. I suspect my list isn't complete yet.

This looks the list to me.

### Comment 3

#### **Description**

The default setting for `CONFIGURE_MAXIMUM_PROCESSORS` is 1 and this means `rtems_configuration_is_smp_enabled()` returns false. Only the `smptests` set the maximum processor count to `CPU_COUNT` and therefore run in SMP mode.

If SMP is not running in an SMP build when running the tests are the tests really reporting a true indication of the of the system?

I would expect we have the `API tests`, `libtests` and `fstests` running with SMP enabled in an SMP build.

**Description**

When used with 64KiB clusters, the FAT driver will loop forever in cpukit/libfs/src/dosfs/fat.c, line 580. This happens because struct fat\_vol\_s declares bytes per cluster variable as `__uint16_t bpc`, whereas it can be as big as 256KiB.

Here is a link for Linux FAT driver which doesn't make any assumption about cluster size: <http://lxr.free-electrons.com/source/fs/fat/inode.c?v=2.6.24#L1262>

**Comment 1**

- 1. **Gedare Bloom, Thu, 20 Apr 2017 15:15:38 GMT**

Do you have a test case?

Do you have a proposed solution? is it just to increase bpc type size?

**Comment 2**

- 1. **munster, Fri, 21 Apr 2017 09:43:32 GMT**

I have attached a solution which increases bpc size and removes the limit.

**Comment 3**

1. **Daniel Hellstrom**, Fri, 12 May 2017 09:32:46 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

I never had this problem until I rebased recently. It triggered on LEON3 since some drivers are looking at the RTEMS version information from headers.

This was fixed by Sebastian in commit:

```
e0627c69b5bc2b669105525b1ce35f84abc3edf0 "cpukit: Fix RTEMS_REVISION define"
```

<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

There are two problems with the caching on ARM:

- In cases where the buffer is not aligned to line boundary at the beginning or the end, the invalidate operation would lose modifications done on the adjacent data. This applies to both L1 and L2 caches.
- The L2C-310 cache management operations use excessive locking. According to manual, the used operations (Clean Line by PA, Clean and Invalidate Line by PA, Cache Sync) are atomic and do not require locking.

I have attached the proposed patch.

**Comment 1**

- Chris Johns, Thu, 27 Apr 2017 23:44:36 GMT**

Why have you changed the signature of some of the functions to be `uint32_t, uint32_t` from `const void* , const size_t` ?

**Comment 2**

- munster, Fri, 28 Apr 2017 15:13:35 GMT**

Well, I was just following the Linux driver example. If you don't like it, I can use the previous function signature.

**Comment 3**

- Chris Johns, Sun, 30 Apr 2017 22:09:35 GMT**

Replying to munster:

Well, I was just following the Linux driver example. If you don't like it, I can use the previous function signature.

I think it is best a change like this is as small as can be and keeping the existing function signatures helps do this so please revert that part of the change and post a new patch. Thanks.

**Comment 4**

- Sebastian Huber, Tue, 02 May 2017 05:30:52 GMT**

Please don't change the function signatures. Please generate one patch for each issue.

Its up to the user to ensure that a cache line invalidation is safe. The cache manager should not take care of this.

**Comment 5**

- munster, Mon, 08 May 2017 10:02:40 GMT**

Replying to Sebastian Huber:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Please don't change the function signatures. Please generate one patch for each issue.

I have attached separate patches for these two issues.

Its up to the user to ensure that a cache line invalidation is safe. The cache manager should not take care of this.

Generally you are right. However, the user may not be aware of this particular problem.

#### **Comment 6**

1. **Sebastian Huber**, Tue, 09 May 2017 07:58:16 GMT

Replying to munster:

Replying to Sebastian Huber:

Please don't change the function signatures. Please generate one patch for each issue.

I have attached separate patches for these two issues.

Could you please format the patches via "git format-patch":

<https://docs.rtems.org/branches/master/user/support/contrib.html>

Please help to improve the wiki and website if something is unclear or hard to find.

Its up to the user to ensure that a cache line invalidation is safe. The cache manager should not take care of this.

Generally you are right. However, the user may not be aware of this particular problem.

The we should fix this issue with better documentation. In

<https://git.rtems.org/rtems/tree/cpukit/rtems/include/rtems/rtems/cache.h#n111>

we have

```
/**
 * @brief Invalidates multiple data cache lines.
 *
 * The cache lines covering the area are marked as invalid. A later read
 * access in the area will load the data from memory.
 *
 * In case the area is not aligned on cache line boundaries, then this
 * operation may destroy unrelated data.
 *
 * @param[in] addr The start address of the area to invalidate.
 * @param[in] size The size in bytes of the area to invalidate.
 */
void rtems_cache_invalidate_multiple_data_lines(
  const void *addr,
  size_t size
);
```

The cache manager documentation probably needs to move into the user manual. Maybe some examples help to show what can go wrong.

#### **Comment 7**

**Description**

I have tried to install sparc bsp=erc32 on 4 different builds. 3 failed, and 1 flawlessly installed. The others all seem to fail somewhere during make install of test suites. Each reports one missing config problem or another.

I believe the problem resulted in a missing package, pax & libbsd-dev on Ubuntu 12.04.5 LTS (GNU/Linux 3.2.0-126-virtual x86\_64)

I hadn't seen this exact problem because I normally update & upgrade as soon as I get a new image. Pressed for time, I skipped it. So, I am not sure if we need to update the documentation to directly include pax, since it is directly called in configure and breaks if not present.

[https://docs.rtems.org/rsb/#\\_host\\_setups](https://docs.rtems.org/rsb/#_host_setups) Under this section, 11.1.5. Ubuntu

```
Add pax to this line
$ sudo apt-get build-dep binutils gcc g++ gdb unzip git python2.7-dev pax
```

**Comment 1**

1. **Chris Johns**, Sun, 07 May 2017 22:54:11 GMT

This looks like a duplicate of #2437.

Solving this issue cleanly at the RSB level requires teaching the RSB about packages and then providing per host integration to the local packaging system if one is present. The RSB can build anything and so it is difficult to create a per host install list for everything that it could build. As a result there is currently a middle ground that is not cleanly covered leaving holes such as this one.

For pax please provide a documentation patch.

**Comment 2**

1. **Chris Johns**, Sun, 07 May 2017 22:58:24 GMT

Also the latest RSB documentation is <https://docs.rtems.org/branches/master/rsb/index.html>

**Description**

I encountered an error compiling the xilinx\_zynq\_zedboard BSP. I am using a built of the RSB that I compiled in December. With that built of the RSB I could build this BSP several times until I did a git pull of the RTEMS repo two weeks ago. Today I updated my repos of the RTEMS and RSB sources, I rebuilt the RSB and I tried to build again the xilinx\_zynq\_zedboard BSP, encountering the same error:

```
gmake[6]: ___ * No rule to make target posix/include/sys/mman.h', needed by ../cpukit/./././xilinx_zynq_zedboard/lib/include/sys/mman.h'. Stop. ___
```

**Comment 1**

1. **Gedare Bloom**, Tue, 09 May 2017 14:24:45 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **invalid**

You need to re-build your toolchain with a new git-pull of the RSB.

**Comment 2**

1. **Arturo Pérez**, Wed, 10 May 2017 08:50:57 GMT

As I wrote, I updated the RSB sources by doing a git-pull. Then, I built it again, but using this new version I found the same error. I did it yesterday and today.

**Comment 3**

1. **Gedare Bloom**, Wed, 10 May 2017 12:46:23 GMT
2. **status**: changed from **closed** to **reopened**

3. **resolution:** **invalid** deleted

The sys/mman.h was moved from RTEMS into newlib awhile ago, but maybe there is a problem with the integration. I recently added the mmap/munmap support. I'll try to look at this, can anyone else replicate it?

#### Comment 4

1. **Gedare Bloom**, Wed, 10 May 2017 12:46:43 GMT
2. **owner:** changed from **joel.sherrill@...** to **Gedare Bloom**
3. **status:** changed from **reopened** to **assigned**

#### Comment 5

1. **Joel Sherrill**, Wed, 10 May 2017 13:07:47 GMT

I built all BSPs overnight and didn't have any failures due to this. I always bootstrap -c and rebootstrap before a build sweep. It is quite possible that the Makefile.in didn't get regenerated in the reporter's source tree.

#### Comment 6

1. **Gedare Bloom**, Wed, 10 May 2017 16:40:46 GMT

Yes, that makes sense. Arturo, please do bootstrap -c and then bootstrap, configure and make.

#### Comment 7

1. **Sebastian Huber**, Thu, 11 May 2017 07:31:02 GMT
2. **milestone:** changed from **4.12** to **4.12.0**

#### Comment 8

1. **Arturo Pérez**, Thu, 11 May 2017 08:25:39 GMT

Yes, that was the solution. I was not doing bootstrap -c.

From now I will do the built always following the steps as Joel said.

Thanks, so much. Sorry, if I made you losing a bit of time.

## **3012 - Global C++ IO streams are broken (cout, cin, cerr)**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3012">https://devel.rtems.org/ticket/3012</a> ( <a href="https://devel.rtems.org/ticket/3012">https://devel.rtems.org/ticket/3012</a> )

## Description

The global C++ IO stream objects are initialized here

[https://gcc.gnu.org/viewcvs/gcc/trunk/libstdc%2B%2B-v3/src/c%2B%2B98/ios\\_init.cc?view=markup#l85](https://gcc.gnu.org/viewcvs/gcc/trunk/libstdc%2B%2B-v3/src/c%2B%2B98/ios_init.cc?view=markup#l85)

via a placement new. The "stdout" etc. is thread-local in Newlib

```
#define stdout ( REENT-> stdout)
```

Using this for a global object like std::cout is quite broken. Which FILE object should be used instead? Potential fix:

```
diff --git a/libstdc++-v3/src/c++98/ios_init.cc b/libstdc++-v3/src/c++98/ios_init.cc

## Comment 1

### 1. Chris Johns, Wed, 10 May 2017 00:21:49 GMT

This approach concerns me because it breaks std::cout in the other direction. If this is fine for C++'s stdout it should be ok for a thread's C stdout and given newlib has:

```
#define stdout ( REENT-> stdout)
```

we are not consistent.

Is moving at run-time the address of stdout, which newlib does, conflicting with another standard like C++? I assume the stdc++ code is capturing a reference to stdout so closing and then opening a file and assigning it to stdio works.

This is a difficult issue.

## Comment 2

### 1. Sebastian Huber, Wed, 10 May 2017 05:08:39 GMT

Another option would be to use thread-local cout, etc. This would require that all RTEMS targets support thread-local storage.

## Comment 3

### 1. Chris Johns, Wed, 10 May 2017 05:59:36 GMT

I have considered this and it is attractive. Is this something libstdc++ supports out of the box or do we need to make changes?

I would like to understand the issue a little more and how cygwin solves the problem. Joel has been testing some code on cygwin and it would be nice to get it to run on RTEMS and see how it breaks.

I am concerned the current implementation's behavior is undefined if a thread calls `std::cout` and then is deleted leaving `libstdc++` with a reference to invalid memory.

#### Comment 4

1. **Sebastian Huber**, Wed, 10 May 2017 06:05:58 GMT

Replying to Chris Johns:

I have considered this and it is attractive. Is this something `libstdc++` supports out of the box or do we need to make changes?

No, I guess it needs a some work and it is not clear if this is acceptable for `libstdc++`. The maintainer have a strong view if it comes to standard compliance.

I would like to understand the issue a little more and how `cygwin` solves the problem.

I guess the main thread is never deleted, so `cout` can use its `stdout` safely.

Joel has been testing some code on `cygwin` and it would be nice to get it to run on RTEMS and see how it breaks.

I am concerned the current implementation's behavior is undefined if a thread calls `std::cout` and then is deleted leaving `libstdc++` with a reference to invalid memory.

This is why one option is to use the `_GLOBAL_REENT`.

#### Comment 5

1. **Sebastian Huber**, Tue, 23 May 2017 09:45:20 GMT

The Ada run-time support has the same problem (thread-local IO streams used like a global object).

#### Comment 6

1. **Sebastian Huber**, Thu, 22 Jun 2017 06:36:49 GMT

Maybe we could add an RTEMS-specific change to `Newlib` so that we still have the thread-local stdio streams, but we initialize them to global `FILE` objects by default, e.g. remove `struct _reent::sf` for RTEMS. This would also reduce the amount of per-thread storage.

If we do this, then we have to be careful with `fclose()`, since this would close the `FILE` for all threads. There is no reference counting in the `FILE` objects.

#### Comment 7

1. **Sebastian Huber**, Fri, 30 Jun 2017 12:57:05 GMT

In `5ede1c7/rtems-source-builder`:

```
4.12: Enable global stdio streams
Update #3012.
```

#### Comment 8

1. **Sebastian Huber**, Fri, 30 Jun 2017 12:57:49 GMT

In `9b07f5e/rtems`:

```
newlib01: Use fopen() instead of freopen()
With global stdio streams, a freopen() would close the global stream object.
Update #3012.
```

#### Comment 9

1. **Chris Johns**, Thu, 06 Jul 2017 01:08:35 GMT

Has the recent change in `newlib` to have a single `stdout`, `stderr`, etc object and per thread references in the TLS fixed this problem?

If the first use of the C++ standard streams is before any code redirects and overwrites a thread TLS pointer the standard streams should be the global instance.

#### Comment 10

1. **Sebastian Huber**, Thu, 06 Jul 2017 05:08:03 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

4. **component**: changed from **GCC** to **Newlib**

5. **milestone**: changed from **Indefinite** to **4.12.0**

From my point of view this problem is fixed.

The application could alter the stdio stream references in a `attribute((constructor(123)))` function if it knows what to do.

**Comment 11**

1. **Sebastian Huber**, Thu, 06 Jul 2017 05:08:25 GMT
2. **version: 4.12** deleted

**Comment 12**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone:** changed from **4.12.0** to **5.1**

#### Comment 2

1. **Sebastian Huber**, Fri, 12 May 2017 05:16:56 GMT

Has the existing PPC 740 a performance monitor exception? Maybe use one category for both variants.

#### Comment 3

1. **phongvanpham**, Wed, 17 May 2017 16:12:53 GMT

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Replying to Sebastian Huber:

Has the existing PPC 740 a performance monitor exception? Maybe use one category for both variants.

Current `ppc_booke_category_table` (exception category for PPC 740) code does not have exception vector 0x1700 supported. Whether or not PPC 740 does have exception vector 0x1700 is unknown since I am not working on that chip nor do I have the datasheet for it. For IBM PowerPC750, exception 0x1700 is Thermal Management. `ASM_60X_ITM_VECTOR` is defined to be 0x17

#### Comment 4

1. **Joel Sherrill**, Wed, 17 May 2017 16:25:08 GMT

I did a quick google and turned up this:

<https://people.cs.clemson.edu/~mark/ppc750.pdf>

Which has 740 and 750 in the title. It lists 0x1700 as Thermal Management and doesn't appear to distinguish 740 from 750.

One odd thought is whether there is an MPC740 which is different from the PPC740. Clearly from the "About This Book" section, they are nearly identical:

The primary objective of this user's manual is to define the functionality of the PowerPC 750™ and PowerPC 740™ microprocessors for use by software and hardware developers. Although the emphasis of this manual is upon the 750, unless otherwise noted, all information here applies to 740.

Maybe that reference helps.

#### Comment 5

1. **phongvanpham**, Wed, 17 May 2017 16:33:34 GMT

Replying to Joel Sherrill:

Yes, that reference does help. Page 182 (where thermal exception management is described) states it is "750-specific".

#### Comment 6

1. **phongvanpham**, Mon, 22 May 2017 17:16:07 GMT

Hi Developers,

What is your status on this ticket? Are you accepting the change and I am just waiting for the code to be merged to main line or you are rejecting the change or postponing it to another release at a TBD date?

If the variable names, etc. does not meet your standard, pls. change them to your liking.

#### Comment 7

1. **Sebastian Huber**, Tue, 23 May 2017 10:09:30 GMT

Its still not clear to me why you cannot use the `mpc_750_category_table` for the IBM PPC750.

#### Comment 8

1. **phongvanpham**, Tue, 23 May 2017 16:02:58 GMT

I copy & paste the two data structures for you convenience.

```
static const ppc_exc_categories mpc_750_category_table = {
```

```
    PPC_BASIC_VECS,
```

```
    [ASM_60X_SYSMGMT_VECTOR] = PPC_EXC_CLASSIC | PPC_EXC_ASYNC, [ASM_60X_ADDR_VECTOR] = PPC_EXC_CLASSIC,
    [ASM_60X_ITM_VECTOR] = PPC_EXC_CLASSIC,
```

```
};
```

```
static const ppc_exc_categories ppc_750_category_table = {
```

```
    PPC_BASIC_VECS,
```

```
    [ASM_60X_PERFMON_VECTOR] = PPC_EXC_CLASSIC, [ASM_60X_SYSMGMT_VECTOR] = PPC_EXC_CLASSIC | PPC_EXC_ASYNC,
    [ASM_60X_ADDR_VECTOR] = PPC_EXC_CLASSIC, [ASM_60X_ITM_VECTOR] = PPC_EXC_CLASSIC,
```

};

There is 1 additional line in ppc\_750 that is not in mpc750.

**Comment 9**

1. **phongvanpham**, Tue, 23 May 2017 16:20:45 GMT

Replying to Sebastian Huber:

Its still not clear to me why you cannot use the mpc\_750\_category\_table for the IBM PPC750.

Are you comfortable/Do you prefer that I add [ASM\_60X\_PERFMON\_VECTOR] = PPC\_EXC\_CLASSIC,

to mpc\_750\_category\_table data structure? From the datasheet, it looks like this exception is missing but I only have access to PowerPC 750 chip so I can't verify anything for folks using MPC750.

**Comment 10**

1. **Sebastian Huber**, Wed, 24 May 2017 05:19:38 GMT

Its still not clear to me why you cannot use the mpc\_750\_category\_table for the IBM PPC750.

Are you comfortable/Do you prefer that I add [ASM\_60X\_PERFMON\_VECTOR] = PPC\_EXC\_CLASSIC,

to mpc\_750\_category\_table data structure? From the datasheet, it looks like this exception is missing but I only have access to PowerPC 750 chip so I can't verify anything for folks using MPC750.

Yes, please add this to the mpc\_750\_category\_table.

**Comment 11**

Closes #3016.
```

**Comment 4**

- 1 phongvanpham**, Wed, 17 May 2017 16:15:26 GMT

Replying to Sebastian Huber:

```
Please generate the Git patch with your real name and a valid e-mail address.
This ns16550_p.h is a private header file, why do you have to change it?
```

The changes are b/c a couple of register names are missing. Yes one can use another name with the intended value; however, this is unmaintainable code. As you can see, there are different names of the same value (register number) in the file.

The reason to use #ifndef here is b/c I intend to use the file elsewhere in my BSP. Basically, I cherry pick code to maximize reuse in order to meet my needs. If you object to this particular change, (thus my needs are not met,) I will copy the file to my BSP to resolve my problem; thus a lack of sharing/reusing.

#### Description

In pci.h, there are references to BSP\_pci\_configuration data structure which is in pci.c. However, in this file, there are also references to detect\_host\_bridge () in detect\_raven\_bridge.c. For folks that are just interested in pci\_read\_config\_dword() + its brothers, all they need is to include pci.h and content for where BSP\_pci\_configuration is defined. The rest of the stuff in pci.c should be separate. Or in another word, data structures and #defines involving with BSP\_pci\_configuration needs to be in separate files rather all stuffed in pci.c

I currently do not need this functionality for my BSP (nor do I able to test it), so I cannot modify code and submit. It is best someone who can test the code to make the code change. Or else, just shelf it under the table and/or close this ticket.

#### Comment 1

3. **resolution**: set to **worksforme**

This shouldn't be an issue since we compile and link with per-function-sections. With this set of options, a function is only included in an executable if it is actually referenced -- not just if it is in a file with a referenced symbol.

FWIW Users using this option with large C++ applications have reported seeing their executables drop in size by half. C applications did get smaller but the RTEMS tests didn't show a huge improvement. Still it did drop some code out.

**Description**

In CentOS 6.8, everything works fine. But in CentOS 7, it does not. Initial investigation (I did a while back around New Year time) looks like later version of texinfo has an issue with autoconf. Enclosed is the email Chris Johns replied but I didn't follow through since I switched to CentOS 6.8 for my work.

"Looks to me like the RSB is trying to download autoconf 2.69-1 and from <https://bugs.debian.org/cgi-bin/bugreport.cgi?bug=711297>

Looks like this autoconf version has a bug. I also noticed my autoconf version is 2.69-11; however, from what I am reading, RSB will download its own version independent of what user has."

Chris John replies:

"I guess a recent texinfo version has exposed the issue. I suggest you get the patch from the link in the bug report, create a patch for rtems-tools.git to add the autoconf patch, then create a patch to the RSB adding the patch to the autoconf build, finally 'git send-email' the patches to devel@... for review."

**Description**

Some tests need `CONFIGURE_DISABLE_SMP_CONFIGURATION` to work correctly on SMP configurations. These tests must be reviewed. There should be a comment why this option is necessary or they should be changed to not use features unavailable on SMP, e.g. disabled preemption or an interrupt level mode > 0.

**Comment 1**

1. **Chris Johns**, Mon, 14 Aug 2017 00:55:55 GMT

3. **status**: changed from **new** to **assigned**

Refer to <https://lists.rtems.org/pipermail/devel/2017-May/017784.html>

testsuites/testdata can be enhanced to know that these tests fail on SMP. This would make a master list of the tests. Longer term, the tests need to be reviewed for underlying cause. If it is a specific SMP unsafe operation, then split that into a different test.

**Comment 4**

1. **Sebastian Huber**, Thu, 12 Oct 2017 11:15:27 GMT

---

**Comment 1****1. Worth Burruss, Wed, 31 May 2017 00:52:01 GMT**

Originally discovered with MSYS2 on windows while building rtems 4.11. Building the gcc compiler fails when trying to build the documentation. This applies when a new version of gcc is used to build older versions of gcc (ie 4.8.3 such as when building bfin and m32c architectures for 4.11). The gcc maintainers recommend the use of MISSING=texinfo switch during configuration. A possible solution is attached.

NOTE: this problem should also exist when trying to build rtems 4.10 compilers and earlier.

**Comment 2****1. Chris Johns, Tue, 13 Jun 2017 00:32:49 GMT**

Is it MISSING=texinfo per the comments or MAKEINFO=missing as in the patch?

Also I am thinking of adding this before the configure command set the environment variable:

```
%if %{_host_os} == win32
  export MAKEINFO=missing
%endif
```

**Comment 3****1. Chris Johns, Tue, 13 Jun 2017 05:45:21 GMT****2. milestone: set to 4.11.2****Comment 4****1. Worth Burruss, Tue, 13 Jun 2017 13:27:39 GMT****2. milestone: 4.11.2 deleted**

Sorry for the Confusion. I have been using: MAKEINFO=missing. I can not fathom where I got the other the switch from or if it is even valid.

Limiting the solution to just windows fixes the problem for now, but will become a problem down the road as more OS's move to newer versions of GCC. From my point of view having a test to see if the Host GCC version is > 6.x is the way to do it. but I do not see a way to execute that logic. So for the short term that solution looks good.

**Comment 5****1. Chris Johns, Wed, 14 Jun 2017 00:06:10 GMT**

Thanks for clearing up which to use.

There is a reference on line to where the GCC developers discuss this issue and the solution?

I am sorry but I am not following the relationship with makeinfo and the host's gcc version.

**Comment 6****1. Worth Burruss, Wed, 14 Jun 2017 18:25:56 GMT**

Chris, you are correct it is not GCC version, I should have looked a little further it is makeinfo version. I got my original patch idea from here: [https://gcc.gnu.org/bugzilla/show\\_bug.cgi?id=60961](https://gcc.gnu.org/bugzilla/show_bug.cgi?id=60961) with better descriptions here: <https://dev.openwrt.org/ticket/13039> and here: <https://osmocom.org/issues/1916>

My MSYS2 is using makeinfo version 6.3 My CentOS was building fine and currently has makeinfo version 5.1

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

### Comment 7

1. **Chris Johns**, Thu, 15 Jun 2017 03:13:29 GMT

Replying to Worth Burruss:

Chris, you are correct it is not GCC version, I should have looked a little further it is makeinfo version. I got my original patch idea from here: [https://gcc.gnu.org/bugzilla/show\\_bug.cgi?id=60961](https://gcc.gnu.org/bugzilla/show_bug.cgi?id=60961)

Thanks. Yes we need to disabled it for all gcc-4 builds.

This says MISSING=texinfo.

with better descriptions here: <https://dev.openwrt.org/ticket/13039>

Here says MAKEINFO=missing.

and here: <https://osmocom.org/issues/1916>

and this has no solution.

My MSYS2 is using makeinfo version 6.3 My CentOS was building fine and currently has makeinfo version 5.1

Looks like we need this handled on the master branch as well.

### Comment 8

1. **Chris Johns**, Thu, 29 Jun 2017 04:52:36 GMT

I have a tried a both options and makeinfo is being run. I cannot make this work.

### Comment 9

1. **Chris Johns**, Thu, 29 Jun 2017 05:43:27 GMT

I was wrong MAKEINFO=missing is the solution. It seems like it is a configure thing.

### Comment 10

1. **Chris Johns**, Mon, 03 Jul 2017 03:38:22 GMT

In 0a916c3/rtems-source-builder:

```
gcc: Disable makenfo cause newer verisons do not build gcc-4.8 docs.
```

```
Newer makeinfo tools cannot build the existing texinfo in gcc so disable building it. This will not be fixed on the gcc branches.
```

```
Updates #3027.
```

### Comment 11

1. **Chris Johns**, Mon, 07 Aug 2017 01:51:09 GMT

2. **status**: changed from **new** to **assigned**

3. **version**: changed from **4.11** to **4.12**

4. **milestone**: set to **4.12.0**

Moving this to 4.12 as it has been fixed on 4.11.

### Comment 12

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT

2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

### Comment 13

1. **Chris Johns**, Tue, 10 Apr 2018 07:37:33 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

**Description**

According to the FreeBSD man page we have:

<https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports>

The CPU\_NAND() macro removes CPUs in src from dst. (It is the cpuset(9) equivalent of the scalar: dst &= ~ src.)

However, in Newlib we had:

```
static __inline void CPU_NAND_S(size_t setsize, cpu_set_t *destset,
    const cpu_set_t *srcset1, const cpu_set_t *srcset2)
{
    cpu_set_word_t *wdest = &destset->_bits[0];
    const cpu_set_word_t *wsrc1 = &srcset1->_bits[0];
    const cpu_set_word_t *wsrc2 = &srcset2->_bits[0];
    size_t n = setsize / sizeof(*wdest);
    size_t i;
    for (i = 0; i < n; ++i)
        wdest[i] = ~(wsrc1[i] & wsrc2[i]);
}
```

**Comment 1**

1. **Sebastian Huber**, Wed, 07 Jun 2017 13:30:00 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In b06dbb26/rtems:

```
sppcpuset01: Update due to CPU_NAND_S() changes
Close #3032.
```

**Description**

According to the FreeBSD man page we have:

<https://www.freebsd.org/cgi/man.cgi?query=cpuset&sektion=9&apropos=0&manpath=FreeBSD+11.0-RELEASE+and+Ports>

The CPU\_CMP() macro returns true if cpuset1 is NOT equal to cpuset2.

However, in Newlib we had:

```
/* return 1 if the sets set1 and set2 are equal, otherwise return 0 */
static __inline int CPU_CMP( const cpu_set_t *set1, const cpu_set_t *set2 )
{
    return CPU_EQUAL(set1, set2);
}
```

**Description**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

The RTEMS mailing list archive has no option to get the raw e-mail via the web interface, e.g.

<https://lists.rtems.org/pipermail/devel/2017-June/018101.html>

For example the Newlib mailing list archive:

<https://sourceware.org/cgi-bin/get-raw-msg?listname=newlib&date=2017&msgid=20170612064218.11969-1-sebastian.huber%40embedded-brains.de>

#### Comment 1

1. **Amar Takhar**, Mon, 12 Jun 2017 11:51:56 GMT
2. **owner:** changed from **joel.sherrill@...** to **Amar Takhar**
3. **status:** changed from **new** to **accepted**

That's strange I will look into this shortly.

#### Comment 2

1. **Amar Takhar**, Mon, 12 Jun 2017 11:57:56 GMT

I don't know how easy this is going to be. I've always grabbed the entire raw mbox file and pulled it out that way. You can find them on the list archive pages in gzipped form.

I'll look into setting this up but I need to figure out the best and safest way to do it.

#### Comment 3

1. **Amar Takhar**, Sat, 20 Oct 2018 20:43:19 GMT
2. **status:** changed from **accepted** to **closed**
3. **type:** changed from **defect** to **infra**
4. **resolution:** set to **invalid**
5. **milestone:** changed from **Indefinite** to **5.1**

This isn't something we can support. It's a custom feature that I cannot find the source to.

If you can get a copy of 'get-raw-msg' from Sourceware I can look into installing it..

#### Comment 4

1. **Joel Sherrill**, Sat, 20 Oct 2018 21:55:12 GMT

What software package is get-raw-msg associated with? Is it part of Sourceware itself or something hosted on sourceware?

#### Comment 5

1. **Amar Takhar**, Sat, 20 Oct 2018 22:29:51 GMT

I think it's something they created custom. I can't find any information on it at all. A few other projects seem to use it but they're hosted by sourceware..

#### Comment 6

1. **Joel Sherrill**, Sat, 20 Oct 2018 22:34:12 GMT

This would be a mailman plugin?

#### Comment 7

1. **Amar Takhar**, Sat, 20 Oct 2018 22:44:28 GMT

It's probably a custom CGI they created.

The real fix for this is to move to Mailman v3. Here is an example setup:

```
https://mail.python.org/mm3/
```

The new frontend HyperKitty has a lot of functionality and also static email URLs. Which unlike v2 don't randomly change.

**Description**

The attached RSB report details the failure.

The path to ranlib is the cwd (see make[5] path) plus the relative path (see the report) which is 308 characters in length and this exceeds the max path length for the Win32 API and binutils reports this as a No such file.

**Description**

The documentation has been moved to rtems-docs.git repo. Remove the docs directory and asciidocs from RTEMS.

**Comment 1**

1. **Chris Johns**, Thu, 03 Aug 2017 06:08:57 GMT

Removing the doc directory means I can remove asciidoc from the source-builder/sb directory and make the RSB smaller. This means I need to remove the asciidoc report type.

Any issues with this?

**Comment 2**

1. **Gedare Bloom**, Thu, 03 Aug 2017 11:58:28 GMT

No issues from me. I think it is time.

**Comment 3**

1. **Chris Johns**, Mon, 07 Aug 2017 00:05:39 GMT
2. **component**: changed from **General** to **RSB**

**Comment 4**

1. **Chris Johns**, Mon, 07 Aug 2017 00:08:40 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 8b96e17/rtems-source-builder:

```
doc: Remove in source documentation and the asciidoc package
The RSB documentation is now in ReST format and part of the RTEMS Documentation project. See https://docs.rtems.org/.
Remove support for the GPL based asciidoc tool and remove the asciidoc package from the RSB.
Add the Python Markdown package and update the reporter to use Markdown for HTML generation. The resulting HTML report is a single self
contained file.
Closes #3047.
```

**Comment 5**

### Comment 1

1. **Sebastian Huber**, Fri, 23 Jun 2017 05:33:59 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

In 21a9010/rtems-source-builder:

```

Fix GDB 7.12 build on Darwin
Close #3052.

```

### Comment 2

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone:** changed from **4.12.0** to **5.1**

Milestone renamed

## 3054 - gdb 7.12.1 on RSB 4.12 branch fail to build on Archlinux

### Description

7.12.1 does not compile with latest guile

As already stated here: [https://sourceware.org/bugzilla/show\\_bug.cgi?id=21104](https://sourceware.org/bugzilla/show_bug.cgi?id=21104) GDB in version 7.12.1 fails when trying to compile on Archlinux. GDB uses deprecated functions of libguile which were gone in version 2.2 of libguile. As GDB states in its configure script to support version 2.2 of libguile it fails compiling.

Tested with the latest rtems source builder on master.

#### Comment 1

**1. Joel Sherrill, Wed, 28 Jun 2017 16:09:15 GMT**

I have no idea what guile is being used for but based on the comments in the gdb PR, it looks like it isn't getting fixed on the 7.12 branch. Looks like Freddie's suggestion is the most practical one.

Freddie Chopin 2017-05-02 21:23:58 UTC For me a "workaround" is to explicitly disable guile by passing `--with-guile=no` to GDB's configure script

A semi-proper solution for 7.12 would be to detect the newer guile version and disable guile.

The PR thread doesn't mention if this is fixed in a newer gdb which leads me to believe that it hasn't been.

#### Comment 2

**1. Joel Sherrill, Wed, 28 Jun 2017 16:26:58 GMT**

Follow up based on discussions on the gdb PR. This is also broken with gdb 8.0. ArchLinux? uses gdb 8.0 with guile 2.0.

We have two options:

build a known guile version as a dependency for gdb disable guile

guile (Scheme) is used as an alternative to Python to program gdb from a user perspective.

My personal recommendation to you would be to disable guile in the RSB configuration files and submit a patch.

Whether or not this is the best permanent solution is up for discussion from an RTEMS community discussion. I suspect it is the best solution though.

#### Comment 3

**1. Andreas Kölbl, Mon, 03 Jul 2017 21:59:59 GMT**

**2. owner:** set to **Andreas Kölbl** <[andreas.koelbl@...](mailto:andreas.koelbl@...)>

**3. status:** changed from **new** to **closed**

**4. resolution:** set to **fixed**

In [d413d7e/rtems-source-builder](https://github.com/rtems/rtems-source-builder):

```
Fix GDB build on ArchLinux?

Archlinux provides both, libguile v2.0 and v2.2. GDB states in configuration its compatibility with both versions of libguile which is false. The SCM_port interface of libguile was removed in v2.2 and therefore breaks GDB as a user.

RTEMS does not use libguile and therefore it can be compiled without support.

https://sourceware.org/bugzilla/show\_bug.cgi?id=21104

Close #3054.
```

#### Description

GCC needs support to provide a workaround for the LEON3FT store-store errata, e.g. <https://gcc.gnu.org/ml/gcc-patches/2017-06/msg01577.html> and follow up versions.

#### Comment 1

1. **Sebastian Huber**, Wed, 12 Jul 2017 09:19:20 GMT

Something was added to GCC 7 branch:

<https://gcc.gnu.org/viewcvs/gcc?view=revision&revision=250121>

Fix is incomplete.

#### **Comment 2**

1. **Daniel Cederman**, Mon, 17 Jul 2017 05:42:46 GMT

In 2f8704b6/rtems:

sparc: Add assembly workaround for LEON3FT B2BST errata

This patch adds NOP instructions to prevent instruction sequences that are sensitive to the LEON3FT B2BST errata. See GRLIB-TN-0009: "LEON3FT Stale Cache Entry After Store with Data Tag Parity Error" for more information.

The sequences are only modified if `FIX_LEON3FT_B2BST` is defined.

The patch works in conjunction with the `-mfix-ut700`, `-mfix-gr712rc`, and `-mfix-ut699` GCC flags that prevents the sensitive sequences from being generated.

Update #3057.

#### **Comment 3**

1. **Daniel Cederman**, Mon, 17 Jul 2017 05:45:23 GMT

In 4debaca6/rtems:

bsps/sparc: Add leon3 BSP variants

Rename NGMP to GR740 and add configs for UT699, UT700, and GR712RC

The UT699 requires `-mcpu=leon` as it does not support the CAS instruction provided by `-mcpu=leon3`. It also requires `-mfix-ut699` for errata fixes.

UT700 and GR712RC requires the `-mfix-ut700` and `-mfix-gr712rc` flags that have been recently added to GCC's master and 7-branch.

Remove `-msoft-float` from the leon3 config to make the more common case of using the FPU the default.

Update #3057.

#### **Comment 4**

1. **Sebastian Huber**, Mon, 17 Jul 2017 06:31:35 GMT

2. **status**: changed from **assigned** to **closed**

<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

Add support to the EDF SMP scheduler to honour one-to-one and one-to-all thread processor affinities. Use one ready queue for threads with a one-to-all affinity. Use one ready queue for each of the one-to-one threads for each processor. Since a red-black tree is used for the ready queues, the space overhead of one pointer per ready queue is small.

**Comment 1**

1. **Sebastian Huber**, Mon, 10 Jul 2017 07:33:00 GMT

In fd03ba4/rtems-source-builder:

```
4.12: Fix and update bitset(9)
Update #3059.
```

score: Fix set scheduler
Ensure that the thread processor affinity fits the new scheduler instance.
Update #3059.
```

**Comment 16**

1. **Sebastian Huber**, Mon, 10 Jul 2017 07:40:06 GMT

In 21389c06/rtems:

```
score: Make EDF the default SMP scheduler
The EDF SMP scheduler supports simple thread processor affinities (see #3059) with a small run-time overhead. The current default SMP scheduler lacks support for thread processor affinities at all. The EDF SMP scheduler offers a good feature set for most applications. So, use it by default. Run-time libraries like libgomp, MTAPI, work stealing schedulers, language interpreters (e.g. Erlang virtual machine), maintenance of per-processor data (e.g. Universal Memory Allocator (UMA)), etc. use a one-to-one thread processor affinity for example.
Update #3063.
```

**Comment 17**

Replying to Sebastian Huber:

I guess this xilinx\_zynq\_zc706 installation has an installed libbsd? I removed some header files from libbsd which may in in your installation tree (e.g. you have now two bitset.h).

Doh! Yes it does. Removing the installed BSP and then installing again allowed libbsd to build.

Thanks.

**Description**

The EDF SMP scheduler supports simple thread processor affinities (see #3059) with a small run-time overhead. The current default SMP scheduler lacks support for thread processor affinities at all. The EDF SMP scheduler offers a good feature set for most applications. So, use it by default. Run-time libraries like libgomp, MTAPI, work stealing schedulers, language interpreters (e.g. Erlang virtual machine), etc. use a one-to-one thread processor affinity for example.

**Comment 1**

1. **Sebastian Huber**, Mon, 10 Jul 2017 07:40:06 GMT

In 21389c06/rtems:

score: Make EDF the default SMP scheduler

The EDF SMP scheduler supports simple thread processor affinities (see #3059) with a small run-time overhead. The current default SMP scheduler lacks support for thread processor affinities at all. The EDF SMP scheduler offers a good feature set for most applications. So, use it by default. Run-time libraries like libgomp, MTAPI, work stealing schedulers, language interpreters (e.g. Erlang virtual machine), maintenance of per-processor data (e.g. Universal Memory Allocator (UMA)), etc. use a one-to-one thread processor affinity for example.

Update #3063.

**Description**

There are declarations of global functions in various driver source files, e.g.

```
c/src/lib/libbsp/sparc/shared/drvmgr/ambapp_bus_glib.c
c/src/lib/libbsp/sparc/shared/drvmgr/ambapp_bus.c
```

The declaration should move to a header file or a static function should be used.

### **Description**

The uniprocessor floating point context switching is unsafe, e.g. it is possible to silently corrupt the floating point context. The SMP floating point switching is safe, however, it doesn't use a deferred switch. Implement lazy floating point switching in uniprocessor configurations. This fixes test case spcontext01.

### **Comment 1**

In 600d88d/rtems:

```
INTERNAL_ERROR_ILLEGAL_USE_OF_FLOATING_POINT_UNIT
Add new fatal error INTERNAL_ERROR_ILLEGAL_USE_OF_FLOATING_POINT_UNIT.
Update #3077.
```

### **Comment 4**

1. **Sebastian Huber**, Tue, 25 Jul 2017 09:45:08 GMT

In 146adb1/rtems:

```
sparc: Add lazy floating point switch
```

The SPARC ABI is a bit special with respect to the floating point context. The complete floating point context is volatile. Thus, from an ABI point of view nothing needs to be saved and restored during a context switch. Instead the floating point context must be saved and restored during interrupt processing. Historically, the deferred floating point switch was used for SPARC and the complete floating point context is saved and restored during a context switch to the new floating point unit owner. This is a bit dangerous since post-switch actions (e.g. signal handlers) and context switch extensions may silently corrupt the floating point context.

The floating point unit is disabled for interrupt handlers. Thus, in case an interrupt handler uses the floating point unit then this will result in a trap (INTERNAL\_ERROR\_ILLEGAL\_USE\_OF\_FLOATING\_POINT\_UNIT).

In uniprocessor configurations, a lazy floating point context switch is used. In case an active floating point thread is interrupted (PSR[EF] == 1) and a thread dispatch is carried out, then this thread is registered as the floating point owner. When a floating point owner is present during a context switch, the floating point unit is disabled for the heir thread (PSR[EF] == 0). The floating point disabled trap checks that the use of the floating point unit is allowed and saves/restores the floating point context on demand.

Update #3077.

#### Description

A "make" in the top level build directory does not build the Ada tests (used to work some weeks ago). A "make" in `./sparc-rtems4.12/c/erc32/ada-tests` for example works.

The configuration step seems to work:

```
configure: configuring in ada-tests
configure: running /bin/sh './../../../../rtems/c/src/ada-tests/configure' '--prefix=/home/joel/rtems-4.11-work/bsp-install' '--
host=sparc-rtems4.12' '--build=x86_64-pc-linux-gnu' '--target=sparc-rtems4.12' '--enable-smp' '--disable-profiling' '--disable-
multiprocessing' '--enable-rtems-debug' '--enable-cxx' '--disable-rdbg' '--enable-maintainer-mode' '--enable-tests' '--enable-
networking' '--enable-posix' '--disable-iron' '--disable-deprecated' '--enable-ada' '--enable-expada' 'SIMSPARC_FAST_IDLE=1' '--with-
target-subdir=sparc-rtems4.12' '--exec-prefix=/home/joel/rtems-4.11-work/bsp-install/sparc-rtems4.12' '--includedir=/home/joel/rtems-
4.11-work/bsp-install/sparc-rtems4.12/include' 'build alias=x86_64-pc-linux-gnu' 'host alias=sparc-rtems4.12' 'target alias=sparc-
rtems4.12' '--with-project-root=../../' '--with-project-top=../../' 'RTEMS_BSP=erc32' 'RTEMS_CPU_MODEL=erc32' 'RTEMS_BSP_FAMILY=erc32'
'CFLAGS=-mcpu=cypress -O2 -g -ffunction-sections -fdata-sections -Wall -Wmissing-prototypes -Wimplicit-function-declaration -Wstrict-
prototypes -Wnested-externs' '--enable-rtems-root=../../' '--enable-project-root=../../erc32' '--with-project-top=../../' '--
enable-rtemsbsp=erc32' '--cache-file=/dev/null --srcdir=../../../../rtems/c/src/ada-tests'
configure: loading site script /usr/share/site/x86_64-unknown-linux-gnu
checking for gmake... gmake
```

However:

```
gmake[4]: Entering directory '/scratch/git-rtems-testing/rtems/build-sparc-erc32-rtems/sparc-rtems4.12/c/erc32/ada-tests'
gmake[4]: Nothing to be done for 'all-am'.
```

#### Comment 1

1. **Joel Sherrill**, Thu, 12 Oct 2017 00:18:40 GMT
2. **owner:** changed from **chris@...** to **Sebastian Huber**
3. **status:** changed from **new** to **assigned**
4. **milestone:** changed from **4.12.0** to **4.10.3**

Is this fixed now?

**Comment 2**

1. **Sebastian Huber**, Thu, 12 Oct 2017 05:29:11 GMT
2. **owner**: changed from **Sebastian Huber** to **Chris Johns**
3. **milestone**: changed from **4.10.3** to **4.12.0**

This is a 4.12 problem and related to recent changes in the build system.

**Comment 3**

1. **Chris Johns**, Thu, 12 Oct 2017 05:39:24 GMT
2. **owner**: **Chris Johns** deleted
3. **status**: changed from **assigned** to **new**

No point assigning this to me, I do not have an Ada compiler and when I last looked it did not build easily on my hosts. I have no ability to test any of this. I suggest you change SUBDIRS to \_SUBDIRS and see what happens. SUBDIRS is owned by automake and our build system circumvented automake long ago.

**Comment 4**

1. **Sebastian Huber**, Thu, 12 Oct 2017 08:52:56 GMT

Thanks, this \_SUBDIR hint was what I needed.

**Comment 5**

1. **Sebastian Huber**, Thu, 12 Oct 2017 08:55:52 GMT

In b3874e1/rtems:

```
ada-tests: Use _SUBDIRS instead of SUBDIRS
Update #3079.
```

**Comment 6**

1. **Sebastian Huber**, Thu, 12 Oct 2017 08:56:07 GMT
2. **owner**: set to **Sebastian Huber <sebastian.huber@...>**
3. **status**: changed from **new** to **closed**
4. **resolution**: set to **fixed**

In ee537ea/rtems:

```
ada-tests: Move to testsuites/ada
This solves a build dependency issue, e.g. building tests before librtmsbsp.a exists.
Close #3079.
```

**Comment 7**

1. **Chris Johns**, Thu, 12 Oct 2017 15:53:17 GMT

Replying to Sebastian Huber:

Thanks, this \_SUBDIR hint was what I needed.

Awesome change. Thank you.

**Comment 8**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

**Description**

The QorIQ chips have more than 4GiB of memory available.

**Comment 1**

1. **Sebastian Huber**, Fri, 28 Jul 2017 08:25:37 GMT

GCC support will be available with GCC 7.2:

<https://gcc.gnu.org/viewcvs/gcc?view=revision&revision=250654>

#### **Comment 2**

1. **Sebastian Huber**, Fri, 28 Jul 2017 08:49:28 GMT

In b615e9b/rtems:

bsp/qoriq: Simplify initialization

Do not flush/invalidate the caches. Instead enable the cache during the low-level initialization and perform an explicit cache flush for the read-only and fast-text sections.

Update #3082. Update #3085.

#### **Comment 3**

1. **Sebastian Huber**, Fri, 28 Jul 2017 08:49:42 GMT

In 0db7c55/rtems:

bsp/qoriq: New BSP names

Due to the FDT support we can now reduce the BSP variants. Use the processor core to define the BSP variants.

Update #3082. Update #3085.

#### **Comment 4**

1. **Sebastian Huber**, Fri, 28 Jul 2017 11:45:15 GMT

In 1ceafe5/rtems-source-builder:

4.12: Update to Binutils 2.29

Update #3082.

#### **Comment 5**

1. **Sebastian Huber**, Fri, 28 Jul 2017 13:40:58 GMT

In 8966e8a/rtems:

bsp/qoriq: Fix pre-processor expansion

Update #3082. Update #3085.

#### **Comment 6**

1. **Sebastian Huber**, Mon, 31 Jul 2017 12:46:02 GMT

In a597984/rtems:

powerpc: Add register defines

Update #3082. Update #3085.

#### **Comment 7**

1. **Sebastian Huber**, Mon, 31 Jul 2017 12:46:18 GMT

In 65ee42c/rtems:

bsp/qoriq: Simplify fatal exceptions

Avoid use of small-data area, since it is not supported in the ELFv2 ABI by GCC.

Update #3082.

#### **Comment 8**

1. **Sebastian Huber**, Mon, 31 Jul 2017 12:46:33 GMT

In b7be9439/rtems:

bsps/powerpc: Do not set output format and arch

There is no need to explicitly set the output format and architecture in the linker script. This enables the usage of this linker script with the ELFv2 ABI (64-bit).

Update #3082.

#### **Comment 9**

1. **Sebastian Huber**, Tue, 01 Aug 2017 09:45:58 GMT

In 23cb9af/rtems:

bsps/powerpc: Rename ppc\_exc\_wrap\_async\_normal

Rename ppc\_exc\_wrap\_async\_normal to ppc\_exc\_interrupt to avoid a bit of obfuscation.

Update #3082.

#### **Comment 10**

1. **Sebastian Huber**, Tue, 01 Aug 2017 09:46:11 GMT

In a8694035/rtems:

bsps/powerpc: Add PPC\_EXC\_INTERRUPT\_FRAME\_SIZE

Use a specific define for the interrupt exception frame size.

Update #3082.

#### **Comment 11**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:49:44 GMT

In 7e3ff84/rtems-source-builder:

4.12: Fix 64-bit PowerPC support of GCC 7.2

Update #3082.

#### **Comment 12**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:51:08 GMT

In 279c540/rtems:

score: Fix format specifier

Update #3082.

#### **Comment 13**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:51:20 GMT

In e062741d/rtems:

dev/i2c: Fix integer type

Update #3082.

#### **Comment 14**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:51:32 GMT

In 93934f88/rtems:

heap: Fix integer types

Update #3082.

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:51:57 GMT

In b98e407/rtems:

libchip/ata: Fix integer to/from pointer  
Update #3082.

#### **Comment 17**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:52:10 GMT

In 5e1a831/rtems:

libchip/serial: Fix integer types  
Update #3082.

#### **Comment 18**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:52:22 GMT

In caa12270/rtems:

powerpc: Add register defines  
Update #3082.

#### **Comment 19**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:52:35 GMT

In ea9084de/rtems:

powerpc: ppc\_interrupt\_get\_disable\_mask()  
Fix warning on 64-bit PowerPC.  
Update #3082.

#### **Comment 20**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:52:47 GMT

In 5a9372f/rtems:

powerpc: 64-bit support for CPU\_SIZEOF\_POINTER  
Update #3082.

#### **Comment 21**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:52:59 GMT

In 7837728b/rtems:

powerpc: 64-bit \_CPU\_Context\_Initialize() support  
Update #3082.

#### **Comment 22**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:53:11 GMT

In a6f84b27/rtems:

powerpc: Add 64-bit context/interrupt support

**Comment 23**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:53:24 GMT

In ec25c6ef/rtems:

```
bsps: Fix integer to/from pointer
Update #3082.
```

**Comment 24**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:53:48 GMT

In c6994af/rtems:

```
bsp/qoriq: Use LA to load an address
Add 64-bit support for LA.
Update #3082.
```

**Comment 30**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:55:03 GMT

In 43cc2b4/rtems:

```
bsp/qoriq: Add basic 64-bit support
Update #3082.
```

**Comment 31**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:55:15 GMT

In 0ae1916b/rtems:

```
bsp/qoriq: Copy FDT later
We need a ready to use TOC section before we can call bsp_fdt_copy().
Update #3082.
```

**Comment 32**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:55:27 GMT

In f14da45/rtems:

```
bsp/qoriq: 64-bit support for spin table
Update #3082.
```

**Comment 33**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:55:40 GMT

In 5f42a0e/rtems:

```
bsp/qoriq: Enable 64-bit mode for exceptions
Update #3082.
```

**Comment 34**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:55:52 GMT

In 77c81016/rtems:

```
bsp/qoriq: 64-bit support for interrupt controller
Update #3082.
```

**Comment 35**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:56:04 GMT

In c8aeb76/rtems:

```
bsp/qoriq: 64-bit MMU support
Update #3082.
```

**Comment 36**

1. **Sebastian Huber**, Tue, 22 Aug 2017 14:56:16 GMT

In c693a3a/rtems:

```
powerpc: PPC64_NOP_FOR_LINKER_TOC_POINTER_RESTORE
In 64-bit mode, the linker must have the ability to restore the TOC pointer after an external function call.
Update #3082.
```

**Comment 3**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone:** changed from **4.12.0** to **5.1**

Milestone renamed

**Comment 4**

1. **Chris Johns**, Mon, 13 Nov 2017 23:40:38 GMT

The list email referenced is <https://lists.rtems.org/pipermail/devel/2017-July/018513.html>

**Comment 5**

1. **Chris Johns**, Tue, 14 Nov 2017 01:56:02 GMT

I wonder if this is due to different directories installing the same files at different levels in the build system and this has exposed something present in the build systems. We could see calls for install happening at the same time on the same file and I wonder if the Linux install executable is doing some checking that exposes this issue.

**Comment 6**

1. **Chris Johns**, Thu, 16 Nov 2017 22:09:52 GMT

Note, make install is broken. I will look at that if this fixes the build issue.

**Comment 7**

1. **Chris Johns**, Mon, 09 Apr 2018 22:52:54 GMT

**Comment 8**

1. **Chris Johns**, Mon, 09 Apr 2018 23:11:56 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

This has been fixed with the switch to real parallel building of sub-directories, the removal of pre-installed header files, and now the testsuite has been refactored to use one nested make call per test group.

### Description

The makefile overrides recipe warnings had disappeared with Chris' rework to improve parallelism. Unfortunately, one Makefile has had the warning return. To reproduce, complete a build with all tests enabled, then just type make >/dev/null at the top of the build tree

```
[joel@rtbf64c rtems-work]$ ./build_bsp sparc erc32
Using rtems for RTEMS source
```

```
real 5m4.247s
user 5m58.188s
sys 1m34.959s
0
```

```
[joel@rtbf64c rtems-work]$ cd b-erc32/
[joel@rtbf64c b-erc32]$ make >/dev/null
Makefile:653: warning: overriding recipe for target `spprofilng01'
Makefile:653: warning: ignoring old recipe for target `spprofilng01'
```

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	Chris Johns
<b>Blocking</b>	
<b>Blocked by</b>	

## Description

Background There are two ways to address a block in RFS:

- Via a single 32bit block number (bno)
- Via a group number(gno) and a bit offset (bit)

They should be fully convertible (1-1 mapping). In other words, the equation to convert 1 to 2 should be unique within the RFS implementation.

The bug The RFS implementation contains two different conversions between 1 and 2.

Details

- In `rtems_rfs_group_bitmap_alloc` (`rtems-rfs-group.c`, line 172)

```
bno = gno * group blocks + bit
```

- In `rtems_rfs_group_bitmap_alloc` (`rtems-rfs-group.c`, line 228)

```
bno = gno * group blocks + bit + 1 (via rtems_rfs_group_block() function)
```

- In `rtems_rfs_group_bitmap_free` (`rtems-rfs-group.c`, line 283)

```
bno = gno * group blocks + bit + 1 (RTEMS_RFS_SUPERBLOCK_SIZE)
```

- In `rtems_rfs_group_bitmap_test` (`rtems-rfs-group.c`, line 332)

```
bno = gno * group blocks + bit
```

To summarize, the implementation contains two ways of converting a bno to a (gno, bit) pair:

Either:

```
bno = gno * group blocks + bit
```

Or:

```
bno = gno * group blocks + bit + 1
```

The Fix The RFS implementation should consistently convert a bno to a (gno, bit) pair with:

```
bno = gno * group blocks + bit + RTEMS_RFS_SUPERBLOCK_SIZE
```

This is because the superblock is not accounted for in the block bitmaps. So places to change:

- `rtems-rfs-group.c`: all references to the conversion must be updated to use `RTEMS_RFS_SUPERBLOCK_SIZE` explicitly.
- `rtems_rfs_group_block` converts the pair to bno via:

```
#define rtems_rfs_group_block(g, b) (((g)->base) + (b))
```

(`g`)->base is calculated via `rtems-rfs-format.c` from:

```
#define rtems_rfs_fs_block(fs, grp, blk) \
  (((fs)->group_blocks) * (grp) + (blk) + 1)
```

The "+ 1" part should really be "+ `RTEMS_RFS_SUPERBLOCK_SIZE`" to be logically correct. As `RTEMS_RFS_SUPERBLOCK_SIZE` itself has a comment saying:

```
/**
 * Number of blocks in the superblock. Yes I know it is a superblock and not
 * superblocks but if for any reason this needs to change it is handled.
 */
#define RTEMS_RFS_SUPERBLOCK_SIZE (1)
```

## Comment 1

<b>Keywords</b>	shell
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

A few of the functions held in cpukit/libmisc/shell/internal.h are useful in building system. For example `rtems_shell_register_monitor_commands()` and `rtems_shell_execute_cmd()`.

The shell commands are important and systems may provide other scripting mechanisms, for example sequences in YAML files. Providing public access lets users know the functions are supported.

**Comment 1**

1. **Joel Sherrill**, Sun, 13 Aug 2017 15:45:14 GMT

Hard to argue against. The shell evolved and this is just an artifact. We now have a different opinion. Change it.

**Comment 2**

1. **Chris Johns**, Sun, 13 Aug 2017 23:23:14 GMT

I have found there is currently no way to have the commands registered unless you start a shell. The POSIX `once` call used to add the shell's configured commands is buried inside the main loop of the shell task.

I would like this change to be back ported to 4.11 to make applications compatible between 4.11 and 4.12 and beyond.

**Comment 3**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Chris Johns**, Tue, 15 Aug 2017 01:38:26 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 2465c01/rtems:

```
libmisc/shell: Make some internal shell functions public.
Add 'rtems_shell_init_environment()' so a user can create the
shell environment without needing to run a shell. Move 'rtems_shell_lookup_topic', 'rtems_shell_can_see_cmd',
and 'rtems_shell_execute_cmd' from the internal interface to
the public interface.
Closes #3096.
```

1. **Chris Johns**, Sun, 20 Aug 2017 01:12:55 GMT
2. **status:** changed from **accepted** to **closed**
3. **resolution:** set to **fixed**

In 6b7efdb2/rtems:

```
libmisc/rtems-fdt: Add RTEMS FDT wrapper and shell command to libmisc.
Provide application support for handling FDT blobs in RTEMS. This
is useful when interfacing FPGA fabrics. Provide a shell command to list a blob as well as provide read
and write access to addresses in the FTB.
Closes #3099.
```

**Comment 3**

1. **Chris Johns**, Wed, 23 Aug 2017 23:40:39 GMT

In 602b184f/rtems:

libmisc/rtems-fdt: Add libmisc/rtems-fdt to the cpukit wrapup.

Updates #3099.

=====
```

Looking down into libiberty.h, I picked on basename()

/\* HAVE\_DECL\_\* is a three-state macro: undefined, 0 or 1. If it is

```
undefined, we haven't run the autoconf check so provide the
declaration without arguments. If it is 0, we checked and failed
to find the declaration so provide a fully prototyped one. If it
is 1, we found it so don't provide any declaration at all. */
```

#if !HAVE\_DECL\_BASENAME

```
#if defined (GNU_LIBRARY) defined (linux) \
   defined (FreeBSD) defined (OpenBSD) defined (NetBSD) \
   defined (CYGWIN) defined (CYGWIN32) defined (MINGW32) \
   defined (DragonFly) defined (HAVE_DECL_BASENAME)
```

```
extern char *basename (const char *) ATTRIBUTE_RETURNS_NONNULL ATTRIBUTE_NONNULL(1);
#else
/* Do not allow basename to be used if there is no prototype seen. We
```

```
either need to use the above prototype or have one from
autoconf which would result in HAVE_DECL_BASENAME being set. */
```

```
#define basename basename_cannot_be_used_without_a_prototype
#endif
#endif
```

=====

The native CentOS 7 has this definition of basename:

```
# ifndef basename
/* Return the file name within directory of FILENAME. We don't
```

```
declare the function if the 'basename' macro is available (defined
in ) which makes the XPG version of this function
available. */
```

```
# ifndef CORRECT_ISO_CPP_STRING_H_PROTO
extern "C++" char *basename (char *filename)
```

```
THROW asm ("basename") nonnull ((1));
```

```
extern "C++" const char *basename (const char *filename)
```

```
THROW asm ("basename") nonnull ((1));
```

```
# else
extern char *basename (const char *filename) THROW nonnull ((1));
#endif
#endif
#endif
```

=====

I think we are getting the C++ prototype from string.h and a conflicting C prototype from libiberty.h

### Comment 1

1. **Chris Johns**, Sun, 20 Aug 2017 07:22:34 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

In f2bb439/rtems-tools:

```
rtemstoolkit/libiberty: Fix broken configure detection.
```

The file libiberty.h requires some configure macros to control some parts and these are not provided so the file did not match what was needed. Hard code the result and remove the need for the macros. The related calls are not provided in our libiberty usage and not needed.

Closes #3103.

### Comment 2

### Description

Change the POSIX barrier into a self-contained object using , e.g.

```
typedef struct {
  struct Thread_queue_Queue  _queue;
  unsigned int                _flags;
  unsigned int                _count;
} pthread_barrier_t;
```

### Comment 1

1. **Sebastian Huber**, Mon, 18 Sep 2017 05:07:02 GMT
2. **status**: changed from **assigned** to **accepted**
3. **milestone**: changed from **Indefinite** to **4.12.0**

### Comment 2

1. **Sebastian Huber**, Thu, 05 Oct 2017 12:34:58 GMT

In 76d9db3/rtems-source-builder:

```
4.12: Update to Newlib 2.5.0.20170922
The time_t is now a 64-bit signed integer.
This update includes a patch to introduce the self-contained POSIX synchronization objects.
Update #2514. Update #3111. Update #3112. Update #3113. Update #3114. Update #3115. Update #3116.
```

### Comment 3

1. **Sebastian Huber**, Thu, 05 Oct 2017 12:35:53 GMT

In e46a075/rtems:

```
Enforce compatible Newlib version
This Newlib check ensures that we have a 64-bit time_t and self-contained POSIX synchronization objects.
Update #2514. Update #3111. Update #3112. Update #3113. Update #3114. Update #3115. Update #3116.
```

### Comment 4

1. **Sebastian Huber**, Thu, 05 Oct 2017 12:36:31 GMT

In e67929c/rtems:

```
posix: Implement self-contained POSIX barriers
POSIX barriers are now available in all configurations and no longer depend on --enable-posix.
```

Update #2514. Update #3114.

#### Comment 5

1. **Sebastian Huber**, Mon, 09 Oct 2017 06:05:48 GMT

In d8f7bdc/rtems-docs:

c-user: Add obsolete configuration options section

Update #2493. Update #3112. Update #3113. Update #3114. Update #3115. Update #3116.

#### Comment 6

1. **Sebastian Huber**, Wed, 11 Oct 2017 12:34:32 GMT
2. **component**: changed from **score** to **posix**

#### Comment 7

1. **Sebastian Huber**, Thu, 12 Oct 2017 05:16:16 GMT
2. **status**: changed from **accepted** to **closed**
3. **resolution**: set to **fixed**

In 9c0cefb/rtems:

confdefs: Add warnings for obsolete options

Update #2674. Close #3112. Close #3113. Close #3114. Close #3115. Close #3116.

#### Comment 8

1. **Sebastian Huber**, Wed, 18 Oct 2017 06:53:08 GMT

In 6087f33e/rtems:

tmtests/tmfine01: Add test cases

Update #2674. Update #3112. Update #3113. Update #3114. Update #3115.

#### Comment 9

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT
2. **milestone**: changed from **4.12.0** to **5.1**

Milestone renamed

#### Comment 10

1. **Sebastian Huber**, Wed, 22 Nov 2017 12:51:59 GMT

In 6c1bf7e/rtems-docs:

c-user: Remove RTEMS\_SYSINIT\_POSIX\_BARRIER

Update #3114.

---

## 3115 - POSIX: Make pthread\_rwlock\_t self-contained

### Description

Use the Thread\_queue\_Context::enqueue\_callout to do the timeout handling. This avoids the switch statement in \_Thread\_queue\_Timeout(). It removes the thread queue dependency to \_Thread\_Timeout().

### Comment 1

1. **Sebastian Huber**, Thu, 24 Aug 2017 09:52:09 GMT
2. **summary**: changed from `__score: Optimize _Thread_queue_Enqueue()` to `__score: Optimize _Thread_queue_Enqueue() timeout handling__`

### Comment 2

1. **Sebastian Huber**, Mon, 09 Oct 2017 12:18:01 GMT
2. **status**: changed from **assigned** to **accepted**
3. **milestone**: changed from **Indefinite** to **4.12.0**

### Comment 3

1. **Sebastian Huber**, Tue, 17 Oct 2017 06:31:01 GMT

In bf2a53d2/rtems:

```
score: Rename watchdog variants
Rename PER_CPU_WATCHDOG_RELATIVE in PER_CPU_WATCHDOG_MONOTONIC to highlight the corresponding POSIX CLOCK_MONOTONIC.
Rename PER_CPU_WATCHDOG_ABSOLUTE in PER_CPU_WATCHDOG_REALTIME to highlight the corresponding POSIX CLOCK_REALTIME.
Update #3117. Update #3182.
```

### Comment 4

1. **Sebastian Huber**, Tue, 17 Oct 2017 06:31:14 GMT

In 91ce012c/rtems:

```
score: Rename _Watchdog_Per_CPU_insert_monotonic()
Rename _Watchdog_Per_CPU_insert_monotonic() in _Watchdog_Per_CPU_insert_ticks().
Update #3117. Update #3182.
```

**Description**

Newlib uses `_times_r()` in `clock()`. The problem is that the `_times_r()` clock frequency is defined by `sysconf(_SC_CLK_TCK)`. The clock frequency of `clock()` is the constant `CLOCKS_PER_SEC`.

FreeBSD uses `getrusage()` for `clock()`.

**Comment 1**

1. **Sebastian Huber**, Thu, 07 Sep 2017 05:40:56 GMT

In `bdbf1ffa/rtems`:

```
Implement clock()

Newlib uses _times_r() in clock(). The problem is that the _times_r() clock frequency is defined by sysconf(_SC_CLK_TCK). The clock
frequency of clock() is the constant CLOCKS_PER_SEC.

FreeBSD uses getrusage() for clock(). Since RTEMS has only one process, the implementation can be simplified.

Update #3121.
```

**Description**

The `BSP_output_char` should output a char and not mingle with high level processing, e.g. `'\n'` to `'\r\n'` translation. Move this translation to `rtems_putc()`. Remove it from all the `BSP_output_char` implementations.

**Comment 1**

1. **Sebastian Huber**, Fri, 08 Sep 2017 08:38:09 GMT
2. **status:** changed from **assigned** to **accepted**

**Comment 2**

1. **Chris Johns**, Sun, 10 Sep 2017 20:36:44 GMT

Is this an internal RTEMS function?

Could this change any external code that may be using it?

What do users call to get the same thing as we currently have?

It is a good change, I am just considering the timing late in a release development cycle.

**Comment 3**

1. **Sebastian Huber**, Mon, 11 Sep 2017 08:44:16 GMT

Replying to Chris Johns:

Is this an internal RTEMS function?

This is the function pointer used by `rtems_putc()` and `printk()`.

Could this change any external code that may be using it?

What do users call to get the same thing as we currently have?

It is a good change, I am just considering the timing late in a release development cycle.

This is not an API change. Only the `"\n"` to `"\r\n"` moves from the lowest level one step up to `rtems_putc()`.

1. **Sebastian Huber**, Tue, 12 Sep 2017 08:01:16 GMT
2. **status:** changed from **accepted** to **closed**
3. **resolution:** set to **fixed**

In 1bc0ad2/rtems:

Simplify and unify `BSP_output_char`

The `BSP_output_char` should output a char and not mingle with high level processing, e.g. `'\n'` to `'\r\n'` translation. Move this translation to `rtems_putc()`. Remove it from all the `BSP_output_char` implementations.

Close #3122.

**Comment 6**

1. **Sebastian Huber**, Tue, 12 Sep 2017 09:50:58 GMT

In 2fc32460/rtems:

```

**Description**

Doxygen latex output on sync.rtems.org does not build.  
Does latex output build on any host? If so which hosts and what tool combination.  
If it does not build we should consider defaulting the setting for latex output to "no".

**Description**

The use of a file descriptor after or during a close() operation may result in a use after free. Finding such errors in applications is difficult. Especially in SMP systems using the highly dynamic libbsd network stack.

The file descriptor objects reside in a table with a application configuration defined size. So, the storage of a file descriptor object is always present, only the referenced file system node may change over time. The file system nodes may use an internal reference counting, which is independent of the file descriptors.

To implement reference counting for the file descriptors add a bit field for the reference count to the rtems\_libio\_t::flags and use atomic operations to maintain the flags.

Each operation using a file descriptor should perform a sequence like this:

```
int op( int fd, ... )
{
  rtems_libio_t *iop;
  unsigned int flags;
  if ( (uint32_t) fd >= rtems_libio_number_iops ) {
    rtems_set_errno_and_return_minus_one( EBADF );
  }
  iop = rtems_libio_iop( fd );
  flags = rtems_libio_iop_hold( iop );
  if ( ( flags & LIBIO_FLAGS_OPEN ) == 0 ) {
    rtems_libio_iop_drop( iop );
    rtems_set_errno_and_return_minus_one( EBADF );
  }
  do_op( iop, ... );
  rtems_libio_iop_drop( iop );
  return 0;
}
```

A close() should return -1 with EBUSY in case the file descriptor is referenced. In this case, no close operation will be performed.

**Comment 1**

1. **Sebastian Huber**, Wed, 13 Sep 2017 05:56:49 GMT
2. **status**: changed from **assigned** to **accepted**

**Comment 2**

1. **Sebastian Huber**, Thu, 14 Sep 2017 05:03:35 GMT

In ead1281f/rtems:

bsp/mrm332: Remove dead code

Update #3132.

### Comment 3

1. **Sebastian Huber**, Thu, 14 Sep 2017 06:36:11 GMT
2. **description:** modified (diff)

### Comment 4

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:58:46 GMT

In 7b45202/rtems:

libio: Simplify rtems\_libio\_iop()

Remove the file descriptor validation. This is the job of rtems\_libio\_check\_fd(). Use an inline function instead of a macro.

Update #3132.

### Comment 5

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:58:57 GMT

In 4b759b1/rtems:

libio: Avoid direct use of rtems\_libio\_iops

Update #3132.

### Comment 6

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:59:09 GMT

In 0169e90/rtems:

libio: Do simple parameter checks early

This simplifies error handling later.

Update #3132.

### Comment 7

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:59:20 GMT

In 48dbb6cf/rtems:

libio: Remove rtems\_libio\_check\_permissions()

Remove rtems\_libio\_check\_permissions() and convert single user to rtems\_libio\_check\_permissions\_with\_error().

Update #3132.

### Comment 8

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:59:32 GMT

In ec10d26/rtems:

libio: rtems\_libio\_check\_permissions\_with\_error()

Rename rtems\_libio\_check\_permissions\_with\_error() in rtems\_libio\_check\_permissions().

Update #3132.

### Comment 9

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:59:43 GMT

In 856ede4f/rtems:

libio: Add iop set/clear flags

Update #3132.

**Comment 10**

1. **Sebastian Huber**, Fri, 15 Sep 2017 08:59:56 GMT

In ca90c6c/rtems:

```
libio: Add rtems_libio_iop_flags_initialize()  
Update #3132.
```

**Comment 11**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:00:08 GMT

In e2b1db23/rtems:

```
libio: Add rtems_libio_iop_flags()  
Update #3132.
```

**Comment 12**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:00:20 GMT

In bbcdc302/rtems:

```
libio: Add rtems_libio_iop_is_no_delay()  
Update #3132.
```

**Comment 13**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:00:32 GMT

In a937a5a/rtems:

```
libio: Add rtems_libio_iop_is_readable()  
Update #3132.
```

**Comment 14**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:00:45 GMT

In 3cffd66d/rtems:

```
libio: Add rtems_libio_iop_is_writeable()  
Update #3132.
```

**Comment 15**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:00:57 GMT

In d4c5441/rtems:

```
libio: Add rtems_libio_iop_is_append()  
Update #3132.
```

**Comment 16**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:01:09 GMT

In 9012db8/rtems:

```
libio: LIBIO_GET_IOP() LIBIO_GET_IOP_WITH_ACCESS()  
  
Replace rtems_libio_check_fd(), rtems_libio_iop(), rtems_libio_check_open() and rtems_libio_check_permissions() combinations with new  
LIBIO_GET_IOP() and LIBIO_GET_IOP_WITH_ACCESS() macros.  
  
Update #3132.
```

**Comment 17**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:01:20 GMT

In 98041b68/rtems:

```
libio: Unify readv() and writev()
Update #3132.
```

#### **Comment 18**

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:01:32 GMT

In baef823c/rtems:

```
libio: Add hold/drop iop reference
Check iop reference count in close() and return -1 with errno set to EBUSY in case the file descriptor is still in use.
Update #3132.
```

#### **Comment 19**

1. **Sebastian Huber**, Fri, 15 Sep 2017 10:49:57 GMT
2. **status**: changed from **accepted** to **closed**
3. **resolution**: set to **fixed**

In 894c965/rtems-libbsd:

```
Support reference counting for file descriptors
Close #3132.
```

#### **Comment 20**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT

**Description**

Remove unused LIBIO\_FLAGS\_CREATE flag.

**Comment 1**

1. **Sebastian Huber**, Thu, 14 Sep 2017 05:10:53 GMT

The LIBIO\_FLAGS\_CREATE is actually used in one place via rtems\_libio\_to\_fcntl\_flags() for fcntl(fd, F\_GETFL). However, POSIX mandates that only access and status flags are returned.

<http://pubs.opengroup.org/onlinepubs/9699919799/functions/fcntl.html>

Status flags are defined here:

<http://pubs.opengroup.org/onlinepubs/9699919799/basedefs/fcntl.h.html>

#### Description

Currently, the free list of file descriptors is organized as a LIFO. In erroneous systems which use a file descriptor after a call to close(), this increases the likelihood that this error is undetected due to the prompt re-use of the file descriptor. The use of a FIFO has the benefit that free file descriptors remain on the free list as long as possible. This increases the time frame in which an invalid use of a closed file descriptor returns an error status.

#### Comment 1

1. **Sebastian Huber**, Fri, 15 Sep 2017 09:01:44 GMT

1. **Sebastian Huber**, Tue, 10 Oct 2017 06:06:29 GMT
2. **component**: changed from **Documentation** to **doc**

**Comment 2**

1. **Joel Sherrill**, Thu, 12 Oct 2017 23:53:55 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In c6f8e51/rtems-docs:

Shorten the name of the BSP and Device Driver Development Guide

Old name:

RTEMS BSP and Device Driver Development Guide

This is long and causes problems in the PDF output. This patch changes the name to:

RTEMS BSP and Driver Guide

Closes #3141.

**Comment 3**

1. **Joel Sherrill**, Fri, 13 Oct 2017 00:04:38 GMT

In 13a15f9/rtems-docs:

Shorten BSP and Driver Guide name (missed commit)

Updates #3141.

**Description**

A zero-initialized pthread\_once\_t reduces the ROM usage of RTEMS applications, since the global pthread\_once\_t objects may reside in the BSS section.

### Description

Running rtems-test with a recent u-boot and a current master this failure is reported:

```

] RTEMS Beagleboard: am335x-based
]
]
] *** BEGIN OF TEST PSXRDWRV ***
] writev bad file descriptor -- EBADF
] writev error 1: 22=Invalid argument
] Error during error test!!!!

```

### Comment 1

1. **Joel Sherrill**, Thu, 21 Sep 2017 15:15:38 GMT

Works on erc32 Fails on jmr3904, psim, and xilinx\_zynq\_a9\_qemu

Tracked down to needing a memset on a stack variable "vec" which was an IO vector. Apparently depending on the BSP, the variable was zero or not. Patch to follow

### Comment 2

1. **Joel Sherrill**, Thu, 21 Sep 2017 15:17:28 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

In 714cb06/rtems:

```

psxrdwrv/test.c: Clear iovec to ensure consistent results
closes #3148.

```

```

**Comment 1**

1. **Chris Johns**, Fri, 22 Sep 2017 08:12:37 GMT

My u-boot is the original one that comes with the board. I am working out how to get a new one to boot from an SD Card

**Comment 2**

1. **Chris Johns**, Mon, 25 Sep 2017 03:45:39 GMT

The SD card requires you position the SPL (MLO) and u-boot image in specific locations to boot:

```
dd if=MLO of=sdcard.img count=1 seek=1 conv=notrunc bs=128k
dd if=u-boot.img of=sdcard.img count=2 seek=1 conv=notrunc bs=384k
```

The SD card can be formatted with anything.

### Comment 1

1. **Jeff Mayes**, Fri, 29 Sep 2017 20:32:06 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **assigned**

### Comment 2

1. **Joel Sherrill**, Fri, 29 Sep 2017 20:55:48 GMT
2. **summary:** changed from **PowerPC tools doesn't build** to **PowerPC tools don't build**

I have built the tools on two CentOS 7 computers. Jeff was on Cygwin and has successfully built both arm and x86.

### Comment 3

1. **Sebastian Huber**, Sat, 30 Sep 2017 07:20:20 GMT

Please make sure that no previous RTEMS tools are in your \$PATH before the build, e.g. delete the previous installation and try it again.

### Comment 4

1. **Sebastian Huber**, Sat, 30 Sep 2017 07:25:02 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **duplicate**

Duplicate of #2540.

### Comment 5

1. **Jeff Mayes**, Wed, 04 Oct 2017 19:48:34 GMT

2. **status:** changed from closed to reopened
3. **resolution:** duplicate deleted

OK. There are no RTEMS tools in my path. I deleted the build folder in my working dir and tried again. I also changed the #PREFIX to use a different directory. It still fails with the same error as reported.

Any other ideas? Thanks

## Comment 6

1. **Jeff Mayes**, Wed, 04 Oct 2017 19:55:52 GMT

Joel had the idea to see what verbose gcc output showed. This shows the as version used (2.29).

We have checked and my RSB is up to date. Is there any chance 64-bit PowerPC support is disabled in binutils on Cygwin?

```

GNU assembler version 2.29 (powerpc-rtems4.12) using BFD version (GNU Binutils) 2.29
Assembler messages:
Fatal error: -a64 unsupported
```

## Comment 7

1. **Chris Johns**, Wed, 04 Oct 2017 23:45:27 GMT

The error is happening in as and it would appear the PPC as does not support 64bit options. Does an as Linux build of the PPC support the -a64 option? Hint, use -save-temp to get a .s file and shift it to Linux and try.

I would compare the full build logs for a Linux build and a Cygwin build paying extra attention to the assembler configure and build. I would try and locate a PowerPC 64bit assembler file in the as source and see if it is build on Linux and Cygwin.

## Comment 8

1. **Sebastian Huber**, Thu, 05 Oct 2017 06:53:10 GMT

The BFD configuration is in Binutils bfd/config.bfd:

```
powerpc-*bsd* | powerpc-*elf* | powerpc-*sysv4* | powerpc-*eabi* | \
powerpc-*solaris2* | powerpc-*linux-* | powerpc-*rtems* | \
powerpc-*chorus*)
  targ_defvec=powerpc_elf32_vec
  targ_selvecs="rs6000_xcoff_vec powerpc_elf32_le_vec powerpc_boot_vec"
  targ64_selvecs="powerpc_elf64_vec powerpc_elf64_le_vec"
;;
```

Looks like some Cygwin-specific build problem to me.

#### Comment 9

1. **Jeff Mayes**, Tue, 10 Oct 2017 22:53:01 GMT

With Joel's help, I got it to build today. Here are the changes we made:

```

#### Comment 10

1. **Chris Johns**, Wed, 11 Oct 2017 10:21:20 GMT

Please correct the ticket and:

Assign ownership to Joel. Set a milestone Add binutils PowerPC 64bit to the tags

Thanks

What hosts have you tested?

#### Comment 11

1. **Joel Sherrill**, Wed, 11 Oct 2017 10:33:42 GMT

2. **owner:** changed from **Sebastian Huber** to **Joel Sherrill**

3. **status:** changed from **reopened** to **assigned**

4. **milestone:** set to **4.12.0**

No other hosts have been tested. We were happy it worked on Cygwin. If you are ok with the patch, we can test it elsewhere.

#### Comment 12

1. **Chris Johns**, Wed, 11 Oct 2017 11:32:44 GMT

Replying to Joel Sherrill:

No other hosts have been tested. We were happy it worked on Cygwin. If you are ok with the patch, we can test it elsewhere.

Patch looks fine with a minor change in the commit to say Enable 64-bit BFD support. Needed on 32bit hosts.. We just need to make sure other hosts are not broken.

#### Comment 13

1. **Joel Sherrill**, Wed, 11 Oct 2017 12:13:05 GMT

Testing now on CentOS 7 and Fedora 26 which are 64-bit hosts.

Following up on a comment from Sebastian that I missed. This is not Cygwin specific. It is an issue on all 32-bit hosts. The bfd magic silently disables 64-bit BFD on 32-bit hosts unless you specify `--enable-64-bit-bfd`. I have not checked yet if sparc64 or aarch64 will build on 32-bit Cygwin. They may need this option also. I will ask Jeff to check if they build. They may need this option also.

#### Comment 14

1. **Jeff Mayes**, Wed, 11 Oct 2017 20:24:31 GMT

Just tested aarch64 and sparc64 with the fixed files, and they both build just fine.

**Comment 15**

1. **Joel Sherrill**, Wed, 11 Oct 2017 23:57:25 GMT
2. **summary:** changed from **PowerPC tools don't build** to **PowerPC tools don't build on 32-bit hosts**

**Comment 16**

1. **Joel Sherrill**, Thu, 12 Oct 2017 02:18:45 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In c4b6bf0/rtems-source-builder:

```
Enable 64-bit BFD support. Needed on 32bit hosts
Closes #3157.
```

**Comment 17**

1. **Sebastian Huber**, Thu, 09 Nov 2017 06:27:14 GMT

**Description**

Updating waf breaks the rootfs. Add rootfs support to rtems-waf.git.

**Comment 1**

1. **Chris Johns**, Mon, 02 Oct 2017 00:13:35 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

**Comment 2**

1. **Joel Sherrill**, Fri, 06 Oct 2017 19:41:46 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

I think this is still broken for me. I did a "git module update" and it didn't seem to pull anything. The configure was this:

```
./waf configure --rtems=$HOME/rtems-work/tools/4.12/bsps \
```

```
--rtems-tools=$HOME/rtems-work/tools/4.12 \ --rtems-bsps=sparc/erc32
```

I did "./wak -k" and multiple tests do not build currently. I cd'ed to file\_io/crc and then did this:

```
$ ../waf clean 'clean-sparc-rtems4.12-erc32' finished successfully (0.065s) [joel@localhost crc]$ ../waf Waf: Entering directory `/home/joel/rtems-work/examples-v2/build/sparc-rtems4.12-erc32' [0/2] Compiling rootfs/image.img [1/2] Compiling ../build/sparc-rtems4.12-erc32/file_io/crc/fs-root.tar [2/6] Compiling crc_32.c [3/6] Compiling ../build/sparc-rtems4.12-erc32/file_io/crc/fs-root-tar.c [4/6] Compiling init.c ../file_io/crc/init.c:18:10: fatal error: FilesystemImage?.h: No such file or directory
```

```
#include "FilesystemImage?.h"
```

compilation terminated.

Waf: Leaving directory `/home/joel/rtems-work/examples-v2/build/sparc-rtems4.12-erc32' Build failed

```
-> task in 'crc.exe' failed with exit status 1 (run with -v to display more information)
```

I did a "git submodule deinit ." and reinitialized the modules but that didn't help either.

### Comment 3

1. **Chris Johns**, Fri, 06 Oct 2017 21:57:35 GMT

Replying to Joel Sherrill:

```
I think this is still broken for me. I did a "git module update" and it didn't seem to pull anything.
```

I have not worked on this since my last changes you have.

```
I did "./waf -k" and multiple tests do not build currently. I cd'ed to file_io/crc and then did this:
```

Using -k is a good idea. I should have done that.

```
../../file_io/crc/init.c:18:10: fatal error: FilesystemImage?.h: No such file or directory
```

```
#include "FilesystemImage?.h"
```

I have changed the bin2tar file name to clean up the code. The code now uses the rtems\_waf \_\_rootfs\_\_ to create the C filesystem file.

```
I did a "git submodule deinit ." and reinitialized the modules but that didn't help either.
```

This a bug I did not see because the build I did stopped at the trace linker errors.

### Comment 4

1. **Joel Sherrill**, Fri, 06 Oct 2017 22:04:09 GMT

Awesome! Any other tests which look easy to fix?

### Comment 5

1. **Sebastian Huber**, Thu, 12 Oct 2017 11:03:38 GMT

In 4b907ce/examples-v2:

```
Fix configuration warnings
```

```
Update #3158.
```

### Comment 6

1. **Sebastian Huber**, Thu, 12 Oct 2017 11:07:34 GMT

In 7a8df0d/examples-v2:

```
Fix warnings
```

```
Update #3158.
```

### Comment 7

1. **Sebastian Huber**, Thu, 12 Oct 2017 11:12:24 GMT

The following errors are left:

```
Waf: Entering directory `build/arm-rtems4.12-xilinx_zynq_a9_qemu'
[ 29/115] Compiling file_io/crc/init.c
[ 34/115] Compiling build/arm-rtems4.12-xilinx_zynq_a9_qemu/file_io/fdopen/test.c.2.o
error: config section: dump-on-error: not found

-> task in 'crc.exe' failed with exit status 1 (run with -v to display more information)
-> task in 'psx sched report.exe' failed with exit status 1 (run with -v to display more information)
```

**Comment 8**

1. **Chris Johns**, Thu, 12 Oct 2017 15:59:18 GMT

Replying to Sebastian Huber:

The following errors are left:

```
Waf: Entering directory `build/arm-rtems4.12-xilinx_zynq_a9_qemu'
[ 29/115] Compiling file io/crc/init.c
[ 34/115] Compiling build/arm-rtems4.12-xilinx_zynq_a9_qemu/file_io/fdopen/test.c.2.o
error: config section: dump-on-error: not found
```

The fix is to remove the line from the INI file.

```
[108/115] Linking build/arm-rtems4.12-xilinx_zynq_a9_qemu/posix_api/psx_sched_report/psx_sched_report.exe
../../file_io/crc/init.c:18:10: fatal error: FilesystemImage.h: No such file or directory
`#include "FilesystemImage.h" `
^~~~~~
compilation terminated.
```

I change the name of the file system image. I have refactored the support so rtems\_waf can build a tar file and create the C/H files with a single build instance. I forgot to update the init.c files.

```
librtemscpu.a(default-configuration.o): In function `__getreent':
confdefs.h:2342: multiple definition of `getreent'
```

This is one Joel has been looking at and has posted on the newlib list about.

**Comment 9**

1. **Joel Sherrill**, Thu, 12 Oct 2017 19:11:24 GMT

In f15676f/examples-v2:

```
Make crc and fdopen build
Updates #3158.
```

**Comment 10**

1. **Joel Sherrill**, Thu, 12 Oct 2017 19:16:23 GMT

psx\_sched\_report fails due to #3176 and using a default configuration. Changing that test to have an explicit RTEMS configuration.

**Comment 11**

1. **Joel Sherrill**, Thu, 12 Oct 2017 19:17:28 GMT

2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**

In b6c5dbb/examples-v2:

```
psx_sched_report: Add RTEMS configuration to address build issue.
Closes #3158.
```

This still fails for me. Did you actually push the fix? I fixed a few other examples-v2 failures. But these remain:

```
-> task in 'hello-deep.texte' failed with exit status 10 (run with -v to display more information)
```

Looks like missing update from recent changes.

```
-> task in 'fat_ramdisk.texte' failed with exit status 10 (run with -v to display more information)
```

Looks like missing update from recent changes.

```
-> task in 'fdopen.texte' failed with exit status 10 (run with -v to display more information)
```

Not building filesystem image

```
-> task in 'crc.exe' failed with exit status 1 (run with -v to display more information)
```

Not building filesystem image

```
-> task in 'psx_sched_report.exe' failed with exit status 1 (run with -v to display more information)
```

RTEMS confdefs.h and newlib libc.a both define getreent.

**Comment 3**

1. **Chris Johns**, Thu, 05 Oct 2017 21:34:05 GMT
2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**

Replying to Joel Sherrill:

```
This still fails for me. Did you actually push the fix?
```

<https://git.rtems.org/examples-v2/commit/?id=c7dfbaf83c5b119106f9ee38c902988cc463b0aa>

It removes the dump-on-error issue which is the subject of this ticket.

Are you seeing #3160?

**Comment 4**

1. **Joel Sherrill**, Thu, 05 Oct 2017 22:26:58 GMT

Yes. It appears to impact both\_hello and fat\_ramdisk.

Did you look at the two tests which aren't building a filesystem image in waf?

#### **Comment 5**

1. **Chris Johns**, Thu, 05 Oct 2017 23:12:15 GMT

Replying to Joel Sherrill:

Yes. It appears to impact both\_hello and fat\_ramdisk.

It is the trace linker definitions. They need updating.

Did you look at the two tests which aren't building a filesystem image in waf?

No. Is that issue #3158? If so please update that ticket with the command you used to configure and build plus the output.

#### **Comment 6**

1. **Joel Sherrill**, Thu, 05 Oct 2017 23:40:26 GMT

OK. Looks like 3158 but I don't have a toolset now. Rebuilding with the latest changes. Will do that in the morning.

#### **Comment 7**

### Comment 1

1. **Sebastian Huber**, Mon, 02 Oct 2017 11:50:12 GMT

I removed these types some months ago. Are you on the right branch? How can I build this stuff?

### Comment 2

1. **Chris Johns**, Mon, 02 Oct 2017 22:23:58 GMT

Replying to Sebastian Huber:

I removed these types some months ago. Are you on the right branch?

Yes. There are types in the trace definitions ...

<https://git.rtems.org/rtems-tools/tree/linkers/rtems-score-coremutex.ini>

These definitions are a quick and dirty hack I would prefer to avoid however the long term solution is getting function signatures and types from the DWARF data but that work is more than the time I have available. I need someone to support the effort.

How can I build this stuff?

Clone examples-v2 and then build using the .waf I have just added to the repo. The examples uses rtems\_waf so configured in a similar way to libbsd.

### Comment 3

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Sebastian Huber**, Fri, 06 Oct 2017 07:34:14 GMT

The CORE mutex implementation changed considerably. Most of it moved to inline functions. I am not sure what you want to trace here?

#### Comment 4

1. **Sebastian Huber**, Fri, 06 Oct 2017 07:36:18 GMT

Maybe this should be replaced by the thread queue enqueue and extract functions.

#### Comment 5

1. **Chris Johns**, Sat, 07 Oct 2017 00:16:31 GMT

Replying to Sebastian Huber:

Maybe this should be replaced by the thread queue enqueue and extract functions.

I think anything that makes sense will do. It is more of an example of what we can trace and the fact you can trace into the kernel some distance.

#### Comment 6

1. **Sebastian Huber**, Thu, 12 Oct 2017 10:53:52 GMT

In b76fa74/rtems-tools:

```
linkers: Update due to API changes
Update #3160.
```

**Description**

Test runs with a interrupt driven console driver result in unreliable test outcomes.

Problem was noticed with test runs on Microzed, for example libtest/block08:

The test prints:

```
*** END OF TEST BLOCK 8 ***
```

---

The rtems-test command marks the result as a failure. There is a single \* missing from the start of the line. I attach the full test trace.

**Attachments:****1 Chris Johns, Fri, 06 Oct 2017 04:03:09 GMT**

**attach:** set to [microzed-block8.txt \(https://devel.rtems.org/ticket/3170/microzed-block8.txt\)](https://devel.rtems.org/ticket/3170/microzed-block8.txt)

**Comment 1**

1. **Chris Johns**, Fri, 06 Oct 2017 21:48:30 GMT

2. **severity:** changed from **major** to **critical**

3. **summary:** changed from **Microzed libtest/block8 fails to print end of test correctly.** to **Microzed libtest/block08 fails to print end of test correctly.**

I changed all printk calls in the block08 test to printf and the output from the test is now correct and rtems-test passes the test.

There must be something wrong with the Zynq UART drivers. I have escalated this to critical because I would like the Zynq to be a tier 1 device with the Beaglebone Black so we have Cortex-A9 and Cortex-A8 devices in tier 1.

There are 233 printk references in the testsuite. I am sure some are needed however block08's printk calls were not needed so I am now wondering how many are?

**Comment 2**

1. **Sebastian Huber**, Mon, 09 Oct 2017 07:19:29 GMT

Does the following patch alter the output:

```

**Comment 5**

1. **Chris Johns**, Thu, 12 Oct 2017 17:19:10 GMT

Replying to Sebastian Huber:

Does the following patch alter the output:

No it did not make a difference.

See <https://lists.rtems.org/pipermail/build/2017-October/000007.html>. Search for Result: invalid Time: 0:00:23.859291 dumpbuf01.exe.img. The rtems\_print\_buffer() call uses rtems\_putc and that uses printk or the putc equivalent.

Reviewing the failures there looks to be something wrong in the BSP. There are failures which should not or do not fail on other BSP. I cannot debug this remotely so it may have to wait. Are you able to run the tests on a Zynq?

**Comment 6**

1. **Sebastian Huber**, Fri, 13 Oct 2017 06:48:49 GMT

Do you use a polled or interrupt driven console driver? The tests need a polled console driver.

**Comment 7**

1. **Chris Johns**, Fri, 13 Oct 2017 12:51:02 GMT

Replying to Sebastian Huber:

Do you use a polled or interrupt driven console driver?

I use the default configuration:

```
configure --target=arm-rtems4.12 --prefix=/opt/work/chris/rtems/kernel/4.12 --disable-networking --enable-rtemsbsp=xilinx_zynq_zedboard
--enable-maintainer-mode --enable-tests
```

I have always assumed the default configuration for \_\_any\_\_ BSP lets the tests run. Is this not the case?

The tests need a polled console driver.

What do I do to make this happen?

### Comment 8

1. **Sebastian Huber**, Fri, 13 Oct 2017 12:54:16 GMT

Replying to Chris Johns:

Replying to Sebastian Huber:

I use the default configuration:

```
configure --target=arm-rtems4.12 --prefix=/opt/work/chris/rtems/kernel/4.12 --disable-networking --enable-
rtemsbsp=xilinx_zynq_zedboard --enable-maintainer-mode --enable-tests
```

I have always assumed the default configuration for \_\_any\_\_ BSP lets the tests run. Is this not the case?

No, this is not the case for the real hardware BSPs which usually use an interrupt driven console driver.

The tests need a polled console driver.

What do I do to make this happen?

This is BSP-specific. Try, to add "ZYNQ\_CONSOLE\_USE\_INTERRUPTS=" to the configure command line.

### Comment 9

1. **Chris Johns**, Fri, 13 Oct 2017 13:21:40 GMT

Replying to Sebastian Huber:

Replying to Chris Johns:

I have always assumed the default configuration for \_\_any\_\_ BSP lets the tests run. Is this not the case?

No, this is not the case for the real hardware BSPs which usually use an interrupt driven console driver.

This seems like a new requirement. Has something changed in RTEMS to cause this? I do not remember having this problem with previous versions.

This is confusing because each BSP is different and has different options. The tests should manage this internally at runtime and not be dependent on low level BSP specific driver implementations. We have polled console driver support in BSPs, why not get the tests to use it?

Is this documented anywhere? FWIW I see adding some now as hiding the real issue.

What do I do to make this happen?

This is BSP-specific. Try, to add "ZYNQ\_CONSOLE\_USE\_INTERRUPTS=" to the configure command line.

I will consider the blocker status for this issue and discuss it with Joel today. He told me yesterday no tests should be using printk unless configured to do so, ie small memory targets. There seems to be some confusion.

### Comment 10

1. **Sebastian Huber**, Fri, 13 Oct 2017 13:28:24 GMT

Replying to Chris Johns:

Replying to Sebastian Huber:

Replying to Chris Johns:

No, this is not the case for the real hardware BSPs which usually use an interrupt driven console driver.

This seems like a new requirement. Has something changed in RTEMS to cause this? I do not remember having this problem with previous versions.

At least since I use RTEMS, this was the case. I asked questions about this on the mailing list.

This is confusing because each BSP is different and has different options. The tests should manage this internally at runtime and not be dependent on low level BSP specific driver implementations. We have polled console driver support in BSPs, why not get the tests to use it?

Is this documented anywhere? FWIW I see adding some now as hiding the real issue.

The console drivers are a real mess. We have no link-time configuration options/mechanism for drivers. Its not so easy.

Changing the tests so that they work with an interrupt driven console driver is hard. I don't think it makes sense. What we need is a non-blocking test output support.

What do I do to make this happen?

This is BSP-specific. Try, to add "ZYNQ\_CONSOLE\_USE\_INTERRUPTS=" to the configure command line.

I will consider the blocker status for this issue and discuss it with Joel today. He told me yesterday no tests should be using printk unless configured to do so, ie small memory targets. There seems to be some confusion.

Some tests must not use printf, due to execution environment constraints, e.g. interrupt context, no drivers, early system state, fatal error, etc.

If you consider this as a blocker, then you possibly delay the release for several months.

#### **Comment 11**

1. **Sebastian Huber**, Fri, 13 Oct 2017 13:38:59 GMT

An short term option would be a unification of the BSP option to select a polled console driver.

#### **Comment 12**

1. **Joel Sherrill**, Fri, 13 Oct 2017 13:41:11 GMT

There is a buffered test up option for the tests which will help those that use the infrastructure. Should be in testsuites/configure.ac

#### **Comment 13**

1. **Chris Johns**, Fri, 13 Oct 2017 13:42:07 GMT

Replying to Sebastian Huber:

Replying to Chris Johns:

Replying to Sebastian Huber:

Replying to Chris Johns:

I have always assumed the default configuration for \_\_any\_\_ BSP lets the tests run. Is this not the case?

No, this is not the case for the real hardware BSPs which usually use an interrupt driven console driver.

This seems like a new requirement. Has something changed in RTEMS to cause this? I do not remember having this problem with previous versions.

At least since I use RTEMS, this was the case. I asked questions about this on the mailing list.

The beaglebone black does not have the same problems as the Zynq. I checked the drivers for the BBB and there is an interrupt version so I wonder if the polled driver is used by default. I did not check this.

The console drivers are a real mess. We have no link-time configuration options/mechanism for drivers. Its not so easy.

If consoles provide interrupt and poll devs, why have the test close the console and reopen it with the polled driver? Yeah ok It is easy to say this and no I have not looked into the detail and what complexity there is. :)

Changing the tests so that they work with an interrupt driven console driver is hard. I don't think it makes sense. What we need is a non-blocking test output support.

Agreed, I was not considering changing the tests to do this rather how output is handled. There is the TESTS\_BUFFER\_OUTPUT and TESTS\_USE\_PRINTK can they be forced on and all stdout and stderr paths switched to what is used?

If you consider this as a blocker, then you possibly delay the release for several months.

This is being a little dramatic. I am not after a rewrite, I am looking for a simple pragmatic solution. We need the ability to test on hardware in a repeatable manner for the life of the release branch.

It depends also on the hardware, FIFO depth, DMA support, etc.

#### Comment 15

1. **Chris Johns**, Fri, 13 Oct 2017 13:47:42 GMT

Replying to Sebastian Huber:

An short term option would be a unification of the BSP option to select a polled console driver.

We have an option --enable-tests=all? Should this force polled drivers?

#### Comment 16

1. **Sebastian Huber**, Mon, 16 Oct 2017 05:22:23 GMT

Its not really transparent to the user that --enable-tests=all tinkers with the console driver.

#### Comment 17

1. **Sebastian Huber**, Mon, 23 Oct 2017 11:49:42 GMT

In 88e84c22/rtems:

```
testsuite: Fix build
Updates #3170.
```

#### Comment 18

**Comment 3**1. **Ian Lepore**, Thu, 12 Oct 2017 05:06:22 GMT

In 51304dde/rtems:

timecounter: Merge FreeBSD change r282424

Implement a mechanism for making changes in the kernel<->driver PPS interface without breaking ABI or API compatibility with existing drivers.

The existing data structures used to communicate between the kernel and driver portions of PPS processing contain no spare/padding fields and no flags field or other straightforward mechanism for communicating changes in the structures or behaviors of the code. This makes it difficult to MFC new features added to the PPS facility. ABI compatibility is important; out-of-tree drivers in module form are known to exist. (Note that the existing api\_version field in the pps\_params structure must contain the value mandated by RFC 2783 and any RFCs that come along after.)

These changes introduce a pair of abi-version fields which are filled in by the driver and the kernel respectively to indicate the interface version. The driver sets its version field before calling the new pps\_init\_abi() function. That lets the kernel know how much of the pps state structure is understood by the driver and it can avoid using newer fields at the end of the structure that it knows about if the driver is a lower version. The kernel fills in its version field during the init call, letting the driver know what features and data the kernel supports.

To implement the new version information in a way that is backwards compatible with code from before these changes, the high bit of the lightly-used 'kmode' field is repurposed as a flag bit that indicates the driver is aware of the abi versioning scheme. Basically if this bit is clear that indicates a "version 0" driver and if it is set the driver\_abi field indicates the version.

These changes also move the recently-added 'mtx' field of pps\_state from the middle to the end of the structure, and make the kernel code that uses this field conditional on the driver being abi version 1 or higher. It changes the only driver currently supplying the mtx field, usb\_serial, to use pps\_init\_abi().

In ec349b58/rtems:

timecounter: Merge FreeBSD change r286423

RFC 2783 requires a status of ETIMEDOUT, not EWOULDBLOCK, on a timeout.

Update #3175.

**Comment 7**1. **Ian Lepore**, Thu, 12 Oct 2017 05:07:09 GMT

In 7494681/rtems:

timecounter: Merge FreeBSD change r286429

Only process the PPS event types currently enabled in pps\_params.mode.

This makes the PPS API behave correctly, but isn't ideal -- we still end up capturing PPS data for non-enabled edges, we just don't process the data into an event that becomes visible outside of kern tc. That's because the event type isn't passed to pps\_capture(), so it can't do the filtering. Any solution for capture filtering is going to require touching every driver.

Update #3175.

### **Comment 8**

#### 1. Ian Lepore, Thu, 12 Oct 2017 05:07:21 GMT

In f1463c8/rtems:

timecounter: Merge FreeBSD change r286701

If a specific timecounter has been chosen via sysctl, and a new timecounter with higher quality registers (presumably in a module that has just been loaded), do not undo the user's choice by switching to the new timecounter.

Document that behavior, and also the fact that there is no way to unregister a timecounter (and thus no way to unload a module containing one).

Update #3175.

### **Comment 9**

#### 1. Ian Lepore, Thu, 12 Oct 2017 05:07:33 GMT

In 2b6d00f/rtems:

timecounter: Merge FreeBSD change r304285

Constify the pointers to eventtimer and timecounter name strings.

The need for this appears as soon as you try to set the names to something that isn't a "quoted literal". (I'm actually confused why quoted strings aren't a problem as well, we must have some warning disabled.)

Update #3175.

In f013c14/rtems:

timecounter: Merge FreeBSD change r288216

Use per-cpu values for base and last in tc\_cpu\_ticks(). The values are updated lockless, different CPUs write its own view of timecounter state. The critical section is done for safety, callers of tc\_cpu\_ticks() are supposed to already enter critical section, or to own a spinlock.

The change fixes sporadic reports of too high values reported for the (W)CPU on platforms that do not provide cpu ticker and use tc\_cpu\_ticks(), in particular, arm\*.

In d310aa7/rtems:

timecounter: Merge FreeBSD change r303382  
 Hide the boottime and boottimebin globals, provide the getboottime(9) and getboottimebin(9) KPI. Change consumers of boottime to use the KPI. The variables were renamed to avoid shadowing issues with local variables of the same name.  
 Issue is that boottime\* should be adjusted from tc\_windup(), which requires them to be members of the timehands structure. As a preparation, this commit only introduces the interface.  
 Some uses of boottime were found doubtful, e.g. NLM uses boottime to identify the system boot instance. Arguably the identity should not change on the leap second adjustment, but the commit is about the timekeeping code and the consumers were kept bug-to-bug compatible.

In b48aeaf/rtems:

timecounter: Merge FreeBSD change r303387  
 Prevent parallel tc\_windup() calls, both parallel top-level calls from setclock() and from simultaneous top-level and interrupt. For this, tc\_windup() is protected with a tc\_setclock mtx spinlock, in the try mode when called from hardclock interrupt. If spinlock cannot be obtained without spinning from the interrupt context, this means that top-level executes tc\_windup() on other core and our try may be avoided.  
 The boottimebin and boottime variables should be adjusted from tc\_windup(). To be correct, they must be part of the timehands and read using lockless protocol. Remove the globals and reimplement the getboottime(9)/getboottimebin(9) KPI using the timehands read protocol.

In 7488715/rtems:

timecounter: Merge FreeBSD change r304285

Implement userspace gettimeofday(2) with HPET timecounter.

Right now, userspace (fast) gettimeofday(2) on x86 only works for RDTSC. For older machines, like Core2, where RDTSC is not C2/C3 invariant, and which fall to HPET hardware, this means that the call has both the penalty of the syscall and of the uncached hw behind the QPI or PCIe connection to the sought bridge. Nothing can be done against the access latency, but the syscall overhead can be removed. System already provides mappable /dev/hpetX devices, which gives straight access to the HPET registers page.

Add yet another algorithm to the x86 'vdso' timehands. Libc is updated to handle both RDTSC and HPET. For HPET, the index of the hpet device to mmap is passed from kernel to userspace, index might be changed and libc invalidates its mapping as needed.

Remove cpu\_fill\_vdso\_timehands() KPI, instead require that timecounters which can be used from userspace, to provide tc\_fill\_vdso\_timehands(,32)() methods. Merge i386 and amd64 libc//sys/vdso\_gettc.c into one source file in the new libc/x86/sys location. vdso\_gettc() internal interface is changed to move timecounter algorithm detection into the MD code.

Measurements show that RDTSC even with the syscall overhead is faster than userspace HPET access. But still, userspace HPET is three-four times faster than syscall HPET on several Core2 and SandyBridge? machines.

In a9219e7/rtems:

timecounter: Merge FreeBSD change r310053

Add labels to sysctls related to clocks.

Sysctls like kern.eventtimer.et.\*.quality currently embed the name of the clock device. This is problematic for the Prometheus metrics exporter for two reasons:

Some of those clocks have dashes in their names, which Prometheus doesn't allow to be used in metric names. It doesn't allow for extracting the same property of all clocks on the system from within a single query.

Attach these nodes to have a label, so that the Prometheus metrics exporter gives these metric a uniform name with the name of the clock attached as a label.

Update #3175.

**Comment 21**1. **Eric van Gyzen**, Thu, 12 Oct 2017 05:09:57 GMT

In 952b42b6/rtems:

timecounter: Merge FreeBSD change r315280

When the RTC is adjusted, reevaluate absolute sleep times based on the RTC

POSIX 2008 says this about clock\_settime(2):

If the value of the CLOCK\_REALTIME clock is set via clock\_settime(), the new value of the clock shall be used to determine the time of expiration for absolute time services based upon the CLOCK\_REALTIME clock. This applies to the time at which armed absolute timers expire. If the absolute time requested at the invocation of such a time service is before the new value of the clock, the time service shall expire immediately as if the clock had reached the requested time normally.

Setting the value of the CLOCK\_REALTIME clock via clock\_settime() shall have no effect on threads that are blocked waiting for a relative time service based upon this clock, including the nanosleep() function; nor on the expiration of relative timers based upon this clock. Consequently, these time services shall expire when the requested relative interval elapses, independently of the new or old value of the clock.

When the real-time clock is adjusted, such as by clock\_settime(3), wake any threads sleeping until an absolute real-clock time. Such a sleep is indicated by a non-zero td\_rtcgen. The sleep functions will set that field to zero and return zero to tell the caller to reevaluate its sleep duration based on the new value of the clock.

At present, this affects the following functions:

```
pthread_cond_timedwait(3) pthread_mutex_timedlock(3) pthread_rwlock_timedrdlock(3) pthread_rwlock_timedwrlock(3) sem_timedwait(3)
sem_clockwait_np(3)
```

I'm working on adding `clock_nanosleep(2)`, which will also be affected.

#### **Description**

Some applications are getting duplicate symbol definitions for `getreent()`. One of the examples-v2 programs is doing this. It is because there are two bodies for this method -- one from `confdefs.h` and another from `newlib`.

<https://sourceware.org/ml/newlib/2017/msg01020.html> addresses the issues and needs to be incorporated by the RSB.

<https://sourceware.org/ml/newlib/2017/msg01019.html> is a cleanup that was spotted at the same time. It can be picked up by a newlib snapshot.

#### Comment 1

1. **Joel Sherrill**, Wed, 11 Oct 2017 10:31:43 GMT
2. **milestone**: set to **4.12.0**

This needs to be fixed for 4.12. I haven't checked if this is also needed for 4.11. If 4.11 `confdefs.h` defines `getreent()`, then it has the bug also.

### **Description**

Changes of the CLOCK\_REALTIME must trigger absolute timeouts. This is not the case. There is no test for this in RTEMS.

### Comment 1

1. **Joel Sherrill**, Thu, 12 Oct 2017 17:34:48 GMT

I think this only can be used via `clock_nanosleep()` or a timeout on a condition variable. Do both not wakeup after a time change on CLOCK\_REALTIME?  
Are there tests for this?

### Comment 2

1. **Sebastian Huber**, Fri, 13 Oct 2017 08:07:57 GMT

### Comment 4

1. **Sebastian Huber**, Tue, 17 Oct 2017 06:31:01 GMT

In bf2a53d2/rtems:

```
score: Rename watchdog variants
Rename PER_CPU_WATCHDOG_RELATIVE in PER_CPU_WATCHDOG_MONOTONIC to highlight the corresponding POSIX CLOCK_MONOTONIC.
Rename PER_CPU_WATCHDOG_ABSOLUTE in PER_CPU_WATCHDOG_REALTIME to highlight the corresponding POSIX CLOCK_REALTIME.
Update #3117. Update #3182.
```

**Comment 5**

1. **Sebastian Huber**, Tue, 17 Oct 2017 06:31:14 GMT

In 91ce012c/rtems:

```
score: Rename _Watchdog_Per_CPU_insert_monotonic()
Rename _Watchdog_Per_CPU_insert_monotonic() in _Watchdog_Per_CPU_insert_ticks().
Update #3117. Update #3182.
```

**Comment 6**

1. **Sebastian Huber**, Tue, 17 Oct 2017 11:57:07 GMT

In 9a583a9/rtems-libbsd:

```
SLEEPQUEUE(9): Update due to API changes
Update #3117. Update #3182.
```

**Comment 7**

1. **Sebastian Huber**, Thu, 19 Oct 2017 12:47:54 GMT

According to POSIX we have for clock\_nanosleep():

[http://pubs.opengroup.org/onlinepubs/9699919799/functions/clock\\_nanosleep.html](http://pubs.opengroup.org/onlinepubs/9699919799/functions/clock_nanosleep.html)

"If, at the time of the call, the time value specified by rntp is less than or equal to the time value of the specified clock, then clock\_nanosleep() shall return immediately and the calling process shall not be suspended."

Would it be all right to perform a sched\_yield() in this case? This would make the implementation of the thread queue enqueue a bit easier.

**Comment 8**

1. **Joel Sherrill**, Thu, 19 Oct 2017 13:03:51 GMT

I think having a time in the past yield is a good solution. Just add it to the documentation in the right spots.

**Comment 9**

1. **Sebastian Huber**, Thu, 19 Oct 2017 13:06:45 GMT

A yield may lead to a pre-emption. I am not sure if this is all right with respect to the "return immediately and the calling process shall not be suspended".

**Comment 10**

1. **Sebastian Huber**, Thu, 19 Oct 2017 13:40:08 GMT

Why is nanosleep() not implemented as clock\_nanosleep(CLOCK\_REALTIME, 0, rntp, rntp)?

**Comment 11**

1. **Joel Sherrill**, Thu, 19 Oct 2017 13:44:02 GMT

History. nanosleep has been there much longer.

**Comment 12**

1. **Sebastian Huber**, Tue, 24 Oct 2017 08:20:14 GMT

In d85c94c0/rtems:

```
psxclockrealtime01: New test
Update #3182.
```

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### **Description**

There appear to be two issues in smptests/Makefile.am:

- `smppsxaffinity0[12]` are listed twice. This causes a warning. I am unsure if they should always be built or only when POSIX is enabled.
- `smppsxmutex01` is listed in the "HAS\_POSIX" section. Aren't POSIX mutexes always on now so this test should not be inside the conditional?

#### **Comment 1**

1. **Joel Sherrill**, Thu, 12 Oct 2017 18:32:53 GMT
2. **owner**: set to **Sebastian Huber**
3. **status**: changed from **new** to **assigned**
4. **component**: changed from **admin** to **build**

#### **Comment 2**

1. **Sebastian Huber**, Fri, 13 Oct 2017 04:55:00 GMT

It is a bit work left to enable the POSIX tests by default, e.g. a lot of them use `pthread_create()`.

#### Comment 3

1. **Sebastian Huber**, Wed, 25 Oct 2017 05:59:02 GMT

The 2. is a duplicate of #2514.

#### Comment 4

1. **Sebastian Huber**, Wed, 25 Oct 2017 05:59:40 GMT
2. **status**: changed from **assigned** to **closed**

**Description**

There are a ton of issues going on with trac that need to be resolved. The two major ones are:

- The ticket commenter emails people who aren't a trac user. This may require a custom modification.
- The always\_email setting is taking things too literally and always sending emails even if it shouldn't.
- The Git plug-in consistently spins, floods the jail with processes then the site dies.
- Frequent, strange and random crashes.
  - This one is not a huge deal since it's just that request process users won't even notice when this happens.

Upgrading trac is a weeklong project usually I will start preparing for it and update here.

If anyone has any feature requests now is the time to do it!

**Comment 1**

1. **Amar Takhar**, Sat, 20 Oct 2018 23:01:00 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**
4. **milestone**: set to **5.1**

The first 2 items are fixed which were the most important.

The last two will only be fixed by a major upgrade which is a lot of work. There's a lot of custom glue we work and it will be a rewrite for most of it for 1.3. Not a bad thing since 1.3 is far superior to 1.2

I'll call this fixed and open a new ticket for the upgrade when the time comes I've made so many changes this ticket is no longer relevant.

**Description**

Note: No category for rtems-tools.

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

My first attempt to send run logs didn't go so well. This was a weird failure mode. It didn't exit but had to be killed by hand. I dropped off the options related to mailing the log and it still failed. This is on an up to date CentOS 7 (rtbf64c 7.4) as well as my 7.3 VM.

```

1. **Joel Sherrill**, Mon, 23 Oct 2017 20:34:13 GMT
2. **owner:** set to **Chris Johns**
3. **status:** changed from **new** to **assigned**

#### Comment 2

1. **Chris Johns**, Tue, 24 Oct 2017 11:23:33 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In bf58911/rtems-tools:

```
tester: Refactor to use INI format files for BSP configurations.
Add support for user configurations files with the --user-config. Add support for a $HOME/.rtemstesterrc for a user configuration.
Closes #3204.
```

#### Comment 3

1. **Joel Sherrill**, Tue, 24 Oct 2017 14:13:19 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

Seems to be worse now but at least the output isn't an exception trace. Updated, cleaned, and reinstalled. Both installed and from the source tree fail with this:

```
[joel@rtbf64c b-erc32]$ /home/joel/rtems-work/tools/4.12/bin/rtems-test Incorrect RTEMS Tools installation [joel@rtbf64c b-erc32]$ ../rtems-tools/tester/rtems-test Incorrect RTEMS Tools installation
```

Looking at the code, this is just a generic exception handler message.

#### Comment 4

1. **Chris Johns**, Tue, 24 Oct 2017 21:03:20 GMT

Replying to Joel Sherrill:

Seems to be worse now but at least the output isn't an exception trace. Updated, cleaned, and reinstalled.

Thank you for the report. I am wondering is something is happening with the installed version I have broken. It looks like there is also some issues with the naming of the INI files and the BSP name I need to resolve.

Both installed and from the source tree fail with this:

```
[joel@rtbf64c b-erc32]$ /home/joel/rtems-work/tools/4.12/bin/rtems-test Incorrect RTEMS Tools installation [joel@rtbf64c b-erc32]$ ../rtems-tools/tester/rtems-test Incorrect RTEMS Tools installation
```

Looking at the code, this is just a generic exception handler message.

Yes, an import is broken. I need to do an install and test. I did not do this.

Chris

#### Comment 5

1. **Chris Johns**, Tue, 24 Oct 2017 21:48:01 GMT

Replying to Joel Sherrill:

```
[joel@rtbf64c b-erc32]$ /home/joel/rtems-work/tools/4.12/bin/rtems-test Incorrect RTEMS Tools installation [joel@rtbf64c b-erc32]$ ../rtems-
tools/tester/rtems-test Incorrect RTEMS Tools installation
```

Sorry my mistake and a silly one. I was playing about seeing if YAML was installed and was checking a number of hosts and all my hosts seem to have support for Python while the 2.7 docs for Python have no such module. I left the line in by mistake. Your error supports the reason I have not added YAML support, we would need a module in our code.

#### Comment 6

1. **Chris Johns**, Tue, 24 Oct 2017 22:06:08 GMT

In 41d0c34/rtems-tools:

```
tester: Add a BSP field to each BSP INI configuration section.
```

```
The INI section in a BSP configuration is the name of the INI file so each BSP configuration section needs a BSP.
```

```
Updates #3204.
```

#### Comment 7

**Description**

As a best-effort approach, a very large relative timeout should result in the maximum monotonic watchdog value and not in an undefined integer overflow.

**Comment 1**

1. **Sebastian Huber**, Fri, 03 Nov 2017 06:08:04 GMT

**Description**

<https://devel.rtems.org/wiki/TBR/UserManual/SupportedCPUs> is out of date. I have the information to update it if that's what we want to do. I don't know the best way to provide this broad view from 4.6 up on what architectures are supported. The wiki seems OK.

**Comment 1**

1. **Chris Johns**, Wed, 25 Oct 2017 22:23:34 GMT

Is this a duplicate of #3206?

The architecture and BSP is closely linked.

**Comment 2**

1. **Joel Sherrill**, Wed, 25 Oct 2017 22:26:58 GMT

They are related but I tend to think the architecture page is OK to do by hand and the BSP page needs something where you can look at a file per release.

Not 100% sure what the right answer is but the set of BSPs is more fluid than the set of architectures.

And the porting guide could include adding an entry and the release procedure could include adding a column.

**Comment 3**

1. **Chris Johns**, Wed, 25 Oct 2017 22:36:30 GMT

Replying to Joel Sherrill:

Not 100% sure what the right answer is but the set of BSPs is more fluid than the set of architectures.

Amar's database highlights a complexity hidden in just top level \_\_architectures\_\_, take ARM, we support a subset of the available variants and having this listed would be awesome.

And the porting guide could include adding an entry and the release procedure could include adding a column.

Column of?

**Comment 4**

1. **Sebastian Huber**, Thu, 26 Oct 2017 05:39:15 GMT

I would move this information to the RTEMS CPU Architecture Supplement and delete the wiki page. We can add a chapter with obsoleted architectures and just mention the version which removed them.

**Description**

I was updating the md5's to sha512's on qemu and made a typo which resulted in this message:

```
reporting: devel/qemu-git-1.cfg -> qemu-42d58e7c6760cb9c55627c28ae538e27dcf2f144-x86_64-linux-gnu-1.xml
error: qemu-git-1.cfg:57: invalid number of hash args
loading: vdeplug
get: requires ()
```

The error message did not result in the build aborting. Perhaps this should be a fatal error.

The broken RSB fragment was in qemu-git-1.cfg:

```
%patch add qemu ${rtems_http_git}/rtems-tools/plain/tools/qemu/0001-openrisc-terminate-qemu-process-upon-receiving-a-hal.patch
-%hash md5 0001-openrisc-terminate-qemu-process-upon-receiving-a-hal.patch 6aa9dfc4522466ab4a463129b3b9cb1d
+%hash md5
376ea9e07c4c8077b345af02856549843dff2ad73b5da5886c71e859c4a0849522c59dcd05724270756763438aecdb70211ea2ae8cac28056cb17da53c3981e1
```

#### Comment 4

1. **Chris Johns**, Tue, 10 Apr 2018 07:55:58 GMT

Are you sure the did continue? If you get an error the RSB switches to --dry-run mode.

Maybe an option should be added to stop the build and if the option --keep-going the mode is switched to dry run?

#### Comment 5

1. **Chris Johns**, Wed, 11 Apr 2018 02:01:37 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 162cbda/rtems-source-builder:

```
sb/config: Terminate building on an error.
```

```
This changes the previous functionality where the RSB switch to dry run mode. This functionality can be enabled by adding --keep-going.
Close #3209.
```

#### **Description**

After applying the attached patch to update the md5's to sha512's, something goes wrong in the RSB build of Qemu. There is nothing obvious from the qemu build directory. But it appears that the cd into the qemu git directory didn't work and it is acting on my RSB git clone. The RSB trace is:

```

script: 78: cd "/data/home/joel/rtems-work/rtems-source-builder/bare/build/qemu-42d58e7c6760cb9c55627c28ae538e27dcf2f144-x86_64-linux-gnu-1"

### Description

Based on these results on gdb simulators, please bump these to Tier 2.

- erc32 - <https://lists.rtems.org/pipermail/build/2017-October/000018.html>
- leon2 - <https://lists.rtems.org/pipermail/build/2017-October/000021.html>
- leon3 - <https://lists.rtems.org/pipermail/build/2017-October/000022.html>
- psim - <https://lists.rtems.org/pipermail/build/2017-October/000020.html>
- jmr3904 - <https://lists.rtems.org/pipermail/build/2017-October/000019.html>

As an aside, how will we distinguish the SPARC BSPs on sis, tsim or real hardware in the results?

### Comment 1

1. **Joel Sherrill**, Fri, 27 Oct 2017 19:08:39 GMT
2. **owner:** set to **Chris Johns**
3. **status:** changed from **new** to **assigned**

### Comment 2

1. **Chris Johns**, Sat, 28 Oct 2017 07:03:51 GMT

Replying to Joel Sherrill:

Based on these results on gdb simulators, please bump these to Tier 2.

Fantastic. Please do not find on the command line so the email results are more compact. :)

erc32 - <https://lists.rtems.org/pipermail/build/2017-October/000018.html> leon2 - <https://lists.rtems.org/pipermail/build/2017-October/000021.html>

These do not look great. Looks like the script conversion to INI is broken. Are you able to please take a look?

leon3 - <https://lists.rtems.org/pipermail/build/2017-October/000022.html> psim - <https://lists.rtems.org/pipermail/build/2017-October/000020.html> jmr3904 - <https://lists.rtems.org/pipermail/build/2017-October/000019.html>

As an aside, how will we distinguish the SPARC BSPs on sis, tsim or real hardware in the results?

The subject has the BSP name being tested. Would you like something in the body of the message?

**Description**

The current vprintf() implementation has a questionable licence header, lacks support for the 'z' and 'j' format specifiers, is not robust against invalid format specifiers, uses a global variable for output. Replace it with a stripped down version of the FreeBSD kernel kvprintf() function.

**Comment 1**

1. **Chris Johns**, Thu, 02 Nov 2017 20:48:50 GMT

Good idea.

**Comment 2**

1. **Sebastian Huber**, Mon, 06 Nov 2017 06:29:13 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 1082798/rtems:

```
score: Add _IO_Printf() and _IO_Vprintf()
```

The previous vprintf() implementation had a questionable licence header, lacks support for the 'z' and 'j' format specifiers, is not robust against invalid format specifiers, uses a global variable for output. Replace it with a stripped down version of the FreeBSD kernel kvprintf() function.

The new implementation allows a low overhead rtems\_snprintf() if necessary.

Update #3199. Close #3216.

### Comment 2

1. **Chris Johns**, Sat, 11 Nov 2017 05:23:26 GMT

In 30218f5/rtems-tools:

```
tester: Add reporting the RTEMS version, build and tools.
Update #3217.
```

### Comment 3

1. **Sebastian Huber**, Mon, 13 Nov 2017 13:16:44 GMT

I get build failures on CentOS Linux release 7.4.1708 with a "make -j 1":

```
+ version=5
+ bsp=t32mppc
+ target=powerpc
+ build_dir=b-t32mppc
+ source_dir=/home/rtems/rtems
+ rm -rf b-t32mppc
+ mkdir b-t32mppc
+ cd b-t32mppc
+ /home/rtems/rtems/configure --target=powerpc-rtems5 --prefix=/opt/rtems/5 --enable-maintainer-mode --enable-rtemsbsp=t32mppc --
enable-posix --disable-tests --enable-networking --enable-smp

```

### Comment 4

1. **Chris Johns**, Mon, 13 Nov 2017 21:53:06 GMT

Replying to Sebastian Huber:

I get build failures on CentOS Linux release 7.4.1708 with a "make -j 1":

```
#include "version-vc-key.h"
```

```
~
```

I can repeat this. And ..

```
$ find . -name version-vc-key.h
$
```

.. for some reason the key is not being generated with a single job.

**Comment 5**

1. **Chris Johns**, Tue, 14 Nov 2017 06:07:03 GMT

In 631f711/rtems:

```
build: Fix the dependence for the generating the key file.
Update #3217.
```

**Comment 6**

1. **Sebastian Huber**, Tue, 14 Nov 2017 06:07:47 GMT

Thanks, this patch worked.

**Comment 7**

1. **Joel Sherrill**, Tue, 05 Dec 2017 14:27:35 GMT

Is this resolved? The tests are reporting version information. I can't tell what else is required before this ticket is complete.

**Description**

As discussed here

<https://lists.rtems.org/pipermail/devel/2017-October/019169.html>

it was agreed to use version 5.1 with the new number scheme for the next RTEMS release.

Most important items of this release:

- SMP support
- 64-bit time\_t (year 2038 problem)
- the network stack header consolidation and the move to Newlib
- self-contained POSIX synchronization objects (impacting the configuration)
- improved Ada support (however, not all Ada tests pass currently)

The following steps are necessary to carry out the number change:

- Change version of RTEMS tools
- Change version of RSB
- Change version of RTEMS
- Documentation repo. Easy.
- Documentation website repo. Easy.
- Release procedure repo. Easy.
- Trac tickets. Not sure.
- Trac wiki. Medium(?). A wiki search of 4.12 gives 21 hits.
- rtems.org website. That needs Joel.
- Make announcement on the devel and user mailing list

**Description**

There must be a recent change to msys2 which is breaking things. I installed the 64-bit version from <https://msys2.github.io/> per the instructions at <https://docs.rtems.org/branches/master/user/hosts/index.html#microsoft-windows>

```
$ ./source-builder/sb-check
error: no hosts defaults found; please add
```

After adding some prints, I learned this:

```
$ ./source-builder/sb-check
posix
made it
MSYS_NT-10.0
error: no hosts defaults found; please add
```

I filled in options.py and windows.py to recognize this as MSYS2. I was then able to run sb-check. But it wasn't happy. Apparently the pacman command in the User's Guide is missing some packages based on newer versions:

```
$ ./source-builder/sb-check
posix
MSYS_NT-10.0
RTEMS Source Builder - Check, 5 (8b30eb3f440a modified)
error: exe: not found: (_ar) ar
error: exe: not found: (_as) as
error: exe: not found: (_cc) x86_64-w64-mingw32-gcc
error: exe: not found: (_cxx) x86_64-w64-mingw32-g++
error: exe: not found: (_ld) ld
error: exe: not found: (_nm) nm
error: exe: not found: (_objcopy) objcopy
error: exe: not found: (_objdump) objdump
error: exe: not found: (_ranlib) ranlib
Environment is not correctly set up
```

I installed binutils explicitly with pacman and then sb-check is complaining about gcc. I did a find to locate the gcc's installed:

```
$ find / -name "*gcc.*"
/home/jrs007/.ssh/id_rsa_gcc.pub
/mingw64/bin/gcc.exe
/mingw64/bin/x86_64-w64-mingw32-gcc.exe
/mingw64/lib/gcc/x86_64-w64-mingw32/6.2.0/include/stdint-gcc.h
/mingw64/lib/gcc/x86_64-w64-mingw32/6.2.0/libgcc.a
/mingw64/share/info/gcc.info.gz
/mingw64/share/man/man1/gcc.1.gz
/usr/share/vim/vim80/compiler/gcc.vim
find: failed to read file names from file system at or below '/': No such file or directory
jrs007@JRS-OAR-Laptop MINGW64 /c/opt/rtems/rsb/source-builder
$ /mingw64/bin/x86_64-w64-mingw32-gcc.exe --version
x86_64-w64-mingw32-gcc.exe (Rev2, Built by MSYS2 project) 6.2.0

3. **resolution:** **fixed** deleted

Wrong ticket closed

### Comment 4

1. **Chris Johns**, Sun, 12 Nov 2017 21:38:18 GMT

I have just updated my MSYS2 and I am not seeing an issue. Also:

```
chris@weng MINGW64 /d/opt/rtems/rsb.git/rtems
$ ../source-builder/sb-check
RTEMS Source Builder - Check, 5 (089327b5dcf9)
Environment is ok
chris@weng MINGW64 /d/opt/rtems/rsb.git/rtems
$ /mingw64/bin/x86_64-w64-mingw32-gcc.exe --version
x86_64-w64-mingw32-gcc.exe (Rev1, Built by MSYS2 project) 7.2.0
Copyright (C) 2017 Free Software Foundation, Inc.
This is free software; see the source for copying conditions. There is NO
warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
```

My installed gcc is much newer than yours?

Did you follow this procedure <https://github.com/msys2/msys2/wiki/MSYS2-installation#iii-updating-packages> ?

### Comment 5

1. **Joel Sherrill**, Tue, 05 Dec 2017 14:31:08 GMT
2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **worksforme**

This should have been closed. The issue was that my install needed to be updated after the initial install. Apparently, they don't give you the latest version of anything on an initial install.

Closing.

## 3228 - aarch64 missing from 5/rtems-all build set

**Description**

Indexes currently do not work. Fix this adding them to all documents.

Add index entries where possible.

**Comment 1**

1. **Chris Johns**, Sat, 11 Nov 2017 23:08:46 GMT
2. **status:** changed from **assigned** to **accepted**

**Comment 2**

1. **Chris Johns**, Sat, 11 Nov 2017 23:43:38 GMT

In 42d50d7/rtems-docs:

```
Add indexes to all documents.
Update #3229.
```

**Comment 3**

1. **Chris Johns**, Sun, 12 Nov 2017 02:57:42 GMT

I have noticed all the c-user guide has .. index:: labels after headings and they should be before the headings. They need to be moved to before to make clicking on an index work better. This needs to happen on all documents.

**Comment 4**

1. **Chris Johns**, Sun, 12 Nov 2017 03:35:39 GMT

In 6c56401/rtems-docs:

```
c-user: Fix index locations.
Update #3229.
```

**Comment 5**

1. **Chris Johns**, Mon, 13 Nov 2017 02:27:40 GMT

In 3384994/rtems-docs:

```
Clean up sphinx warnings.
Fix minor formatting issues. Fix reference the glossary TLS using ':term:'. Make sure nothing is between an anchor and the heading where ':ref:' references
the anchor. This meant moving all the recently added '.. index::' entries.
Update #3232. Update #3229.
```

**Comment 6**

1. **Chris Johns**, Tue, 14 Nov 2017 22:04:30 GMT

The documentation README needs updating to explain the formatting I fixed in the last change in this ticket.

**Comment 7**

1. **Sebastian Huber**, Mon, 05 Feb 2018 09:04:34 GMT

The index directives are still in the wrong place, e.g.

[https://docs.rtems.org/branches/master/c-user/configuring\\_a\\_system.html#configure-bdbuf-buffer-count](https://docs.rtems.org/branches/master/c-user/configuring_a_system.html#configure-bdbuf-buffer-count)

**Comment 8**

1. **Sebastian Huber**, Mon, 05 Feb 2018 09:48:28 GMT

In 13debf/rtems-docs:

```
c-user: Fix index directives
Update #3229.
```

**Comment 9**

1. **Joel Sherrill**, Sun, 14 Oct 2018 00:36:36 GMT
2. **status**: changed from **accepted** to **closed**
3. **resolution**: set to **fixed**

Fixed on review doc master.

**Description**

The git push to trac hook does not queue or handle a number of commits in a push. As a result updates to tickets can be missed.

**Comment 1**

1. **Chris Johns**, Thu, 16 Nov 2017 20:42:34 GMT
2. **summary:** changed from **Git push to trace with more than one commit does not update tickets.** to **Git push to Trac with more than one commit does not update tickets.**

**Comment 2**

1. **Chris Johns**, Mon, 05 Feb 2018 23:42:25 GMT
2. **priority:** changed from **normal** to **highest**
3. **severity:** changed from **normal** to **blocker**

I consider this ticket is important and we need to find a solution. I am finding tickets are not being closed on branches if there is a push with more than one change. This creates 2 issues, the first the ticket is not closed effecting the milestone report \_\_ and \_\_ manually closing the ticket requires finding and pasting in the URL for the changeset and so we can have a possible mix of Trac changesets and cgkit changesets. Given we have moved to Trac generated Release Notes (which are fantastic) having this data correct for releases is important.

**Comment 3**

1. **Sebastian Huber**, Thu, 03 May 2018 05:19:40 GMT

I use the following workaround:

```
git log --format='%h' origin/master..HEAD | tac | sed 's%(.*)%git push origin \1:master%' > tmp.sh
```

It creates a script to push each commit separately.

#### Description

The `getentropy()` system call was introduced by OpenBSD and is now also available on glibc 2.25 and later. It is used for example by `arc4random_buf()`. Which in turn is used by various cryptographic functions.

#### Comment 1

1. **Christian Mauderer**, Fri, 17 Nov 2017 06:28:22 GMT

In `ddc339c/rtems`:

```
cpukit: Add _arc4random_getentropy_fail.  
Add a default implementation of _arc4random_getentropy_fail with an internal error.  
Update #3239.
```

#### Comment 2

1. **Christian Mauderer**, Fri, 17 Nov 2017 06:28:34 GMT

In `ca4895c/rtems`:

```
getentropy: Add cpu counter based implementation.  
Update #3239.
```

#### Comment 3

1. **Christian Mauderer**, Fri, 17 Nov 2017 06:28:47 GMT

In `1358d4c/rtems`:

```
getentropy: Add test.  
Update #3239.
```

#### Comment 4

1. **Christian Mauderer**, Fri, 17 Nov 2017 06:29:01 GMT

In `a9de9a7/rtems`:

```
bsp/atsam: Add getentropy().  
Update #3239.
```

#### Comment 5

1. **Christian Mauderer**, Fri, 17 Nov 2017 06:48:05 GMT

In `d0b961a/rtems-docs`:

```
bsp-howto: Add getentropy.  
Update #3239.
```

#### Comment 6

1. **Sebastian Huber**, Fri, 17 Nov 2017 06:58:41 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In baf9824/rtems-docs:

Document INTERNAL\_ERROR\_ARC4RANDOM\_GETENTROPY\_FAIL  
Close #3239.

#### **Comment 7**

1. **Sebastian Huber**, Mon, 20 Nov 2017 07:09:41 GMT

In 70f23e4/rtems-docs:

Clarify INTERNAL\_ERROR\_ARC4RANDOM\_GETENTROPY\_FAIL  
Update #3239.

#### **Comment 8**

1. **Sebastian Huber**, Mon, 20 Nov 2017 07:50:50 GMT

In 3d374d9/rtems:

bsps: Use a state in default getentropy()  
Use the boot time to initialize the state. Use the state, the current CPU counter and a very simple pseudo random number generator for getentropy(). At least, this enables to pass the test "GETENTROPY 1" on ERC32.  
Update #3239.

#### **Comment 9**

1. **Sebastian Huber**, Wed, 22 Nov 2017 12:01:45 GMT

In a8bf9a3/rtems:

bsps: Add default getentropy() implementation  
Update #3239. Close #3249.

### **3240 - cpukit/libmisc/stackchk/check.c stack addresses formatted incorrectly.**

#### **Description**

The function Stack\_check\_Dump\_threads\_usage displays the stack high, low, and current pointers incorrectly.  
Instead of displaying these pointers in conventional hex format, the values have a proper prefix of 0x, but the pointer value is displayed in decimal.  
The incorrect inttypes.h formatting define was used.

#### **Attachments:**

**Description**

<https://gcc.gnu.org/ml/gcc-patches/2017-11/msg01751.html>

This patch series adds workarounds for the newly discovered errata for UT699, UT700, and GR712RC. The errata and possible workarounds are described in the following documents available at <http://www.gaisler.com/index.php/information/app-tech-notes>:

GRLIB-TN-0010 - LEON3/FT AHB Deadlock After Sequence of Load and Atomic Instructions  
 GRLIB-TN-0011 - LEON3/FT AHB Lock Release during Atomic Operation  
 GRLIB-TN-0012 - GR712RC Incorrect Annulation of Floating-point Operation on Instruction Cache Parity Error  
 GRLIB-TN-0013 - GR712RC Floating-point controller: Missing FDIV/FSQRT Result

Daniel Cederman (4):

```
[SPARC] Errata workaround for GRLIB-TN-0012
[SPARC] Errata workaround for GRLIB-TN-0011
[SPARC] Errata workaround for GRLIB-TN-0010
[SPARC] Errata workaround for GRLIB-TN-0013
```

**Blocked by**

### **Description**

For the SMP support the global construction was changed to use an approach with a thread restart after global construction. With this implementation thread-local objects and POSIX keys initialized during global construction are not present in the initialization thread (main thread). This is not in line with what users familiar with GNU/Linux or FreeBSD would expect. See for example:

<https://lists.rtems.org/pipermail/users/2017-July/031525.html>

### **Description**

The current `rtems_panic()` implementation is quite heavy weight. It depends on `_exit()` which calls the global destructors. It uses `fprintf(stderr, ...)` for output which depends on an initialized console device and the complex `fprintf()`.

Introduce a new fatal source `RTEMS_FATAL_SOURCE_PANIC` for `rtems_panic()` and output via `printk()`.

Document this function in Fatal Manager chapter.

Replace all `BSP_panic()` with `rtems_panic()`.

### **Comment 1**

**Description****Comment 1**

1. **Chris Johns**, Fri, 24 Nov 2017 05:25:37 GMT

Solving this problem requires:

Capturing the installed headers files with an MD5 checksum so each can be clearly identified in the source tree. Capturing the preinstall view of the process with the install path and a source tree path. Defining the include paths in RTEMS and any macros required to reference the header within that tree.

For each preinstall header we need to collate the source headers and determine what overlaps. With the define directories we want to have we can determine the moves we need. I am getting close to having this data.

bsp/gen5200: Use public include path  
Update #3254.

**Comment 78**1. **Chris Johns**, Thu, 25 Jan 2018 09:17:03 GMT

In 2afb22b/rtems:

Remove make preinstall

A speciality of the RTEMS build system was the make preinstall step. It copied header files from arbitrary locations into the build tree. The header files were included via the `-Bsome/build/tree/path` GCC command line option.

This has at least seven problems:

The make preinstall step itself needs time and disk space. Errors in header files show up in the build tree copy. This makes it hard for editors to open the right file to fix the error. There is no clear relationship between source and build tree header files. This makes an audit of the build process difficult. The visibility of all header files in the build tree makes it difficult to enforce API barriers. For example it is discouraged to use BSP-specifics in the cpukit. An introduction of a new build system is difficult. Include paths specified by the `-B` option are system headers. This may suppress warnings. The parallel build had sporadic failures on some hosts. This patch removes the make preinstall step. All installed header files are moved to dedicated include directories in the source tree. Let `@RTEMS_CPU@` be the target architecture, e.g. arm, powerpc, sparc, etc. Let `@RTEMS_BSP_FAMILIY@` be a BSP family base directory, e.g. erc32, imx, qoriq, etc.

The new cpukit include directories are:

cpukit/include cpukit/score/cpu/@RTEMS\_CPU@/include cpukit/libnetworking

The new BSP include directories are:

bsps/include bsp/@RTEMS\_CPU@/include bsp/@RTEMS\_CPU@/@RTEMS\_BSP\_FAMILIY@/include

There are build tree include directories for generated files.

The include directory order favours the most general header file, e.g. it is not possible to override general header files via the include path order.

The "bootstrap -p" option was removed. The new "bootstrap -H" option should be used to regenerate the "headers.am" files.

Update #3254.

**Comment 79**1. **Sebastian Huber**, Fri, 09 Mar 2018 07:44:27 GMT

In 16f4661f/rtems:

network: Optionally install network headers

Install the network headers only if `--enable-networking` is specified.

Update #3254.

**Comment 80**1. **Sebastian Huber**, Wed, 21 Mar 2018 06:59:00 GMT2. **status**: changed from **new** to **closed**3. **resolution**: set to **fixed**

The header reorganization is complete.

**Comment 81**1. **Sebastian Huber**, Wed, 28 Mar 2018 05:21:29 GMT

In fc9db4c/rtems-docs:

user: Do not mention "bootstrap -p"

It is now obsolete and was never necessary for an RTEMS users.

Update #3254.

**Comment 82**1. **Chris Johns**, Wed, 11 Apr 2018 03:28:15 GMT

In b8c59353/rtems:

build: Fix make clean.

Update #3254.

### Description

The libpci is currently only used on SPARC. It is in cpukit, so BSP-specific header files are not allowed. Unfortunately this is not the case for libpci. However, it seems the the routines depending on BSP\_PCI\_BIG\_ENDIAN are not used:

```
grep -r 'pci_{dst}\{2\}' .
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint16_t pci_ld_le16(volatile uint16_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_le16(volatile uint16_t *addr, uint16_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint32_t pci_ld_le32(volatile uint32_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_le32(volatile uint32_t *addr, uint32_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint16_t pci_ld_be16(volatile uint16_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_be16(volatile uint16_t *addr, uint16_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint32_t pci_ld_be32(volatile uint32_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_be32(volatile uint32_t *addr, uint32_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint16_t pci_ld_le16(volatile uint16_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_le16(volatile uint16_t *addr, uint16_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint32_t pci_ld_le32(volatile uint32_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_le32(volatile uint32_t *addr, uint32_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint16_t pci_ld_be16(volatile uint16_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_be16(volatile uint16_t *addr, uint16_t val)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE uint32_t pci_ld_be32(volatile uint32_t *addr)
./cpukit/libpci/pci/access.h:RTEMS_INLINE_ROUTINE void pci_st_be32(volatile uint32_t *addr, uint32_t val)
```

Is this dead code and can I remove BSP\_PCI\_BIG\_ENDIAN?

Another issue is the use of a BSP-specific interrupt API in cpukit/libpci/pci/irq.h.

The missing functions should be added to .

**Description**

The CLOCK\_MONOTONIC time services use currently the clock tick based watchdog. This is a problem in case the uptime (measured via the timercounter) and the ticks since boot drift away (measured via the clock ticks). Introduce a new watchdog which uses the uptime. The memory overhead is quite small (two pointers per processor).

**Comment 1**

1. **Sebastian Huber**, Fri, 02 Feb 2018 14:20:36 GMT

In 89c0313/rtems:

```
score: Optimize watchdog tickle
Avoid unnecessary lock acquire/release operations. Get realtime via timecounter only if necessary.
Update #3264.
```

**Comment 2**

1. **Sebastian Huber**, Fri, 02 Feb 2018 14:20:48 GMT

In 3a4e044/rtems:

```
score: Rename _Watchdog_Realtime_from_*()
Rename _Watchdog_Realtime_from_*() to _Watchdog_Ticks_from_*().
Update #3264.
```

**Comment 3**

1. **Sebastian Huber**, Fri, 02 Feb 2018 14:21:00 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 9480815a/rtems:

```
score: Introduce new monotonic clock
Rename PER_CPU_WATCHDOG_MONOTONIC to PER_CPU_WATCHDOG_TICKS. Add new PER_CPU_WATCHDOG_MONOTONIC which is based on the system uptime
(measured by timecounter).
Close #3264.
```

**Comment 4**

1. **Sebastian Huber**, Mon, 05 Feb 2018 10:39:52 GMT

In a0633c5/rtems-libbsd:

```
SLEEPQUEUE(9): Update due to API changes
Update #3264.
```

---

**3265 - Use second one based uptime for CLOCK\_MONOTONIC for FreeBSD compatibility**

```

**Comment 1**

1. **Joel Sherrill**, Sun, 24 Dec 2017 20:09:09 GMT

Is there anything in the implementations that is BSP, not architecture, specific? They could be moved to cpukit if we have confidence they can be implemented always that way.

Or they can be real methods provided by the bsl

#### Comment 2

1. **Chris Johns**, Tue, 26 Dec 2017 21:59:42 GMT

Replying to Joel Sherrill:

Is there anything in the implementations that is BSP, not architecture, specific? They could be moved to cpukit if we have confidence they can be implemented always that way.

Or they can be real methods provided by the bsl

Sorry I do not know.

**Description**

The PowerPC BSP family headers need some refactoring for the RTEMS 5 release. The BSP family relies on the preinstall process to get suitable headers installed to work and removing preinstall exposes this. The specific issue appears with irq.h when building the no-preinstall branch. There is a PowerPC BSP family header and a number of BSPs also have an irq.h which overrides families header. The code has #include and the header used depends on the include order on the GCC command line. This is fragile for any user. These headers needs to be moved to BSP specific paths, for example #include .

In d62a3df/rtems-libbsd:

```
sdk_dpaa: Port to RTEMS
Update #3277.
```

### **Comment 20**

1. **Sebastian Huber**, Tue, 23 Jan 2018 14:00:00 GMT

In 327f4e1/rtems-libbsd:

```
sdk_dpaa: What to do with tail queue drop?
The issue is this:
static int dpaa_eth_macless_probe(struct platform_device *_of_dev) { [...]
```

```
INIT_LIST_HEAD(&priv->dpa_fq_list);
```

```
err = dpa_fq_probe_macless(dev, &priv->dpa_fq_list, RX); if (!err)
```

```
    err = dpa_fq_probe_macless(dev, &priv->dpa_fq_list,
                                TX);
```

```
if (err < 0)
```

```
    goto fq_probe_failed;
```

[...]

```
/* Add the FQs to the interface, and make them active */ /* For MAC-less devices we only get here for RX frame queues
```

```
initialization, which are the TX queues of the other partition. It is safe to rely on one partition to set the FQ taildrop threshold for
the TX queues of the other partition because the ERN notifications will be received by the partition doing qman_enqueue.
*/
```

```
err = dpa_fqs_init(dev, &priv->dpa_fq_list, true); if (err < 0)
```

```
    goto fq_alloc_failed;
```

[...]

The priv->dpa\_fq\_list contains a list of FQ\_TYPE\_RX\_PCD and FQ\_TYPE\_TX items. I don't understand what the "For MAC-less devices we only get here for RX frame queues initialization" means in this context. The td\_enable == true in dpa\_fqs\_init(). So, we have:

```
int dpa_fq_init(struct dpa_fq *dpa_fq, bool td_enable) { [...]
```

```
    if (dpa_fq->fq_type == FQ_TYPE_TX
        dpa_fq->fq_type == FQ_TYPE_TX_CONFIRM
        dpa_fq->fq_type == FQ_TYPE_TX_CONF_MQ) {
```

[...]

```
initfq.we_mask |= QM_INITFQ_WE_OAC;
```

```
[...]
```

```
}
```

```
if (td_enable) {
    initfq.we_mask |= QM_INITFQ_WE_TDTHRESH; qm_fqd_taildrop_set(&initfq.fqd.td,
        DPA_FQ_TD, 1);
    initfq.fqd.fq_ctrl = QM_FQCTRL_TDE;
}
```

The `td_enable == true` && `dpa_fq->fq_type == FQ_TYPE_TX` causes later:

```
int qman_init_fq(struct qman_fq *fq, u32 flags, struct qm_mcc_initfq *opts) { [...]
```

```
if (opts && (opts->we_mask & QM_INITFQ_WE_OAC)) {
    /* And can't be set at the same time as TDTHRESH */ if (opts->we_mask & QM_INITFQ_WE_TDTHRESH)
        return -EINVAL;
}
```

This aborts the initialization of the MAC-less driver. I don't understand why this path doesn't happen on the SDK Linux system.

Update #3277.

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

In order to build a tool chain with Ada support you need a native GCC with Ada support of the same version as the cross compiler. The RSB uses hard coded paths for the gcc and g++ programs:

```
source-builder/defaults.mc: __cc:          exe,      required, '/usr/bin/gcc'
source-builder/defaults.mc:  cxx:          exe,      required, '/usr/bin/g++'
```

So, the RSB user must change the main GCC installation of the machine to build a particular RTEMS tool chain. This is undesired/infeasible in most situations.

**Comment 1**

1. **Chris Johns**, Wed, 31 Jan 2018 00:03:21 GMT

I am OK with changing this to 'gcc' and 'g++'. There are a few other paths that could be relaxed, ie I remembering seeing something in your build logs.

This is something that has appeared as the RSB ages.

**Comment 2**

1. **Sebastian Huber**, Thu, 01 Feb 2018 06:14:47 GMT
2. **owner**: set to **Sebastian Huber <sebastian.huber@...>**
3. **status**: changed from **new** to **closed**
4. **resolution**: set to **fixed**

In 2a5c9da/rtems-source-builder:

Avoid hard coded GCC binary paths

In order to build a tool chain with Ada support a native GCC with Ada support of the same version as the cross compiler is required. The RSB used hard coded paths for the gcc and g++ programs. This forced the RSB user to change the main GCC installation of the machine to build a particular RTEMS tool chain. This is undesired/infeasible in most situations.

Close #3284.

**3285 - Reorganize BSP source directory**

### Description

Now, that all BSP header files are in

- `bsps/include`
- `bsps/@RTEMS_CPU@/include`
- `bsps/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@/include`

we should also move the BSP sources to this new directory tree. How do we want to organize the BSP sources in `bsps/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@`?

- `include` (this is already there, see #3254)
- `config`
  - `somebsp.cfg`
- `start` (everything required to run a minimal application without devices)
  - `start.S`
  - `bspstart.c`
  - `bspsmp.c`
  - `linkcmds`
- `cache` (everything for the cache controller support)
- `irq` (everything for the interrupt controller support)
- `console` (everything for the console driver)
- `clock` (everything for the clock driver)
- `i2c` (everything for the I2C driver)
- `spi` (everything for the SPI driver)
- `net` (legacy network stack drivers)
- `mpci` (RTEMS\_MULTIPROCESSING support)
- `rtc` (everything for the RTC driver)
- `ata` (everything for the ATA driver)
- `contrib` (import of external sources)
  - The layout of external sources should be used as is if possible.

### Comment 1

1. **Sebastian Huber**, Wed, 31 Jan 2018 11:51:51 GMT

In 4cf93658/rtems:

```
bsps: Rework cache manager implementation

The previous cache manager support used a single source file (cache_manager.c) which included an implementation header (cache_h). This required the use of specialized include paths to find the right header file. Change this to include a generic implementation header (cacheimpl.h) in specialized source files.

Use the following directories and files:
  bsp/shared/cache bsp/@RTEMS_CPU@/shared/cache bsp/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@/start/cache.c
Update #3285.
```

bsps: Remove empty gnatinstallhandler.c
This patch is a part of the BSP source reorganization.
Update #3285.
```

#### **Comment 71**

1. **Sebastian Huber**, Fri, 13 Apr 2018 07:45:53 GMT

I move slowly to the real BSP sources. After some review and effort calculation I propose a new structure for the BSPs in bsp@RTEMS\_CPU@/RTEMS\_BSP\_FAMILY@:

include (this is already there, see #3254) make somebsp.cfg start (everything required to run a minimal application without devices) start.S bspstart.c bspsmc.c linkcmds cache (everything for the cache controller support) irq (everything for the interrupt controller support) console (everything for the console driver) clock (everything for the clock driver i2c (everything for the I2C driver) spi (everything for the SPI driver) net (legacy network stack drivers) mpci (RTEMS\_MULTIPROCESSING support) contrib (import of external sources) The layout of external sources should be used as is if possible.

This essentially removes the new dev directory of the original proposal and is closer to the existing BSP layout. The existing layout has standard directory names, but the file names vary greatly. This new proposal helps to move the files with less human intervention.

#### **Comment 72**

1. **Joel Sherrill**, Fri, 13 Apr 2018 12:36:21 GMT

I see you are back to moving the contents of make/custom to make/. I still have my local branch where I was well along the path of doing that. I can resurrect it if desired.

#### **Comment 73**

1. **Chris Johns**, Sat, 14 Apr 2018 04:30:25 GMT

I suggest we move away from make to config. Make is an implementation.

Can we please create a doc type file in the bsp to list the directories we allow?

In 4b70ed9/rtems:

bsps/mvme147s: Fix Makefile.am  
This patch is a part of the BSP source reorganization.  
Update #3285.

#### **Comment 116**

1. **Sebastian Huber**, Mon, 23 Apr 2018 05:54:44 GMT

In 676d3d5/rtems-docs:

bsp-howto: Avoid :file: role with \${...}  
The curly braces have a special meaning in the :file: role.  
This patch is a part of the BSP source reorganization.  
Update #3285.

**Comment 117**

1. **Sebastian Huber**, Mon, 23 Apr 2018 13:16:02 GMT

In 1645deb/rtems-source-builder:

```
bootstrap: Do not generate acinclude.m4 files
Do not generate files which are part of the Git repository.  These files should be maintained manually in the future.
This patch is a part of the BSP source reorganization.
Update #3285.
```

**Comment 118**

1. **Sebastian Huber**, Mon, 23 Apr 2018 13:19:00 GMT

In 37dc047/rtems:

```
bsps: Remove AC_CONFIG_SRCDIR()
This AC_CONFIG_SRCDIR() is just a sanity check in this insane build system.  Since all content of
c/src/lib/libbsp/@RTEMS_CPU@/@RTEMS_BSP_FAMILY@ is bound to be moved it makes no sense to keep it.
This patch is a part of the BSP source reorganization.
Update #3285.
```

**Comment 119**

1. **Sebastian Huber**, Mon, 23 Apr 2018 13:19:11 GMT

In adb85dd/rtems:

```
bsps: Move make/custom/* files to bsp
Adjust various build files.  Remove automatic generation of the c/src/lib/libbsp/*/acinclude.m4 files from bootstrap script.
This patch is a part of the BSP source reorganization.
Update #3285.
```

3. **resolution:** set to **fixed**

In 40c623a8/rtems:

powerpc/shared/startup/linkcmds.base: Add wildcards on some sections  
Closes #3307.

**Comment 3**

1. **Sebastian Huber**, Wed, 07 Mar 2018 09:48:06 GMT
2. **status**: changed from **closed** to **reopened**
3. **resolution**: **fixed** deleted

I reverted [40c623a8/rtems] and built the qoriq\_e6500\_32 with the -fPIC option. I got no linker failures in the test suite.  
We should investigate what sections are not recognized before we add dangerous \*.x wildcards.  
See also [1fccdd639ee38a990e629fdaa670eeda9faae9beb/rtems].

**Comment 4**

1. **Sebastian Huber**, Fri, 18 May 2018 08:45:56 GMT

In 7bf072b/rtems:

```
bsp/powerpc: Remove wildcards in linkcmds.base
This reverts commit 40c623a883da5dd80e4599cf4cd14097834706bd.
The use of postfix wildcards, e.g. of the form "*.x" is dangerous since it circumvents the standard matching rules for sections.
Unknown input sections should be added explicitly to the desired output section via "x.*" wildcards.
Update #3307.
```

**Comment 5**

1. **Sebastian Huber**, Mon, 17 Sep 2018 11:47:24 GMT
2. **status**: changed from **reopened** to **closed**

<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

The default console driver for tests is the simple console driver. It uses a polled output via `rtems_putc()` done directly in the context of the executing thread. This is a problem for timing sensitive tests. Add a simple task console driver.

```
.. index:: CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER
.. CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER:
CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER
-----
CONSTANT:
  ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER``
DATA TYPE:
  Boolean feature macro.
RANGE:
  Defined or undefined.
DEFAULT VALUE:
  This is not defined by default.
DESCRIPTION:
  ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER`` is defined if
  the application wishes to include the Simple Task Console Device Driver.
NOTES:
  This device driver is responsible for providing the :file:/dev/console`
  device file. This device is used to initialize the standard input, output,
  and error file descriptors.
  This device driver reads via getchar().
  This device driver writes into a write buffer. The count of characters
  written into the write buffer is returned. It might be less than the
  requested count, in case the write buffer is full. The write is
  non-blocking and may be called from interrupt context. A dedicated task
  reads from the write buffer and outputs the characters via
  rtems_putc(). This task runs with the least important priority. The
  write buffer size is 2047 characters and it is not configurable.
  Use fsync(STDOUT_FILENO) or fdatsync(STDOUT_FILENO) to drain the
  write buffer.
  The Termios framework is not used. There is no support to change device
  settings, e.g. baud, stop bits, parity, etc.
  The
  * ``CONFIGURE_APPLICATION_NEEDS_CONSOLE_DRIVER``,
  * ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_CONSOLE_DRIVER``, and
  * ``CONFIGURE_APPLICATION_NEEDS_SIMPLE_TASK_CONSOLE_DRIVER``
  configuration options are mutually exclusive.
```

#### Comment 1

1. **Sebastian Huber**, Tue, 06 Mar 2018 10:46:54 GMT

In f6c6c8b/rtems-docs:

```
CONFIGURE_*_SIMPLE_TASK_CONSOLE_DRIVER

<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	3324
<b>Blocked by</b>	

### Description

The mhttpd's http etag uses the mtime and file length and this can cause subtle issues if a target has no RTC or it is incorrect and files are being copied without preserving the mtime or changes happen that do not change the length.

The cp and untar code do not update a file's time.

Add support for an etag callback so a user can manage the tag, ie MD5 or something similar.

### Comment 1

#### Description

Each port contains a types.h file. It universally defines one type (CPU\_Uint32ptr) that is required. Some of the types.h files define a CPU specific simple vectored ISR handler prototype.

- Move the CPU\_Uint32ptr typedef to cpu.h
- If unused, delete the ISR handler prototype. If used, move to cpu.h

#### Description

On certain shells, the "-e" option is not supported, and causes echo to output the flag along with the quoted text.

```
-> % sh
$ echo -e "foo bar"
-e foo bar
$
```

This varies by shell, and is not even consistent between sh or bash.

It was introduced while removing the make preinstall stage here, and may still work on most shells, though it didn't for me on sh on Ubuntu 16.04 LTS (4.4.0-78-generic x86\_64 GNU/Linux) - as far as I can tell, this bug hasn't made it to any releases yet, so just fixing it on master should be enough.

A patch is attached.

Reference to the POSIX standard which confirms that -n is the only argument supported.

**Description**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

RTEMS threads getting locked up when using certain c++ functionality.  
Issue happens for example when `std::future` is combined with `std::async`.

Investigating deeper, seems like this happens if `std::async` executes before `std::future` gets scheduled to run. Both of these create a `pthread_once` instance.

`_once()` uses a common semaphore for all calls, thus the first function (`async.get` usually) gets the lock, calls its "init" function (which blocks until the second function has completed). After this, `std::future` also uses `pthread_once` to execute, but because the lock is already taken, it also blocks, causing a deadlock.

Attached you can find a test application that reproduces the deadlock.

#### Comment 1

##### 1. Stavros Passas, Tue, 13 Mar 2018 13:22:26 GMT

Copying the suggestion from Sebastian, (from the mailing list) about this issue:

"Please open a ticket and provide a test case for the RTEMS test suite. Maybe we have to use dedicated mutexes for each `pthread_once_t` object. This is what Linux and FreeBSD do. This would require a Newlib update."

#### Comment 2

##### 1. Stavros Passas, Tue, 13 Mar 2018 13:34:02 GMT

I agree with Sebastian, that using one dedicated mutex for each `pthread_once_t` instance would be a longer term and elegant solution, but it would also add overhead for each `pthread_t` instance.

I am adding a different proposed solution, which doesn't require newlib changes (and increasing the `pthread_t` size):

The `_once` implementation uses a single mutex. Currently this mutex protects the whole function, while I believe we need to protect reads/writes to the `once_state` variable only. Concurrent tasks finding the state on `RUNNING`, could just yield until the state becomes `ONCE_STATE_COMPLETE`.

#### Comment 3

##### 1. Sebastian Huber, Tue, 13 Mar 2018 14:12:26 GMT

##### 2. milestone: changed from 4.11.4 to 5.1

Please send patches to the mailing list.

The yield loop may fail if thread priorities come into play. It should be replaced with a condition variable. So, for the `once` implementation we need a mutex and a condition variable (`#include` ). There is currently no condition variable with API mutex support. We need protection from asynchronous deletion. Maybe use `_Thread_Set_life_protection()` directly in `_Once()`.

If we want to back port this fix to RTEMS 4.11, then we have to use instead of .

#### Comment 4

### Description

```
log/powerpc-hsc_cm01.log:/home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/powerpc/gen83xx/include/bsp/hwreg_vals.h:244:0: warning: "FPGA_START"
redefined
log/powerpc-hsc_cm01.log:/home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/powerpc/gen83xx/include/bsp/hwreg_vals.h:246:0: warning: "FPGA_SIZE"
redefined
```

Looking at the code, it is pretty clear that the macros are redefined. Unfortunately one of the three has a different value the second time:

```
=====
/* fpga BCSR register */
#define FPGA_START 0xF8000000
#define FPGA_SIZE 0x8000
#define FPGA_END (FPGA_START+FPGA_SIZE-1)

/*
 *
 *   • working values for various registers, used in start/start.S
 *
 */

/* fpga config 16 MB size */
#define FPGA_CONFIG_START 0xF8000000
#define FPGA_CONFIG_SIZE 0x01000000
/* fpga register 8 MB size */
#define FPGA_REGISTER_START 0xF9000000
#define FPGA_REGISTER_SIZE 0x00800000
/* fpga fifo 8 MB size */
#define FPGA_FIFO_START 0xF9800000
#define FPGA_FIFO_SIZE 0x00800000

#define FPGA_START (FPGA_CONFIG_START) __ fpga window size 32 MByte
#define FPGA_SIZE (0x02000000)
#define FPGA_END (FPGA_START+FPGA_SIZE-1) __
=====
```

**Description**

We are missing the const on the third parameter. This requires a change to newlib and RTEMS. The correct prototype is:

```
int pthread_setschedparam(
```

```
    pthread_t thread,
    int policy,
    const struct sched_param *param
)

```

**Description**

`bsp/arm/lpc176x/include/bsp.h` defines `OPERATION_COUNT` in an attempt to override the autoconf generated constant. This conflicts and results in this warning:

`file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html`

/home/joel/rtems-work/rtems-testing/rtems/rtems/bsps/arm/lpc176x/include/bsp.h:42:0: warning: "OPERATION\_COUNT" redefined

I understand why this is lowered by the BSP but the mechanism used is not good. And if the include file order is different between tests, you could get the BSP value or the autoconf generated value based on the order.

This warning needs to be fixed and a safer mechanism for a BSP to override OPERATION\_COUNT defined.

My first suggestion is to use BSP\_OPERATION\_COUNT and add logic to one of the common test .h files to undef OPERATION\_COUNT and redefine it to BSP\_OPERATION\_COUNT if it is defined.

A safer option might be to change the name of the autoconf generated variable to OPERATION\_COUNT\_DEFAULT and rely on logic in a common test support .h to define OPERATION\_COUNT to OPERATION\_COUNT\_DEFAULT or BSP\_OPERATION\_DEFAULT.

#### Comment 1

1. **Joel Sherrill**, Fri, 16 Mar 2018 16:51:10 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **assigned**

**Description**

Command line defines defined by the build system make it difficult get a consistent view of the sources from other entities, e.g. static code analysis, code editors and reviews.

Command line defines are currently used here:

```
c/src/lib/libbsp/mips/hurricane/Makefile.am:libbsp_a_CPPFLAGS = $(AM_CPPFLAGS) -DRM52XX
c/src/lib/libbsp/mips/rbtx4938/Makefile.am:libbsp_a_CPPFLAGS = $(AM_CPPFLAGS) -DTX49
c/src/lib/libbsp/mips/jmr3904/Makefile.am:libbsp_a_CPPFLAGS = $(AM_CPPFLAGS) -DTX39
cpukit/pppd/Makefile.am:libpppd_a_CPPFLAGS = $(AM_CPPFLAGS) -D_BSD_VISIBLE -I$(srcdir)/../libmd
cpukit/libfs/Makefile.am:libjffs2_a_CPPFLAGS += -D_ECOS
cpukit/libfs/Makefile.am:libjffs2_a_CPPFLAGS += '-DKBUILD_MODNAME="JFFS2"'
cpukit/mghttpd/Makefile.am:# libmghttpd_a_CPPFLAGS += -DHAVE_MD5
cpukit/mghttpd/Makefile.am:libmghttpd_a_CPPFLAGS += -DNO_SSL -DNO_POPEN -DNO_CGI -DUSE_WEBSOCKET
cpukit/librpc/Makefile.am:librpc_CPPFLAGS = -D_RPC read=read -D_RFC write=write -D_RPC_close=close \
cpukit/libnetworking/Makefile.am:libnetworking_CPPFLAGS = -DINET -DNFS \
cpukit/libnetworking/Makefile.am:libc_CPPFLAGS = -DNO_POLL -DNO_SELECT -D_BSD_VISIBLE -D_THREAD_SAFE
cpukit/libnetworking/Makefile.am:lib_CPPFLAGS = -DNO_POLL -DNO_SELECT
cpukit/libnetworking/Makefile.am:lib_a_CPPFLAGS = $(AM_CPPFLAGS) $(lib_CPPFLAGS) -D_BSD_VISIBLE
cpukit/libdl/Makefile.am:libdl_a_CPPFLAGS = $(AM_CPPFLAGS) -DRTEMS_RTL_RAP_LOADER=1 -DRTEMS_RTL_ELF_LOADER=1
```

**Comment 1**

1. **Chris Johns**, Tue, 27 Mar 2018 06:15:31 GMT

What are you thinking of doing?

**Comment 2**

1. **Sebastian Huber**, Tue, 27 Mar 2018 06:18:03 GMT

Move the defines to a header file.

**Comment 3**

1. **Joel Sherrill**, Tue, 27 Mar 2018 23:09:52 GMT

For places where the source comes from other places (e.g. JFFS2, etc), what's the approach that doesn't modify the upstream source?

**Comment 4**

1. **Sebastian Huber**, Wed, 28 Mar 2018 05:02:03 GMT

We just have to be careful to avoid potential conflicts with upstream merges. JFFS2 is the only area with an active upstream.

**Comment 5**

1. **Chris Johns**, Wed, 28 Mar 2018 23:25:38 GMT

Replying to Sebastian Huber:

We just have to be careful to avoid potential conflicts with upstream merges. JFFS2 is the only area with an active upstream.

Thank you.

**Description**

The packhex program ( tools/build/packhex.c) is exported to the standard RTEMS build infrastructure via the PACKHEX variable. It is used by some legacy BSPs. It as unclear license information:

```

***** P A C K H E X . C *****
*
* Packhex is a hex-file compaction utility. It attempts to concatenate
* hex records to produce more size-efficient packaging.
*
* Limitations: Input files must be correctly formatted. This utility
* is not robust enough to detect hex-record formatting
* errors.
*
* Published: May 1993 Embedded Systems Programming magazine
* "Creating Faster Hex Files"
*
* URL: ESP magazine: http://www.embedded.com
* Source Code: ftp://ftp.mfi.com/pub/espmag/1993/pakhex.zip
*
* Author: Mark Gringrich
*
* Compiler: Microsoft C 6.0
* cl /F 1000 pakhex.c
*
*****/

```

Move it to rtems-tools.

#### Comment 1

1. **Chris Johns**, Thu, 26 Apr 2018 02:40:11 GMT

OK to remove.

#### Comment 2

1. **Sebastian Huber**, Thu, 07 Jun 2018 05:03:34 GMT

2. **summary**: changed from **Move unhex program to rtems-tools** to **Move packhex program to rtems-tools**

#### Comment 3

1. **Sebastian Huber**, Thu, 14 Jun 2018 09:45:24 GMT

2. **summary**: changed from **Move packhex program to rtems-tools** to **Remove packhex program**

This program has no license information and is unused in the RTEMS build. Users of HEX files should consider to use ELF instead. Remove it.

#### Comment 4

1. **Sebastian Huber**, Fri, 15 Jun 2018 05:17:12 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

In e8b28ba/rtems:

```
tools: Remove packhex
```

All tools should be removed from the RTEMS source repository at some point in time. Tools with a BSD-style license will be moved to the RTEMS tools repository. Unfortunately, this tool has no license information.

Remove all uses of this tool from the code base. Users of HEX files should consider to use ELF instead.

```
Close #3379.
```

#### Comment 5

1. **Joel Sherrill**, Fri, 15 Jun 2018 05:27:50 GMT

Users of this tool cannot use ELF because this is used with boards where you must download in hex formats.

#### Comment 6

1. **Chris Johns**, Fri, 15 Jun 2018 05:42:25 GMT

Replying to Joel Sherrill:

Users of this tool cannot use ELF because this is used with boards where you must download in hex formats.

If you logically extend this should we support all possible formats users can download? I suggest we do not.

The code is available for users to integrate into their workflow.

#### Description

<https://docs.rtems.org/branches/master/user/tools/tester.html#command-line-help> does not look like the current output of the `--help`. This may also apply to other branches and branch specific tickets filed.

#### Comment 1

1. **Joel Sherrill**, Tue, 27 Mar 2018 19:26:10 GMT
2. **owner**: set to **Chris Johns**
3. **status**: changed from **new** to **assigned**
4. **component**: changed from **tool** to **doc**

#### Comment 2

1. **Gedare Bloom**, Sat, 04 Apr 2020 20:52:10 GMT

The simple solution is to not show the excerpt of `--help` output. Having these output examples that are not forward-compatible is a bit of a pain.

#### Comment 3

1. **Chris Johns**, Tue, 28 Apr 2020 05:22:16 GMT

Replying to Gedare Bloom:

The simple solution is to not show the excerpt of `--help` output. Having these output examples that are not forward-compatible is a bit of a pain.

I agree. I will remove it.

#### Comment 4

1. **Chris Johns**, Tue, 28 Apr 2020 05:27:54 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 8bf866b/rtems-docs:

```
user/tester: Remove command line help as output
Closes #3381

#### Description

Merge the nested Makefile.am files into a single file per group of tests.

A single Makefile.am for all tests is not practical at this point in time because a test is an estimated 7 lines and with over 750 tests this means the file would be too big and a conflict hot spot.

#### Comment 1

1. **Chris Johns**, Mon, 09 Apr 2018 22:36:29 GMT

In 18f77699/rtems:

```
testsuite: Autoconf test check support.
```

```
The autoconf function checks the state of a test for the BSP and controls the building of the test.
```

```
This change is part of the testsuite Makefile.am reorganisation.
```

```
Update #3382
```

#### Comment 2

1. **Chris Johns**, Mon, 09 Apr 2018 22:36:39 GMT

In 32f2629b/rtems:

```
testsuite/benchmarks: Merged nested Makefile.am files into one Makefile.am
```

```
This change is part of the testsuite Makefile.am reorganization.
```

```
Update #3382
```

#### Comment 3

1. **Chris Johns**, Mon, 09 Apr 2018 22:36:49 GMT

In 5c65b98/rtems:

```
testsuite/libtests: Merged nested Makefile.am files into one Makefile.am
```

```
This change is part of the testsuite Makefile.am reorganization.
```

```
Update #3382
```

#### Comment 4

1. **Chris Johns**, Mon, 09 Apr 2018 22:37:00 GMT

In 8967e5f/rtems:

```
testsuite/fstests: Merged nested Makefile.am files into one Makefile.am
```

```
This change is part of the testsuite Makefile.am reorganization.
```

```
Update #3382
```

#### Comment 5

1. **Chris Johns**, Mon, 09 Apr 2018 22:37:12 GMT

In 3206879f/rtems:

testsuite/mptests: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

#### **Comment 6**

1. **Chris Johns**, Mon, 09 Apr 2018 22:37:24 GMT

In 2a99a6a/rtems:

testsuite/psxtests: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

#### **Comment 7**

1. **Chris Johns**, Mon, 09 Apr 2018 22:37:46 GMT

In dfc57eb/rtems:

testsuite/psxtmtests: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

#### **Comment 8**

1. **Chris Johns**, Mon, 09 Apr 2018 22:38:07 GMT

In 590a5809/rtems:

testsuite/irhealstone: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

#### **Comment 9**

1. **Chris Johns**, Mon, 09 Apr 2018 22:38:22 GMT

In d027e6bb/rtems:

testsuite/samples: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

#### **Comment 10**

1. **Chris Johns**, Mon, 09 Apr 2018 22:38:39 GMT

In 8074fa0b/rtems:

testsuite/smpmtests: Merged nested Makefile.am files into one Makefile.am  
This change is part of the testsuite Makefile.am reorganization.  
Update #3382

1. **Chris Johns**, Mon, 09 Apr 2018 22:39:06 GMT

In cc14545e/rtems:

```
testsuite/tmtests: Merged nested Makefile.am files into one Makefile.am
This change is part of the testsuite Makefile.am reorganization.
Update #3382
```

#### **Comment 13**

1. **Chris Johns**, Mon, 09 Apr 2018 22:39:17 GMT

In ee3d7dcb/rtems:

```
testsuites: Remove the test check from the subdir support.
Leave the parallel support so each test group builds in parallel.
Update #3382
```

#### **Comment 14**

1. **Chris Johns**, Mon, 09 Apr 2018 22:39:28 GMT

In cb7b4dc4/rtems:

```
bsp/lpc24xx: Exclude iconv POSIX tests.
These are now built to executables and are too large for this BSP.
This change is part of the testsuite Makefile.am reorganization.
Update #3382
```

#### **Comment 15**

1. **Sebastian Huber**, Tue, 10 Apr 2018 10:39:13 GMT

In 2eaea422/rtems:

```
sptestests: Fix AM_CONDITIONAL
Update #3382.
```

#### **Comment 16**

1. **Chris Johns**, Fri, 19 Oct 2018 00:30:39 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

This task is finished.

### **3383 - Require --enable-rtemsbsp with --enable-smp or --enable-multiprocessor**

<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

Common systems like Linux and FreeBSD define `int32_t` to `int`. This means a lot of third party code works well in these cases:

```
#include
void f(int32_t);
void f(int);
void g(int32_t *);
void h(void)
{
    int i;
    g(&i);
}
```

On RTEMS you get however in C

```
test.c:5:6: error: conflicting types for 'f'
void f(int);
    ^
test.c:3:6: note: previous declaration of 'f' was here
void f(int32_t);
    ^
test.c: In function 'h':
test.c:12:4: warning: passing argument 1 of 'g' from incompatible pointer type [-Wincompatible-pointer-types]
    g(&i);
    ^
test.c:7:6: note: expected 'int32_t * {aka long int *}' but argument is of type 'int *'
void g(int32_t *);
```

and C++

```
test.c: In function 'void h()':
test.c:12:4: error: invalid conversion from 'int*' to 'int32_t* {aka long int*}' [-fpermissive]
    g(&i);
    ^
test.c:7:6: note: initializing argument 1 of 'void g(int32_t*)'
void g(int32_t *);
    ^
```

This is due to a Newlib speciality which uses `long` for `int32_t` if `long` is a 32-bit type. To ease the use of third party software in RTEMS we should override this option and use `int` for `int32_t` just like the standard host operating systems (e.g. Linux and FreeBSD). Only a small GCC patch is required to do this:

```
diff --git a/gcc/config/rtems.h b/gcc/config/rtems.h
index 439199d4cbb..9b1408efe6f 100644
--- a/gcc/config/rtems.h
+++ b/gcc/config/rtems.h
@@ -48,3 +48,7 @@
-__latomic -lc -lgcc --end-group %(!qnoLinkcmds: -T linkcmds%s)
+
+}
+
+#define TARGET_POSIX_IO
+
+/* Use int for int32_t (see stdint-newlib.h). */
+#undef STDINT_LONG32
+#define STDINT_LONG32 0
```

**Comment 1**

1. **Joel Sherrill**, Mon, 09 Apr 2018 13:39:53 GMT

Just to keep it clean, what if int is 16 bits on the target?

#### Comment 2

1. **Sebastian Huber**, Mon, 09 Apr 2018 13:46:46 GMT

See newlib-stdint.h in GCC sources:

```
[...]
#define INT32_TYPE (STDINT_LONG32 ? "long int" : INT_TYPE_SIZE == 32 ? "int" : SHORT_TYPE_SIZE == 32 ? "short int" : CHAR_TYPE_SIZE == 32 ? "signed char" : 0)
[...]
```

So, 16-bit targets should not use this option.

#### Comment 3

1. **Sebastian Huber**, Thu, 14 Jun 2018 05:21:24 GMT

Committed to GCC as:

<https://gcc.gnu.org/viewcvs/gcc?view=revision&revision=261582> <https://gcc.gnu.org/viewcvs/gcc?view=revision&revision=261583>

**Description**

It is critical this interface works because we have moved to Trac for release notes and the release notes contain links to the changesets because we reference the tickets in the commits.

Some requests work:

- 900c40730dbec34cd7a6f1c03c80896951bf1b9c/rtems
- d8defb9dbe4ab1ef375ecce55e8bfb1028c5dd13/rtems
- 9704efb4ec088a472842cbc9bc46392685ebc806/rtems

and others do not:

- 2afb22b7e1ebcbe40373ff7e0efae7d207c655a9/rtems

Notes:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

- items 2. and 3. are either side of the changeset a. in the commit history of RTEMS.
- Clicking on 3. and then the Next Changeset link also fails.

**Comment 1**

1. **Amar Takhar**, Sat, 20 Oct 2018 21:15:43 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **invalid**

This is a known issue and will only be fixed by upgrading to Trac 1.3 The diff is just too large and Apache times out before it's done. You can use [git.rtems.org](https://git.rtems.org) to view it as it's written in C and not some kludgy python:

<https://git.rtems.org/rtems/commit?id=2afb22b7e1ebcbe40373ff7e0efae7d207c655a9>

**3387 - Add subdir-objects to automake flags**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3387">https://devel.rtems.org/ticket/3387</a> ( <a href="https://devel.rtems.org/ticket/3387">https://devel.rtems.org/ticket/3387</a> )
<b>Id</b>	3387
<b>Reporter</b>	Chris Johns

**Description**

This will be fixed by the new build system, see #3818.

**Comment 1**

1. **Chris Johns**, Wed, 11 Apr 2018 01:58:07 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In aa567bc1/rtems:

```
configure: Add subdir-objects to all automake flags.
```

```
This option silences warning with automake-1.16.1 allowing us to upgrade to that version.
```

```
This change has been tested with automake-1.12.6 and automake-1.16.1. It seems version 1.16.1 configures slower than 1.12.6 for the same source and BSP. The newer versions is 6 second slower.
```

```
Close #3387.
```

**Comment 2**

1. **Sebastian Huber**, Wed, 11 Apr 2018 05:21:30 GMT

I am not sure, but I think this breaks the BSP build. We have now for example in the build tree:

```

pwd
sparc-rtems5/c/erc32/lib/libbsp/sparc/erc32
make clean
test -z "" || rm -f
test -z "librtemsbsp.a" || rm -f librtemsbsp.a
rm -f *.o
rm -f ../../../../../../bsps/shared/*.o
rm -f ../../../../../../bsps/shared/cache/*.o
rm -f ../../../../../../bsps/shared/dev/display/*.o
rm -f ../../../../../../bsps/shared/dev/flash/*.o
rm -f ../../../../../../bsps/shared/dev/i2c/*.o
rm -f ../../../../../../bsps/shared/dev/ide/*.o
rm -f ../../../../../../bsps/shared/dev/rtc/*.o
rm -f ../../../../../../bsps/shared/dev/serial/*.o
rm -f ../../../../../../bsps/shared/irq/*.o
rm -f ../../../../../../bsps/shared/net/*.o
rm -f ../../../../../../bsps/shared/shmhdr/*.o
rm -f ../../../../../../bsps/shared/start/*.o
rm -f ../shared/*.o
rm -f ./shared/*.o
rm -f ./shared/irq/*.o
rm -f ./shared/startup/*.o
rm -f clock/*.o
rm -f console/*.o
rm -f erc32sonic/*.o
rm -f gnatsupp/*.o
rm -f startup/*.o
rm -f timer/*.o

```

This assumes that the build and source tree have the same layout. However, this is not the case. For example:

```

pwd
sparc-rtems5/c/erc32/lib/libbsp/sparc/erc32
ls ../../../../../../
at697f bsp c erc32 gr712rc gr740 leon2 leon3 ut699 ut700

```

The critical issues is that the bsp directory is not BSP-specific.

### Comment 3

1. **Sebastian Huber**, Wed, 11 Apr 2018 05:21:40 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

### Comment 4

1. **Chris Johns**, Wed, 11 Apr 2018 06:04:13 GMT

Replying to Sebastian Huber:

I am not sure, but I think this breaks the BSP build.

I think it exposes a bug in the BSP Makefile support. Object files must stay contained under the BSP directory. Why does the cpukit not have a problem?

### Comment 5

1. **Sebastian Huber**, Wed, 11 Apr 2018 06:07:22 GMT

The problem is that we are right in between a move of the BSP sources from one tree to another.

### Comment 6

1. **Chris Johns**, Wed, 11 Apr 2018 06:11:10 GMT

Will the move clean up the build tree and avoid this issue once the move is done? If so the only thing that is broken is building more than one BSP at a time. Is that a problem for you?

### Comment 7

1. **Sebastian Huber**, Wed, 11 Apr 2018 06:21:34 GMT

To finish the move will need a couple of weeks (more than four I guess). Do I have to use the BSP builder to build the BSPs?

### Comment 8

1. **Chris Johns**, Wed, 11 Apr 2018 06:41:40 GMT

Replying to Chris Johns:

Will the move clean up the build tree and avoid this issue once the move is done?

Nice, I am looking forward to this happening.

If so the only thing that is broken is building more than one BSP at a time. Is that a problem for you?

That is one way.

Just thought of a simpler solution that may work. What if you remove the subdir-objects option from the just the effected Makefile.am file(s)? This leave the parts of the build tree that are fixed ready and as you fix the broken parts the option can be added. It also lets automake-1.16.1 indicate we have a problem in the areas we have not fixed.

Does that work?

**Comment 9**

1. **Sebastian Huber**, Thu, 12 Apr 2018 05:55:53 GMT

In 4ff09d5b/rtems:

```
build: Remove subdir-objects from BSP configure.ac
The subdir-objects do not work currently due to BSP sources in bsps and c and the existing build tree layout.
Update #3387.
```

**Comment 10**

1. **Sebastian Huber**, Thu, 12 Apr 2018 09:14:04 GMT
2. **owner:** changed from **Chris Johns** to **Sebastian Huber**
3. **status:** changed from **reopened** to **assigned**

**Comment 11**

1. **Sebastian Huber**, Fri, 20 Apr 2018 13:31:12 GMT

In 234f0a2d/rtems:

```
build: Remove subdir-objects from Ada tests
Somehow it does not work. With this Automake option you get:
gmake[6]: Entering directory '/build/sparc-rtems5/c/erc32/testsuites/ada/sptests' Making all-am in sp01 gmake[7]: Entering directory
'/build/sparc-rtems5/c/erc32/testsuites/ada/sptests/sp01' gmake[7]: ___* No rule to make target 'init.o', needed by 'ada_sp01.exe'. Stop.
Update #3387.
```

**Comment 12**

1. **Joel Sherrill**, Thu, 12 Dec 2019 23:13:52 GMT

Is this ticket "won't fix" with the move to the new build system?

**Comment 13**

1. **Sebastian Huber**, Fri, 13 Dec 2019 06:05:12 GMT

Yes, provided we move to the new build system.

**Comment 14**

1. **Chris Johns**, Fri, 13 Dec 2019 12:53:29 GMT

Replying to Sebastian Huber:

Yes, provided we move to the new build system.

I have been using the build system when doing some work week and I am now addicted.

I would like us to resolve the tickets we have to clear 5.0 then branch the repos. I can then prepare a release. This would release master for the merge the new build system.

**Comment 15**

1. **Sebastian Huber**, Thu, 19 Dec 2019 08:14:20 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **wontfix**
4. **description:** modified (diff)

**Description**

These failures have persisted across all the autoconf changes:

Failures:

<pre>powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-networking --enable-smp ld/collect2:0 error: no error message found!</pre>
<pre>powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-debug --enable-smp ld/collect2:0 error: no error message found!</pre>
<pre>powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-debug --enable-\ networking --enable-smp ld/collect2:0 error: no error message found!</pre>
<pre>powerpc/qemuprep-altivec: configure --target=powerpc-rtems5 --enable-rtemsbsp=qemuprep-altivec\ --prefix=/home/joel/rtems-work/bsps --enable-smp ld/collect2:0 error: no error message found!</pre>

I checked and it looks like qemuprep-altivec is listed in the smp excludes section.

It is the only BSP with a - in the name that is in smp-excludes. Could it be that the matching fails in this case?

The other is pc586-sse which is SMP excluded also but using a different mechanism..

**Comment 1**

1. **Chris Johns**, Fri, 19 Oct 2018 00:34:17 GMT

This should be fixed in a recent rtems-tools. Please test and closed fixed if it is fixed.

**Comment 2**

1. **Chris Johns**, Fri, 19 Oct 2018 00:35:16 GMT

Why rtems-tester in the subject line?

**Comment 3**

**Description**

There is some support for cexp and tests in the NFS client directory:

```
cpukit/libfs/src/nfsclient/src/cexp.c
cpukit/libfs/src/nfsclient/src/dirutils.c
cpukit/libfs/src/nfsclient/src/nfs.modini.c
cpukit/libfs/src/nfsclient/src/nfsTest.c
cpukit/libfs/src/nfsclient/src/rpcio.modini.c
```

There are also some \*.rel files installed. This stuff is probably unused. If it is still in use it should move elsewhere, e.g. some general cexp support outside of the main RTEMS sources. Dead/untested code should not be present in the RTEMS code base.

<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

The R\_ARM\_V4BX does not have a symbol and this raised an error with dl06 with an ARMv7 instruction set when merging sections when creating a RAP image.

Ignore this relocation record.

**Comment 1**

1. **Chris Johns**, Mon, 16 Apr 2018 01:57:46 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In ec419a0/rtems-tools:

```
rtemstoolkit/rap: Ignore R_ARM_V4BX relocation records
```

Note, this removes the details needed to alter the instruction for an ARMv4 instruction set. Currently this type of record is not handled in the RAP format loader and the RTL loader ignores it.

Close #3396

## 3397 - The register keyword is deprecated in C++11

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3397">https://devel.rtems.org/ticket/3397</a> ( <a href="https://devel.rtems.org/ticket/3397">https://devel.rtems.org/ticket/3397</a> )

### Description

The following code gives a warning with GCC and `-std=c++17`:

```
void f(void)
{
    register int i;
}
```

```
test.cc: In function 'void f()':
test.cc:3:15: warning: ISO C++1z does not allow 'register' storage class specifier [-Wregister]
    register int i;
                ^
```

Remove the use of the register keyword at least in the public header files for C++ compatibility.

### Comment 1

1. **Sebastian Huber**, Tue, 17 Apr 2018 05:06:01 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In f35c3be9/rtems:

Remove register keyword from public header files

The following code

```
void f(void) {
    register int i;
}
```

gives a warning with GCC and `-std=c++17`

```
test.cc: In function 'void f()': test.cc:3:15: warning: ISO C++1z does not allow 'register' storage class specifier [-Wregister]
```

```
    register int i;
```

and clang with `-std=c++14`

```
test.cc:3:3: warning: 'register' storage class specifier is deprecated and incompatible with C++1z [-Wdeprecated-register]
```

```
    register int i;
```

```
1 warning generated.
```

Remove the use of the register keyword at least in the public header files for C++ compatibility.

Close #3397.

```

**Comment 1**

1. **Chris Johns**, Wed, 18 Apr 2018 01:15:58 GMT

Ouch, I will need to think about this one because rtems-ld does not know about mutilib configurations and the BSP has -mips3 -EL as options to the linker.

**Comment 2**

1. **Chris Johns**, Wed, 18 Apr 2018 01:28:13 GMT

Looking at the rtemstoolkit/rld-cc.cpp function get\_library\_path() is asking gcc for the path to a library and if this is being used it may be a simple matter of adding the CFLAGS or CPU\_FLAGS to rtems-ld.

I suspect -E will need to be added to the flag filter list so as a machine flag.

#### **Description**

The RTEMS 5 tool set contains the RTEMS tools (rtems-tools). The version of the RTEMS tools is determined by the tool set build time since the current Git master branch is fetched. Instead use an explicit RTEMS tools version (similar to all other tools, e.g. Binutils, Newlib, GCC, GDB) to make the RTEMS tool set independent of the arbitrary build time.

#### **Comment 1**

1. **Sebastian Huber**, Wed, 18 Apr 2018 08:07:30 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

<b>Blocked by</b>	

#### **Description**

Jiri has suggested that the patches used in the RSB that are hosted by him be moved to rtems.org and the RSB patches link be changed. This impacts at least qemu.

#### **Comment 1**

1. **Chris Johns**, Wed, 25 Apr 2018 02:21:41 GMT

Please avoid personal directories on ftp.rtems.org. There are no other accessible paths on that host.

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

You can use a ticket and attachments. I cannot see a way to get a txt version of our mailing list archives.

#### Comment 2

1. **Chris Johns**, Fri, 19 Oct 2018 00:19:07 GMT
2. **owner: chrisj@...** deleted

Can someone else please handle this?

#### Comment 3

1. **Joel Sherrill**, Tue, 23 Oct 2018 17:05:31 GMT

I only see this one patch referencing Jiri's servers:

```
./tools/rtems-gdb-7.12-1.cfg:%patch add gdb https://gaisler.org/gdb/gdb-7.12.1-sis-leon2-leon3.diff
```

The current rtems-gdb-8.0.1-1.cfg references a ticket attachment.

```
%patch add gdb https://devel.rtems.org/raw-attachment/ticket/3460/gdb-8.0.1-sis-leon2-leon3.diff
```

Is it OK to close this since the current sparc/gdb build doesn't touch his server?

#### Comment 4

1. **Chris Johns**, Tue, 23 Oct 2018 21:48:12 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

Yes it is fine to close this ticket, I will do it. I will clean out the configs on the 5 branch when it is created.

### **3409 - Strip down configure checks to the bare minimum**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3409">https://devel.rtems.org/ticket/3409</a> ( <a href="https://devel.rtems.org/ticket/3409">https://devel.rtems.org/ticket/3409</a> )

**Description**

examples-v2 doesn't build for qemuppc. both \_hello fails because of something going on with rtems-ld. Taking that out of the wscript results in getting further but fails with an undefined error for the same symbol.

```
/home/joel/rtems-work/tools/5/bin/powerpc-rtems5-gcc: hello-deep.o: In function `wrapThread_Life_action_handler':
/home/joel/rtems-work/tools/5/bin/powerpc-rtems5-gcc: /home/joel/rtems-work/examples-v2/build/powerpc-rtems5-qemuppc/hello-deep.c:1304: undefined
reference to `_Thread_Life_action_handler'
/home/joel/rtems-work/tools/5/bin/powerpc-rtems5-gcc: collect2: error: ld returned 1 exit status
```

error: linking: Linker error

**Comment 1**

1. **Chris Johns**, Thu, 26 Apr 2018 03:33:03 GMT

The score thread definition files have not been updated after a change in the score:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

<https://git.rtems.org/rtems-tools/tree/linkers/rtems-score-thread.ini#n8>

which is referenced from:

[https://git.rtems.org/examples-v2/tree/hello/both\\_hello/hello-deep.ini#n21](https://git.rtems.org/examples-v2/tree/hello/both_hello/hello-deep.ini#n21)

I am OK with a change to remove the definition being pushed.

Note, adding libdwf support to rtems-tools would remove the need for these files.

Please remember rtems-tools repo changes require an RSB update to have the RSB pick up any changes.

In 7045cc3/rtems-tools:

```
linkers: Remove _Thread_Life_action_handler
This is a static function.
Update #3413.
```

#### **Comment 3**

1. **Sebastian Huber**, Thu, 19 Dec 2019 09:14:21 GMT

In f484118/rtems-source-builder:

```
5: Update rtems-tools
Update #3413.
```

#### **Comment 4**

1. **Sebastian Huber**, Thu, 19 Dec 2019 09:23:53 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

I was able to build the examples with these patches.

#### **Comment 5**

1. **Joel Sherrill**, Thu, 19 Dec 2019 13:47:44 GMT

It really would be better to have dynamic loading examples in rtems-examples rather than just bolting on some odd build stuff to an unrelated example. Neither both\_hello or triple\_period are intended to demonstrate dynamic loading and don't use it.

## **3415 - Add examples and tests as components**

2. **owner**: **Chris Johns** deleted
3. **status**: changed from **accepted** to **new**

I do not user Ubuntu. A user would be the best person to do this as they can test it.

**Comment 3**

1. **Marçal Comajoan Cara**, Sun, 11 Nov 2018 16:47:06 GMT

I tried building RTEMS on Ubuntu 18.04 and it worked great with the packages installed by using only this command:

`__ Error: Failed to load processor bash__`

```
No macro or processor named 'bash' found
```

This package list is based on the output of sb-check and error messages I got during the installation which I corrected installing the packages above. This probably also works for Ubuntu 17.10 but 18.04 is more important because it's LTS while 17.10 not. Because of this, Ubuntu 17.10 is also unsupported since July 19, 2018.

I also think that the part which mentions Xubuntu (the Xfce Ubuntu flavour) is redundant because every official Ubuntu flavour has the same base packages (the packages that change from flavour to flavour are the desktop environment related ones like the file managers, graphical text editors, etc. but usually not development packages like the ones that are required to build RTEMS). The id in the link (<https://docs.rtems.org/branches/master/user/hosts/posix.html#xubuntu> <-), also should be ubuntu instead of xubuntu.

With the patch attached here I fixed and updated everything.

**Comment 4**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Joel Sherrill**, Thu, 12 Dec 2019 22:24:13 GMT

The documentation changes did not include information on "Error :: You must put some 'source' URIs in your sources.list" being reported. As this occurred on an Ubuntu version that was not LTS, it is not being added. If this error occurs in the future on a LTS release, then add this information.

#### Comment 5

1. **Joel Sherrill**, Thu, 12 Dec 2019 22:24:30 GMT
2. **owner:** set to **Joel Sherrill** <joel@...>
3. **status:** changed from **new** to **closed**
4. **resolution:** set to **fixed**

In 9316722/rtems-docs:

```
user/hosts/posix.rst: Update Ubuntu instructions.
```

Note that the ticket has instructions for what to do if the error message "Error :: You must put some 'source' URIs in your sources.list" is reported. As this occurred on an Ubuntu version that was not LTS, it is not being added. If this error occurs in the future on a LTS release, then add this information.

```
closes #3416.
```

### Description

Always build network services (tftps, ftps, ftpd, telnetd, libdebugger) which only depend on the POSIX socket API (provided by Newlib header files) as support libraries. Remove them from libbsd.

The network services must reside in dedicated libraries to avoid a cyclic dependency between libbsd.a and librtemscpu.a.

### Comment 1

1. **Sebastian Huber**, Wed, 02 May 2018 07:59:18 GMT

In dd8e4b7/rtems:

```
libdebugger: Move to separate library
```

Always build remote TCP support since it depends only on the POSIX socket API. It works with the legacy network stack and libbsd. Move it to a separate libdebugger.a library to allow an easy use with libbsd via "-ldebugger -lbsd" otherwise we would have a cyclic dependency between libbsd.a and librtemscpu.a.

Update #3419.

### Comment 2

1. **Sebastian Huber**, Wed, 02 May 2018 07:59:28 GMT

In c3bab73b/rtems:

```
tftps: Always build TFTP client
```

Move TFTP client filesystem to separate library libtftps.a. Conditionally use legacy network stack features, e.g. BOOTP support.

Update #3419.

### Comment 3

1. **Sebastian Huber**, Wed, 02 May 2018 07:59:39 GMT

In fea9a7a/rtems:

```
ftps: Always build FTP client
```

Move FTP client filesystem to separate library libftps.a.

Update #3419.

### Comment 4

1. **Sebastian Huber**, Wed, 02 May 2018 07:59:49 GMT

In bf76d5f/rtems:

```
network: Import latest from FreeBSD
```

Update #3419.

### Comment 5

1. **Sebastian Huber**, Wed, 02 May 2018 08:00:00 GMT

In 4fed5ac/rtems:

```
ftpd: Fairplay with libbsd
```

Update #3419.

#### Comment 6

1. **Sebastian Huber**, Wed, 02 May 2018 08:00:10 GMT

In 32b5b23/rtems:

ftpd: Use floating-point tasks due to syslog()  
Update #3419.

#### Comment 7

1. **Sebastian Huber**, Wed, 02 May 2018 08:00:20 GMT

In b771cb4/rtems:

ftpd: Always build FTP daemon  
Add support for libbsd initialization.  
Update #3419.

#### Comment 8

1. **Sebastian Huber**, Wed, 02 May 2018 08:00:31 GMT

In b80b34c3/rtems:

telnetd: Always build telnet daemon  
Add support for libbsd initialization.  
Update #3419.

#### Comment 9

1. **Sebastian Huber**, Wed, 02 May 2018 08:00:41 GMT

In 8d52a0e2/rtems:

telnetd: Use syslog() instead of printk()  
Update #3419.

#### Comment 10

1. **Sebastian Huber**, Wed, 02 May 2018 08:01:29 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 443a058/rtems-libbsd:

Use network services from RTEMS  
Close #3419.

#### Comment 11

1. **Sebastian Huber**, Wed, 02 May 2018 08:37:00 GMT

In 634b3bf/rtems-libbsd:

rtems-debugger: Remove files  
They are now in the main RTEMS sources.  
Update #3419.

#### Comment 12

1. **Chris Johns**, Thu, 03 May 2018 02:21:40 GMT

Does this change require user applications update their list of libraries linked to use the services moved to separate libraries?

**Comment 13**

1. **Sebastian Huber**, Thu, 03 May 2018 05:25:55 GMT

Yes, the old network stack already had libftpd.a and libtelnetd.a. In the libbsd it was previously included. The libtftpfs.a and libtftpfs.a are new. The debugger support with libdebugger.a will be new in RTEMS 5.1.

**Comment 14**

1. **Chris Johns**, Thu, 03 May 2018 05:39:58 GMT

Thank you. I just wanted this noted for the release notes.

**Comment 15**

1. **Christian Mauderer**, Fri, 04 May 2018 05:16:48 GMT

In dd35ec5/rtems-libbsd:

```
waf: Allow to add libs per test.
Update #3419.
```

**Comment 16**

1. **Sebastian Huber**, Tue, 08 May 2018 06:07:02 GMT

In eaa1709/rtems:

```
ftpd: Fix infinite recursion in yield()
Update #3419.
```

**3421 - New Trac components for Coverage and Trace**

**Description**

Both coverage and tracing are large enough areas that lumping them into tools or other random categories makes work on them harder to trac.

Please add coverage and tracing. Coverage could be a subcategory of tools. Tracing could be a standalone component. It has target and tool components.

**Comment 1**

1. **Joel Sherrill**, Sat, 13 Oct 2018 22:29:02 GMT

2. **status:** changed from **assigned** to **closed**

3. **resolution:** set to **wontfix**

These should be filed as tool with an appropriate keyword.

### Description

```

Checking for program 'ar'           : /home/joel/rtems-work/tools/5/bin/mips-rtems5-ar
Checking for program 'g++, c++'    : /home/joel/rtems-work/tools/5/bin/mips-rtems5-g++
Checking for program 'ar'           : /home/joel/rtems-work/tools/5/bin/mips-rtems5-ar
Checking for program 'gas, gcc'     : /home/joel/rtems-work/tools/5/bin/mips-rtems5-gcc
Checking for program 'ar'           : /home/joel/rtems-work/tools/5/bin/mips-rtems5-ar
Compiler version (mips-rtems5-gcc) : 7.3.0 20180125 (RTEMS 5, RSB 6d9c77c77d271d1fc2dfe8493d6713930b52a6dd, Newlib 3.0.0)
Checking for RTEMS CPU options header : started
-> processing test results          : 1 test failed
One of the tests has failed, read config.log for more information
(complete log in /data/home/joel/rtems-work/examples-v2/build/config.log)
+ check fatal 1 'failed waf configure - examples-v2 on rbt4925'

```

### Comment 1

1. **Chris Johns**, Wed, 02 May 2018 00:31:06 GMT

The check for RTEMS CPU options header fails. Does the BSP install rtems/score/cpuopts.h?

### Comment 2

1. **Chris Johns**, Wed, 02 May 2018 00:33:52 GMT
2. **description:** modified (diff)

Also the output says to read config.log for more information. Could you please report what it says is failing?

### Comment 3

1. **Joel Sherrill**, Sat, 13 Oct 2018 22:34:50 GMT
2. **owner:** set to **Joel Sherrill**
3. **status:** changed from **new** to **assigned**
4. **component:** changed from **admin** to **examples**

### Comment 4

1. **Joel Sherrill**, Sun, 14 Oct 2018 20:52:58 GMT

With the Makefile.inc system, all tests build successfully and this is the command sequence for hello\_world\_c

```

mips-rtems5-gcc --pipe -B/home/joel/rtems-work/tools/5/bsp-install/mips-rtems5/rbt4925/lib/ -specs bsp_specs -qrtems -Wall -O2 -g -
fomit-frame-pointer -ffunction-sections -fdata-sections -mips3 -G0 -EL -c -o o-optimize/test.o test.c
mips-rtems5-gcc --pipe -B/home/joel/rtems-work/tools/5/bsp-install/mips-rtems5/rbt4925/lib/ -specs bsp_specs -qrtems -Wall -O2 -g -
fomit-frame-pointer -ffunction-sections -fdata-sections -mips3 -G0 -EL -Wl,--gc-sections -mips3 -G0 -EL -o o-
optimize/hello.exe o-optimize/test.o

```

With the following waf command, the configure fails:

```

./waf configure --rtems=/home/joel/rtems-work/tools/5/bsp-install \
--rtems-tools=/home/joel/rtems-work/tools/5 --rtems-bsps=mips/rbt4925

```

The test probe gcc is this:

```

['/home/joel/rtems-work/tools/5/bin/mips-rtems5-g++', '-qrtems', '-B/home/joel/rtems-work/tools/5/bsp-install/mips-rtems5/lib/', '-
B/home/joel/rtems-work/tools/5/bsp-install/mips-rtems5/rbt4925/lib/', '--specs', 'bsp_specs', '-mips3', '-mips3', '-fomit-frame-
pointer', '-fomit-frame-pointer', '-ffunction-sections', '-ffunction-sections', '-fdata-sections', '-fdata-sections', 'test.cpp.l.o',
'-o/home/joel/rtems-work/examples-v2/build/.conf_check_2580b0f878d416be57b9cf3634e02230/testbuild/testprog', '-Wl,-Bstatic', '-Wl,-
Bdynamic']
err: /home/joel/rtems-work/tools/5/lib/gcc/mips-rtems5/7.3.0/../../../../mips-rtems5/bin/ld: /home/joel/rtems-work/tools/5/bsp-
install/mips-rtems5/rbt4925/lib/start.o: compiled for a little endian system and target is big endian

```

Notice the -G0 and -EL (or -EB) are missing.

### Comment 5

1. **Joel Sherrill**, Sun, 14 Oct 2018 21:16:34 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 2fec1c5/rtems\_waf:

```
rtems.py: Pass -EL, -EB, and -Gn to link phase
closes #3424.
```

### Comment 6

1. **Joel Sherrill**, Sun, 14 Oct 2018 21:20:39 GMT

In 5e3264d/examples-v2:

```
rtems_waf: Update to get #3424
```

### Comment 7

1. **Joel Sherrill**, Sun, 14 Oct 2018 22:06:16 GMT

In 8992d20/rtems-source-builder:

```
rtems-tools-5-1.cfg: Bump to latest
closes #3401, #3402, #3424.
```

```

Looks like the -D option from the CPU\_CFLAGS is missing and many of the options are duplicated.

```
CPU_CFLAGS = -mcpu=8540 -meabi -msdata=sysv -fno-common $(CPU_CFLAGS_FLOAT) \
-D ppc generic -mstrict-align
```

### Comment 3

1. **Chris Johns**, Thu, 03 May 2018 02:25:09 GMT

Thank you, it is what I suspected. There are BSPs where something special or different is happening. It highlights the issue with BSP configurations in a format like make.

If we can collect what we need to have on the CFLAGS in the .pc files I can look at fixing it.

### Comment 4

1. **Joel Sherrill**, Mon, 07 May 2018 20:07:13 GMT

The underlying problem is that the rtems\_waf application support eats a few gcc arguments that are needed to build applications. In this case it is -Dxxx where xxx is a macro indicating PowerPC type.

The proper solution to this is to ban use of -D in the required BSP CFLAGS. We should not require a -D to be specified on the application command line to either compiler correctly or at all.

This impacts some PowerPC BSPs and defining the expected symbol in bsp.h will work based on this traceback.

In file included from /home/joel/rtems-work/bsp-install\_\_powerpc-rtems5/mpc5566evb/lib/include/libcpu/powerpc-utility.h:40:0, \_\_

```
from /home/joel/rtems-work/bsp-install__powerpc-rtems5/mpc5566evb/lib/include/bsp.h:39, from ../gdb/overwrite/rtems_init.c:7:
```

```
/home/joel/rtems-work/bsp-install__powerpc-rtems5/mpc5566evb/lib/include/rtems/powerpc/powerpc.h:283:2: error: #error "Unsupported CPU Model"
```

```
#error "Unsupported CPU Model"
```

My solution is to move the -D in impacted PowerPC BSPs from CFLAGS (or CPU\_CFLAGS) to bsp.h

### Comment 5

1. **Chris Johns**, Mon, 07 May 2018 21:04:02 GMT

Replying to Joel Sherrill:

My solution is to move the -D in impacted PowerPC BSPs from CFLAGS (or CPU\_CFLAGS) to bsp.h

I agree, applications should only be required to match some machine related flags to make sure the correct ABI is being used.

### Comment 6

## 1. Sebastian Huber, Tue, 08 May 2018 07:37:02 GMT

There are a couple of BSPs which use -D flags:

```
grep -- -D bsp*/**/config/*
bsp/arm/rtl22xx/config/rtl22xx_t.cfg:#CPU_CFLAGS += -mthumb-interwork -D __THUMB_INTERWORK__ -mthumb
bsp/arm/rtl22xx/config/rtl22xx_t.cfg:#CPU_ASFLAGS += -D __THUMB_INTERWORK__ -mthumb-interwork
bsp/arm/smdk2410/config/smdk2410.cfg:CPU_CFLAGS = -mcpu=arm920t -DCPU_S3C2410
bsp/powerpc/beatnik/config/beatnik.cfg:CPU_CFLAGS = -mcpu=7400 -D __ppc_generic
bsp/powerpc/haleakala/config/haleakala.cfg:CPU_CFLAGS = -mcpu=405 -Dppc405
bsp/powerpc/motorola_powerpc/config/mcp750.cfg:CPU_CFLAGS = -mcpu=750 -Dmpc750
bsp/powerpc/motorola_powerpc/config/mtx603e.cfg:CPU_CFLAGS = -mcpu=603e -Dppc603e
bsp/powerpc/motorola_powerpc/config/mvme2100.cfg:CPU_CFLAGS = -mcpu=603e -Dppc603e
bsp/powerpc/motorola_powerpc/config/qemuprep-altivec.cfg:CPU_CFLAGS = -mcpu=7400 -mmultiple -mstring -mstrict-align -D __ppc_generic
bsp/powerpc/motorola_powerpc/config/qemuprep.cfg:CPU_CFLAGS = -mcpu=powerpc -mmultiple -mstring -mstrict-align -D __ppc_generic
bsp/powerpc/mpc55xxevb/config/mpc55xx.inc: -D __ppc_generic -mstrict-align
bsp/powerpc/mpc8260ads/config/mpc8260ads.cfg:CPU_CFLAGS = -mcpu=603e -mstrict-align -Dmpc8260 \
bsp/powerpc/mvme3100/config/mvme3100.cfg:CPU_CFLAGS = -mcpu=powerpc -msoft-float -D __ppc_generic
bsp/powerpc/mvme5500/config/mvme5500.cfg:CPU_CFLAGS = -mcpu=7450 -mtune=7450 -Dmpc7455
bsp/powerpc/psim/config/psim.cfg:CPU_CFLAGS = -meabi -mcpu=603e -msdata=sysv -fno-common -Dppc603e
bsp/powerpc/qemuppc/config/qemuppc.cfg:CPU_CFLAGS = -mcpu=603e -Dppc603e
bsp/powerpc/qoriq/config/qoriq_e6500_32.cfg: -D __ppc_generic
bsp/powerpc/qoriq/config/qoriq_e6500_64.cfg: -D __ppc_generic
bsp/powerpc/qoriq/config/qoriq.inc: -D __ppc_generic
bsp/powerpc/ss555/config/ss555.cfg:CPU_CFLAGS = -mcpu=$(GCC_CPU_MODEL) -Dmpc555
bsp/powerpc/t32mppc/config/t32mppc.cfg: -D __ppc_generic
bsp/powerpc/tqm8xx/config/tqm8xx.inc:CPU_CFLAGS = -mcpu=860 -Dmpc860 \
bsp/powerpc/virtex4/config/virtex4.cfg:CPU_CFLAGS = -mcpu=405 -Dppc405
bsp/powerpc/virtex5/config/virtex5.cfg:CPU_CFLAGS = -mcpu=440 -Dppc440 -msoft-float
bsp/powerpc/virtex/config/virtex.cfg:CPU_CFLAGS = -mcpu=403 -Dppc405 -meabi -msdata=sysv -fno-common
bsp/sparc64/niagara/config/niagara.cfg:CPU_CFLAGS = -mcpu=niagara -DSUN4V
bsp/sparc64/usiii/config/usiii.cfg:CPU_CFLAGS = -mcpu=ultrasparc3 -DUS3 -DSUN4U
```

We should ban the use of command line defines.

Getting rid of the -D \_\_ppc\_generic is easy. Getting rid of the -Dppc405, etc. is more difficult and there is some interaction with the GCC specs:

```
#undef CPP_OS_DEFAULT_SPEC
#define CPP_OS_DEFAULT_SPEC "\
%{!mcpu*: %{!Dppc*: %{!Dmpc*: -Dmpc750} }} \
%{mcpu=403: %{!Dppc*: %{!Dmpc*: -Dppc403} }} \

In 9d62874/rtems:

```
sparc64 BSPs: Hard define configuration required settings
Updates #3425.
```

**Comment 12**

1. **Joel Sherrill**, Tue, 15 May 2018 23:04:01 GMT

Replying to Sebastian Huber:

I don't have time for this ticket at least in the next two weeks.

Is the approach I used on the arm and sparc64 BSPs acceptable? I am testing a similar patch for the PowerPC BSPs. Use `BSP_SETOPTS` when variants and `AC_DEFINE` when there are no variants.

If so, this will eliminate the use of `-Dxxx` in `.cfg` files.

**Comment 13**

1. **Joel Sherrill**, Fri, 18 May 2018 13:22:54 GMT

In eaf5bec/rtems:

```
virtex5: Move -Dxxx to configure.ac
Updates #3425.
```

**Comment 14**

1. **Joel Sherrill**, Fri, 18 May 2018 13:24:32 GMT

2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

No BSPs use `-D` in `CFLAGS` now. #3431 is a ticket to track some identified follow up work.

**Comment 15**

1. **Sebastian Huber**, Mon, 11 Jun 2018 12:48:11 GMT

In 07c5976/rtems:

```
bsps/powerpc: Hack to fix the build
```

The `ppc405` define must be checked before the `ppc403` define. The `ppc405` define is provided by `.`. The `ppc403` define is provided by GCC as a built-in define if no `ppc*` or `mpc*` define is set via the command line (see GCC sources `"gcc/config/rs6000/rtems.h"`).

```
Update #3425.
```

**Description**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

This scheduler was the first SMP scheduler added. It was created to have an easy SMP scheduler to debug. This was especially important when all of the SMP modifications and support were new. A Simple Scheduler has a use case as a low resource alternative for small uniprocessor systems. But the SMP variant just doesn't seem to have a good use case. If you have an SMP system, the application is almost certain to have enough resources where the more complicated data structures used by the other schedulers wouldn't be a burden. The Deterministic Priority Scheduler uses ~3K for FIFO with 256 priorities. This should not be an issue for an SMP system.

This ticket is a proposal to remove this as no longer having a use case.

#### Comment 1

1. **Sebastian Huber**, Fri, 25 May 2018 07:59:43 GMT

Please don't remove this scheduler. I may change it a bit to support also the simple one-to-one and one-to-all thread processor affinities. It uses very simple data structures which yield a small object code size. Even big SMP machines may have a small L1 cache.

#### Comment 2

1. **Sebastian Huber**, Mon, 17 Sep 2018 11:34:20 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **wontfix**

This scheduler implementation should not be removed. It is useful in clustered scheduler scenarios.

## 3433 - Add SMP support for RISC-V

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3433">https://devel.rtems.org/ticket/3433</a> ( <a href="https://devel.rtems.org/ticket/3433">https://devel.rtems.org/ticket/3433</a> )

#### Description

The project includes the following tasks:

- add CPU counter support
- add context validation code
- add BSP support for Qemu
- add support for device tree provided by Qemu
- fix all unexpected test suite failures running on Qemu
- add build system support to enable an SMP build
- add SMP implementation

#### Comment 1

1. **Sebastian Huber**, Fri, 25 May 2018 07:11:14 GMT
2. **owner**: set to **Sebastian Huber**
3. **status**: changed from **new** to **accepted**

#### Comment 2

In 16d905f/rtems:

bsp/riscv: Add BSP options to define RAM region  
Update #3433.

#### **Comment 11**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:55:50 GMT

In fef0a41/rtems:

bsp/riscv: Do not clear integer registers at start  
There is no need to do this.

Update #3433.

#### **Comment 12**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:01 GMT

In 52f4fb6/rtems:

```
riscv: Format assembler files
Use tabs to match the GCC generated assembler output.
Update #3433.
```

#### **Comment 13**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:11 GMT

In b0ee789/rtems:

```
bsp/riscv: Use memset() to clear .bss
Update #3433.
```

#### **Comment 14**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:22 GMT

In 9b2ef07f/rtems:

```
bsp/riscv: Load global pointer
Update #3433.
```

#### **Comment 15**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:33 GMT

In 7c3b0df1/rtems:

```
riscv: Implement ISR set/get level
Fix prototypes.
Update #3433.
```

#### **Comment 16**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:44 GMT

In 853c5ef/rtems:

```
build: Enable RISC-V SMP build
Update #3433.
```

#### **Comment 17**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:56:56 GMT

In 2086948/rtems:

```
riscv: Add dummy SMP support
Update #3433.
```

#### **Comment 18**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:57:07 GMT

In fe2cd01/rtems:

```
bsp/riscv: Add device tree support
Update #3433.
```

**Comment 19**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:57:18 GMT

In 5f5c450/rtems:

```
bsp/riscv: Add SMP startup synchronization
Update #3433.
```

**Comment 20**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:57:29 GMT

In c558cc4/rtems:

```
bsp/riscv: Fix vector table for lp64
Update #3433.
```

**Comment 21**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:57:39 GMT

In 1232cd46/rtems:

```
bsp/riscv: Add device tree support for console
Update #3433.
```

**Comment 22**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:57:50 GMT

In cdfed94f/rtems:

```
bsp/riscv: Rework clock driver
Use device tree provided timebase frequency. Do not write to read-only mtime register.
Update #3433.
```

**Comment 23**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:00 GMT

In ff7b104/rtems:

```
bsp/riscv: Remove bsp_interrupt_handler_default()
It duplicated the default implementation.
Update #3433.
```

**Comment 24**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:10 GMT

In bc3bdf2/rtems:

```
riscv: Optimize and fix interrupt disable/enable
Use the atomic read and clear operation to disable interrupts.
Do not write the complete mstatus. Instead, set only the MIE bit depending on the level parameter.
Update #3433.
```

**Comment 25**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:20 GMT

In 3be4478f/rtems:

```
riscv: Avoid namespace pollution
```

Remove include from (which is visible via for example).  
Update #3433.

#### **Comment 26**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:31 GMT

In 0fd8287/rtems:

riscv: Add \_CPU\_Get\_current\_per\_CPU\_control()  
Update #3433.

#### **Comment 27**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:41 GMT

In 9704d86f/rtems:

riscv: Enable interrupts during dispatch after ISR  
The code sequence is derived from the ARM code (see \_ARMV4\_Exception\_interrupt).  
Update #2751. Update #3433.

#### **Comment 28**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:58:52 GMT

In 98f051e/rtems:

riscv: Remove RISC\_V\_GCC\_RED\_ZONE\_SIZE  
The current ABI says that there is no stack red zone:  
<https://github.com/riscv/riscv-elf-psabi-doc/blob/master/riscv-elf.md>  
"Procedures must not rely upon the persistence of stack-allocated data whose addresses lie below the stack pointer."  
Update #3433.

#### **Comment 29**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:03 GMT

In 9510742/rtems:

riscv: Fix CPU\_STACK\_ALIGNMENT  
According to the RISC-V psABI  
<https://github.com/riscv/riscv-elf-psabi-doc/blob/master/riscv-elf.md>  
the stack alignment is 128 bits (16 bytes).  
Update #3433.

#### **Comment 30**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:13 GMT

In a49a3c8e/rtems:

riscv: Do not clear thread context  
Do not clear the complete thread context. Initialize only the necessary members. The Context\_Control::is\_executing member must be preserved across \_CPU\_Context\_Initialize() calls.  
Update #3433.

#### **Comment 31**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:23 GMT

In 04698eb/rtems:

riscv: Properly align the thread stack  
Update #3433.

**Comment 32**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:33 GMT

In 2987c4f/rtems:

```
riscv: Remove x8 initialization
The RISC-V psABI
https://github.com/riscv/riscv-elf-psabi-doc/blob/master/riscv-elf.md
does not mention that this is a frame pointer.
Update #3433.
```

**Comment 33**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:44 GMT

In b706b4a/rtems:

```
riscv: Remove mstatus from thread context
The mstatus register contains no thread-specific state which must be saved/restored during a context switch. Machine interrupts (MIE) must be enabled during a context switch.
Create separate CPU_Interrupt_frame structure.
Update #3433.
```

**Comment 34**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:59:54 GMT

#### **Description**

This configuration option is untested

#### Comment 1

1. **Joel Sherrill**, Fri, 25 May 2018 15:09:24 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **wontfix**

It is used in deployed use code. Off the top of my head, it was used on a custom erc32 board to initialize a VMEBus and associated hardware before any other drivers were initialized. This was very specifically needed to extend -- not modify -- an existing BSP.

If you want a test added, great. But this has a very legitimate use case. It should not be deleted.

<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	qualification
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

Most applications use a clock driver and most BSPs use the clock driver framework provided by clockimpl.h. This framework offers a Clock\_driver\_support\_shutdown\_hardware() hook which is used like this.

```
#ifdef Clock_driver_support_shutdown_hardware
/**
 * @brief Clock_exit
 *
 * This routine allows the clock driver to exit by masking the interrupt and
 * disabling the clock's counter.
 */
void Clock_exit( void )
{
    Clock_driver_support_shutdown_hardware();
    /* do not restore old vector */
}
#endif
...
#ifdef Clock_driver_support_shutdown_hardware
atexit( Clock_exit );
#endif
```

The aim is to stop clock tick interrupts at some late point in the exit() procedure.

The use of atexit() pulls in malloc() which pulls in errno. It is incompatible with the intention of the CONFIGURE\_DISABLE\_NEWLIB\_REENTRANCY configuration option.

The exit() function must be called from thread context, so accompanied clock tick interrupts should cause no harm. On the contrary, someone may assume a normal operating system operation, e.g. working timeouts.

Remove the superfluous Clock\_driver\_support\_shutdown\_hardware() hook.

### Comment 1

1. **Sebastian Huber**, Fri, 29 Jun 2018 08:16:31 GMT

In c765aa0/rtems-docs:

```
bsp-howto: Mention clock driver hook removal
Update #3436.
```

### Comment 2

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:53:27 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 7ee59313/rtems:

Remove `Clock_driver_support_shutdown_hardware()`

The aim of this clock driver hook was to stop clock tick interrupts at some late point in the `exit()` procedure.

The use of `atexit()` pulls in `malloc()` which pulls in `errno`. It is incompatible with the intention of the `CONFIGURE_DISABLE_NEWLIB_REENTRANCY` configuration option.

The `exit()` function must be called from thread context, so accompanied clock tick interrupts should cause no harm. On the contrary, someone may assume a normal operating system operation, e.g. working timeouts.

Remove the `Clock_driver_support_shutdown_hardware()` clock driver hook.

Close #3436.

### Comment 3

1. **Sebastian Huber**, Wed, 11 Dec 2019 08:06:32 GMT

In a6b2080/rtems:

clock: Remove `Clock_exit()` from API

This function is no longer supported by the standard clock driver implementation (`clockimpl.h`).

Update #3436.

### Comment 4

1. **Sebastian Huber**, Wed, 23 Jun 2021 07:16:03 GMT
2. **keywords: qualification** added

## **3437 - Replace use of `printk()` in `free()` with a fatal error**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3437">https://devel.rtems.org/ticket/3437</a> ( <a href="https://devel.rtems.org/ticket/3437">https://devel.rtems.org/ticket/3437</a> )
<b>Id</b>	3437
<b>Reporter</b>	Sebastian Huber
<b>Created</b>	25 May 2018 12:56:20
<b>Modified</b>	5 June 2018 07:14:01
<b>Owner</b>	Sebastian Huber
<b>Type</b>	enhancement
<b>Component</b>	unspecified
<b>Status</b>	closed

#### Description

This script is horribly out of date. A new version could be placed in RTEMS tools if necessary.

#### Comment 1

1. **Joel Sherrill**, Wed, 13 Jun 2018 08:17:24 GMT

I don't disagree with removing this. The question this script is trying to answer is "what's the code space requirement for RTEMS?" This is usually asked as "How big is RTEMS?" The answer is that it depends.

This script produced a report similar to some other RTOS when it was written. But I evolved to think that the linked size of sample reference applications like base\_sp, minimum, hello, minimum networking, etc.

A real application will vary in size based on the set of services it uses. Often those services depends on things that add code which we wouldn't consider part of RTEMS. A C++ application with megabytes of code from the C++ Standard Library is large but may use a very small but of code from RTEMS itself. The Qt demos were similar.

Also size varies by architecture, optimization level, gcc version, function section linking, etc.

There is no single answer and no standard guides. So we need to decide what we think is useful, explain it, and watch it.

#### Comment 2

1. **Sebastian Huber**, Fri, 15 Jun 2018 05:15:50 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 9eb1494f/rtems:

```
tools: Remove size_rtems
```

This script is horribly out of date. A new version could be placed in RTEMS tools if necessary.

Close #3451.

### 3452 - Update RISC-V tool chain to support standard 64-bit chips

<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

The last installed tool in RTEMS repository is the install-if-change script. This script does the same as the standard "install" program with an additional feature to install variants via the -V command line option.

This script is used by the standard Makefile support:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

```
c/src/make/host.cfg.in:INSTALL_CHANGE=$(PROJECT_BIN)/install-if-change
```

The INSTALL\_CHANGE is used by:

```
c/src/make/host.cfg.in:ifndef INSTALL_CHANGE
c/src/make/host.cfg.in:INSTALL_CHANGE=$(PROJECT_BIN)/install-if-change
c/src/make/host.cfg.in:INSTALL_VARIANT=$(INSTALL_CHANGE) -V "$(LIB_VARIANT)"
```

Is the variant stuff still supported?

I would remove the support for it and replace the "install-if-change" script with the standard "install" program.

#### **Comment 1**

1. **Sebastian Huber**, Fri, 15 Jun 2018 06:22:33 GMT

The script has no license information.

#### **Comment 2**

1. **Joel Sherrill**, Fri, 15 Jun 2018 06:40:12 GMT

Remove it and uses on technical grounds. The remaining use isn't enough to even make the lack of license a factor.

#### **Comment 3**

1. **Sebastian Huber**, Mon, 18 Jun 2018 05:12:45 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

In bac8d934/rtems:

```
tools: Remove install-if-change program

The last installed tool in RTEMS repository is the install-if-change script. It is not used to build/install BSPs. This script does the
same as the standard "install" program with an additional feature to install variants via the -V command line option.

This script is used by the standard Makefile support:

c/src/make/host.cfg.in:INSTALL_CHANGE=$(PROJECT_BIN)/install-if-change

The INSTALL_CHANGE is used by:

c/src/make/host.cfg.in:ifndef INSTALL_CHANGE c/src/make/host.cfg.in:INSTALL_CHANGE=$(PROJECT_BIN)/install-if-change
c/src/make/host.cfg.in:INSTALL_VARIANT=$(INSTALL_CHANGE) -V "$(LIB_VARIANT)"

Remove the support for variant installation and instead use the standard "install" program. This breaks application Makefiles using the
standard Makefile support of RTEMS.

Close #3455.
```

## **3458 - rtems-test should not use the env PATH to find covoar**

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3458">https://devel.rtems.org/ticket/3458</a> ( <a href="https://devel.rtems.org/ticket/3458">https://devel.rtems.org/ticket/3458</a> )
<b>Id</b>	3458

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	coverage rtems-test
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

#### **Description**

The rtems-test command should know where covoar is when invoking it. It cannot use the environment's path. The path can contain invalid or outdated versions with subtle issues that could be hard to find.

There should be no need to run install to use and test rtems-test with coverage.

The rtems-test python code for running the tests knows where it is and adjusts. For example using an absolute path to rtems-tests in a build directly results in it being able to find the development tree rtemstoolkit and configuration data. The command needs to be taught to find the development version of covoar.

Note, currently covoar needs external tools and this is currently using the environment's path however there is work underway to remove this dependence so there case does not need to be handled.

#### **Comment 1**

1. **Chris Johns**, Mon, 18 Jun 2018 05:33:29 GMT

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

### Comment 2

1. **Chris Johns**, Tue, 19 Jun 2018 03:45:15 GMT
2. **owner:** set to **Chris Johns** <chrisj@...>

In e341a65/rtems-tools:

```
tester: Make the path to covoar absolute to ignore the env PATH.

Using the environment's path to find covoar allow invalid versions to be used which may vary in subtle ways. Find and use the covoar that is
build with the version of 'rtems-test'.

This patch means you do not need to install the tools before running improving the development experience.

Closes #3458
```

---

## **3459 - Rework initialization and interrupt stack support**

<b>Blocking</b>	3433
<b>Blocked by</b>	

### **Description**

We need an initialization stack to run the sequential system initialization before multitasking is enabled. The system initialization is done with interrupts disabled.

We need an interrupt stack for interrupt processing. This helps to avoid a per thread stack overhead for interrupt processing. The size for interrupt stack is application dependent, e.g. maximum interrupt nest level, stack demands of interrupt handlers.

The initialization and interrupt stacks are needed for each processor in the system.

Since interrupts are disabled during the sequential system initialization we can re-use the interrupt stack for the initialization stack. This is important for low end targets, with very limited RAM sizes. We need the initialization stack before a proper C run-time environment is set up e.g. we cannot assume that the access to global data is available. The stack memory area begin and size should be available via global symbols (named addresses). On some BSPs, e.g. ARM, this is done via the linker command file.

It should be possible to set the stack size via the CONFIGURE\_INTERRUPT\_STACK\_SIZE configuration option and not via some magic stuff in linker command files.

Many BSPs set the BSS area to zero during system initialization. Thus, the initialization stack must not be contained in the BSS area.

The interrupt stack implementation is currently controlled by the following CPU port defines:

```

/**
 * Does RTEMS manage a dedicated interrupt stack in software?
 *
 * If TRUE, then a stack is allocated in @ref _ISR_Handler_initialization.
 * If FALSE, nothing is done.
 *
 * If the CPU supports a dedicated interrupt stack in hardware,
 * then it is generally the responsibility of the BSP to allocate it
 * and set it up.
 *
 * If the CPU does not support a dedicated interrupt stack, then
 * the porter has two options: (1) execute interrupts on the
 * stack of the interrupted task, and (2) have RTEMS manage a dedicated
 * interrupt stack.
 *
 * If this is TRUE, @ref CPU_ALLOCATE_INTERRUPT_STACK should also be TRUE.
 *
 * Only one of @ref CPU_HAS_SOFTWARE_INTERRUPT_STACK and
 * @ref CPU_HAS_HARDWARE_INTERRUPT_STACK should be set to TRUE. It is
 * possible that both are FALSE for a particular CPU. Although it
 * is unclear what that would imply about the interrupt processing
 * procedure on that CPU.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_HAS_SOFTWARE_INTERRUPT_STACK FALSE
/**
 * Does this CPU have hardware support for a dedicated interrupt stack?
 *
 * If TRUE, then it must be installed during initialization.
 * If FALSE, then no installation is performed.
 *
 * If this is TRUE, @ref CPU_ALLOCATE_INTERRUPT_STACK should also be TRUE.
 *
 * Only one of @ref CPU_HAS_SOFTWARE_INTERRUPT_STACK and
 * @ref CPU_HAS_HARDWARE_INTERRUPT_STACK should be set to TRUE. It is
 * possible that both are FALSE for a particular CPU. Although it
 * is unclear what that would imply about the interrupt processing
 * procedure on that CPU.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_HAS_HARDWARE_INTERRUPT_STACK TRUE
/**
 * Does RTEMS allocate a dedicated interrupt stack in the Interrupt Manager?
 *
 * If TRUE, then the memory is allocated during initialization.
 * If FALSE, then the memory is allocated during initialization.
 *
 * This should be TRUE is CPU_HAS_SOFTWARE_INTERRUPT_STACK is TRUE.
 *
 * Port Specific Information:
 *
 * XXX document implementation including references if appropriate
 */
#define CPU_ALLOCATE_INTERRUPT_STACK TRUE

```

Do the following steps to unify and simplify the initialization and interrupt stack support.

- Add `RTEMS_DECLARE_GLOBAL_SYMBOL()` and `RTEMS_DEFINE_GLOBAL_SYMBOL()` macros to `basedefs.h`, to allow a global symbol definition via C code, e.g. in `confdefs.h`, to make the interrupt stack size available to the low level initialization code.
- Add a special input section `".rtemsstack"` to the linker command files to allow a placement of the interrupt stacks. The BSPs can provide the optimal memory location for this section, e.g. on-chip RAM, tightly-coupled memory.

This makes the `CPU_HAS_SOFTWARE_INTERRUPT_STACK` and `CPU_HAS_HARDWARE_INTERRUPT_STACK` CPU port defines superfluous, since the low level initialization code has all information available via global symbols.

This makes the `CPU_ALLOCATE_INTERRUPT_STACK` CPU port define superfluous, since the interrupt stacks are allocated by `confdefs.h` for all architectures. There is no need for BSP-specific linker command file magic.

The optional `_CPU_Interrupt_stack_setup()` is still useful to customize the registration of the interrupt stack area in the per-CPU information.

#### Comment 1

1. **Sebastian Huber**, Mon, 18 Jun 2018 06:30:48 GMT
2. **blocking**: set to **3433**

#### Comment 2

1. **Sebastian Huber**, Tue, 19 Jun 2018 13:27:08 GMT

In `b0c3ba2f/rtems`:

```

bsps: Remove superfluous bsp_processor_count

This is unused copy and paste stuff.

Update #3459.

```

#### Comment 3

1. **Sebastian Huber**, Wed, 20 Jun 2018 07:34:03 GMT

Just for reference, the reuse of the initialization stack for the interrupt stack is only possible because `boot_card()` is a no-return function. This was not the case in RTEMS versions before 4.11.

#### Comment 4

1. **Sebastian Huber**, Fri, 22 Jun 2018 04:30:39 GMT

In cc3edaa/rtems:

config: SMP only CONFIGURE\_MAXIMUM\_PROCESSORS

Do not set the CONFIGURE\_MAXIMUM\_PROCESSORS in uni-processor default configuration, since this may lead to an oversize workspace.

Update #3459.

#### **Comment 5**

1. **Sebastian Huber**, Fri, 22 Jun 2018 04:30:49 GMT

In 8ff5916c/rtems:

stackchk: Remove dead code

Update #3459.

#### **Comment 6**

1. **Sebastian Huber**, Fri, 22 Jun 2018 04:31:00 GMT

In 1cb2e748/rtems:

stackchk: Refactor Stack\_check\_Dump\_threads\_usage

Update #3459.

#### **Comment 7**

1. **Sebastian Huber**, Fri, 22 Jun 2018 04:31:10 GMT

In c47ad8e/rtems:

stackchk: Add SMP support

Check the interrupt stacks of all processors. Set up the interrupt stack of the current processor for high water testing in the thread begin extension. This must be done after multi-threading started, since the initialization stacks may reuse the interrupt stacks. Disable thread dispatching in SMP configurations to prevent thread migration. Writing to the interrupt stack is only safe if done from the corresponding processor in thread context.

Update #3459.

#### **Comment 8**

1. **Sebastian Huber**, Fri, 22 Jun 2018 04:31:21 GMT

In fe46647e/rtems:

score: Macros to declare and define global symbols

Add RTEMS\_DEFINE\_GLOBAL\_SYMBOL() and add RTEMS\_DECLARE\_GLOBAL\_SYMBOL().

Update #3459.

#### **Comment 9**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:53:49 GMT

In c8df844/rtems:

score: Add CPU\_INTERRUPT\_STACK\_ALIGNMENT

Add CPU port define for the interrupt stack alignment. The alignment should take the stack ABI and the cache line size into account.

Update #3459.

#### **Comment 10**

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:54:00 GMT

In 715d616/rtems:

bsps: Support .rtemsstack.\* linker input sections

Use a dedicated memory region or place it between the BSS and workspace.

Update #3459.

Comment 11

1. **Sebastian Huber**, Fri, 29 Jun 2018 09:54:14 GMT

In 511dc4b/rtems:

```
Rework initialization and interrupt stack support

Statically initialize the interrupt stack area (_Configuration_Interrupt_stack_area_begin, _Configuration_Interrupt_stack_area_end, and
_Configuration_Interrupt_stack_size) via . Place the interrupt stack area in a special section ".rtemsstack.interrupt". Let BSPs define
the optimal placement of this section in their linker command files (e.g. in a fast on-chip memory).

This change makes makes the CPU_HAS SOFTWARE_INTERRUPT_STACK and CPU HAS HARDWARE_INTERRUPT_STACK CPU port defines superfluous, since the
low level initialization code has all information available via global symbols.

This change makes the CPU_ALLOCATE_INTERRUPT_STACK CPU port define superfluous, since the interrupt stacks are allocated by confdefs.h for
all architectures. There is no need for BSP-specific linker command file magic (except the section placement), see previous ARM linker
command file as a bad example.

Remove _CPU_Install_interrupt_stack(). Initialize the hardware interrupt stack in _CPU_Initialize() if necessary (e.g.
m68k_install_interrupt_stack()).

The optional _CPU_Interrupt_stack_setup() is still useful to customize the registration of the interrupt stack area in the per-CPU
information.

The initialization stack can reuse the interrupt stack, since
interrupts are disabled during the sequential system initialization,
and the boot_card() function does not return.
This stack reuse saves memory.

Changes per architecture:

arm:
  Mostly replace the linker symbol based configuration of stacks with
  the standard configuration via
  CONFIGURE_INTERRUPT_STACK_SIZE. The size of the FIQ, ABT and UND
  mode stack is still defined via linker symbols. These modes are
  rarely used in applications and the default values provided by the
  BSP should be sufficient in most cases. Remove the bsp_processor_count linker symbol hack used for the SMP
  support. This is possible since the interrupt stack area is now
  allocated by the linker and not allocated from the heap. This makes
  some configure.ac stuff obsolete. Remove the now superfluous BSP
  variants altcycv_devkit_smp and realview_pbx_a9_qemu_smp.
bfin:
  Remove unused magic linker command file allocation of initialization
  stack. Maybe a previous linker command file copy and paste problem?
  In the start.S the initialization stack is set to a hard coded value.
  lm32, m32c, mips, nios2, riscv, sh, v850:
  Remove magic linker command file allocation of initialization stack.
  Reuse interrupt stack for initialization stack.
m68k:
  Remove magic linker command file allocation of initialization stack.
  Reuse interrupt stack for initialization stack.
powerpc:
  Remove magic linker command file allocation of initialization stack.
  Reuse interrupt stack for initialization stack. Used dedicated memory region (REGION_RTEMSSTACK) for the interrupt
  stack on BSPs using the shared linkcmds.base (replacement for
  REGION_RWEXTRA).
sparc:
  Remove the hard coded initialization stack. Use the interrupt stack
  for the initialization stack on the boot processor. This saves
  16KiB of RAM.
Update #3459.
```

Comment 12

1. **Sebastian Huber**, Tue, 03 Jul 2018 05:07:40 GMT

In 156b227/rtems-tools:

```
tester: Remove obsolete BSP variants
Update #3459.
```

Comment 13

1. **Sebastian Huber**, Tue, 03 Jul 2018 05:12:58 GMT

In 25f4db0/rtems-source-builder:

```
5: Update tools to not build obsolete BSP variants
Update #3459.
```

Comment 14

1. **Sebastian Huber**, Thu, 19 Jul 2018 05:38:20 GMT

2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In efd581f/rtems-docs:

```
cpu-supplement: Update interrupt stack paragraph
Close #3459.
```

**Comment 15**1. **Sebastian Huber**, Tue, 31 Jul 2018 05:13:55 GMT

In 334e1d2/rtems:

confdefs: Fix uniprocessor configuration

Introduce a new internal define `_CONFIGURE_MAXIMUM_PROCESSORS` and ensure that it is `_CONFIGURE_MAXIMUM_PROCESSORS > 1` only in SMP configurations.

This avoids to allocate data structures for non-existing additional processors in uniprocessor configuration.

Update #3459.

**Comment 16**1. **Sebastian Huber**, Fri, 03 Aug 2018 11:04:49 GMT

In 42f9963d/rtems:

score: Remove superfluous semicolon

This avoids warnings like this:

warning: ISO C does not allow extra ';' outside of a function [-Wpedantic]

```
RTEMS_DECLARE_GLOBAL_SYMBOL( abc );
```

Update #3459.

**Comment 17**1. **Sebastian Huber**, Mon, 03 Sep 2018 05:03:42 GMT

In fad3f79b/rtems:

bsps: `BSP_INTERRUPT_STACK_AT_WORK_AREA_BEGIN`

Remove the `BSP_INTERRUPT_STACK_AT_WORK_AREA_BEGIN` hack. The interrupt stacks are now allocated by the linker.

Update #3459.

**Comment 18**1. **Sebastian Huber**, Thu, 06 Sep 2018 05:05:31 GMT

In 54d87f2/rtems:

bsps/powerpc: Simplify `ppc_exc_initialize()`

Remove parameters from `ppc_exc_initialize()` since all BSPs passed the same values.

Update #3459.

**Comment 19**1. **Sebastian Huber**, Fri, 21 Sep 2018 06:08:11 GMT

In 56e61e24/rtems:

Remove `INTERNAL_ERROR_INTERRUPT_STACK_TOO_SMALL`

The configured interrupt stack size (`CONFIGURE_INTERRUPT_STACK_SIZE`) is checked against the minimum task stack size. The minimum task stack size is also a configuration option (`CONFIGURE_MINIMUM_TASK_STACK_SIZE`). So, this check does not really help in case of configuration errors. In addition, the interrupt stack is also re-used as the initialization stack in most BSPs. It is probably better to use a stack checker to detect problems.

Update #3459.

**Comment 20**1. **Sebastian Huber**, Fri, 21 Sep 2018 06:08:34 GMT

In 4221d93/rtems:

stackchk: Improve support for interrupt stacks

Prepare the interrupt stack which may be used by the boot processor as initialization stack with the stack sanity pattern. Check the interrupt stack of the current processor in the thread begin and switch extension.

Update #3459.

#### **Comment 21**

<b>Blocking</b>	
<b>Blocked by</b>	

## Description

The original import version of the JFFS2 sources was Linux v3.11 (September 2013). Update the JFFS2 sources to Linux v4.17.

The Git command to generate the patches is:

```
git format-patch v3.11..v4.17 -- include/uapi/linux/jffs2.h fs/jffs2/LICENCE fs/jffs2/acl.h fs/jffs2/build.c fs/jffs2/compr.c
fs/jffs2/compr.h fs/jffs2/compr_rtime.c fs/jffs2/compr_rubin.c fs/jffs2/compr_zlib.c fs/jffs2/debug.c fs/jffs2/debug.h fs/jffs2/erase.c
fs/jffs2/gc.c fs/jffs2/jffs2_fs_i.h fs/jffs2/jffs2_fs_sb.h fs/jffs2/nodelist.c fs/jffs2/nodelist.h fs/jffs2/nodemgmt.c fs/jffs2/read.c
fs/jffs2/readinode.c fs/jffs2/scan.c fs/jffs2/summary.h fs/jffs2/write.c fs/jffs2/xattr.h
```

We need a source file transformation in the patches:

```
sed -i 's%/fs/jffs2%/cpukit/libfs/src/jffs2/src%g' 00*
```

To support the first commit:

```
From e8bbeeb755a077cfc0f814b07739f9225642d65c Mon Sep 17 00:00:00 2001
From: Cody P Schafer
Date: Thu, 23 Jan 2014 15:56:11 -0800
Subject: [PATCH 01/24] fs/jffs2: use rbtree postorder iteration helper instead
of opencoding
Use rbtree_postorder_for_each_entry_safe() to destroy the rbtree instead
of opencoding an alternate postorder iteration that modifies the tree
Signed-off-by: Cody P Schafer
Cc: Michel Lespinasse
Cc: Jan Kara
Cc: David Woodhouse
Signed-off-by: Andrew Morton
Signed-off-by: Linus Torvalds
```

we have to a postorder iterator to the red-black tree support code.

The remaining 23 patches are easy to apply.

## Comment 1

1. **Sebastian Huber**, Mon, 16 Jul 2018 05:54:17 GMT

In 6539bea/rtems:

```
score: Add postorder tree iteration support
Update #3465.
```

## Comment 2

1. **Sebastian Huber**, Mon, 16 Jul 2018 05:58:13 GMT

In 877aeab/rtems:

```
linux: Install
This makes it possible to test this API.
Update #3465.
```

## Comment 3

1. **Sebastian Huber**, Mon, 16 Jul 2018 06:02:08 GMT

In 0cb4257/rtems:

```
linux: Simplify
Remove the placeholder struct rb_node and use RBTree_Node directly via some C pre-processor defines to adjust the member names.
Update #3465.
```

## Comment 4

1. **Sebastian Huber**, Mon, 16 Jul 2018 06:06:03 GMT

In 22d9575/rtems:

```
linux: Add rbtree_postorder_for_each_entry_safe()
Update #3465.
```

#### **Comment 5**

1. **Sebastian Huber**, Mon, 16 Jul 2018 06:51:28 GMT
2. **status:** changed from **assigned** to **closed**

**Comment 5**

1. **Sebastian Huber**, Fri, 24 Aug 2018 07:08:28 GMT

In 6695d02/rtems:

Update FreeBSD kernel timespec support

This change is based on the following FreeBSD commit:

"Make timespecadd(3) and friends public

The timespecadd(3) family of macros were imported from NetBSD back in r35029. However, they were initially guarded by #ifdef \_KERNEL. In the meantime, we have grown at least 28 syscalls that use timespecs in some way, leading many programs both inside and outside of the base system to redefine those macros. It's better just to make the definitions public.

Our kernel currently defines two-argument versions of timespecadd and timespecsub. NetBSD, OpenBSD, and FreeDesktop?.org's libbsd, however, define three-argument versions. Solaris also defines a three-argument version, but only in its kernel. This revision changes our definition to match the common three-argument version.

Bump \_FreeBSD\_version due to the breaking KPI change.

Discussed with: cem, jilles, ian, bde Differential Revision: <https://reviews.freebsd.org/D14725>"

To make the change public (outside #ifdef \_KERNEL) it must be integrated in Newlib.

Update #3472.

**Description**

Add macros to for the GNU extension builtin\_expect(). Use RTEMS\_PREDICT\_TRUE() and RTEMS\_PREDICT\_FALSE() similar to the FreeBSD predict\_true() and predict\_false(). Alternatives are the Linux likely() and unlikely() or directly the GCC builtin\_expect(), however, the FreeBSD names seem to be the most easy to understand.

### Description

In case an application defines `CONFIGURE_MINIMUM_TASK_STACK_SIZE`, then this may change the `CONFIGURE_INTERRUPT_STACK_SIZE` as well:

```
#ifndef CONFIGURE_INTERRUPT_STACK_SIZE
#define BSP_INTERRUPT_STACK_SIZE
#define CONFIGURE_INTERRUPT_STACK_SIZE BSP_INTERRUPT_STACK_SIZE
#else
#define CONFIGURE_INTERRUPT_STACK_SIZE CONFIGURE_MINIMUM_TASK_STACK_SIZE
#endif
#endif
```

I think this is not what a user expects.

### Comment 1

1. **Sebastian Huber**, Mon, 30 Jul 2018 05:57:30 GMT

This behaviour is more or less documented:

[https://docs.rtems.org/branches/master/c-user/configuring\\_a\\_system.html#configure-interrupt-stack-size](https://docs.rtems.org/branches/master/c-user/configuring_a_system.html#configure-interrupt-stack-size)

The documentation doesn't mention that `BSP_INTERRUPT_STACK_SIZE` is involved too.

**3482 - Relax the buffer alignment required by rtems\_partition\_create()**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3482">https://devel.rtems.org/ticket/3482</a> ( <a href="https://devel.rtems.org/ticket/3482">https://devel.rtems.org/ticket/3482</a> )
<b>Id</b>	3482
<b>Reporter</b>	Sebastian Huber
<b>Created</b>	2 August 2018 12:37:58
<b>Modified</b>	23 June 2021 07:16:03
<b>Owner</b>	Sebastian Huber
<b>Type</b>	enhancement
<b>Component</b>	rtems
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	qualification
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

Buffer alignment required by rtems\_partition\_create() is too strict since it is checked via \_Addresses\_Is\_aligned() which is

```
RTEMS_INLINE_ROUTINE bool _Addresses_Is_aligned (
  const void* address
)
{
  #if (CPU_ALIGNMENT == 0)
    return true;
  #else
    return (((uintptr_t)address % CPU_ALIGNMENT) == 0);
  #endif
}
```

The CPU\_ALIGNMENT must take long double and vector data type alignment requirements into account. For the partition maintenance only pointer alignment is required. The user should ensure that its buffer is suitable for the items it wants to manage. The user should not be burdened to provide buffers with the maximum architecture alignment, e.g. why need a 16 byte aligned buffer if you want to manage items with 4 byte integers only?

**Comment 1**

1. **Sebastian Huber**, Fri, 03 Aug 2018 11:04:28 GMT

In 27bbc05/rtems:

```
score: Remove CPU_PARTITION_ALIGNMENT

Use the CPU_SIZEOF_POINTER alignment instead. The internal alignment requirement is defined by the use of Chain_Node (consisting of two pointers) to manage the free chain of partitions.

It seems that previously the condition
```

```
CPU_PARTITION_ALIGNMENT >= sizeof(Chain_Node)
```

was true on all CPU ports. Now, we need an additional check.

Update #3482.

**Comment 2**

1. **Sebastian Huber**, Fri, 03 Aug 2018 11:04:38 GMT

In 83ca9f0a/rtems:

```
rtems: Relax partition buffer area alignment

The partition buffer area alignment required by rtems_partition_create() was too strict since it was checked via _Addresses_Is_aligned() which uses CPU_ALIGNMENT. The CPU_ALIGNMENT must take long double and vector data type alignment requirements into account. For the partition maintenance only pointer alignment is required (Chain_Node, which consists of two pointers). The user should ensure that its partition buffer area is suitable for the items it wants to manage. The user should not be burdened to provide buffers with the maximum architecture alignment, e.g. why need a 16 byte aligned buffer if you want to manage items with 4 byte integers only?

**Description**

Use `uintptr_t` to specify the length of the partition buffer area instead of `uint32_t`. This is in line with `rtems_region_create()`. On 64-bit targets, the length may exceed 4GiB. Use `size_t` for the buffer size, since on some targets the single object size is less than the overall address range, e.g. `m32c sizeof(uintptr_t) > sizeof(size_t)`.

**Comment 1**

1. **Sebastian Huber**, Fri, 10 Aug 2018 05:17:59 GMT

In 66cb142/rtems:

```
rtems: Parameter types in rtems_partition_create()

Use uintptr_t to specify the length of the partition buffer area instead of uint32_t. This is in line with rtems_region_create(). On 64-bit targets, the length may exceed 4GiB. Use size_t for the buffer size, since on some targets the single object size is less than the overall address range, e.g. m32c sizeof(uintptr_t) > sizeof(size_t).

**Description**

RTEMS has the configuration option `CONFIGURE_HAS_OWN_MOUNT_TABLE` since 1999. This configuration option is broken since RTEMS 4.11. Remove this broken configuration option.

**Comment 1**

1. **Sebastian Huber**, Wed, 19 Sep 2018 08:52:32 GMT

In 5fa0a1f6/rtems:

```
config: Remove CONFIGURE_HAS_OWN_MOUNT_TABLE
```

```
RTEMS had the configuration option CONFIGURE_HAS_OWN_MOUNT_TABLE since
This configuration option was broken since RTEMS 4.11. Remove
this broken configuration option.
```

```
Update #3488.
```

**Comment 2**

1. **Sebastian Huber**, Wed, 19 Sep 2018 08:53:13 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 11040cf/rtems-docs:

```
c-user: Remove CONFIGURE_HAS_OWN_MOUNT_TABLE
```

```
Close #3488.
```

**Comment 3**

**Description**

Obsolete the CONFIGURE\_HAS\_OWN\_CONFIGURATION\_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes.

#### Comment 1

1. **Sebastian Huber**, Wed, 08 Aug 2018 07:14:19 GMT
2. **blocking**: set to **3490**

#### Comment 2

1. **Chris Johns**, Wed, 08 Aug 2018 07:28:53 GMT

Should this be deprecated for a release before being removed?

Maybe the question should be asked on the user and devel lists if there are users?

#### Comment 3

1. **Sebastian Huber**, Wed, 08 Aug 2018 07:30:23 GMT

Normally, I would say that we should deprecate it, however, it is broken since RTEMS 4.11 and we didn't get a bug report or complaint. There is also no test case for this configuration option.

#### Comment 4

1. **Sebastian Huber**, Wed, 08 Aug 2018 07:31:47 GMT

Replying to Sebastian Huber:

Normally, I would say that we should deprecate it, however, it is broken since RTEMS 4.11 and we didn't get a bug report or complaint. There is also no test case for this configuration option.

Sorry, I answered to the wrong ticket.

Obsolete == deprecate? Next step is remove in 6.1 (#3490).

#### Comment 5

1. **Chris Johns**, Wed, 08 Aug 2018 07:37:57 GMT

Thank you. Anyone interested can now see the reason.

#### Comment 6

1. **Sebastian Huber**, Wed, 08 Aug 2018 07:41:30 GMT

Sorry, I added some confusion. The reason for this change is in the ticket description. Maybe I should delete this comment:

<https://devel.rtems.org/ticket/3489#comment:3>

#### Comment 7

1. **Sebastian Huber**, Wed, 19 Sep 2018 08:52:44 GMT

In 68f339b6/rtems:

```
Remove CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
```

```
The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes.
```

```
Update #3489. Update #3490.
```

#### Comment 8

1. **Sebastian Huber**, Wed, 19 Sep 2018 08:53:20 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In cec2f2c/rtems-docs:

```
Remove CONFIGURE_HAS_OWN_CONFIGURATION_TABLE
```

```
Close #3489. Close #3490.
```

**Description**

This configuration option was obsoleted in RTEMS 5.1.

**Comment 1**

1. **Joel Sherrill**, Wed, 08 Aug 2018 13:42:38 GMT

I think I proposed removing option on the devel@ list a while back. Normally I prefer to deprecate for one cycle as this ticket proposes but I don't see how anyone could be using this. The rate of change to the internal configuration with addition of SMP has been intense. There have been no questions indicating someone is trying to trail the CONFIGURE\_XXX interface on their own.

It isn't a huge feature, but I really don't think it is used. If there is consensus, I wouldn't be opposed to killing it now. But now a huge deal.

**Description**

The `_Thread_Dispatch_enable()` contains a superfluous interrupt enable. This bug had probably no effect since the interrupt enable is idempotent on all CPU ports.

```

RTEMS_INLINE_ROUTINE void _Thread_Dispatch_enable( Per_CPU_Control *cpu_self )
{
  uint32_t disable_level = cpu_self->thread_dispatch_disable_level;
  if ( disable_level == 1 ) {
    ISR_Level level;
    ISR_Local_disable( level );
    if (
      cpu_self->dispatch_necessary
      #if defined(RTEMS_SCORE_ROBUST_THREAD_DISPATCH)
      || !_ISR_Is_enabled( level )
      #endif
    ) {
      _Thread_Do_dispatch( cpu_self, level ); <-- This function enabled interrupts
    } else {
      cpu_self->thread_dispatch_disable_level = 0;
      _Profiling_Thread_dispatch_enable( cpu_self, 0 );
    }
    ISR_Local_enable( level ); <-- Here we enable it again
  } else {
    Assert( disable_level > 0 );
    cpu_self->thread_dispatch_disable_level = disable_level - 1;
  }
}

```

**Comment 1**

#### Description

Currently rtems\_waf checks for a bin directory in the RTEMS path. There is no bin directory any more so this test needs to be changed to share/rtems.

#### Comment 1

1. **Chris Johns**, Sun, 12 Aug 2018 01:59:21 GMT
2. **owner:** set to **Chris Johns <chrisj@...>**
3. **status:** changed from **new** to **closed**
4. **resolution:** set to **fixed**

In c0d52d5/rtems\_waf:

```
Change RTEMS path check from bin to share/rtems.
```

```
There is no bin directory anymore with RTEMS 5 so the test fails. Check for the share/rtems directory.
```

```
Closes #3500.
```

## 3501 - MSR\_RI defined multiple places

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3501">https://devel.rtems.org/ticket/3501</a> ( <a href="https://devel.rtems.org/ticket/3501">https://devel.rtems.org/ticket/3501</a> )
<b>Id</b>	3501
<b>Reporter</b>	Joel Sherrill
<b>Created</b>	14 August 2018 23:23:02
<b>Modified</b>	15 August 2018 15:44:16
<b>Owner</b>	Christian Mauderer
<b>Type</b>	defect
<b>Component</b>	arch/powerpc
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

#### Description

Two files define the MSR\_RI macro. Since one is a register name on the PowerPC, this shows up on 48 PowerPC BSPs. This is one example.

```
log/powerpc-qoriq_e6500_64.log:../../../../rtems/c/src/././cpukit/dev/serial/sc16is752-regs.h:117:0: warning: "MSR_RI" redefined
log/powerpc-qoriq_e6500_64.log:#define MSR_RI (1u << 6)
log/powerpc-qoriq_e6500_64.log:#define MSR_RI (1<<1) /* Recoverable Exception */
log/powerpc-qoriq_e6500_64.log:../../../../rtems/c/src/././cpukit/dev/serial/sc16is752-regs.h:117:0: warning: "MSR_RI" redefined
log/powerpc-qoriq_e6500_64.log:#define MSR_RI (1u << 6)
log/powerpc-qoriq_e6500_64.log:#define MSR_RI (1<<1) /* Recoverable Exception */
```

#### Comment 1

1. **Joel Sherrill**, Tue, 14 Aug 2018 23:23:52 GMT
2. **owner:** set to **Christian Mauderer**
3. **status:** changed from **new** to **assigned**

Assigning to Christian since the git log says he added the file cpukit/dev/serial/sc16is752-regs.h

#### Comment 2

1. **Christian Mauderer**, Wed, 15 Aug 2018 07:41:32 GMT

Also I didn't add the file but only the line in that file, it's quite clearly my responsibility. I was sure that this driver is only used in the ATSAM-BSP. But it seems that it is compiled for every BSP. I'll add a prefix to the register names and send a patch.

### Comment 3

1. **Christian Mauderer**, Wed, 15 Aug 2018 15:44:16 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In dcaea71/rtems:

```
dev/sc16is752: Add name space for field names.
```

The field names for the registers generated a name collision (MSR\_RI on the power pc). This patch adds a SC16IS752\_ prefix for all field names.

```
Closes #3501.
```

## 3502 - PL111\_LCD\_CONTROL\_LCD\_BPP\_16 Redefined

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3502">https://devel.rtems.org/ticket/3502</a> ( <a href="https://devel.rtems.org/ticket/3502">https://devel.rtems.org/ticket/3502</a> )
<b>Id</b>	3502
<b>Reporter</b>	Joel Sherrill

<b>Owner</b>	Sebastian Huber
<b>Type</b>	defect
<b>Component</b>	arch/arm
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

The constant PL111\_LCD\_CONTROL\_LCD\_BPP\_16 is defined twice in the file bsp/arm/include/bsp/arm-pl111-regs.h:

```
#define PL111_LCD_CONTROL_LCD_BPP_16 0x04U
#define PL111_LCD_CONTROL_LCD_BPP_24 0x05U
#define PL111_LCD_CONTROL_LCD_BPP_16 0x06U
#define PL111_LCD_CONTROL_LCD_BPP_12 0x07U
```

Given the context, I am guessing the first one should be BPP\_32 but since Sebastian added the file, I am assuming he has docs and can answer this question for sure.

### Comment 1

1. **Joel Sherrill**, Tue, 14 Aug 2018 23:31:18 GMT
2. **owner**: set to **Sebastian Huber**
3. **status**: changed from **new** to **assigned**

### Comment 2

1. **Sebastian Huber**, Mon, 20 Aug 2018 06:36:58 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 2cd3716/rtems:

```
bsp/arm: Fix PL111 register define re-definition
```

```
Close #3502.
```

## 3503 - PDF Documentation is missing an index

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3503">https://devel.rtems.org/ticket/3503</a> ( <a href="https://devel.rtems.org/ticket/3503">https://devel.rtems.org/ticket/3503</a> )
<b>Id</b>	3503
<b>Reporter</b>	Chris Johns
<b>Created</b>	21 August 2018 01:15:54
<b>Modified</b>	21 August 2018 05:00:24
<b>Owner</b>	Chris Johns
<b>Type</b>	defect
<b>Component</b>	doc
<b>Status</b>	closed

<b>Priority</b>	high
<b>Severity</b>	critical
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

The PDF generated documents have an empty index.

**Comment 1**

1. **Chris Johns**, Tue, 21 Aug 2018 02:14:12 GMT

We cannot have a genindex.rst file, the documentation reserves this for a generated file. Removing the genindex entry from the TOC of a document results in the PDF having an index. Removing the genindex entry from the TOC removes the index from the HTML generated output.

The solution is to specialize the HTML template however the template processing in common and common/waf.py looks broken. The path in common/conf.py is a build path that is not present and the common templates are copied into each docs HTML build tree and the path in the file is relative to the top directory.

**Comment 2**

1. **Chris Johns**, Tue, 21 Aug 2018 03:48:28 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 5ce8e43/rtems-docs:

```
build: Fix indexing so it works on HTML and PDF.
      Remove all genindex.rst files, these are generated and should not
      exist in our source. Fix the HTML templates so the local specialisation works. Add a index link to the sidebar for HTML.
      Note, there is no TOC entry for the index in the PDF output and I cannot figure out how to add one.
```

Closes #3503

**Comment 3**

1. **Sebastian Huber**, Tue, 21 Aug 2018 05:00:24 GMT
2. **component:** changed from **admin** to **doc**

**3504 - Warning and formatting in bsp/powerpc/mpc55xevb/dev/dspi.c**

**Description**

This is a printf format warning. Also the file is formatted with tabs and not two spaces.

```

<b>Blocked by</b>	3549

### Description

This looks like ppc403 and ppc405 are both defined but I am not seeing source of the ppc405 definition. The warning is in this section of code:

```
#if defined (ppc403)
#define exisr 0x040 /* DCR: external interrupt status register */
#define exier 0x042 /* DCR: external interrupt enable register */
#endif /* ppc403 */
#if defined(ppc405)
#define exisr 0x0C0 /* DCR: external interrupt status register */
#define exier 0x0C2 /* DCR: external interrupt enable register */
#endif /* ppc405 */
```

In file included from /home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/include/rtems/score/percpu.h:25:0,

```
from ../../../../../../rtems/c/src/lib/libbsp/powerpc/virtex/../../../../bsps/powerpc/shared/exceptions/ppc_exc_async_normal.S:16:
```

```
/home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:228:0: warning: "exisir" redefined
```

```
#define exisir 0x0C0 /* DCR: external interrupt status register */
```

```
/home/joel/rtems-work/rtems-testing/rtems/rtems/cpukit/score/cpu/powerpc/include/rtems/asm.h:224:0: note: this is the location of the previous definition
```

```

```

```
#define exier 0x042 /* DCR: external interrupt enable register */
```

### Comment 1

1. **Joel Sherrill**, Wed, 22 Aug 2018 17:39:34 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **assigned**

### Comment 2

1. **Sebastian Huber**, Wed, 05 Sep 2018 05:41:38 GMT

Some ppc\* defines are RTEMS-specific GCC built-in defines.

### Comment 3

1. **Joel Sherrill**, Sun, 14 Oct 2018 00:52:17 GMT

We discussed removing this BSP on the mailing list. Is the resolution of this ticket to refer to a ticket to remove this BSP before 5.1 and close this as won't fix?

### Comment 4

1. **Sebastian Huber**, Mon, 15 Oct 2018 05:14:44 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **wontfix**
4. **blockedby:** set to **3549**

## 3506 - waf for building RTEMS applications needs updating

### Description

Because there are no native tools in the RTEMS tree anymore, the RTEMS install point will not have a bin/ directory. If the --rtems-tools and --rtems directories are different, the sanity check by `__waf configure__` for `$(rtems)/bin` fails. See examples-v2.

```
+ ./waf configure -v --rtems=/home/joel/rtems-work/bsp-install --rtems-tools=/home/joel/rtems-work/tools/5 --rtems-bsps=powerpc/gemuppc
Setting top to          : /home/joel/rtems-work/examples-v2
Setting out to         : /home/joel/rtems-work/examples-v2/build
RTEMS path is not valid. No bin directory found.
(complete log in /home/joel/rtems-work/examples-v2/build/config.log)
```

**Description**

Add means to declare, define and get custom per-CPU data. The API should cover the APIs defined by the Linux and FreeBSD header files.

**Comment 1**

1. **Sebastian Huber**, Mon, 10 Sep 2018 09:37:07 GMT

In cfc4231d/rtems:

```
score: Add flexible per-CPU data
Update #3507.
```

**Comment 2**

1. **Sebastian Huber**, Mon, 10 Sep 2018 09:38:06 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In d90c813/rtems-docs:

```
c-user: Mention per-processor data
Close #3507.
```

**Comment 3**

1. **Sebastian Huber**, Mon, 10 Sep 2018 10:03:36 GMT

In 1fe1b820/rtems:

```
score: Fix PER_CPU_DATA_GET_BY_OFFSET()
Add uniprocessor version for PER_CPU_DATA_GET_BY_OFFSET(). Fix warnings in uniprocessor configurations.
Update #3507.
```

**Comment 4**

1. **Sebastian Huber**, Mon, 17 Sep 2018 06:58:44 GMT

In aaa6653/rtems:

```
score: Fix PER_CPU_DATA_ITEM_DECLARE()
Fix PER_CPU_DATA_ITEM_DECLARE() for targets with a small-data area.
Update #3507.
```

**Comment 5**

1. **Sebastian Huber**, Wed, 19 Sep 2018 09:58:17 GMT

In 776464a/rtems:

```
score: Allocate per-CPU data only if necessary

The _Workspace_Allocate_aligned() would returns a non-NULL pointer for a zero size allocation request if there is enough memory available.
This conflicts with the size estimate of zero in _Workspace_Space_for_per_CPU_data() if the per-CPU data set is empty.

Update #3507.
```

**Comment 6**

1. **Sebastian Huber**, Wed, 19 Dec 2018 08:50:59 GMT

In 7c19e50/rtems:

```
score: Fix per-CPU data allocation

Allocate the per-CPU data for secondary processors directly from the heap areas before heap initialization and not via
_Workspace_Allocate_aligned(). This avoids dependency on the workspace allocator. It fixes also a problem on some platforms (e.g. QorIQ)
where at this early point in the system initialization the top of the RAM is used by low-level startup code on secondary processors (boot
pages).

Update #3507.
```

**Comment 7**

1. **Sebastian Huber**, Tue, 19 Feb 2019 08:18:30 GMT

In 789b0ca/rtems-docs:

```
c-user: INTERNAL_ERROR_NO_MEMORY_FOR_PER_CPU_DATA
Update #3507.
```

**3508 - Add support for thread to processor pinning**

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3508">https://devel.rtems.org/ticket/3508</a> ( <a href="https://devel.rtems.org/ticket/3508">https://devel.rtems.org/ticket/3508</a> )

**Description**

FreeBSD started to use lock-free data structures (Concurrency Kit) with epoch based reclamation (EBR) in May 2018. The goal of this synchronization approach is to avoid atomic read-modify-write operations in the fast path. The algorithms need highly efficient access to per-processor data. This gives raise to add a new feature to RTEMS: thread to processor pinning. Thread pinning is orthogonal to thread processor affinity and overrules the processor affinity settings of a thread. It is intended for temporary use in short critical sections which allow preemption.

**Comment 1**

1. **Sebastian Huber**, Mon, 10 Sep 2018 09:37:18 GMT

In d8bc0730/rtems:

```
score: Modify _Scheduler_Unblock()
```

In SMP configurations, obtain the scheduler node for the block and unblock operations through the same way via Thread\_Control::Scheduler::Scheduler\_node. This symmetry is important in a follow up patch which introduces thread pinning.

Update #3508.

### Comment 2

1. **Sebastian Huber**, Mon, 10 Sep 2018 09:37:29 GMT

In 7097962/rtems:

```
score: Add thread pin/unpin support
```

Add support to temporarily pin a thread to its current processor. This may be used to access per-processor data structures in critical sections with enabled thread dispatching, e.g. a pinned thread is allowed to block.

Update #3508.

### Comment 3

1. **Sebastian Huber**, Mon, 10 Sep 2018 09:38:15 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 7c58036/rtems-docs:

```
c-user: Mention thread pinning
```

```
Close #3508.
```

**Description**

On Ubuntu 18.04.1 LTS there is no command named Python. I have the following Python commands:

```
python2.7  python3.6  python3.6m-config
python3m-config  python 2.7-config  python3.6-config  python3-config  python3
python3.6m      python3m
```

I am going to symlink python2.7 to python to make it work, but there should be a better solution.

**Description**

Helping others work through the hello world, it is common for their VM images to not have enough disk space for the build to complete. It would be useful if the set-builder could report disk usage of the build/ directory. This information could be fed into the Users Guide.

It is frustrating and a bad experience to watch the build fail 90% of the way through.

I did a sparc tools build and it used 7.9 GB in build/. That probably means you need 12-15GB to have all the sources, rtems, and build RTEMS. Needs to be verified by others and to other architectures.

What do you define as space that needs to be accounted for?

The build tree after each package in a build set has been built? Installed files? Source and patches?

**Comment 5**

1. **Joel Sherrill**, Sun, 16 Sep 2018 00:00:08 GMT

Replying to Chris Johns:

What do you define as space that needs to be accounted for?  
The build tree after each package in a build set has been built? Installed files? Source and patches?

Good questions. The ultimate answer is all of that. :)

The build tree peak is a critical piece of information. I saw people run out of disk space during the gcc/newlib phase. If we knew that, our instructions could give guidance. I did a no clean and was left with 8GB in build for SPARC. That's probably harsh if normally each package's build is cleaned. But SPARC now has more multilibs than I expected but arm and powerpc both have a lot also.

The question is "how much do I need to build the tools for architecture X?" That includes source tarballs, git, patches, peak space for untar'ed, and peak build usage. And ideally we want to give advice that leaves people enough room to clone RTEMS and build it.

How can we get the input to give good advice that avoids folks running out of build space during the "getting started"?

**Comment 6**

1. **Chris Johns**, Sun, 16 Sep 2018 03:35:55 GMT

I have taken a look at implementing this and it is not easy and complex to do so I do not think I will adding this feature.

The prep, build and clean are all part of a shell script that is generated and run and while I could add some du commands to the script to dump the sizes there is no way to capture the output in a way that can be reported.

I feel it is simpler to create a script to wrap the sb-set-builder command with the --no-clean option and then dump the sizes once built. If this is run on a machine with plenty of storage you should be able to get the results to update the user manual.

**Comment 7**

The prep, build and clean are all part of a shell script that is generated and run and while I could add some du commands to the script to dump the sizes there is no way to capture the output in a way that can be reported.

I have taken a further look and it looks like the clean phase of the script is not being used and the RSB is cleaning a build in Python. This makes implementing something possible. I still need to check all the .cfg files to see if this is true.

The issue is any shell variables defined in one phase could be used in another phase and splitting the scripts means the variables or settings will not seen in subsequent phases.

**Comment 8**

1. **Chris Johns**, Thu, 20 Sep 2018 03:20:07 GMT

I am concerned there is another issue which cause the overflow of a VM disk. What is in the 7.9G build directory?

I have a patch I am testing which gives the following output for a rtems-sparc build:

```
Build Sizes: usage: 3.661GB total: 2.412GB (sources: 1.472GB, patches: 6.630MB, installed 955.801MB)
```

The full output is:

```

$ ./source-builder/sb-set-builder --prefix=/opt/work/rtems/5 --log=5-sparc.txt 5/rtems-sparc

In 38fd56c/rtems-source-builder:

```

sb: Monitor the build disk usage. Report the usage, total and various sizes
Track the size of a build of a package in a build set to determine the
maximum amount of disk space used. This can be used as a guide to
documenting how much space a user needs to set aside to build a specific
set of tools. The %clean stage of a build is now split into a separate script.
I do not think this is an issue because I could not find any %clean sections in any build configs we have. In time support for the %clean
section will be removed, the package builder cleans up.

```

Update #3522.

#### **Comment 3**

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:27:46 GMT

In e36ca10/rtems-libbsd:

mDNSResponder: Update to v567

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-567.tar.gz>

Update #3522.

#### **Comment 4**

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:27:54 GMT

In 49ebc73/rtems-libbsd:

mDNSResponder: Update to v576.30.4

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-576.30.4.tar.gz>

Update #3522.

#### **Comment 5**

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:28:03 GMT

In f761b29/rtems-libbsd:

mDNSResponder: Update to v625.41.2

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-625.41.2.tar.gz>

Update #3522.

#### **Comment 6**

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:28:16 GMT

In f01edf1/rtems-libbsd:

mDNSResponder: Update to v765.1.2

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-765.1.2.tar.gz>

Move `mDNS_StartResolveService()` and `mDNS_StopResolveService()` to an RTEMS-specific file (`rtemsbsd/mdns/mDNSResolveService.c`) using the v576.30.4 Implementation. Apple removed These functions without explanation.

Update #3522.

#### Comment 7

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:28:23 GMT

In `fc605b3/rtems-libbsd`:

mDNSResponder: Update to v765.20.4

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-765.20.4.tar.gz>

Update #3522.

#### Comment 8

1. **Sebastian Huber**, Thu, 20 Sep 2018 09:28:31 GMT

In `7d33d36/rtems-libbsd`:

mDNSResponder: Update to v765.30.11

The sources can be obtained via:

<https://opensource.apple.com/tarballs/mDNSResponder/mDNSResponder-765.30.11.tar.gz>

Update #3522.

#### Comment 9

### Description

Import legacy network driver and port it to libbsd.

### Comment 1

1. **Sebastian Huber**, Fri, 21 Sep 2018 08:39:14 GMT

In 860d833/rtems-libbsd:

```
if_ffec_mpc8xx: Import legacy driver from RTEMS
Imported from RTEMS commit 1fe1b820de02c274c2b2b3431340152734ee9fb6 (2018-09-12).
Update #3523.
```

### Comment 2

1. **Sebastian Huber**, Fri, 21 Sep 2018 08:39:21 GMT

In 457b4fc/rtems-libbsd:

```
if_ffec_mpc8xx: Port driver to libbsd
Update #3523.
```

### Comment 3

1. **Sebastian Huber**, Fri, 21 Sep 2018 08:39:29 GMT

In d101ed8/rtems-libbsd:

```
if_ffec_mpc8xx: New MDIO driver support
Update #3523.
```

### Comment 4

1. **Sebastian Huber**, Fri, 21 Sep 2018 08:39:37 GMT

In 1b70957/rtems-libbsd:

```
if_ffec_mpc8xx: Use M_NOWAIT for incoming frames
Update #3523.
```

### Comment 5

1. **Sebastian Huber**, Fri, 21 Sep 2018 08:39:45 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 6103496/rtems-libbsd:

```
if_ffec_mpc8xx: Fix incoming data invalidation
With a write-back cache dirty cache lines may be evicted which could overwrite new data.
Close #3523.
```

#### **Comment 12**

1. **Sebastian Huber**, Fri, 12 Oct 2018 12:16:56 GMT

In 35c533f/rtems-source-builder:

5: Update Newlib

Pick up POSIX header file changes and improved opendir() implementation. This addresses time of check and time of use error conditions (TOCTOU).

Update #3530. Update #3545. Update #3546. Update #3547.

#### **Comment 13**

1. **Sebastian Huber**, Fri, 02 Nov 2018 10:58:42 GMT

In 706802f8/rtems:

ftpd: Make send\_dirline() more robust

Account for large file names.

Update #3530.

#### **Comment 14**

1. **Sebastian Huber**, Fri, 02 Nov 2018 10:58:50 GMT

In 8c3cd1e8/rtems:

ftpd: Deal with too long command lines

Update #3530.

#### **Comment 15**

1. **Sebastian Huber**, Fri, 02 Nov 2018 10:58:58 GMT

In fa0adf36/rtems:

ftpd: Avoid TOCTOU problem

Assume that opendir() returns only non-NULL if we actually open a directory.

Update #3530.

#### **Comment 16**

1. **Joel Sherrill**, Fri, 02 Nov 2018 14:16:10 GMT

Just an FYI that I have been trying to put the URL for the corresponding RTEMS tickets in the Coverity comment for the CID. Not sure it will ever be useful but best to be thorough in case we need it in the future.

#### **Comment 17**

1. **Sebastian Huber**, Thu, 19 Dec 2019 08:20:33 GMT

An up to date Coverity run would be nice to see if all issues are fixed.

#### **Comment 18**

1. **Joel Sherrill**, Thu, 19 Dec 2019 14:49:38 GMT

I just submitted one. Hopefully it will pop out soon.

**Comment 19**

1. **Sebastian Huber**, Wed, 04 Mar 2020 07:22:16 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

I reviewed all CIDs with respect to the FTP server. I think further improvements require some modelling in Coverity so remove the taint from data.

---

**Description**

Add programs to report default attributes for various POSIX objects including barriers, condition variables, message queues, mutexes, pthreads, and rwlocks. The programs should be able to run on any POSIX host and report what it uses for object attribute defaults.

Object attribute defaults are unspecified by POSIX. The portable practice is to explicitly set every attribute. These programs allow one to probe and compare various operating system implementations.

**Comment 1**

1. **Joel Sherrill**, Wed, 26 Sep 2018 14:43:47 GMT

<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

The RSB source only download is host specific. Configurations for builds can restrict sources or patches by host to work around specific host issues. Currently a source only download is host specific because the host check is based on the host the RSB is being run on.

The release process uses source only downloading to create the complete set of sources in a release. This issue means some host specific source may not be captured.

I am yet to figure how to resolve this issue because the download logic is driven by the configuration scripts and this type of logic exists in configuration files such as `rtms-gcc-7.3.0-newlib-d13c84eb07e35984bf7a974cd786a6cdac29e6b9.cfg`:

```
%if %{_build_os} == freebsd || %{_build_os} == darwin
%patch add gcc --rsb-file=freebsd-libgcc-sed-fix.patch -p0 https://gcc.gnu.org/bugzilla/attachment.cgi?id=41380
%hash sha256 freebsd-libgcc-sed-fix.patch 8a11bd619c2e5546668e328da00b387d02395c1e8ff4a99225152387a1e60a4
%endif
```

The simpler construct in `rtms-tools-common-1.cfg` of:

```
%ifos win32 mingw ming32
  SB_BUILD_ROOT_WAF=$SB_BUILD_ROOT$(echo %{_prefix} | cut -c 1-2)
%else
  SB_BUILD_ROOT_WAF=$SB_BUILD_ROOT
%endif
```

is easier to manage as the `%ifos` logic can always return True however the `%else` path also need to be followed and this could break the logic in a configuration file. Yes, the example is not about sources or patches however it shows what could be used.

I do not think creating a new variable such as `%(download_only)` and adding logic to the configuration file will help, for example:

```
%if %{download_only} || %{_build_os} == freebsd || %{_build_os} == darwin
%patch add gcc foobar-bsd.patch
%else
%patch add gcc foobar-gnu.patch
%endif
```

We require the logic to follow the `%if` True path and the `%else` path.

**Description**

The `rtms_task_delete(RTEMS_SELF)` function does not return. In order to aid compilers and static analysis tools provide an `rtms_task_exit()` function which can be specified as a no return function.

```
void rtems_task_exit(void) RTEMS_NO_RETURN;
```

This is similar to the POSIX equivalent.

```
void pthread_exit (void * value ptr) dead2;
```

**Description**

Upstream python does not create a python command any more and creates python2 and python3. Distributions and operating systems are starting to ship without the python command.

The RSB and RTEMS Tools python commands need to be updated and tested so they run on Python2 and Python3 and support added to use the available commands.

**Comment 1**

1. **Sebastian Huber**, Thu, 04 Oct 2018 05:55:01 GMT

Do we have a host platform without python3 support? If not, then I would simply use python3 and stop using python/python2.

**Comment 2**

1. **Chris Johns**, Thu, 04 Oct 2018 06:30:58 GMT

Replying to Sebastian Huber:

Do we have a host platform without python3 support? If not, then I would simply use python3 and stop using python/python2.

In time we will need to switch to python3 however I am not in a position to go over all the code and do this. I think it also makes things difficult or at least more complicated for users with established environment to get such a hard error. We should consider a softer landing if this is possible. I am considering moving to a shell script that checks for python2 then python3 and if not found outputs a user friendly error message. The existing code is moved into the python directories run from the python command line. Once we are happy with python3 we can switch the order we check. A script would let us add an environment variable we could use to force a version to test with without needing symlinks etc.

**Comment 3**

1. **Sebastian Huber**, Thu, 04 Oct 2018 06:40:08 GMT

I think we already have a fairly good Python 3 support, since on a recent msys2 there is no Python 2 available?

One issue is probably the RTEMS Tester. We had some difficulties with the TFTP Server:

<https://github.com/msoulier/tftpy/pull/94>

The latest tftpy seems to work only with Python 3.5, but not 3.4.

**Comment 4**

1. **Chris Johns**, Thu, 04 Oct 2018 07:21:09 GMT

Replying to Sebastian Huber:

I think we already have a fairly good Python 3 support, since on a recent msys2 there is no Python 2 available?

I agree we seem to be in good shape so this is not about our code or even the developer set ups. I am concerned about user set ups and considering the effect on them.

Also, will there be a python4, if so do we go through all this again?

One issue is probably the RTEMS Tester. We had some difficulties with the TFTP Server:

<https://github.com/msoulier/tftpy/pull/94>

The latest tftpy seems to work only with Python 3.5, but not 3.4.

Hmmm.

In e058db0/rtems-tools:

```
python: Provide support to select a valid python version.
Update imports after wrapping the code. Fix python3 issues. Fix config path issues for in repo and install runs.
Closes #3537
```

**Comment 11**

1. **Chris Johns**, Mon, 17 Dec 2018 23:59:24 GMT
2. **status**: changed from **closed** to **reopened**
3. **resolution**: **fixed** deleted

Support for python-config needs to be added. FreeBSD 11.2-RELEASE-p5 has:

```
$ find /usr/local/ -name Python.h
/usr/local/include/python3.6m/Python.h
```

Notice the m in the path. The python-config command gives:

```
$ python3-config --includes
-I/usr/local/include/python3.6m -I/usr/local/include/python3.6m
```

The RSB should detect and use a suitable the python-config command to find the include paths and to use those paths before looks at default paths.

**Description**

This is a POSIX flag. Make sure its use causes no open failure.

**Comment 1**

1. **Sebastian Huber**, Fri, 12 Oct 2018 12:16:56 GMT

In 35c533f/rtems-source-builder:

5: Update Newlib

Pick up POSIX header file changes and improved opendir() implementation. This addresses time of check and time of use error conditions (TOCTOU).

Update #3530. Update #3545. Update #3546. Update #3547.

**Comment 2**

1. **Sebastian Huber**, Tue, 23 Oct 2018 14:02:29 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 3825926/rtems:

Support O\_CLOEXEC open() flag

Make sure this flag is ignored and does not prevent a successful open.

Close #3547.

## 3549 - Obsolete powerpc/virtex BSP

### Description

An RTEMS application default configuration is contained in cpukit/libmisc/dummy/default-configuration.c. This default configuration is contained in librtemscpu.a. This has at least two problems:

- Application configuration errors may pull in the default configuration which in turn leads to multiply define symbols error. This is quite confusing. You have to consult the linker map file to figure out what caused the pull in of the default configurations. You need to know what a linker map file is and how you generate it with your build system. This is not very user friendly.
- It prevents the use of default configuration items for each subsystem in librtemscpu.a. This can be used to reduce the size of the configuration itself.

Proposed change: Move the default configuration to a separate library, e.g. librtemsdefaultconfig.a.

**Comment 1**

1. **Sebastian Huber**, Tue, 23 Oct 2018 14:12:55 GMT

In 1b89636/rtems\_waf:

Avoid default RTEMS application configuration

Use a test body with a proper RTEMS application configuration to avoid a dependency on the default configuration. Do not include directly since this header file is an implementation detail.

Update #3551.

**Comment 2**

1. **Sebastian Huber**, Thu, 25 Oct 2018 05:52:50 GMT

In 2ce13cf/rtems-libbsd:

Update rtems\_waf

Update #3551.

**Comment 3**

**Description**

I had no idea but this had gotten removed in the last upgrade I've re-added it.

This makes a few changes to the navigation:

- "New Ticket" now goes to /wiki/NewTicket
- There is a new button "New Ticket (direct)" in the upper right for those who want to directly go to creating a ticket.
- "My Tickets" used to go to a query but now goes to the new wiki:MyTickets page.

These changes existed years ago when NavAdd? was working I opened this ticket in case anyone has complaints about it coming back if not I will close it in a few days.

**Comment 1**

1. **Gedare Bloom**, Sat, 20 Oct 2018 18:43:40 GMT

Seems fine to me.

**Comment 2**

1. **Amar Takhar**, Sun, 21 Oct 2018 03:35:43 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

Based on feedback I'm closing this early it can always be re-opened and if required.

**Description**

When we first went to trac we had restrictions on the 'owner' to developers only. When track was upgraded this broke completely but all the code to handle this was already in place.

I took the time to fix it today so we have dropdowns again.

I've created this ticket to see if anyone has an issue with this should we keep it? Drop it? I know it's been years but it was our original choice.

See any ticket the 'reassign to' and on a new ticket the 'assign to' is now a dropdown. These are based on trac permissions so we can always add more if we need it but it really should be restricted to having a project member be the owner so we can ensure tickets are closed and sorted properly.

**Comment 1**

1. **Joel Sherrill**, Sat, 20 Oct 2018 18:45:16 GMT

I'm not sure what this changes so don't have an opinion yet. If it sucks, I am sure someone will complain. Lol

**Comment 2**

1. **Gedare Bloom**, Sat, 20 Oct 2018 18:45:41 GMT

With this we lose the ability to set the owner to the "Needs Funding" category to indicate that no developer is willing to be responsible for it.

**Comment 3**

1. **Amar Takhar**, Sat, 20 Oct 2018 19:01:53 GMT

Replying to Gedare:

With this we lose the ability to set the owner to the "Needs Funding" category to indicate that no developer is willing to be responsible for it.

Thank you I have just fixed this.

**Comment 4**

1. **Amar Takhar**, Sat, 20 Oct 2018 21:46:33 GMT

Replying to Joel Sherrill:

I'm not sure what this changes so don't have an opinion yet. If it sucks, I am sure someone will complain. Lol

Look at these two pages:

<https://devel.rtems.org/newticket> <https://devel.rtems.org/ticket/3560>

Check the "assign" and "assign to" or "reassign-to" fields it is now a restricted dropdown. It used to be like this years ago.

**Comment 5**

1. **Amar Takhar**, Sat, 20 Oct 2018 22:58:08 GMT

2. **blockedby**: set to **2933**

**Comment 6**

1. **Amar Takhar**, Sun, 21 Oct 2018 03:36:03 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

Based on feedback I am closing this it can always be re-opened if there are any issues.

**3561 - Migrate to CommitTicketUpdater**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3561">https://devel.rtems.org/ticket/3561</a> ( <a href="https://devel.rtems.org/ticket/3561">https://devel.rtems.org/ticket/3561</a> )

**Description**

The old script was ancient and outdated. I've now killed it off and moved to the internal system described here:

<https://trac.edgewall.org/wiki/CommitTicketUpdater>

This should handle all scenarios if it does not please let me know. I will leave this ticket open for a week or so.

**Comment 1**

1. **Chris Johns**, Sun, 21 Oct 2018 21:15:11 GMT

Should <https://devel.rtems.org/wiki/Developer/Git/Committers> be updated with something about the triggers, even a link to Trac doco?

#### Comment 2

1. **Amar Takhar**, Sun, 21 Oct 2018 21:28:55 GMT

Replying to Chris Johns:

Should <https://devel.rtems.org/wiki/Developer/Git/Committers> be updated with something about the triggers, even a link to Trac doco?

Great idea how is this? [wiki:Developer/Git/Committers#TicketUpdates](https://devel.rtems.org/wiki/Developer/Git/Committers#TicketUpdates)

#### Comment 3

1. **Chris Johns**, Tue, 23 Oct 2018 06:23:25 GMT

2. **priority**: changed from **normal** to **highest**

3. **severity**: changed from **normal** to **critical**

Git pushes are not updating \_\_Trac\_\_ up as report by Sebastian in an email..

[https://git.rtems.org/rtems\\_waf/commit/?id=1b896361d302aeda0145af90972aea863e28898f](https://git.rtems.org/rtems_waf/commit/?id=1b896361d302aeda0145af90972aea863e28898f)

It didn't update the ticket:

<https://devel.rtems.org/ticket/3551>

It doesn't show up in the Git view in Trac:

[https://devel.rtems.org/log/rtems\\_waf](https://devel.rtems.org/log/rtems_waf)

The common git hook `/data/support/git-support/hooks/post-receive-3` for \_\_Trac\_\_ is commented out:

```
stat -x /data/support/git-support/hooks/post-receive-3 | grep Modify
Modify: Sun Oct 21 00:09:04 2018
```

I suggest we manually update all tickets until this is resolved. I am not sure why this has been done.

#### Comment 4

1. **Amar Takhar**, Tue, 23 Oct 2018 13:48:36 GMT

Replying to Chris Johns:

I suggest we manually update all tickets until this is resolved. I am not sure why this has been done.

It was done due to the numerous complaints about tickets not updating especially with multiple commits.

The way we were doing has been unsupported for over 4 years now it's broken and hacky this change was inevitable I'll look into it I can manually force trac to update the tickets as required so we won't lose anything.

#### Comment 5

1. **Amar Takhar**, Tue, 23 Oct 2018 14:08:21 GMT

I forced an update and changed how I was doing the update we'll see if it works this way.

#### Comment 6

1. **Chris Johns**, Tue, 23 Oct 2018 21:46:07 GMT

Replying to Amar Takhar:

I forced an update and changed how I was doing the update we'll see if it works this way.

Could you please explain the change and is there anything we need to do, I am confused if we still need to manually handle ticket updates?

#### Comment 7

1. **Sebastian Huber**, Wed, 24 Oct 2018 05:05:35 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

Thanks for fixing this. The automatic update worked with this commit:

[\[05a5366469ee4ee7776f70dceea631ea57a63b19/rtems-docs\]](https://git.rtems.org/rtems-waf/commit/05a5366469ee4ee7776f70dceea631ea57a63b19/rtems-docs)

#### Comment 8

1. **Sebastian Huber**, Fri, 26 Oct 2018 17:17:54 GMT

2. **status**: changed from **closed** to **reopened**

3. **resolution**: **fixed** deleted

I checked in four commits at once:

<https://git.rtems.org/rtems/log/?qt=range&q=01595a4f321ad890270a3bc3e21c98ba51163562..24b58072ff1ac5a1691374aa139807bf866bf01a>

Only the last commit updated the ticket system. This one for example didn't update the corresponding ticket:

<https://git.rtems.org/rtems/commit?id=4b801acc2003073c50b381435896a29f29e51a3c>

<https://devel.rtems.org/ticket/2514#comment:41>

#### Comment 9

1. **Amar Takhar**, Thu, 15 Nov 2018 02:18:10 GMT

While working on Buildbot I discovered what was causing this issue. The changeset updating in trac wasn't properly iterating over every commit in a push just the parent.

I have changed it now hopefully it should catch everything now. Let me know if it doesn't thanks.

#### Comment 10

1. **Sebastian Huber**, Fri, 16 Nov 2018 06:25:22 GMT

I committed this to rtems-docs:

<https://git.rtems.org/rtems-docs/commit?id=e49e4056c7d4b7fa35881cfc3522c6e038940e84>

I received this from Git:

```
git push origin e49e4056c7d4b7fa35881cfc3522c6e038940e84:master
Counting objects: 4, done.
Delta compression using up to 12 threads.
Compressing objects: 100% (4/4), done.

 1a704cd..e49e405  e49e4056c7d4b7fa35881cfc3522c6e038940e84 -> master
```

The corresponding tickets were not updated, e.g. #3584.

#### Comment 11

1. **Amar Takhar**, Fri, 16 Nov 2018 23:07:44 GMT

I reworked a lot of these scripts to make it much easier to modify going forward as a few more will be added. I left some old variables in one of them that were statically set to 'rtems'.

This should fix this problem please let me know if it does not.

#### Comment 12

1. **Amar Takhar**, Wed, 21 Nov 2018 23:14:33 GMT

2. **status:** changed from **reopened** to **closed**

3. **resolution:** set to **fixed**

I have not heard any complaints and multiple references should work now as the bug was extremely clear. If it's still an issue please re-open.

### 3562 - Use a short paths for the RSB temporary build path on Windows

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3562">https://devel.rtems.org/ticket/3562</a> ( <a href="https://devel.rtems.org/ticket/3562">https://devel.rtems.org/ticket/3562</a> )
<b>Id</b>	3562

<b>Modified</b>	5 November 2018 04:47:51
<b>Owner</b>	Chris Johns
<b>Type</b>	defect
<b>Component</b>	tool/rsb
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

The %[\_tmproot] path is currently based on a BuildRoot setting in the build configuration files. The line is:

```
BuildRoot: %[_tmppath]/%[_name]-root-%[_id u] -n
```

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

This is for a shared \$TEMP path plus the name is not shortened so on Windows these paths become long. Remove the BuildRoot from all configuration files and add support for a shortened temporary path. Windows needs short paths due to the 256 max. path length issue.

**Comment 1**

1. **Chris Johns**, Mon, 22 Oct 2018 00:58:42 GMT
2. **component:** changed from **admin** to **tool/rsb**

**Comment 2**

1. **Chris Johns**, Mon, 05 Nov 2018 04:47:51 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 96c414c/rtems-source-builder:

windows: Remove BuildRoot? from all configs, add a short tmp path.

Closes #3562.

**Description**

The current waf version included in rtems-tools is waf 1.9.9 (389f3f3b289f6b835a21ad4e128076cdb463d34d)

it crashes when executed with python3. The current version of waf is 2.0.12 and resolves this issue.

**Description**

Cygwin no longer has libtermcap. gdb/sim/erc32 needs a patch to find libncurses. Upstream gdb patch already merged.

<https://sourceware.org/git/gitweb.cgi?p=binutils-gdb.git;a=commitdiff;h=c1230d1bab8e36e1aa40f3bbadcef9b5d9ddc041>

This ticket is just to contain a patch that applies cleanly to gdb 8.0.1 and to track adding that patch to the RSB.

**Attachments:**

**Description**

We already use GCC in-tree libraries for MPFR, MPC, GMP and zlib. Use them also for CLoog and ISL. This helps to ensure that the same target code is generated across host systems. It also helps to avoid GCC build issues in case future versions of ISL and CLoog available on the host system are incompatible to the GCC version picked up by the RSB for RTEMS.

**Comment 1**

1. **Sebastian Huber**, Mon, 05 Nov 2018 07:12:29 GMT

Since GCC 5 the CLoog library is no longer necessary.

**Comment 2**

1. **Sebastian Huber**, Tue, 06 Nov 2018 09:50:16 GMT

In 509dfbd/rtems-source-builder:

```
Support in-tree CLoog and ISL libraries for GCC

---

#### Description

The standard C/POSIX functions malloc() and calloc() set errno in case of an error. A dependency to errno pulls in getreent() which pulls in a lot of data structures and functions. This is an issue in low level code especially in the area of a basic board support package initialization and device drivers.

Provide rtems\_malloc() and rtems\_calloc() functions declared in which do the same as the corresponding C/POSIX functions except setting errno.

The posix\_memalign() and aligned\_alloc() functions do not have this issue with the errno.

#### Comment 1

1. **Sebastian Huber**, Mon, 12 Nov 2018 14:43:46 GMT

In c1f3c2b8/rtems:

```
score: Add and use malloc() family attributes
```

In 70928bc9/rtems:

```
sparc64: Remove use of proc_ptr
Update #3585.
```

#### **Comment 20**

1. **Sebastian Huber**, Mon, 12 Nov 2018 14:43:38 GMT

In 4539e307/rtems:

```
x86_64: Remove use of proc_ptr
Update #3585.
```

#### **Comment 21**

1. **Joel Sherrill**, Thu, 12 Dec 2019 23:18:18 GMT

This appears to have been resolved last year. There are no references to `proc_ptr` beyond the following:

b15b2881 cpukit/include/rtems/score/basedefs.h	(Sebastian Huber	2018-11-08 06:25:06 +0100 564)	typedef void * proc_ptr
RTEMS DEPRECA			

#### **Comment 22**

1. **Joel Sherrill**, Thu, 12 Dec 2019 23:18:26 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

#### **Comment 23**

1. **Sebastian Huber**, Wed, 23 Jun 2021 07:16:03 GMT
2. **keywords**: **qualification** added

## **3587 - Deprecate rtems\_context**

<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

#### Description

The header file still exposes a lot of implementation details via the definition of internal data structures, e.g. the `*_Control` structures of the API objects. They are only necessary for the application configuration. Move them to separate header files. Currently we have:

- 
- 

Use

-

for this new header file.

Potential new header files are:

- rtems/extensiondata.h
- rtems/rtems/asrdata.h
- rtems/rtems/barrierdata.h
- rtems/rtems/dpmemdata.h
- rtems/rtems/eventdata.h
- rtems/rtems/messagedata.h
- rtems/rtems/partdata.h
- rtems/rtems/ratemondata.h
- rtems/rtems/regiondata.h
- rtems/rtems/semdata.h
- rtems/rtems/tasksdata.h
- rtems/rtems/timerdata.h

#### Description

The m32c architecture port is incomplete, e.g. important features such as interrupt support are missing. It never run on real hardware. The tools are out dated and unmaintained. There are no known users:

<https://lists.rtems.org/pipermail/users/2018-January/031991.html>

**Description**

Stafford Horne emailed me to say that he just pushed the or1k gcc to the FSF repository. We can now switch from gcc 4.9.3 to a hash from the gcc master. I was testing periodically from his repository before the merge so it should be working.

I am marking this as a blocker but expect it to be easy and quick to resolve. We don't want to release using gcc 4.9.3 for any target.

**Description**

Cloned from #3527:

By default GCC puts uninitialized global variables into a common section in the ELF file. When attempting to load the resulting ELF file at runtime using `dlopen()`, these global symbols are not resolved as expected.

The RTL reports unresolved symbols, and runtime code that take the address of the global get NULL instead.

This is reproducible using the `libtests/dl01` example by adding a global variable to the module code. I will attach a patch that replicates the issue.

Test platform is QEMU using pc686 BSP, RTEMS source version 4.11.3 (latest on 4.11 git branch as of this writing)

#### Comment 1

1. **Chris Johns**, Tue, 13 Nov 2018 06:14:16 GMT
2. **owner:** set to **Chris Johns**
3. **status:** changed from **new** to **accepted**

#### Comment 2

1. **Chris Johns**, Thu, 22 Nov 2018 02:17:39 GMT

In 803eac9/rtems:

```
libdl: Manage the allocation of common uninitialised variables.

The use of separate text and data results in uninitialised variables being placed in the common section. There is no section in ELF for the
common variables so the loader needs to create the section and allocate the variables in that section. This patch does that.

The patch adds a second pass over the symbols.

The issue can also be seen as a section 65522 error.

Updates #3604
```

<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	major
<b>Keywords</b>	RTL dlopen dlclose
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### **Description**

Cloned from #3195:

Consider the following example using ELF `.o` files from compiled source files `module-0.c` and `module-1.c` from ticket #3194:

`module-0.o` is loaded using `dlopen()` with no code or data dependencies.

`module-1.o` is loaded using `dlopen()` with both code and data dependencies on `module-0` which are resolved by RTL.

The RTL function `dlclose()` returns no error when `module-0` is unloaded, when it should return an error and not unload `module-0`. This becomes quite dangerous because a subsequent call to `module1Function1()` in the currently-loaded `module-1.o`, which accesses `shared_resource_0[ ]` and calls `module0Function0()`, will result in an unexpected trap on qemu or the call succeeding with the correct return value on hardware when it should not.

The erroneous successful unload() of `module-0` aside, it appears as though the resources are not actually deleted and I believe this ticket is related to tickets #3192 and #3194.

Architecture is `sparc-leon3` using both the RTEMS 4.11.1 public release and `rtems master @f043b9bd3bf25626fb1a311dd7fa041eacc68adc` with `rtems-source-builder @55f2d69e9b67cde23d61375fa34ef5b0f04a985d`.

Execution environments are `qemu-system-sparc` and `LEON3 UT700` hardware.

#### Comment 1

1. **Chris Johns**, Thu, 22 Nov 2018 02:17:31 GMT

In 03139d5b/rtems:

libdl: Add object file dependencies to track references

Tracking references lets us manage when an object file can be unloaded. If an object file has references to it, it cannot be unloaded.

Modules that depend on each other cannot be unloaded.

Updates #3605

### **Comment 2**

1. **Chris Johns**, Thu, 12 Dec 2019 17:08:23 GMT

Kevin, is this fixed? It would be nice if we can close this ticket.

### **Comment 3**

1. **Chris Johns**, Thu, 12 Dec 2019 18:19:17 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

The email bounced. I will close this.

## **3609 - Update Spike Version in RSB (RISC-V simulator)**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3609">https://devel.rtems.org/ticket/3609</a> ( <a href="https://devel.rtems.org/ticket/3609">https://devel.rtems.org/ticket/3609</a> )

<b>Blocking</b>	
<b>Blocked by</b>	

### **Description**

The spike version in the RSB does not run the test executables. Per Hesham, we should be using a newer version from git.

This is one of the two alternative simulators to run RISC-V executables. At the moment, neither Spike nor Qemu are usable for the RISC-V as present in the RSB.

### **Comment 1**

1. **Hesham Almatary**, Fri, 16 Nov 2018 09:43:42 GMT

RSB should already build an updated version of Spike as of this commit:<https://github.com/RTEMS/rtems-source-builder/commit/693e6b518d1710793096cdb11f806d9e511a8972>

Do you have any issues running RTEMS with it?

### **Comment 2**

1. **Sebastian Huber**, Thu, 19 Dec 2019 11:19:28 GMT

Is this issue fixed?

### **Comment 3**

1. **Joel Sherrill**, Thu, 19 Dec 2019 14:05:20 GMT

The RSB appears to be updated based on this build list result from my build this week.

<https://lists.rtems.org/pipermail/build/2019-December/009507.html>

But... none of the RISC-V BSPs ran correctly on Spike so there is something wrong still:

<https://lists.rtems.org/pipermail/build/2019-December/009509.html>

Could be Spike but more easily the rtems-tools configuration for the execution of the simulator. Does it work for you Hesham?

### **Comment 4**

1. **Joel Sherrill**, Wed, 01 Apr 2020 23:21:54 GMT

2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

I updated the RSB to have a functional Spike with a git version. Results have been posted to build@

#### **Description**

The new CommitTicketUpdater? does not process commits in order. For example see:

<https://devel.rtems.org/ticket/3598#comment:40> <https://devel.rtems.org/ticket/3598#comment:41>

Compare with Git commit order:

<https://git.rtems.org/rtems/log/?id=ea55ea84eaf1b3dab72d7a7a6578f0dc59e55396&qt=range&q=1947449a5d6f01a44ccc61eda3e78ef7e06da952..5fc727fe77a632f9df38161a8474007dab020608>

#### **Comment 1**

1. **Amar Takhar**, Wed, 05 Dec 2018 03:33:42 GMT

Hmm, this is the order that git-rev gives it to the script. I'll play around and try to figure out.

Since there are only two commits I can't tell if it's simply reversed I'd need at least 4 multiple times to see if I can simply reverse the order to fix this.

#### **Comment 2**

1. **Chris Johns**, Wed, 05 Dec 2018 03:39:39 GMT

Why not create a test repo as a personal repo and add the hooks for testing?

#### Comment 3

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:36:46 GMT

I pushed at least seven commits today in one rush:

<https://devel.rtems.org/ticket/3621>

They show up in reverse order.

#### Comment 4

1. **Amar Takhar**, Fri, 07 Dec 2018 13:38:34 GMT

Okay great thanks all I need to do is reverse the order of the commits fed into the updater. I'll do that shortly.

#### Comment 5

1. **Amar Takhar**, Fri, 07 Dec 2018 13:41:28 GMT

Replying to Chris Johns:

Why not create a test repo as a personal repo and add the hooks for testing?

Because we use quite a few scripts that do unique things for RTEMS infrastructure. It would be a lot of work to get the same environment running elsewhere for a check that can be done the next time 4 commits are pushed at the same time. Outside of aesthetics the tickets are still being updated. I'm not sure where the offending area is but now I think I know we'll see.

#### Comment 6

1. **Amar Takhar**, Fri, 07 Dec 2018 13:45:39 GMT

Since this is never been a problem before I didn't notice that git rev-list by default shows reverse chronological order. I added --reverse to the commandline hopefully that fixes this issue.

Please let me know if this fixes the issue.

#### Comment 7

1. **Sebastian Huber**, Fri, 14 Dec 2018 06:06:26 GMT

2. **milestone**: changed from **Indefinite** to **5.1**

Thanks, it works now:

#### Description

Statically initialize the object information structures to make the configuration easier to review and simplify the debugging.

The workspace size estimate generated by looks currently like this:

```
const rtems_configuration_table Configuration = { ( ( ( (ssize_t) (((((1 +
0) != 0 ? 1 : 0) * ((Objects_Maximum) ((1 + 0) & ~0x80000000U))) *
(sizeof(Configuration_Thread_control)) != 0 ? 1 : 0) * (((((1 + 0) != 0 ? 1 :
0) * ((Objects_Maximum) ((1 + 0) & ~0x80000000U))) *
(sizeof(Configuration_Thread_control)) + (2 * sizeof(uintptr_t) +
(sizeof(Heap_Protection_block_begin) + sizeof(Heap_Protection_block_end)))) +
(((sizeof(Heap_Block) + (8) - 1) - ((sizeof(Heap_Block) + (8) - 1) % (8))) -
1) - (((((1 + 0) != 0 ? 1 : 0) * ((Objects_Maximum) ((1 + 0) & ~0x80000000U)))
* (sizeof(Configuration_Thread_control)) + (2 * sizeof(uintptr_t) +
(sizeof(Heap_Protection_block_begin) + sizeof(Heap_Protection_block_end)))) +
(((sizeof(Heap_Block) + (8) - 1) - ((sizeof(Heap_Block) + (8) - 1) % (8)))
```

[more than 500 similar lines]

```
1) - (((sizeof(Configuration_Initial_Extensions) /
sizeof(Configuration_Initial_Extensions)[0]) *
sizeof(User_extensions_Switch_control) + (2 * sizeof(uintptr_t) +
(sizeof(Heap_Protection_block_begin) + sizeof(Heap_Protection_block_end)))) +
(((sizeof(Heap_Block) + (8) - 1) - ((sizeof(Heap_Block) + (8) - 1) % (8))) -

(8) - 1) - ((2 * sizeof(uintptr_t) + (sizeof(Heap_Protection_block_begin) +
sizeof(Heap_Protection_block_end)))) + (8) - 1) % (8)) ,
```

The object controls reside on the heap even for fixed object count configuration. Using a statically allocated array makes it easier to find the objects during debugging.

#### Comment 1

1. **Chris Johns**, Tue, 27 Nov 2018 00:53:30 GMT

Replying to Sebastian Huber:

The object controls reside on the heap even for fixed object count configuration. Using a statically allocated array makes it easier to find the objects during debugging.

It is not clear me to what the requirements are these change are being based on? Is there some overriding push for everything to be static tables every where.

Static tables for initialisation do solve some issues such as audit-able configuration control but are there other use cases where this may not be a good fit. I cannot tell. For example statically inflexible kernel initialisation and libdl do not sit well together. The demands on the kernel configuration from the loadable code can vary and does and if you consider libdl as a means to produce "golden images" having the ability to vary the configuration is important. I have built systems where the bootloader loads the kernel configuration data and then loads the application. Can this still be done?

#### Comment 2

1. **Sebastian Huber**, Tue, 27 Nov 2018 06:00:08 GMT

You can still do whatever you want after the system is initialized. I just want to get rid of the workspace allocations used during the system startup and instead use storage allocated by the linker.

#### Comment 3

1. **Chris Johns**, Tue, 27 Nov 2018 06:05:25 GMT

Great and thank you.

#### Comment 4

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:28 GMT

In f70079c/rtems:

```
score: Remove Objects_Information::the_api
Remove Objects_Information::the_class. This information is already contained in Objects_Information::maximum_id.
Update #3621.
```

#### Comment 5

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:31 GMT

In 1c2d178/rtems:

```
score: Remove Objects_Information::maximum
This information is already present in Objects_Information::maximum_id. Add and use _Objects_Get_maximum_index().
Update #3621.
```

#### Comment 6

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:35 GMT

In 3899bc1a/rtems:

```
score: Optimize object lookup
Use the maximum ID for the ID to object translation. Using the maximum ID gets rid of an additional load from the object information in
```

`_Objects_Get()`. In addition, object lookups fail for every ID in case the object information is cleared to zero. This makes it a bit more robust during system startup (see new tests in `spconfig02`).

The local table no longer needs a NULL pointer entry at array index zero. Adjust all the object iteration loops accordingly.

Remove `Objects_Information::minimum_id` since it contains only redundant information. Add `_Objects_Get_minimum_id()` to get the minimum ID.

Update #3621.

### Comment 7

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:38 GMT

In `359a3a3/rtems`:

score: Rename `Objects_Information::allocation_size`

Rename `Objects_Information::allocation_size` in `Objects_Information::objects_per_block`. Adjust integer types in `_Objects_Shrink_information()` and `_Objects_Free()`.

Update #3621.

### Comment 8

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:41 GMT

In `0da9d80/rtems`:

score: Rename `Objects_Information::size`

Rename `Objects_Information::size` to `Objects_Information::object_size`. Change its type from `size_t` to `uint16_t` and move it to reduce the size of `Objects_Information`.

Update #3621.

### Comment 9

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:44 GMT

In `9c9c6a9/rtems`:

score: Remove `Objects_Information::is_string`

Use `Objects_Information::name_length` to store this information.

Update #3621.

### Comment 10

1. **Sebastian Huber**, Fri, 07 Dec 2018 13:33:48 GMT

In `d6e3473/rtems`:

score: Remove dead code

Update #3621.

### Comment 11

1. **Sebastian Huber**, Fri, 14 Dec 2018 06:04:01 GMT

In `8b0e752/rtems`:

score: Remove `Objects_Information::auto_extend`

Use `Objects_Information::objects_per_block` to provide this information. Add and use `_Objects_Is_auto_extend()`.

Update #3621.

### Comment 12

1. **Sebastian Huber**, Fri, 14 Dec 2018 06:04:05 GMT

In `0f5b2c09/rtems`:

rtems: Use object information to get config max

Use functions instead of macros. Add missing `rtems_configuration_get_maximum_*` functions.

Update #3621.

**Comment 13**

1. **Sebastian Huber**, Fri, 14 Dec 2018 06:04:08 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 21275b58/rtems:

score: Static Objects\_Information initialization

Statically allocate the objects information together with the initial set of objects either via . Provide default object informations with zero objects via librtmscpu.a. This greatly simplifies the workspace size estimate. RTEMS applications which do not use the unlimited objects option are easier to debug since all objects reside now in statically allocated objects of the right types.

Close #3621.

**Comment 14**

1. **Sebastian Huber**, Thu, 02 Jan 2020 08:49:12 GMT

In a320aedd/rtems:

score: Fix objects node initialization

The objects node is statically initialized to one. Clear the node field before it is set.

Update #3621.

<b>Blocking</b>	
<b>Blocked by</b>	

### Description

Cloned from #3195:

Consider the following example using ELF .o files from compiled source files module-0.c and module-1.c from ticket #3194:

module-0.o is loaded using dlopen() with no code or data dependencies.

module-1.o is loaded using dlopen() with both code and data dependencies on module-0 which are resolved by RTL.

The RTL function dlclose() returns no error when module-0 is unloaded, when it should return an error and not unload module-0. This becomes quite dangerous because a subsequent call to module1Function1() in the currently-loaded module-1.o, which accesses shared\_resource\_0[] and calls module0Function0(), will result in an unexpected trap on qemu or the call succeeding with the correct return value on hardware when it should not.

The erroneous successful unload() of module-0 aside, it appears as though the resources are not actually deleted and I believe this ticket is related to tickets #3192 and #3194.

closes #3626.

### 3629 - Add RSB reporting section to the documentation.

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3629">https://devel.rtems.org/ticket/3629</a> ( <a href="https://devel.rtems.org/ticket/3629">https://devel.rtems.org/ticket/3629</a> )

#### Description

As reported in this email <https://lists.rtems.org/pipermail/users/2018-November/032802.html>:

"I could imagine that the GCC 6.3.0 of the TASTE VM isn't suitable to build RTEMS toolchain with RTEMS source builder & kernel masters but I can't find information which of all those config files of RSB I have to use for a successful build (targets: ARM, x86-64). This is pretty frustrating and very disappointing. There are so many variables which are not exactly documented, at least for the current version of RSB/kernel."

there is no documented way to get a configuration report of an RSB configuration. The documentation needs to be updated to show how this can be done. For example:

```
$ ./source-builder/sb-reports 5/rtems-sparc
$ less 5-rtems-sparc.txt
```

#### Comment 1

1. **Gedare Bloom**, Sun, 05 Apr 2020 20:56:51 GMT

#### Description

Hi,

I am following

<https://docs.rtems.org/branches/master/user/hosts/windows.html>

to build a Windows Host toolchain on Linux Mint 19. However, the build of rtems-tools fails with: "unknown host: i686-w64-mingw32".

I can track the issue down to the function "check\_options" in the wscript. The function expects a host called "mingw32" or "x86\_64-w64-mingw32". My naive solution would be to simply extend the list with "i686-w64-mingw32", but I've just started with RTEMS so I might have chosen a wrong path in an earlier step.

**Comment 1**

1. **Chris Johns**, Sun, 09 Dec 2018 23:35:56 GMT

I suggest comparing the post commit hook in the hooks directory in the examples-v2 repo on dispatch.rtems.org with another working repo to see if something needs to be updated.

**Comment 2**

1. **Amar Takhar**, Wed, 13 Feb 2019 20:02:19 GMT
2. **status**: changed from **assigned** to **accepted**

This should have been fixed when I redid all the hooks I have not heard any complaints since then.

<b>Blocking</b>	
<b>Blocked by</b>	

### Description

The build fails with pdfindex complaining on an `__Undefined Control Sequence__`:

```
! Undefined control sequence.
\spxpagem
1.88 ..ecture}, \hyperindexformat{\spxpagem}{183}
```

The Tex is:

```
\item[Architecture\index{Architecture@\spxentry{Architecture}|spxpagem}\phantomsection\label{\detokenize{glossary/index:term-architecture`} \leavevmode
```

And the IDX entry from makeindex is:

```
\item \spxentry {Architecture}, \hyperindexformat{\spxpagem}{183}
```

### Comment 1

1. **Chris Johns**, Tue, 08 Jan 2019 23:24:50 GMT

Sphinx provides a Makefile in the build directory and this uses latexmk to create the PDF. I have seen posts from sphinx developers stating the Makefile should be used when building a PDF.

Sphinx 1.8 and later references `\spxpagem` which is provided in a support file called `sphinx.xdy`. The Makefile references this file in the xindy options:

```
export XINDYOPTS = -L english -C utf8 -M sphinx.xdy
```

The issue on FreeBSD with `texlive-full-20150521` is the lack of the xindy command:

```
$ type xindy
xindy: not found
```

And latexmk expects it to exist.

**Description**

Add low level event recording infrastructure for system and user defined events. The infrastructure should be able to record high frequency events such as

- SMP lock acquire/release,
- interrupt entry/exit,
- thread switches,
- UMA zone allocate/free,
- Ethernet packet input/output, etc.

It should allow post-mortem analysis in fatal error handlers, e.g. the last events should be in the record buffer, the newest event overwrites the oldest event. It should be possible to detect record buffer overflows for consumers that expect a continuous stream of events, e.g. to display the system state in real-time.

The framework should support high-end SMP machines (more than 1GHz processor frequency, more than four processors).

The existing capture engine tries to solve this problem, but its performance is not good enough for high-end production systems. The main issues are the variable-size buffers and the use of SMP locks for synchronization. To fix this, the API would change significantly.

Add a new API instead. The implementation should use per-processor data structures and no atomic read-modify-write operations. It is pretty much a per-processor ring buffer for record events.

Use the CPU counter to get the time of events. Combine it with periodic uptime events to synchronize it with CLOCK\_REALTIME.

Here is an example of the

```
/**
 * @brief Produces a record item.
 *
 * @param event The record event without a time stamp for the item.
 * @param data The record data for the item.
 */
void rtems_record_produce( rtems_record_event event, rtems_record_data data );
```

function PowerPC machine code generated by GCC:

```

00000000 :
0: 7d 00 00 a6      mfmsr   r8
4: 7c 00 01 46      wrteei  0
8: 7d 2e 82 a6      mfspr  r9,526
c: 7d 50 42 a6      mfsprg r10,0

14: 55 29 50 2a      rlwinm r9,r9,10,0,21
18: 7d 23 1b 78      or     r3,r9,r3
1c: 81 2a 00 00      lwz    r9,0(r10)
20: 80 ca 00 08      lwz    r6,8(r10)
24: 38 e9 00 01      addi   r7,r9,1
28: 7d 29 30 38      and    r9,r9,r6
2c: 55 29 18 38      rlwinm r9,r9,3,0,28
30: 7d 2a 4a 14      add    r9,r10,r9
34: 90 69 00 48      stw   r3,72(r9)
38: 90 89 00 4c      stw   r4,76(r9)
3c: 7c 20 04 ac      lwsync
40: 90 ea 00 00      stw   r7,0(r10)
44: 7d 00 01 06      wrtee  r8
48: 4e 80 00 20      blr

```

Just 19 instructions, no branches, no stack frame, no atomic-read-modify-write, just a light weight synchronization to ensure that the consumer reads not half finished items.

### Comment 1

1. **Sebastian Huber**, Tue, 29 Jan 2019 12:57:00 GMT

In dca6184/rtems:

Add low level event recording support

Add low level event recording infrastructure for system and user defined events. The infrastructure is able to record high frequency events such as

SMP lock acquire/release, interrupt entry/exit, thread switches, UMA zone allocate/free, and Ethernet packet input/output, etc. It allows post-mortem analysis in fatal error handlers, e.g. the last events are in the record buffer, the newest event overwrites the oldest event. It is possible to detect record buffer overflows for consumers that expect a continuous stream of events, e.g. to display the system state in real-time.

The implementation supports high-end SMP machines (more than 1GHz processor frequency, more than four processors).

Add a new API instead. The implementation uses per-processor data structures and no atomic read-modify-write operations. It uses per-processor ring buffers to record the events.

The CPU counter is used to get the time of events. It is combined with periodic uptime events to synchronize it with CLOCK\_REALTIME.

The existing capture engine tries to solve this problem also, but its performance is not good enough for high-end production systems. The main issues are the variable-size buffers and the use of SMP locks for synchronization. To fix this, the API would change significantly.

Update #3665.

1. **Sebastian Huber**, Mon, 09 Sep 2019 05:05:59 GMT

In c331bdc/rtems:

record: Allow tracing of ISR disable/enable

Directly use the CPU port API in boot\_card() to allow tracing of the higher level interrupt disable/enable routines, e.g. `_ISR_Local_disable()` and `_ISR_Local_enable()`. Currently, there is no configuration option to enable this. Below is a patch. It may be used to investigate some nasty low level bugs in the system.

Update #3665.

**Description**

In C++17 there is a `std::aligned_alloc()`:  
[https://en.cppreference.com/w/cpp/memory/c/aligned\\_alloc](https://en.cppreference.com/w/cpp/memory/c/aligned_alloc)  
 Unfortunately, it doesn't work with RTEMS currently:  
[https://gcc.gnu.org/bugzilla/show\\_bug.cgi?id=85904](https://gcc.gnu.org/bugzilla/show_bug.cgi?id=85904)  
 Provide `aligned_alloc()` and `memalign()` (as a strong alias to `aligned_allo()`) by RTEMS.

**Comment 1**

1. **Sebastian Huber**, Fri, 21 Dec 2018 06:56:55 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 2158621/rtems:

Add `aligned_alloc()` and `memalign()`  
 Ensure that the C++17 `aligned` new operator works.  
 Close #3666.

#### Comment 2

1. **Sebastian Huber**, Thu, 10 Jan 2019 10:35:55 GMT

In 8eaf136d/rtems:

`memalign`: Add missing attributes to fix warning  
 Update #3666.

#### Comment 3

1. **Sebastian Huber**, Wed, 23 Jun 2021 07:16:03 GMT
2. **keywords**: **qualification** added

### 3667 - Support data cache disable on ARMv7-AR

#### **Description**

On 19.12.2018 I pushed a commit to the rtems-libbsd with a keyword that should have updated a ticket. But the ticket didn't pick up the commit:

Commit: <https://git.rtems.org/rtems-libbsd/commit/?id=91566dda7f52b5eba04df159770b4797ba652f20>

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Ticket: <https://devel.rtems.org/ticket/3569>

The same message format worked from rtems-tools and rtems-source-builder. Did I something wrong?

#### Comment 1

1. **Sebastian Huber**, Mon, 07 Jan 2019 07:46:27 GMT
2. **summary:** changed from **Commit message in Libbsd didn't trigger a ticket update.** to **Commit message in examples-v2 and libbsd didn't trigger a ticket update.**

#### Comment 2

1. **Amar Takhar**, Thu, 02 Apr 2020 20:11:17 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**
4. **milestone:** set to **5.1**

This was fixed a long time ago the issue was in the update scripts not updating multiple commits in one push only the first one was being handled.

### 3669 - rtems-docs.git does not build with Sphinx 1.8.2 and 1.8.3

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3669">https://devel.rtems.org/ticket/3669</a> ( <a href="https://devel.rtems.org/ticket/3669">https://devel.rtems.org/ticket/3669</a> )

#### Description

The docs do not build with Sphinx 1.8. Recent posts indicate some changes to support unicode indexes via xindy have caused this and the solution being discussed is to use the generate Makefile ...

<https://github.com/rtd/readthedocs.org/issues/4454>

The need to use the Makefile is debatable however what it contains is important as it defines what needs to happen.

This recent issue can be seen in the Tex generated file for the User Manual (user.tex). It contains:

```
\item[{\Waf\index{\Waf\spxentry{\Waf}|spxpagem}\phantomsection\label{\detokenize{glossary/index:term-waf'}} \leavevmode
Waf build system. For more information see \sphinxurl{http://www.waf.io/}
```

Our current build uses pdflatex directly and there is an error as spxpagem is not defined.

If you inspect a version 1.8 generated Makefile the command latexmk is used. This wraps the PDF generation so the correct number of passes are performed. Using this tool should be considered.

The Makefile contains:

```
export XINDYOPTS = -L english -C utf8 -M sphinx.xdy
```

The sphinx.xdy contains the needed spxpagem. I can only conclude sphinx needs to be built with xindy because the reference is always generated.

The problem for building FreeBSD is xindy is not an available command.

#### Comment 1

1. **Amar Takhar**, Tue, 25 Dec 2018 00:11:19 GMT
2. **owner:** set to **Amar Takhar**
3. **status:** changed from **new** to **accepted**

I'll sort this out, I've been aware this change was going to happen for a while now but since FreeBSD ports only has Sphinx 1.6.5 I haven't hit it yet.

#### Comment 2

1. **Joel Sherrill**, Wed, 26 Dec 2018 18:52:50 GMT

FWIW I tried two CentOS 7 computers with Sphinx 1.8. Neither gets anywhere close to this point. Neither even creates a Makefile in the build tree. They both fail immediately with this:

```
joel@devel rtems-docs]$ ./waf
Waf: Entering directory `/home/joel/rtems-work/rtems-docs/build'
Waf: Leaving directory `/home/joel/rtems-work/rtems-docs/build'
invalid number of source/target for bld(posted=True, target=[/home/joel/rtems-work/rtems-docs/build/user/latex/capt-of.sty,
/home/joel/rtems-work/rtems-docs/build/user/latex/eqparbox.sty, /home/joel/rtems-work/rtems-docs/build/user/latex/environ.sty,
/home/joel/rtems-work/rtems-docs/build/user/latex/ifplatform.sty, /home/joel/rtems-work/rtems-docs/build/user/latex/trimspaces.sty,
/home/joel/rtems-work/rtems-docs/build/user/latex/slantsc.sty, /home/joel/rtems-work/rtems-docs/build/user/latex/upquote.sty,
/home/joel/rtems-work/rtems-docs/build/user/latex/rtemsextrafonts.sty], idx=1, meths=['process subst', 'process rule',
'process source'], sources=['../common/latex/capt-of.sty', '../common/latex/eqparbox.sty', '../common/latex/environ.sty',
'../common/latex/ifplatform.sty', '../common/latex/trimspaces.sty', '../common/latex/slantsc.sty', '../common/latex/upquote.sty'],
path=/home/joel/rtems-work/rtems-docs/user, is copy=True, features=['subst']) in /home/joel/rtems-work/rtems-docs/user
```

Both have a texlive install from around 20 Nov 2018. There is nothing much in the build/ directory after running waf configure and waf.

```
joel@devel rtems-docs]$ find build -type f
build/c4che/build.config.py
build/c4che/ cache.py
build/config.log
build/.lock-waf linux2 build
```

### Comment 3

1. **Sebastian Huber**, Thu, 03 Jan 2019 11:37:22 GMT

On openSUSE 15.0 I use a sphinx 1.8.1 with Python 3 and it works. I don't have a xindy tool installed.

### Comment 4

1. **Sebastian Huber**, Thu, 03 Jan 2019 11:51:00 GMT

I updated to sphinx 1.8.2 and 1.8.3. On both versions I experience the reported issue, e.g.

```
cd build/user/latex
pdflatex -shell-escape user.tex
...
[182] [183]
! Undefined control sequence.
\spxpagem
l.88 ...ecture}, \hyperindexformat{\spxpagem}{181}
?
```

### Comment 5

1. **Sebastian Huber**, Thu, 03 Jan 2019 11:51:21 GMT
2. **summary:** changed from **rtems-docs.git does not build with Sphinx 1.8** to **rtems-docs.git does not build with Sphinx 1.8.2 and 1.8.3**

### Comment 6

1. **Chris Johns**, Mon, 07 Jan 2019 05:31:20 GMT

I suspect all future versions will behave the same way.

### Comment 7

1. **Chris Johns**, Tue, 05 Feb 2019 09:35:41 GMT

For FreeBSD we need to wait until a texlive update. This bug is tracking the progress:

[https://bugs.freebsd.org/bugzilla/show\\_bug.cgi?id=211997](https://bugs.freebsd.org/bugzilla/show_bug.cgi?id=211997)

### Comment 8

1. **Chris Johns**, Wed, 06 Feb 2019 02:59:17 GMT

With the help of the sphinx project I have resolved the issue. The issue in github is:

<https://github.com/sphinx-doc/sphinx/issues/6021>

I will be working on a patch to sort this out.

### Comment 9

1. **Chris Johns**, Wed, 06 Feb 2019 21:30:22 GMT
2. **status:** changed from **accepted** to **closed**
3. **resolution:** set to **fixed**

In a3b0a40/rtems-docs:

```
Fix building with Sphinx 1.8 and later.
Provide the pytnon.ist file for makeindex. Add support for xelatex building so we can switch if we want too.
Closes #3669
```

## 3670 - examples-v2 uses deprecated or obsolete RTEMS interfaces

### Comment 1

1. **Sebastian Huber**, Fri, 04 Jan 2019 06:55:37 GMT

Should the examples work with all RTEMS versions or just RTEMS 5?

### Comment 2

1. **Chris Johns**, Mon, 07 Jan 2019 05:29:58 GMT

Replying to Sebastian Huber:

Should the examples work with all RTEMS versions or just RTEMS 5?

I suppose the examples should be equivalent to what a user sees so in this case they should build with RTEMS 5 and have no errors or warnings. The examples are captured as part of a release which means there is a history and the changes needed for RTEMS.

If I had an application that needed to work with 4.11 and 5 I would detect the version and conditionally handle the changes in the build system and code.

I am OK with them building for RTEMS 5.

### Comment 3

1. **Sebastian Huber**, Mon, 07 Jan 2019 07:45:58 GMT

2. **status:** changed from **new** to **closed**

3. **resolution:** set to **fixed**

I fixed the issues. Trac didn't update the ticket.

## 3672 - No i386 BSP can link all tests after cache manager changes

### Description

The user manual contains this about prefixes:

"A further reason not to use the standard prefix is to allow more than one version of RTEMS to exist on your host machine at a time. The autoconf and automake tools required by RTEMS are not versioned and vary between the various versions of RTEMS. If you use a single prefix such as the standard prefix there is a chance parts from a package of different versions may interact. This should not happen but it can.

For POSIX or Unix hosts, the RTEMS Project uses /opt/rtems as it's standard prefix. We view this prefix as a production level path, and we prefer to place development versions under a different prefix away from the production versions. Under this top level prefix we place the various versions we need for development. For example the version 4.11.0 prefix would be /opt/rtems/4.11.0. If an update called 4.11.1 is released the prefix would be /opt/rtems/4.11.1. These are recommendations and the choice of what you use is entirely yours. You may decide to have a single path for all RTEMS 4.11 releases of /opt/rtems/4.11."

The default prefix selected by the RSB should take this into account. Use OS prefix + "rtems" + \$rtems\_version, e.g. on Linux for RTEMS 5: "/opt/rtems/5".

## 3677 - ARM BSP contains ARM code in THUMB only build

### Description

The xilinx\_zynq\_a9\_gemu BSP contains a memcpy that is ARM mode code and not THUMB. This can be seen with hello.exe and vlan01.exe in the libbsd examples.

The script run with the command that follows shows there is a single ARM function in the executable. The python script is:

```
from __future__ import print_function
import sys
for line in sys.stdin:
    ls = line.split()
    if len(ls) == 8 and ls[0][-1] == ':' and ls[3] == 'FUNC':
        addr = int(ls[1], 16)
        if addr & 1 == 0:
            print(ls[7])
```

Command with output:

```
$ arm-rtems5-readelf -a `find . -name hello.exe` | python ./arm-thumb.py
memcpy
```

The presence of this single function makes me wonder why and if something is wrong in the building of the memcpy function. Examination with rtems-exeinfo shows the code is built by GNU AS from the file memcpy-armv7a.S while other asm files are not generating ARM code. The section of the output from:

```
$ rtems-exeinfo -a `find . -name hello.exe`
```

is:

```
GNU AS 2.31.1: 14 objects
| arm_exc_interrupt.S
| armv4-exception-default.S
| bpabi.S
| bpabi.S
| bsp-start-memcpy.S
| cpu_asm.S
| liblfuncs.S
| liblfuncs.S
| liblfuncs.S
| memchr.S
| memcpy-armv7a.S
| start.S
| strcmp-armv7.S
| strlen-armv7.S
```

GNU LD is correctly managing the interworking and the code runs however is this behavior expected and understood?

Note, the existence of this code breaks libdl's loading of dhcpd.c as section .rel.text.dhcpd\_handle\_hwaddr contains a R\_ARM\_THM\_JUMP24 relocation record which requires a veneer in large memory application as well as bl to blx support. This support could be added but I am not currently in favor of having this support for something that should not happen.

### Comment 1

1. **Chris Johns**, Mon, 21 Jan 2019 00:44:30 GMT

Hmmmm .... <https://github.com/RTEMS/sourceware-mirror-newlib-cygwin/blob/master/newlib/libc/machine/arm/memcpy-armv7a.S#L47>

### Comment 2

1. **Sebastian Huber**, Mon, 21 Jan 2019 06:17:19 GMT

The interworking support is mandatory in ARM EABI. The memcpy() code is from ARM, I guess they know what they are doing.

### Description

A Git clone via HTTPS does not give much interactive feedback. This could result in users thinking that a network issue exists and let them abort the command.

```
git clone https://git.rtems.org/rtems-libbsd
Cloning into 'rtems-libbsd'...
Checking out files: 100% (5159/5159), done.
```

vs.

```
git clone git://git.rtems.org/rtems-libbsd.git
Cloning into 'rtems-libbsd'...
remote: Counting objects: 34566, done.
remote: Compressing objects: 100% (8700/8700), done.
remote: Total 34566 (delta 24457), reused 34566 (delta 24457)
Receiving objects: 100% (34566/34566), 30.33 MiB | 1.34 MiB/s, done.
Resolving deltas: 100% (24457/24457), done.
Checking out files: 100% (5159/5159), done.
```

### Comment 1

1. **Sebastian Huber**, Mon, 28 Jan 2019 12:35:07 GMT

Cloning the RSB via HTTPS doesn't work for me:

```
git clone https://git.rtems.org/rtems-source-builder rsb
Cloning into 'rsb'...
```

### Comment 2

1. **Sebastian Huber**, Tue, 29 Jan 2019 07:15:57 GMT

Ok, a git clone works via HTTPS, but it is extremely slow:

```
time git clone https://git.rtems.org/rtems-source-builder rsb
Cloning into 'rsb'...
real 6m41.242s
user 0m5.766s
sys 0m3.054s
```

```
time git clone git://git.rtems.org/rtems-source-builder.git rsb
Cloning into 'rsb'...
remote: Counting objects: 8758, done.
remote: Compressing objects: 100% (5222/5222), done.
remote: Total 8758 (delta 6078), reused 5028 (delta 3494)
Receiving objects: 100% (8758/8758), 2.89 MiB | 1.12 MiB/s, done.
Resolving deltas: 100% (6078/6078), done.
real 0m4.469s
user 0m0.415s
sys 0m0.083s
```

### Comment 3

1. **Chris Johns**, Tue, 12 Feb 2019 21:30:12 GMT

The https access has recently been discussed on the devel list. This thread is the start:

<https://lists.rtems.org/pipermail/devel/2019-February/024816.html>

### Comment 4

1. **Chris Johns**, Thu, 12 Dec 2019 16:56:24 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **wontfix**

I am going to close this ticket. The documentation uses git://.

If this is important funding is need to see why that we need to sort out in cgkit.

## 3684 - rtems\_print\_buffer is broken

**Description**

Add large memory support to libdl. Some architectures use small relative offsets with smaller instructions for performance reasons. Object files loaded at addresses that are outside the relative range require trampoline calls that bridge the instruction in the object to the target symbol. The mechanism used depends on the archives.

Libdl requires generic support to parse the relocation record before the object file allocation to provide the memory to hold the trampoline calls.

The ARM and PowerPC architectures require trampolines. This is called veneers on ARM.

**Comment 1**

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:11 GMT

In b08278e/rtems:

```
powerpc/psim: Increase the psim memory to 256M
This allows test dl09 to run and test PowePC backend trampoline support.
Updates #3685
```

**Comment 2**

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:35 GMT

In d8c70ba6/rtems:

```
libdl: Add support for trampolines
Trampolines or fixups for veneers provide long jump support
for instruction sets that implement short relative address
branches. The linker provides trampolines when creating a
static image. This patch adds trampoline support to libdl
and the ARM architecture. The dl09 test requires enough memory so modules are outside
the relative branch instruction ranges for the architecture.
Updates #3685
```

**Comment 3**

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:38 GMT

In 194eb403/rtems:

```
libdl: Add support for large memory programs
Add trampolines to support relocs that are out of range on
support architectures. Support not loading separate text/data sections in an object
file if the symbol provided in the section is a duplicate.
A base image may have pulled in part of an object and another
part needs to be dynamically loaded. Refactor the unresolved handling to scale to hundreds of
unresolved symbols when loading large number of files.
Updates #3685
```

**Comment 4**

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:42 GMT

In 6c9f017/rtems:

```
libdl: Add powerpc large memory and small data support.
Add support for architecture sections that can be handled by the
architecture back end. Add trampoline/fixup support for PowerPC. This means the PowerPC
now supports large memory loading of applications. Add a bit allocator to manage small block based regions of memory. Add small data
(sdata/sbss) support for the PowerPC. The support
makes the linker allocated small data region of memory a global
resource available to libdl loaded object files.
Updates #3687 Updates #3685
```

**Comment 5**

1. **Chris Johns**, Tue, 19 Feb 2019 22:09:47 GMT

In 22afb034/rtems:

```
libdl/alloc: Add a locking interface to the allocator.
Allow an allocator to lock the allocations. This is needed to
lock the heap allocator so the text and trampoline table are
as close together as possible to allow for the largest possible
object file size. Update the default heap allocator to lock the heap allocator. Update ELF loading to lock the allocator.
Updates #3685
```

**Comment 6**

1. **Sebastian Huber**, Fri, 13 Dec 2019 08:33:02 GMT

b08278e/rtems leads to the following run-time error on PSIM:

```
BATs must not overlap; area 0x08000000..0x09000000 hits DBAT 0
BATs must not overlap; area 0x0c000000..0xd0000000 hits DBAT 0
```

The RAM overlaps with the PCI area:

```
/*
 * Setup BATs and enable MMU
 */
/* Memory */
setdbat(0, 0x0<<28, 0x0<<28, 1<<28, _PAGE_RW);
setibat(0, 0x0<<28, 0x0<<28, 1<<28, _PAGE_0);
/* PCI */
setdbat(1, 0x8<<24, 0x8<<24, 1<<24, IO_PAGE);
setdbat(2, 0xc<<24, 0xc<<24, 1<<24, IO_PAGE);
```

**Comment 7**

1. **Sebastian Huber**, Fri, 13 Dec 2019 08:41:49 GMT

Increasing the RAM size to 256MiB (0x10000000) on PSIM breaks also the shared memory support:

```
typedef struct {
/* 0x0c000000 - 0x0c007FFF - AMD 29F040 */
volatile uint8_t Flash[ 512 * 1024 ];
/* 0x0c080000 - 0x0c0fffff - NVRAM/NVRAM */
volatile uint8_t nvram[ 512 * 1024 ];
/* 0x0c100000 - 0x0c100007 - NVRAM/RTC */
psim_rtc_t RTC;
/* 0x0c100008 - 0x0c10000f - NVRAM/RTC */
uint8_t gap1[8];
/* 0x0c100010 - 0x0c10001b - System V IPC Semaphore */
psim_sysv_sem_t Semaphore;
/* 0x0c10001c - 0x0c10001f - NVRAM/RTC */
uint8_t gap2[4];
/* 0x0c100020 - 0x0c10005f - Ethernet */
volatile uint8_t Ethtap[ 64 ];
/* 0x0c100060 - 0x0c10ffff - NVRAM/RTC */
uint8_t gap3[65440];
/* 0x0c110000 - 0x0c12ffff - System V IPC Shared Memory */
uint8_t SharedMemory[ 128 * 1024 ];
/* 0x0c130000 - 0x0c170000 - OpenPIC IRQ Controller */
volatile uint8_t OpenPIC[ 256 * 1024 ];
} psim_registers_t;
```

I suggest to revert this change.

**Comment 8**

1. **Chris Johns**, Tue, 17 Dec 2019 20:18:36 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

The large memory support in libdl task has finished. The psim issue should be moved to another ticket and the solution is to change the address map of the devices as suggested by Joel on the devel@ list.

**Comment 9**

1. **Sebastian Huber**, Thu, 02 Jan 2020 11:54:11 GMT

See #3849.

**3686 - Add library searching and loading to libdl**

---

<b>Link Id</b>	<a href="https://devel.rtems.org/ticket/3686">https://devel.rtems.org/ticket/3686</a> ( <a href="https://devel.rtems.org/ticket/3686">https://devel.rtems.org/ticket/3686</a> )

<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

---

**Description**

Provide support to search library files (archives) for symbols loading the object file that contains the symbol. The support shall:

- Parse a configuration file called /etc/libdl.conf for the list of archive symbols to load. Support fnmatch() wildcard parsing. Allow runtime updates reloading if there is a change.
- Maintain archive symbol tables in memory to improve symbol search performance. Archives must have a ranlib generated symbol table. Reload an archive if it has changed.
- Make sure separate text and data built object files is supported. Assume a duplicate symbol means that section and symbol has already been loaded. Load all sections not loaded. There is no need to be efficient at this point in time.
- Add support to check if there are any system wide unresolved symbols.
- Automatically unloaded archive object files that are not referenced.
- Duplicate symbols in archives is not an error. The first archive that has the symbol in an object file is loaded.

The feature adds \_\_symbol based demand loading\_\_ of object files to libdl. A user loads an object file using the dlopen function and unresolved symbols are loaded from the libraries hosted on the target.

**Comment 1**

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:15 GMT

In 89c59be/rtems:

```
libdl: Add symbol searching and loading from archives.
Load archive symbol tables to support searching of archives
for symbols. Search archive symbols and load the object file that contains
the symbol. Search the global and archives until all remaining unresolved symbols
are not found. Group the loaded object files in the pending queue. Run the object file and loaded dependents as a group before adding to the
main object list. Remove orphaned object files after references are removed.
Updates #3686
```

### Description

Add support for architecture specific sections. Allow architecture back end support to handle sections that are specific to an architecture.

Add PowerPC sdata and sbss support. The PowerPC can support a `_small_data_` 64K continuous system wide region of memory. Small data accesses are faster as the instruction is smaller however the variable is referenced as a signed 16bit offset from the register r13. This register is offset from the region's base address by 32K. The linker creates the `.sdata` and `.sbss` regions and sets the `_SDA_BASE_` symbol which is loaded into r13. Any run-time loaded code with small data support needs space in the small data region therefore a BSP needs a way to define the space and the linker needs to allocate it. Provide a way for PowerPC BSPs to add extra memory to the small data region.

RTEMS supports the PowerPC EABI and uses sysv small data allocations. RTEMS uses the default variable size of 8 as the selector for a variable to be allocated in the small data region. The GCC user manual recommends all code is built with the same settings. Dynamically loaded code could be built with small data disabled and if enabled the default size is recommended.

Note, small data is system wide which means a default size of 8 allows only 8192 8 byte variables.

Provide an allocator to manage the available small data memory.

### Comment 1

1. **Chris Johns**, Fri, 08 Feb 2019 23:08:42 GMT

In 6c9f017/rtems:

```
libdl: Add powerpc large memory and small data support.
Add support for architecture sections that can be handled by the
architecture back end. Add trampoline/fixup support for PowerPC. This means the PowerPC
now supports large memory loading of applications. Add a bit allocator to manage small block based regions of memory. Add small data
(sdata/sbss) support for the PowerPC. The support
makes the linker allocated small data region of memory a global
resource available to libdl loaded object files.
Updates #3687 Updates #3685
```

### Comment 2

1. **Sebastian Huber**, Mon, 11 Feb 2019 10:43:14 GMT

In eec706e2/rtems:

```
bsps/powerpc: Fix small data area section

Fix small data area in case no fixed size is desired. Rename bsp_section_set_sdata_sbss_size into bsp_section_small_data_area_size since
this symbol reflects the overall small data area size (including space for libdl). Do not use bsp_section_sbss_size before definition in
linker command file. Add new symbols to .

Update #3687.
```

### Comment 3

1. **Chris Johns**, Mon, 18 Feb 2019 00:28:02 GMT

In 3ecb207/rtems:

```
libdl/rap: Add the section alloc call after section load was split

Updates #3687
```

### Comment 4

1. **Chris Johns**, Wed, 06 Mar 2019 19:34:29 GMT

In ec1dd51a/rtems:

```
libdl: Add small data support to the remaining PowerPC BSPs.

Updates #3687
```

### Comment 1

1. **Chris Johns**, Thu, 14 Feb 2019 23:15:51 GMT

The patch creates global data between the architecture relocater and the format. I wonder how the ELF format handles the same reloc records?

The latest code has support for architecture specific handling of reloc records. I wonder if this new infrastructure can be used to achieve the same thing?

### Comment 2

1. **Chris Johns**, Tue, 28 Apr 2020 04:00:12 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 0b416759/rtems:

```
libdl/mips: Fix MIPS16hi/lo relocation support.
```

```
This patch is an updated version from:
```

```
https://lists.rtems.org/pipermail/users/2016-January/029740.html
```

```
Closes #3693
```

## Description

The Trace Compass is a tool to analyse and display trace data. Trace data can be gathered from RTEMS applications via various means, for example:

- RTEMS Trace Linker
- Event Recording
- Capture Engine

The goal of this project is to enable the Trace Compass to analyse and display some basic information using the Event Recording infrastructure. Basic information is defined by the Linux kernel trace support (ltng) and includes (see Trace Compass project explorer Tracing -> Traces -> Something):

- kernel
  - Views
    - CPU usage
      - CPU usage
    - IRQ Analysis
      - IRQ Statistics
      - IRQ Table
      - IRQ vs Count
      - IRQ vs Time
    - Linux Kernel
      - Control Flow
      - Resources

Example data can be obtained from the Trace Visualization Labs.

Advanced support for Trace Compass could include dynamic memory traces, stack usage, network packet flow, etc.

There are four main problems.

- Generation of sufficient trace events, currently the interrupt entry/exit events are not available for example.
- The trace data must be transferred from the target system running the RTEMS application to a host computer running the Trace Compass (transfer via TCP is available, for UDP based transfer see #3695).
- The Trace Compass must be able to analyse and display the information obtained from the Event Recording.
- The RTEMS user must be able to use this infrastructure. This requires that it is easy to use, availability of tutorials and documentation.

To tackle problem 3. there are two approaches possible. You can extend the Trace Compass to work with the trace data provided by RTEMS as is. Alternatively, the RTEMS trace data could be converted to Linux kernel trace data (ltng) which Trace Compass already understands.

Related topics are Common Trace Format, Babeltrace, barectf, #2961 and #3028.

### \_\_Skills Needed\_\_

You need good C and C++ skills with a proven record. You need to show socket level and networking programming skills. In case Trace Compass needs to be extended this requires Java skills and familiarity with the Eclipse framework. Knowledge of YAML and XML is helpful. High end RTEMS targets can generate a huge number of events per second (10MiB/s trace data is 13'0720 events per second; on a 4GHz host processor this is 3051 instructions per event under real-time processing conditions) which imposes a considerable work load to modern host computers, so the host programs must work efficiently.

### \_\_Difficulty\_\_

We consider this an advanced project.

## Comment 1

1. **Gedare Bloom**, Thu, 28 Feb 2019 21:07:23 GMT
2. **keywords: SoC testing** added; **GSoC** removed

## Comment 2

1. **Gedare Bloom**, Thu, 28 Feb 2019 21:09:32 GMT
2. **keywords: statistics** added; **testing** removed

## Comment 3

1. **Ravindra Kumar Meena**, Fri, 31 May 2019 10:01:13 GMT

The current stable version 1.5.6 of babeltrace does not have feature to convert live trace stream into CTF. This feature is currently in development and will be released in babeltrace 2.0

## Comment 4

1. **Christian Mauderer**, Mon, 10 Feb 2020 20:30:04 GMT

This project has been at least partially done during GSoC 2019 and further developed since then. For everyone picking up this project: Check carefully what can be extended.

<b>Blocking</b>	3705
<b>Blocked by</b>	

---

**Description**

The confdefs.h file contains Doxygen comments. They are not helpful and lead to a confusing Doxygen output. The documentation place for the RTEMS configuration is the RTEMS Classic API Guide:

[https://docs.rtems.org/branches/master/c-user/configuring\\_a\\_system.html](https://docs.rtems.org/branches/master/c-user/configuring_a_system.html)

**Comment 1**

1. **Chris Johns**, Wed, 27 Feb 2019 23:48:33 GMT

Can a link be added so doxygen generate docs point to the documentation?

**Comment 2**

1. **Joel Sherrill**, Wed, 27 Feb 2019 23:52:08 GMT

I am against a patch that removes them without verifying that all info in the Doxygen comments is already in the Classic API Guide. There has to be at least some information in confdefs.h comments that isn't in the manual.

**Comment 3**

1. **Sebastian Huber**, Thu, 28 Feb 2019 14:18:19 GMT

I think we all agreed that the user documentation is in the manuals and Doxygen is for internal use, e.g. for RTEMS contributors.

If something is in Doxygen comments in confdefs.h which is not in the manual, then of course we should update the manual.

**Comment 4**

1. **Sebastian Huber**, Mon, 01 Jun 2020 11:27:20 GMT
2. **status:** changed from **assigned** to **closed**
3. **version:** changed from **6** to **5**
4. **resolution:** set to **fixed**
5. **milestone:** changed from **6.1** to **5.1**

Removing the Doxygen markup from was a side-effect of #3875. With the new specification items for the application configuration options it would be possible to generate Doxygen markup for them: #3994.

#### Description

Add `rtems_scheduler_get_processor()` as a replacement for `rtems_get_current_processor()`. The `rtems_get_current_processor()` is a bit orphaned. Adopt it by the Scheduler Manager. This is in line with the `glibc sched_getcpu()` function.

#### Comment 1

1. **Sebastian Huber**, Tue, 09 Apr 2019 06:11:49 GMT

In 03c9f24/rtems:

```
rtems: Add rtems_scheduler_get_processor()

Add rtems_scheduler_get_processor() as a replacement for rtems_get_current_processor(). The rtems_get_current_processor() is a bit
orphaned. Adopt it by the Scheduler Manager. This is in line with the glibc sched_getcpu() function.

Deprecate rtems_get_current_processor().

Update #3731.
```

**Description**

Add `rtems_scheduler_get_processor_maximum()` as a replacement for `rtems_get_processor_count()`. The `rtems_get_processor_count()` is a bit orphaned. Adopt it by the Scheduler Manager. The count is also misleading, since the processor set may have gaps and the actual count of online processors may be less than the value returned by `rtems_get_processor_count()`.

**Description**

Testing master on a Zynq reports:

```
(gdb) target remote 10.10.5.45:1122
Remote debugging using 10.10.5.45:1122
Truncated register 19 in remote 'g' packet
```

It looks to me like gdb is now smart enough to know this ARM arch has a NEON and floating point registers:

```
(gdb) maint print registers
Name      Nr  Rel Offset  Size  Type
r0         0   0     0       4  uint32_t
r1         1   1     4       4  uint32_t
r2         2   2     8       4  uint32_t
r3         3   3    12       4  uint32_t
r4         4   4    16       4  uint32_t
r5         5   5    20       4  uint32_t
r6         6   6    24       4  uint32_t
r7         7   7    28       4  uint32_t
r8         8   8    32       4  uint32_t
r9         9   9    36       4  uint32_t
r10        10  10   40       4  uint32_t
r11        11  11   44       4  uint32_t
r12        12  12   48       4  uint32_t
sp         13  13   52       4  *1
lr         14  14   56       4  uint32_t
pc         15  15   60       4  *1
f0         16  16   64      12  _arm_ext
f1         17  17   76      12  _arm_ext
f2         18  18   88      12  _arm_ext
f3         19  19  100      12  _arm_ext
f4         20  20  112      12  _arm_ext
f5         21  21  124      12  _arm_ext
f6         22  22  136      12  _arm_ext
f7         23  23  148      12  _arm_ext
fps        24  24  160       4  uint32_t
cpsr       25  25  164       4  uint32_t
```

The target support in libdebugger is a simple array of 32bit ints. This needs to change to handle registers at various offsets. The lack of fp regs was a simplification at the time I first implement this server. Loos like I need to sort this out.

#### Comment 1

1. **Chris Johns**, Sat, 06 Apr 2019 00:39:37 GMT
2. **status:** changed from **new** to **accepted**

I suspect the more recent gdb we are using is checking the g register data length and libdebugger was not returning the correct amount for the ARM processor.

#### Comment 2

1. **Chris Johns**, Sat, 06 Apr 2019 00:43:24 GMT

Adding support for offsets to the ARM backend has things working. The following is with master RSB, kernel and libbsd:

```

$ /opt/work/rtems/5/bin/arm-rtems5-gdb ./build/arm-rtems5-xilinx_zynq_zedboard-default/debugger01.exe
GNU gdb (GDB) 8.2.1

**Comment 3**

1. **Chris Johns**, Tue, 09 Apr 2019 05:05:23 GMT
2. **status:** changed from **accepted** to **closed**
3. **resolution:** set to **fixed**

In 2c09b71/rtems:

libdebugger: Use an offset table to format GDB g packets.

Adding support for a register offset table lets FPU registers be supported if added to the backend.

Closes #3733.

**3734 - Add RTEMS\_CONST attribute**

**Description**

Remove the `CONFIGURE_HAS_OWN_MULTIPROCESSING_TABLE` configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes. The use of this configuration option had a note in the documentation:

"This is a configuration parameter which is very unlikely to be used by an application. If you find yourself wanting to use it in an application, please reconsider and discuss this on the RTEMS Users mailing list."

No discussion took place in a couple of years about this topic.

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Replying to Sebastian Huber:

Maybe related to #3339.

If you mean a broken linkcmd file, yes. There are a number of BSP specific linkcmd files and this is hurting us, these BSPs and their users. A common linkcmd file for the arch means a simulator is able to do a lot of the needed testing.

We have a lot of important systems running PowerPC BSPs and there are issues. I think it would be good to sort this out but we need someone to do this or use a support service and we need someone with enough gear or access to people with the gear it to make the changes and get a working base line.

## 3741 - libdl loading ELF objects from libbsd NFS file system ends in a deadlock

### Description

For ELF files the run-time loader calls this chain:

- `__rtems_rtl_elf_file_load()`
- `__rtems_rtl_alloc_lock()`
- `__rtems_rtl_alloc_heap()`
- `__RTEMS_Lock_allocator()`

`__RTEMS_Lock_allocator()` locks all heap operations. RTL then calls `__read()` and for NFS file systems the NFS threads try to use the heap, locking up the system.

### Comment 2

1. **Chris Johns**, Tue, 30 Apr 2019 07:25:22 GMT

The default RTL allocator (heap) uses the file system while holding the heap allocator lock and if the file system uses the heap we end up in a deadlock. LibBSD's NFS implementation uses the heap.

The allocator lock/unlock logic was added when the trampoline changes were added. Trampolines provide large memory support and is documented in the User Manual (<https://docs.rtems.org/branches/master/user/exe/loader.html#large-memory>). The trampoline table needs to be close to the code using it or it may be out of range. If something allocates a large piece of memory between allocating the text memory and the trampoline table the relocation to the trampoline will be out of range.

There are two unknowns until the memory is allocated and code is loaded. The first is the location in memory and the second is the instruction the relocation record is pointing too. The location lets us determine the distance from the instruction to the target address and if it is in range and the instruction lets the arch back-end know determine the range the instruction has.

The ELF loader can be split into a finer set of stages to do as much processing before allocating memory however as stated above the two unknowns need to be resolved.

The most robust solution is to add code to build a table of relocation records that could require trampolines. While the allocator lock is being held:

Lock the allocator Allocate the sections Locate the symbols Determine the number of trampolines using the cached relocation records Allocate the trampoline table Unlock the allocator

The number of trampolines can be determined using the relocation table data held in memory. The relocation table could be implemented in a similar way the unresolved externals is done with a common pool of blocks that grows and shrinks based on demand. A block allocation should aid the heap with fragmentation.

### Comment 3

1. **Chris Johns**, Thu, 02 May 2019 01:45:27 GMT
2. **summary:** changed from **libdl load of ELF objects on NFS file system lock up** to **libdl loadinf ELF objects from libbsd NFS file system ends in a deadlock**

I have:

Implemented caching any reloc record that could result in a trampoline using the unresolved table. This table is suitable for the purpose. I have not refactored the unresolved code to relabel the code to be common to unresolved and trampolines at this point in time, I have simply added the trampoline code to the unresolved code with a separate RTL internal header to isolate the interface. Increased the block size for the unresolved table from 64 to 256 and a block is allocated when in the resolved table is opened and one block is always held. It is not clear to me how many tramp reloc records a large object file or an incrementally link object file could have. Added per object file trampoline stats to help track what is happening.

The output for the PowerPC psim BSP for test dl09 with the test hacked to show the trampoline stats is:

```
RTL List:
/dl09-o1.o
trampolines:
  slots      : 3
  size       : 48
  slot size  : 16
  used       : 1
  relocs     : 0
  unresolved: 3
  yield      : 33%
/dl09-o2.o
trampolines:
  slots      : 7
  size       : 112
  slot size  : 16
  used       : 7
  relocs     : 6
  unresolved: 1
  yield      : 100%
/dl09-o5.o
trampolines:
  slots      : 6
  size       : 96
  slot size  : 16
  used       : 6
  relocs     : 6
  unresolved: 0
  yield      : 100%
/dl09-o3.o
trampolines:
  slots      : 37
  size       : 592
  slot size  : 16
  used       : 13
  relocs     : 12
  unresolved: 25
  yield      : 35%
/dl09-o4.o
trampolines:
  slots      : 8
  size       : 128
  slot size  : 16
  used       : 8
  relocs     : 7
  unresolved: 1
  yield      : 100%
```

The dl09 test is a bit special because it does a large heap allocation between the loading of each object modules so the yields are close to 100%. The yield indicates how successful the slot usage is. There is an element of estimation in the allocation size of the table.

Note, /dl09-o3.o exposes a new issue related to the way the unresolved external trampoline slots are managed. This file has a yield of 35% because there are 25 unresolved relocation records. Most of these turn out to be small data (SDATA) relocations and do not need trampolines because they are in the small data section which is limited in size and these are for data which can be jumped too.

If we look at test dl08 we get:

```

RTL List:
/dl08-o1.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs     : 0
    unresolved: 1
    yield      : 0%
/libdl08_1.a:dl08-o2.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs     : 0
    unresolved: 1
    yield      : 0%
/libdl08_2.a:dl08-o3.o
  trampolines:
    slots      : 25
    size       : 400
    slot size  : 16
    used       : 0
    relocs     : 0
    unresolved: 25
    yield      : 0%
/libdl08_1.a:dl08-o4.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs     : 0
    unresolved: 1
    yield      : 0%
/libdl08_2.a:dl08-o6-123456789-123456789.o
  trampolines: no slots allocated
/libdl08_2.a:dl08-o5.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs     : 0
    unresolved: 1
    yield      : 0%

```

Notice we have a yield of 0% because no trampolines are needed and everything is within range. Again we have the same issue noted above with `/libdl08_2.a:dl08-o3.o`.

#### Comment 4

1. **Chris Johns**, Thu, 02 May 2019 01:47:14 GMT
2. **summary:** changed from `libdl loadinif ELF objects from libbsd NFS file system ends in a deadlock` to `libdl loading ELF objects from libbsd NFS file system ends in a deadlock`

#### Comment 5

1. **Chris Johns**, Fri, 03 May 2019 00:12:02 GMT

I have worked on the way the relocs are parsed and now have dl09 on the psim and xilinx\_zynq\_a9\_qemu BSPs reporting trampoline usage of:

```

RTL List:
/dl09-o1.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 1
    relocs     : 1
    unresolved: 0
    yield      : 100%
/dl09-o2.o
  trampolines:
    slots      : 7
    size       : 112
    slot size  : 16
    used       : 7
    relocs     : 7
    unresolved: 0
    yield      : 100%
/dl09-o5.o
  trampolines:
    slots      : 6
    size       : 96
    slot size  : 16
    used       : 6
    relocs     : 6
    unresolved: 0
    yield      : 100%
/dl09-o3.o
  trampolines:
    slots      : 13
    size       : 208
    slot size  : 16
    used       : 13
    relocs     : 13
    unresolved: 0
    yield      : 100%
/dl09-o4.o
  trampolines:
    slots      : 8
    size       : 128
    slot size  : 16
    used       : 8
    relocs     : 8
    unresolved: 0
    yield      : 100%

```

The dl08 results still have a 0% yield but the number of slots is lower:

```

RTL List:
/dl08-o1.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs    : 1
    unresolved: 0
    yield     : 0%
/libdl08_1.a:dl08-o2.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs    : 1
    unresolved: 0
    yield     : 0%
/libdl08_2.a:dl08-o3.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs    : 1
    unresolved: 0
    yield     : 0%
/libdl08_1.a:dl08-o4.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs    : 1
    unresolved: 0
    yield     : 0%
/libdl08_2.a:dl08-o6-123456789-123456789.o
  trampolines:
    slots      : 0
    size       : 0
    slot size  : 16
    used       : 0
    relocs    : 0
    unresolved: 0
    yield     : 0%
/libdl08_2.a:dl08-o5.o
  trampolines:
    slots      : 1
    size       : 16
    slot size  : 16
    used       : 0
    relocs    : 1
    unresolved: 0
    yield     : 0%

```

#### Comment 6

1. **Chris Johns**, Fri, 03 May 2019 00:46:02 GMT

I have posted a reasonable solution to the bug but I think there is a better solution. The current trampoline processing is reloc record based and it should target symbol based. A trampoline to a target symbol will be the same set of instructions and could be shared by relocations. This would drop the trampoline slot count.

A change would move away from a trampoline cache of each record to a cache of target symbols referenced by reloc records. The tramp check would see which symbols are in range and which are out of range to determine the number of slots to allocate. A relocation record that is not the full address range would still need a slot if the symbol is unresolved. The symbol cache entry would reference count reloc records referencing it and be deleted once there are no more references. The symbol cache entry would hold the trampoline slot number once allocated for use by other relocation records.

Note, the trampoline code is transparent to the execution of the object code and only has the target symbol address in it therefore it can be shared by more than one relocation record.

The unresolved table code may need to be split as the symbol record may grow the size of the record union and effect the memory footprint for unresolved symbols.

#### Comment 7

1. **Chris Johns**, Sat, 04 May 2019 02:22:01 GMT

2. **status:** changed from **accepted** to **closed**

3. **resolution:** set to **fixed**

In b36c5209/rtems:

```

libdl: Do not access the ELF file while the allocator is locked.
  Load symbols before allocation. Parse reloc records and place any reloc recs in a cache to use
while the allocator is locked. Relocate symbols after section allocation. Split section loading into allocation/locating and loading. Update
all arch back-ends with a new reloc interface to control
tramp handling. Add -a and -t to the object list shell command.
Closes #3741

```

### 3742 - T\_config conflicting type qualifiers for 'config'

---

**Description**

Running the rtems-bsp-builder on FreeBSD is give an error in ttest01 for bsps:

- arm/csb336
- arm/csb337
- arm/csb637
- arm/kit637\_v6
- mips/csb350

The error being reported is:

```
error: testsuites/libtests/ttest01/init.c:146:23: error: conflicting type qualifiers for 'config'
```

The builder command line is:

```
/opt/work/chris/rtems/rt/rtems-tools.git/tester/rtems-bsp-builder \
--rtems-tools=/opt/work/rtems/5 \
--rtems=/opt/work/chris/rtems/kernel/rtems.git \
--log=everything-tests \
--profile=everything \
--build=tests \
--jobs=7/6
```

A BSP configure command line is:

```
/opt/work/chris/rtems/kernel/rtems.git/configure \
--target=mips-rtems5 --enable-rtemsbsp=csb350 --prefix=/opt/rtems/5 \
--enable-tests --disable-smp
```

**Comment 1**

1. **Sebastian Huber**, Mon, 06 May 2019 05:57:55 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

In 8bd4f61c/rtems:

```
bsps: Remove bogus config declaration
Replace it with a proper struct rtems_bsdnet_ifconfig forward declaration.
Close #3742.
```

**3743 - RSB os and arch config logic is broken**

**Description**

The config file processing of conditionals:

- %ifos
- %ifnos
- %ifarch

do not correctly process lists of arguments. The argument list is split in 2 with the first element correct handled and the remaining treated as a lump. The argument list needs to be split evenly.

#### Comment 1

1. **Chris Johns**, Fri, 10 May 2019 02:44:45 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 0956a2c/rtems-source-builder:

```
sb/config: Fix os and arch conditional logic.
Correctly split the argument list and check each element.
Closes #3743
```

## 3746 - libdl test dl05.exe failing

#### Description

This test is failing because the second stage of the symbol loading does not check if a section referenced by a symbol has been loaded. It is not clear yet if the lack of support in libdl for group sections is a factor.

#### Comment 1

1. **Chris Johns**, Mon, 13 May 2019 22:57:17 GMT
2. **owner:** set to **Chris Johns <chrisj@...>**
3. **status:** changed from **new** to **closed**
4. **resolution:** set to **fixed**

In 74883be5/rtems:

```
libdl: Fix loading symbol that reference unknown sections.
Make the symbol parsing and loading stage match. Check for possible overflow of the tables when loading.
Closes #3746
```

#### Comment 2

1. **Chris Johns**, Tue, 14 May 2019 00:19:54 GMT

In d0f627d/rtems:

```
libdl: Fix size bug in loading symbols.
This was introduced in 74883be5d4b5fa166179d6003032f6eac2e0f544.
Updates #3746
```

## 3747 - Address Cortex-M3 Errata 602117

## Description

While testing on a NXP LPC1788 it found that this chip is affected by the Cortex-M3 Errata 602117. NXP didn't bother to document this in their errata sheet for the chip:

[https://www.nxp.com/docs/en/errata/ES\\_LPC177X\\_8X.pdf](https://www.nxp.com/docs/en/errata/ES_LPC177X_8X.pdf)

To avoid the issues, you have to compile everything with `-mfix-cortex-m3-ldrd`. This option is enabled by default, if you use `-mcpu=cortex-m3`.

I think we have to change our GCC multilibs to account for this errata. For example:

```
diff --git a/gcc/config/arm/t-rtems b/gcc/config/arm/t-rtems

#### **Description**

Symbol searching has two parts, searching the object file and searching the global symbol table. Currently the object file search is linear and the global table search uses a hash table.

A large incrementally linked object file can have a large local and global set of symbols and this can slow the loading process. This issue does not show up for small object files with a few symbols which is typically how our libraries are made.

Change the object file symbol search to a binary search (bsearch). A hash table for each object file would increase the in memory object file footprint by a significant amount and would harm the small object file use case that only have a few symbols. A binary search is a suitable compromise.

#### **Comment 1**

1. **Chris Johns**, Wed, 22 May 2019 00:03:14 GMT
2. **owner**: set to **Chris Johns** <chrisj@...>
3. **status**: changed from **assigned** to **closed**
4. **resolution**: set to **fixed**

In 327e45da/rtems:

```
libdl: Sort object file symbols and use a binary search to find
Replace the linear object file symbol search with a binary search. Sort the object file symbols after loading.
Closes #3748
```

<b>Blocking</b>	
<b>Blocked by</b>	

---

### Description

CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTOR probably should not mention LIBIO as that is an internal component/organization aid which should not be visible to the user.

This ticket is to discuss renaming CONFIGURE\_LIBIO\_MAXIMUM\_FILE\_DESCRIPTOR to just CONFIGURE\_MAXIMUM\_FILE\_DESCRIPTOR.

Perhaps deprecate now and obsolete in next major version. Include code to warn and map old name to new.

Thoughts?

### Comment 1

1. **Sebastian Huber**, Wed, 22 May 2019 05:45:29 GMT

I like CONFIGURE\_MAXIMUM\_FILE\_DESCRIPTOR better, however, do we really want to tinker with this configuration option which is used probably in hundreds of application configurations? It will probably force users to do something like this

```
#if RTEMS_VERSION >= 5
`#define CONFIGURE_MAXIMUM_FILE_DESCRIPTOR X`
`#else`
`#define CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR X`
`#endif
```

### Comment 2

1. **Chris Johns**, Thu, 12 Dec 2019 23:30:31 GMT

Sebastian, can this be worked on while you are playing with the config?

### Comment 3

1. **Sebastian Huber**, Fri, 13 Dec 2019 06:04:11 GMT

Yes, I work on this. I hope to finish the configuration related stuff by end of next week.

### Comment 4

1. **Sebastian Huber**, Thu, 19 Dec 2019 07:55:54 GMT

In 3cec2df/rtems:

```
config: CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR
Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTOR into CONFIGURE_MAXIMUM_FILE_DESCRIPTOR.
Update #3753.
```

**Comment 5**

1. **Sebastian Huber**, Thu, 19 Dec 2019 07:57:47 GMT
2. **owner:** set to **Sebastian Huber** <sebastian.huber@...>
3. **status:** changed from **new** to **closed**
4. **resolution:** set to **fixed**

In 2c58b5f/rtems-docs:

```
c-user: CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORs
Rename CONFIGURE_LIBIO_MAXIMUM_FILE_DESCRIPTORs in CONFIGURE_MAXIMUM_FILE_DESCRIPTORs.
Close #3753.
```

**Description**

Calling `arm_cp15_set_translation_table_entries()` on a BBB (Cortex-A8) crashes in the call to `arm_cp15_tlb_invalidate_entry_all_asids()`. There is no HYP support in the BBB's A8. The cp15 register is documented in the A8 manual but the BBB device from TI does not have the support built in.

A check of the A8 doco from ARM says this is for use in HYP mode so should we be using without checking if HYP is supported and if it is active? I am also wondering if we use should be using it on the Zynq. I have no idea why the Zynq (A9) does not complain, it may be ignoring the invalidate request.

While looking at this code I was wondering why we do not follow ARM's recommendation of 'break-make' updates of the TLB? I do not know we could support such a process because we may be asked to invalidate the entry for the text section we are running in to update it.

Note, following the other path in the call works on a BBB.

**Comment 1**

1. **Chris Johns**, Tue, 25 Jun 2019 10:08:06 GMT

The implementation is:

```
ARM_CP15_TEXT_SECTION static inline void
arm_cp15_tlb_invalidate_entry_all_asids(const void *mva)
{
  ARM_SWITCH_REGISTERS;
  mva = ARM_CP15_TLB_PREPARE_MVA(mva);
  asm_volatile (
    ARM_SWITCH_TO_ARM
    "mcr p15, 0, %[mva], c8, c7, 3\n"
    ARM_SWITCH_BACK
    : ARM_SWITCH_OUTPUT
    : [mva] "r" (mva)
  );
}
```

The cp15 register c8, 0, c7, 3 is undefined for a Cortex-A8 (ARM's document DDI0334K p3-12). The conditional define in arm\_cp15\_set\_translation\_table\_entries catches the Cortex-A8.

**Comment 2**

1. **Sebastian Huber**, Tue, 25 Jun 2019 10:42:44 GMT

Can the availability checked via a feature register at runtime?

**Comment 3**

1. **Chris Johns**, Tue, 25 Jun 2019 10:44:49 GMT

Replying to Sebastian Huber:

Can the availability checked via a feature register at runtime?

Yes I think so. The test can be for variant 3 or earlier for the Cortex-A8 and 4 or higher for Cortex-A9 or later.

**Comment 4**

1. **Chris Johns**, Tue, 30 Jul 2019 22:38:00 GMT

2. **owner:** set to **Chris Johns** <chrisj@...>

3. **status:** changed from **new** to **closed**

4. **resolution:** set to **fixed**

In 98d6792/rtems:

```
arm: Select the TLB invalidate based on the core's Id variant.
Closes #3760
```

**Comment 5**

1. **Chris Johns**, Mon, 12 Aug 2019 23:01:20 GMT

In 15b6f44d/rtems:

```
arm/tlb: Fix the MP affinity check to invalidate ASIDs.
The TI's CortexA7 MP MPIDR register returns 0
Updates #3760
```

---

## **3762** - Return the current handler from ARM cp15 set exception call

#### Description

Update the cp15 call `arm_cp15_set_exception_handler()` to return the current handler. This lets code catch and return an exception handler, for example code to probe suspect hardware.

This is need to probe the memory map debug registers for debug v7 implementations.

#### Comment 1

**Description**

Add support to allow staging of an RTEMS BSP build so dependent packages can be built in a single RBS buildset build.

**Comment 1**

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

1. **Chris Johns**, Sun, 21 Jul 2019 22:20:20 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 270c5df5/rtems:

```
Makefile.inc: Add support for staged builds.
Allow the RTEMS_ROOT to be conditionally supplied. This
can be a staging area before being moved to the final
install prefix location. Update the default.cfg to use RTEMS_ROOT and to not rely on
the exec prefix so it's paths can be staged. Fix and add the needed configure subs.
Closes #3768
```

## **3769 - RSB BSP Buildsets**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3769">https://devel.rtems.org/ticket/3769</a> ( <a href="https://devel.rtems.org/ticket/3769">https://devel.rtems.org/ticket/3769</a> )

### Description

Add support to the RSB for BSP build sets. The support includes building 3rd party packages for a BSP.

- Add BSP buildset support
- Build packages for a BSP
- Stage buildset builds if not the outer build so dependent packages and be built before a package and used
- Fix packages to support staged builds

### Comment 1

1. **Chris Johns**, Mon, 22 Jul 2019 21:58:10 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 831ae05/rtems-source-builder:

```
rtems/bsp: Build packages for the beagle BSP.
Closes #3769
```

## **3770 - RSB 3rd party packages failing to build**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3770">https://devel.rtems.org/ticket/3770</a> ( <a href="https://devel.rtems.org/ticket/3770">https://devel.rtems.org/ticket/3770</a> )
<b>Id</b>	3770

<b>Blocking</b>	
<b>Blocked by</b>	

### Description

The following packages do not build or have issues and will be removed if they are not updated:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

- ntp
- microwindows
- nxlib
- lwip

The lwip patch used by this package needs to be updated. The install target for the Makefile does not support DESTDIR and cannot be staged. It is being built however a lack of DESTDIR is not compatible with the requirements of the RSB for staged builds. The package installs directly to the prefix which is not suppose to happen.

The packages will need to be fixed or removed before 5.1. There is no point releasing the RSB with packages that are broken.

#### Comment 1

1. **Chris Johns**, Thu, 12 Dec 2019 17:05:47 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **wontfix**

I am going to close this ticket and these packages will not be available with the RSB. With no RSB support I do not know who builds these packages and if they are valid?

### **3773 - RPi fails to boot**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3773">https://devel.rtems.org/ticket/3773</a> ( <a href="https://devel.rtems.org/ticket/3773">https://devel.rtems.org/ticket/3773</a> )

#### **Description**

The RPi BSP fails to boot with the current master. A bsect of the repo shows the failure appears after this change [bdec62c4/rtems].

#### Comment 1

1. **Sebastian Huber**, Fri, 26 Jul 2019 07:25:25 GMT

In 0f5c1d53/rtems:

```
bsps/arm: Remove register init for ARMv7-M
There are no known ARMv7-M chips with a dual lockstep mode.
Update #3773.
```

#### Comment 2

1. **Sebastian Huber**, Fri, 26 Jul 2019 07:25:28 GMT

In 0ee2125/rtems:

```
bsps/arm: Move register init to start.S
This makes it easier to review changes in start.S.
Update #3773.
```

#### Comment 3

1. **Sebastian Huber**, Fri, 26 Jul 2019 07:25:32 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 1e6380b/rtems:

```
bsps/arm: Move HYP to SVC change to start.S
This fixes the corruption of r3 by the call to bsp_start_arm_drop_hyp_mode().
```

Moving the code makes it easier to review changes in start.S.

Close #3773.

```

**Comment 1**

1. **Sebastian Huber**, Fri, 09 Aug 2019 10:49:09 GMT

In source-builder/sb/check.py:

```
def path_check(opts, silent = False):
    if 'PATH' in os.environ:
        paths = os.environ['PATH'].split(os.pathsep)
        for p in paths:
            if len(p.strip()) == 0:
                if not silent:
                    log.notice('error: environment PATH contains an empty path')
                return False
            elif not options.host_windows and (p.strip() == '.' or p.strip() == '..'):
                if not silent:
                    log.notice('error: environment PATH invalid path: %s' % (p))
                return False
            elif not path.exists(p):
                if not silent and opts.warn_all():
                    log.notice('warning: environment PATH not found: %s' % (p))
            elif not path.isdir(p):
                if not silent and opts.warn_all():
                    log.notice('warning: environment PATH not a directory: %s' % (p))
    return True
```

The path.exists() seems to be rather complicated, why is it necessary in addition to path.isdir()? What is the overall goal of this check? Is it not the responsibility of the user to take care of his \$PATH variable?

**Comment 2**

1. **Sebastian Huber**, Wed, 27 Nov 2019 13:52:12 GMT

This bug is still open. It is a show stopper on some systems.

### Comment 3

1. **Sebastian Huber**, Wed, 27 Nov 2019 13:55:58 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **accepted**

I suggest to remove this check. I think the RSB tries to be smarter than necessary here.

### Comment 4

1. **Sebastian Huber**, Fri, 29 Nov 2019 06:34:35 GMT

I am not sure if these hard errors are really useful, e.g.

```
$ export PATH=::$PATH
$ ./source-builder/sb-set-builder --prefix=/build/rtems/5 5/rtems-arm --source-only-download
RTEMS Source Builder - Set Builder, 5 (f3b44b25d135)
error: environment PATH contains an empty path
error: host build environment is not set up correctly
Build FAILED
```

Why don't we just issue a warning? If something goes wrong the warning will show up in the logs.

### Comment 5

1. **Chris Johns**, Sun, 01 Dec 2019 23:14:09 GMT

I wonder how many issues have been fixed by having this check present that users cleaned up?

If we remove this test and we get no increase in issues then the test did nothing and our users all had clean environments. An increase means it did serve a purpose. I also think your point about the RSB nannying our users this way may be a step too far so making the tests just warnings and no fatal would be a good compromise. It would let us request the output with debugging a specific user problem.

### Comment 6

1. **Sebastian Huber**, Mon, 02 Dec 2019 08:48:07 GMT

Nannying fits quite well. The empty path check is not superfluous. If I remove it, then RSB fails with:

```
$ export PATH=::$PATH
$ ../source-builder/sb-set-builder 5/rtems-arm --source-only-download
error: unknown application load error
error: unknown application load error
```

### Comment 7

1. **Sebastian Huber**, Tue, 03 Dec 2019 05:53:07 GMT
2. **status:** changed from **accepted** to **closed**
3. **resolution:** set to **fixed**

In 784f518/rtems-source-builder:

```
Be more resilient against $PATH errors
Close #3781.
```

#### Comment 1

1. **Joel Sherrill**, Fri, 16 Aug 2019 13:25:22 GMT

Please update the description of this ticket to clarify. My questions include:

Are you planning to submit a BSP variant for this or are you asking for one? Either way please link to the hardware, manuals, etc.

#### Comment 2

1. **pragnesh**, Fri, 16 Aug 2019 13:38:55 GMT

Replying to Joel Sherrill:

Please update the description of this ticket to clarify. My questions include:

Are you planning to submit a BSP variant for this or are you asking for one? Either way please link to the hardware, manuals, etc.

- 1) Are you planning to submit a BSP variant for this or are you asking for one?

I have already sent a patch for this new BSP variant (Freedom E310) to [devel@rtems.org](mailto:devel@rtems.org), I created this ticket so that i can give reference in the commit message. i followed this <https://docs.rtems.org/branches/master/user/support/contrib.html>

Let me know, Is this a right procedure to submit a patch?

- 2) Either way please link to the hardware, manuals, etc.

I will update the same in description.

#### Comment 3

1. **pragnesh**, Mon, 19 Aug 2019 08:59:01 GMT

Link for the hardware and manuals

<https://www.sifive.com/documentation> (Freedom FE310-G002 Manual) <https://www.digikey.com/eewiki/display/LOGIC/Diligent+Arty+A7+with+Xilinx+Artix-7+Implementing+SiFive+FE310+RISC-V> [https://sifive.cdn.prismic.io/sifive%2Fed96de35-065f-474c-a432-9f6a364af9c8\\_sifive-e310-arty-gettingstarted-v1.0.6.pdf](https://sifive.cdn.prismic.io/sifive%2Fed96de35-065f-474c-a432-9f6a364af9c8_sifive-e310-arty-gettingstarted-v1.0.6.pdf)

#### Comment 4

1. **Pragnesh Patel**, Wed, 23 Oct 2019 06:12:46 GMT

In a7f5e42c/rtems:

```
riscv: add freedom E310 Arty A7 bsp
Added support for Sifive Freedom FE310 soc on Arty A7 FPGA board. Update #3785.

**Description**

expected behaviour

Build without errors and without runtime errors

undesired behaviour

bsp\_start\_hook\_0\_done is undefined  
CPACR Register is not setup

target hardware

Hercules Safety MCU development Kit TMS570 MCU

toolchain version

Modified GCC, binutils and gdb build script to build armeb compiler build with RTEMS Source Builder master(see patches for RTEMS Soucre Builder)  
I need a ARM Compiler with Big Endian Support as default for TMS570.

configuration options for bsp

```
../rtems/configure '--prefix=[bsp path]/bsp/armeb-rtems5' '--host=arm-rtems5' '--target=arm-rtems5' '--enable-posix' '--enable-rtems-debug' '--disable-tests' '--disable-networking' '--enable-rtemsbsp=tms570ls3137_hdk' 'CC_FOR_TARGET=armeb-rtems5-gcc' 'CXX_FOR_TARGET=armeb-rtems5-gcc' 'AR=armeb-rtems5-ar' 'TMS570_USE_HWINIT_STARTUP=1'
```

Test on master commit RTEMS (4a9a58ea8ad75248af5876c01ef654f9bc59c312)

Bug Fix

define simbol bsp\_start\_hook\_0\_done in start.S  
add if defined(ARM\_ARCH\_7R)  
see patches

**Comment 1**

1. **Andreas Werner**, Fri, 23 Aug 2019 08:51:44 GMT

I can't upload Atachments the patches and files can be found under: <https://www.cs.hs-rm.de/~werner/rtems/bugreport/>

**Comment 2**

1. **Sebastian Huber**, Mon, 26 Aug 2019 05:57:34 GMT
2. **owner:** set to **Sebastian Huber**
3. **status:** changed from **new** to **accepted**
4. **component:** changed from **bsps** to **arch/arm**
5. **milestone:** set to **5.1**

The problem is triggered by the TMS570\_USE\_HWINIT\_STARTUP=1 BSP option. In bspstarthooks-hwinit.c we have:

```
#if 1
/*
 * Do not depend on link register to be restored to
 * correct value from stack. If TCRAM self test is enabled
 * the all stack content is zeroed there.
 */
bsp_start_hook_0_done();
#endif
```

Leading to:

```
bsp/arm/tms570/start/bspstarthooks-hwinit.c:375: undefined reference to `bsp_start_hook_0_done'
```

<b>Blocked by</b>	

### Description

Fresh install of Windows 10, with updates. Then installed MSYS2 as instructed here: <https://docs.rtems.org/branches/master/user/hosts/windows.html#msys2>  
Fetched the RSB, and then tried to build rtems-sparc tools, like this...

```
$ ../source-builder/sb-set-builder --prefix=/home/mayes/dev/rtems/5 5/rtems-sparc
RTEMS Source Builder - Set Builder, 5 (b45df48a51bc)
Build Set: 5/rtems-sparc
Build Set: 5/rtems-autotools.bset
Build Set: 5/rtems-autotools-internal.bset
config: tools/rtems-autoconf-2.69-1.cfg
...
...
config: devel/expat-2.1.0-1.cfg
package: expat-2.1.0-x86_64-w64-mingw32-1
building: expat-2.1.0-x86_64-w64-mingw32-1
sizes: expat-2.1.0-x86_64-w64-mingw32-1: 9.229MB (installed: 2.037MB)
cleaning: expat-2.1.0-x86_64-w64-mingw32-1
reporting: devel/expat-2.1.0-1.cfg -> expat-2.1.0-x86_64-w64-mingw32-1.txt
reporting: devel/expat-2.1.0-1.cfg -> expat-2.1.0-x86_64-w64-mingw32-1.xml
config: tools/rtems-gdb-8.3-1.cfg
error: shell macro failed: sh -c "/mingw64/bin/python2-config --ldflags | awk 'BEGIN{FS=" "}/python/{for(i=1;i
Build Set: Time 0:07:19.564000
Build FAILED _
```

This happens when using Python3 and also when using Python2.

### Comment 1

1. **Chris Johns**, Thu, 05 Sep 2019 23:24:07 GMT

The issue is due to the shell command string containing " character that are not escaped. On MinGW these commands have to use the MSYS2 shell and not the host's shell which is some form of cmd.exe. The command to invoke the MSYS2 shell is ...

<https://git.rtems.org/rtems-source-builder/tree/source-builder/sb/config.py#n430>

The wrapping of the string in "" effects the shell's processing.

### Comment 2

1. **Chris Johns**, Thu, 05 Sep 2019 23:31:43 GMT

The failing command on Windows is:

```
sh -c "/mingw64/bin/python2-config --ldflags | awk 'BEGIN{FS=" "}/python/{for(i=1;i
```

### Comment 3

1. **Chris Johns**, Fri, 06 Sep 2019 01:53:14 GMT

2. **status:** changed from **assigned** to **closed**

3. **resolution:** set to **fixed**

In d8b2719/rtems-source-builder:

```
sb/config: Escape double quotes on Windows for shell macros
Closes #3792
```

**3793 - trace record tool does not build on Windows**

<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

**Description**

RTEMS initial signal mask for the "process" does not match the behavior of Linux, FreeBSD, and Cygwin.

There are some subtle rules which need to be followed for the value of the created thread's signal mask. Because signals are part of C99 and enhanced by POSIX, both Classic API tasks and POSIX threads have to have them enabled.

- Internal system threads should have no signals enabled. They have no business executing user signal handlers -- especially IDLE.
- The initial signal mask for other threads needs to follow the implication of a pure C99 environment which only has the methods raise() and signal(). This implies that all signals are unmasked until the thread explicitly uses a POSIX methods to block some. This applies to both Classic tasks and POSIX threads created as initialization tasks/threads (e.g. before the system is up).
- After the initial threads are created, the signal mask should be inherited from the creator. This can be done based on system state.

RTEMS behavior was incorrect by blocking all signals initially and for Classic API tasks.

Notes:

- The default signal mask does not matter for any application that does not use POSIX signals.
- It is assumed that Classic API tasks should provide a compliant C run-time environment. Hence the default signal mask state matters.

Impact on Applications and Tests

In general, an application should always explicitly block or unmask any signals that it intends to process. If there is concern about which thread may process it, then it should be blocked in all threads that are not intended to process it. The following code can be used to block all signals. This method can be used in the initialization task/thread to mimic historical behavior:

```
static void block_all_signals(void)
{
    int          sc;
    sigset_t     mask;
    sc = sigfillset( &mask );
    // check sc == 0
    sc = pthread_sigmask( SIG_BLOCK, &mask, NULL );
    // check sc == 0
}
```

**Comment 1**

1. **Joel Sherrill**, Wed, 25 Sep 2019 19:52:37 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 8798372/rtems:

```
Correct initial POSIX signals mask
```

```
+ Modify POSIX thread create extension to ensure expected
    initial signal mask is provided to system threads, initial tasks and threads, and inherited by tasks and threads.
```

```
+ Adds psxsignal07 to verify functionality when using a POSIX
    Initialization thread and POSIX threads.
```

```
+ Adds psxsignal08 to verify functionality when using a Classic API
    Initialization task and Classic API tasks.
```

Closes #3794.

**Description**

Currently the RTEMS termios implementation does not examine the ISIG setting in the termios attributes and thus does not examine input for the INTR (ctl-C) and QUIT (ctl-\) characters. As a consequence, it cannot return -1/EINTR.

The proposed solution implements a point at which a default handler can do nothing like currently or the application can use the following new method which allows them to register the RTEMS provided method rtems\_termios\_posix\_isig\_handler().

```
rtems_termios_isig_status_code rtems_termios_register_isig_handler(
  rtems_termios_isig_handler handler
);
```

The method rtems\_termios\_posix\_isig\_handler() is provided and has the POSIX compliant behavior of generating SIGINTR for the VINTR character and SIGQUIT for the VQUIT character.

The user also can register rtems\_termios\_default\_isig\_handler() to return to the default behavior.

The tests termios10 (polled IO) and termios11 (interrupt driven IO) are added to exercise this behavior.

2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In 667501a/rtems:

termios: Add Capability to Generate SIGINTR and SIGQUIT

This patch adds the ability for termios to send SIGINTR on receipt of VINTR and SIGQUIT for VKILL and return -1/EINTR from read() on a termios channel. Importantly, this patch does not alter the default behavior or force POSIX signal code in just because termios is used. The application must explicitly enable the POSIX behavior of generating a signal upon receipt of these characters. This is discussed in the POSIX standard:

[https://pubs.opengroup.org/onlinepubs/9699919799/basedefs/V1\\_chap11.html](https://pubs.opengroup.org/onlinepubs/9699919799/basedefs/V1_chap11.html)

Closes #3800.

### Comment 3

1. **Sebastian Huber**, Sat, 01 Feb 2020 14:03:08 GMT
2. **status:** changed from **closed** to **reopened**
3. **resolution:** **fixed** deleted

The implementation breaks the canonical input mode as shown by test case termios09.

### Comment 4

1. **Sebastian Huber**, Sat, 01 Feb 2020 14:11:27 GMT

The implementation introduced a new enum:

```
/**
 * @brief Type returned by all input processing (isig) methods
 */
typedef enum {
    /**
     * This indicates that the input character was processed
     * and possibly placed into the buffer.
     */
    RTEMS_TERMIOISIG_WAS_PROCESSED,
    /**
     * This indicates that the input character was not processed and
     * subsequent processing is required.
     */
    RTEMS_TERMIOISIG_WAS_NOT_PROCESSED,
    /**
     * This indicates that the character was processed and determined
     * to be one that requires a signal to be raised (e.g. VINTR or
     * VKILL). The tty must be in the right termios mode for this to
     * occur. There is no further processing of this character required and
     * the pending read() operation should be interrupted.
     */
    RTEMS_TERMIOISIG_INTERRUPT_READ
} rtems_termios_isig_status_code;
```

What was the rationale for the two status codes RTEMS\_TERMIOISIG\_WAS\_PROCESSED and RTEMS\_TERMIOISIG\_WAS\_NOT\_PROCESSED?

What should a handler do if it returns RTEMS\_TERMIOISIG\_WAS\_PROCESSED? The default handler just returns RTEMS\_TERMIOISIG\_WAS\_NOT\_PROCESSED.

### Comment 5

1. **Sebastian Huber**, Mon, 10 Feb 2020 08:01:48 GMT

In 90f11edd/rtems:

termios: Fix input canonical mode

Canonical input processing was broken by 667501a314ba75f80f1c13c6b43dd35d0a00efd1 as shown by test case termios09.

Update #3800.

### Comment 6

1. **Joel Sherrill**, Thu, 02 Apr 2020 01:03:02 GMT

Ping?

**Comment 9**

1. **Sebastian Huber**, Mon, 04 May 2020 14:55:44 GMT

Joel, I have no idea what you had in mind with the `rtems_termios_isig_status_code`, see my comment #4. Is this part of the API which applications may implement? The

```
rtems_termios_isig_status_code rtems_termios_posix_isig_handler(
  unsigned char c,
  struct rtems_termios_tty *tty
)
{
  if (c == tty->termios.c_cc[VINTR]) {
    raise(SIGINT);
    return RTEMS_TERMIOIS_ISIG_INTERRUPT_READ;
  }
  if (c == tty->termios.c_cc[VQUIT]) {
    raise(SIGQUIT);
    return RTEMS_TERMIOIS_ISIG_INTERRUPT_READ;
  }
  return RTEMS_TERMIOIS_ISIG_WAS_NOT_PROCESSED;
}
```

doesn't use `RTEMS_TERMIOIS_ISIG_WAS_PROCESSED` for example. The "unsigned char" should be probably `cc_t`.

**Comment 10**

1. **Joel Sherrill**, Mon, 04 May 2020 15:30:41 GMT

I added the enum for readability. This is a very odd path and having a real name versus a boolean seemed to me to make the code clearer. We could add a debug assert before the return `RTEMS_TERMIOIS_IPROC_CONTINUE` and then the enum `RTEMS_TERMIOIS_ISIG_WAS_NOT_PROCESSED` would be used.

I was leaning to improving the readability with the enum names. It was also not 100% clear to be that there would not end up ever being a third case.

```
static rtems_termios_iproc_status_code
iproc (unsigned char c, struct rtems_termios_tty *tty)
{
  /*
   * If signals are enabled, then allow possibility of VINTR causing
   * SIGINTR and VQUIT causing SIGQUIT. Invoke user provided isig handler.
   */
  if ((tty->termios.c_lflag & ISIG) {
    if ((c == tty->termios.c_cc[VINTR]) || (c == tty->termios.c_cc[VQUIT])) {
      rtems_termios_isig_status_code rc;
      rc = (*termios_isig_handler)(c, tty);
      if (rc == RTEMS_TERMIOIS_ISIG_INTERRUPT_READ) {
        return RTEMS_TERMIOIS_IPROC_INTERRUPT;
      }
      return RTEMS_TERMIOIS_IPROC_CONTINUE;
    }
  }
}
```

**Comment 11**

1. **Chris Johns**, Tue, 05 May 2020 02:28:14 GMT

I am attempting to follow the flow of this ticket to see what the issue is. Sebastian, Joel pushed the patch on 2 Oct 2019, then you updated the ticket with comment:4 around Feb 1 2020 plus a patch to fix the change Joel pushed removing references to one of the enum values. The change only updated the ticket. It was confusing for me to determining the status and action that needs to happen. I have now taken the time to do this.

In regards to enum's one of the fixes for ticket #3969 highlights a subtle issue with bool as a return type then changing code to need more return values. There is no upgrade path I consider `__clean__` or `__safe__` (?) if there is a need to add more return states than a bool's true and false. The libdl ticket shows what happens if you move to an enum from bool as compilers, coverage etc cannot see enough to know any code that was `if (!returned_bool_now_enum())` ... maybe wrong. In the case of libdl the true or 1 became `.*_no_error` and 0 so a valid or no error result was incorrectly handled in code not updated. I think in important interfaces an enum should be considered desirable even if there is only two states and even if only one state is currently being used, i.e. what we now have.

I agree the documentation should indicate how to use the enum results returned. Can someone please update the enum's comments so a user knows how to handle them if returned?

Thanks

**Comment 12**

1. **Sebastian Huber**, Thu, 07 May 2020 13:07:43 GMT

2. **status:** changed from **reopened** to **closed**

3. **resolution:** set to **fixed**

In 153b2669/rtems:

```
termios: Replace rtems_termios_isig_status_code

Merge the rtems_termios_isig_status_code and rtems_termios_iproc_status_code enums into a single rtems_termios_iproc_status_code which is now a part of the API.

Simplify rtems_termios_posix_isig_handler() to avoid unreachable code.

Close #3800.
```

**Description**

It looks like there is a bug in the code that fetches source/patches. Jiri's site is a simple https:

```
making dir: /home/joel/rtems-work/rtems-source-builder/bare/patches
url: https://gaisler.org/qemu/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch -> /home/joel/rtems-work/rtems-source-builder/bare/patches/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch
download: (full) https://gaisler.org/qemu/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch -> patches/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch
download: https://gaisler.org/qemu/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch -> patches/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch
download: no ssl context
download: https://gaisler.org/qemu/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch: error:
error: downloading https://gaisler.org/qemu/0001-LEON3-Add-emulation-of-AMBA-plugin-play.patch: all paths have failed, giving up
```

This is a build with the following script:

```
version=5
# variant="-couverture"
time ./source-builder/sb-set-builder \
--trace \
--log=l-qemu.txt \
--prefix=${HOME}/rtems-work/tools/${version} \
devel/qemu${variant}
```

**Comment 1**

1. **Chris Johns**, Tue, 29 Oct 2019 04:36:13 GMT

Are you sure it is a bug? I do not see the issue and have been downloading these files a lot over the last few days with the RSB.

**Comment 2**

1. **Joel Sherrill**, Tue, 29 Oct 2019 15:22:07 GMT

Replying to Chris Johns:

Are you sure it is a bug? I do not see the issue and have been downloading these files a lot over the last few days with the RSB.

Jiri has a patch which moves the patches to another server. This resolves it for me. But I am on Centos 7 and have tried Python 2.7 and 3.6. The patches load in a browser but don't fetch. Not sure what's up. I don't see this on any other package or patch.

**Comment 3**

1. **Chris Johns**, Tue, 29 Oct 2019 18:28:21 GMT

Replying to Joel Sherrill:

Jiri has a patch which moves the patches to another server. This resolves it for me.

But this does not find out if there is an issue. Lets not paper over the issue. Your debugging of this would help.

But I am on Centos 7 and have tried Python 2.7 and 3.6. The patches load in a browser but don't fetch. Not sure what's up. I don't see this on any other package or patch.

The code is ...

<https://git.rtems.org/rtems-source-builder/tree/source-builder/sb/download.py#n367>

Please add a raise here ...

<https://git.rtems.org/rtems-source-builder/tree/source-builder/sb/download.py#n390>

so the failure is printed. Even better if you could add code to better report the exception it would help long term. Python has great doco on exceptions and catching them.

**Comment 4**

1. **Jiri Gaisler**, Wed, 30 Oct 2019 11:23:58 GMT

The issue could have been caused by some temporary network problem to or in my server. How about if I attach the Leon3 Qemu patches to this ticket and modify RSB to fetch the patches from here ...? We used to do that for the sis/gdb patches and that worked OK.

**Comment 5**

1. **Joel Sherrill**, Wed, 30 Oct 2019 12:42:04 GMT

I tried this again yesterday and this morning and did not have issues. I am closing this as spurious network issues. We can always reopen it.

**Comment 6**

1. **Chris Johns**, Wed, 30 Oct 2019 20:50:27 GMT

Replying to Jiri Gaisler:

The issue could have been caused by some temporary network problem to or in my server. How about if I attach the Leon3 Qemu patches to this ticket and modify RSB to fetch the patches from here ...? We used to do that for the sis/gdb patches and that worked OK.

That is for Jiri to comment on. No one else is having problems and I think it is something local to your setup.

## Comment 1

1. Chris Johns, Wed, 30 Oct 2019 20:47:02 GMT

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **invalid**

This has been fixed. See the simpler beaglebone error, I think number 10. I think your source tree is not up to date in your build system.

### Comment 2

1. **Chris Johns**, Wed, 30 Oct 2019 20:48:48 GMT

<https://git.rtems.org/rtems/commit?id=32c9b831094e5d8474e07e87e978bc33f1472f1c> <https://git.rtems.org/rtems/commit?id=2fdbdbc8b17a40837c53d70106f99eb8ec7c7988>

## 3806 - Add fatal error for heap errors

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3806">https://devel.rtems.org/ticket/3806</a> ( <a href="https://devel.rtems.org/ticket/3806">https://devel.rtems.org/ticket/3806</a> )
<b>Id</b>	3806
<b>Reporter</b>	Sebastian Huber
<b>Created</b>	31 October 2019 12:10:55
<b>Modified</b>	5 November 2019 11:50:33
<b>Owner</b>	Sebastian Huber
<b>Type</b>	enhancement
<b>Component</b>	score
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

Currently, the following fatal error is generate in case of heap errors:

```
static void _Heap_Protection_block_error_default(
  Heap_Control *heap,
  Heap_Block *block
)
{
  /* FIXME */
  _Terminate( INTERNAL_ERROR_CORE, 0xdeadbeef );
}
```

Replace this with a dedicated fatal error source and a context structure (similar to assert()).

### Comment 1

1. **sebastian.huber**, Tue, 05 Nov 2019 11:50:12 GMT

In 3859cd63/rtems:

```
rtems-5: Improve heap fatal error information
Update #3806.
```

### Comment 2

1. **Sebastian Huber**, Tue, 05 Nov 2019 11:50:33 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In dee158c/rtems-docs:

```
c-user: Document RTEMS_FATAL_SOURCE_HEAP
Close #3806.
```

## 3808 - Fix qemu-couverture-git RSB download file name

Fixed

### **3813** - RSB does not handle --rsb-file in releases

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3813">https://devel.rtems.org/ticket/3813</a> ( <a href="https://devel.rtems.org/ticket/3813">https://devel.rtems.org/ticket/3813</a> )
<b>Id</b>	3813
<b>Reporter</b>	Chris Johns
<b>Created</b>	3 November 2019 22:34:52
<b>Modified</b>	29 April 2020 05:14:11
<b>Owner</b>	Chris Johns
<b>Type</b>	defect
<b>Component</b>	tool/rsb
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

A released RSB does not handle the set source option --rsb-file:

```

package: arm-rtems5-gcc-fb371a33fa6-newlib-6661a67-x86_64-freebsd12.0-1
download: https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/sources/fb371a33fa6 -> sources/gnu-mirror-gcc-fb371a33fa6.tar.gz
download: https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/sources/fb371a33fa6: error: HTTP Error 404: Not Found
download: https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/fb371a33fa6 -> sources/gnu-mirror-gcc-fb371a33fa6.tar.gz
download: https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/fb371a33fa6: error: HTTP Error 404: Not Found
download: https://code.load.github.com/RTEMS/gnu-mirror-gcc/tar.gz/fb371a33fa6 -> sources/gnu-mirror-gcc-fb371a33fa6.tar.gz
downloading: sources/gnu-mirror-gcc-fb371a33fa6.tar.gz - 93.6MB

```

The released source has the --rsb-file name as the file name and not the URL file name. The transformation occurred when the release process downloaded the files to make the release.  
The release fails to find the source in the RTEMS file server and falls back to the home site to fetch the source.

### Comment 1

1. **Chris Johns**, Wed, 29 Apr 2020 05:14:11 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

Pushed ...

<https://git.rtems.org/rtems-release/commit/?id=5e16156b814762fa57ab049cfb80e4614124d04f>

and built a release and tested it with a test URL and the beagleboneblack BSP stack built.

## 3814 - Releasing creates 2 copies of the kernel and tools.

### Description

The release snapshot m1911 as found here:

<https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m1911/>

has a kernel (rtems-5.0.0-m1911.tar.xz) in the top directory and another copy in the sources directory.

The top level copy is the head of the branch, in this case master while I suspect the copy in the sources directory is created by the RSB when collecting the source.

Which is correct for a release? I am not sure, the tagged version in the RSB or the release packaged version?

I tend to think the release packaged version is used and the RSB collected versions should not be collected. They are only useful when working from git.

### Comment 1

1. **Chris Johns**, Mon, 11 Nov 2019 03:50:25 GMT
2. **keywords:** **release** added

### Comment 2

1. **Chris Johns**, Mon, 18 Nov 2019 22:16:01 GMT

In 6950f22/rtems-source-builder:

```
sb: Add support for a comma separated release path list.
```

```
Updates #3814
```

### Comment 3

1. **Chris Johns**, Mon, 18 Nov 2019 22:16:04 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In f0b0a70/rtems-source-builder:

rtems: Fix kernel and tools release source package selection.

Closes #3814

## **3815 - Improve SMP EDF scheduler configuration**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3815">https://devel.rtems.org/ticket/3815</a> ( <a href="https://devel.rtems.org/ticket/3815">https://devel.rtems.org/ticket/3815</a> )
<b>Id</b>	3815

<b>Blocking</b>	
<b>Blocked by</b>	

### Description

It is currently quite easy to misconfigure the SMP EDF scheduler so that not enough memory is reserved for the scheduler data structures. The only feedback to the user from these configuration errors is a memory corruption. Improve the configuration means or at least issue a fatal error.

### Comment 1

1. **Sebastian Huber**, Fri, 20 Dec 2019 06:17:22 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 806fe963/rtems:

```
config: Improve EDF SMP scheduler configuration
```

```
Use CONFIGURE_MAXIMUM_PROCESSORS to configure the EDF SMP scheduler context. This avoids hard to debug configuration errors resulting in memory corruptions.
```

```
Close #3815.
```

### Comment 2

1. **Sebastian Huber**, Wed, 15 Apr 2020 14:57:22 GMT

In 7b7efb2/rtems-docs:

```
c-user: Fix RTEMS_SCHEDULER_EDF_SMP()
```

```
Update #3815.
```

#### Comment 1

1. **Chris Johns**, Tue, 05 Nov 2019 23:34:10 GMT
2. **description:** modified (diff)
3. **milestone:** set to 5.1

#### Comment 2

1. **Sebastian Huber**, Wed, 06 Nov 2019 10:26:42 GMT

I was able to build the RTEMS 5 tools with 12.0-RELEASE-p2. I will try to update to the latest FreeBSD 12 and see what happens.

#### Comment 3

1. **Joel Sherrill**, Wed, 06 Nov 2019 14:35:01 GMT

Replying to Sebastian Huber:

I was able to build the RTEMS 5 tools with 12.0-RELEASE-p2. I will try to update to the latest FreeBSD 12 and see what happens.

This is with a fresh install from their images. Jeff can give you the URL if it matters. Hopefully, there is something stupid on our side and not a difference between FreeBSD pre-release images and the final release image.

#### Comment 4

1. **Sebastian Huber**, Wed, 06 Nov 2019 14:38:09 GMT

I did an update to FreeBSD 12.1 and at least ARM is building fine:

<https://lists.rtems.org/pipermail/build/2019-November/008065.html>

#### Comment 5

1. **Chris Johns**, Wed, 06 Nov 2019 21:37:59 GMT

Do you have libiconv installed?

```
$ pkg which /usr/local/lib/libiconv.a
/usr/local/lib/libiconv.a was installed by package libiconv-1.14 11
```

#### Comment 6

1. **Sebastian Huber**, Thu, 07 Nov 2019 06:00:10 GMT

Yes, I have the same output. We installed the following packages:

```
pkg install git
pkg install python
pkg install bison
pkg install gmake
pkg install subversion
pkg install makeinfo
pkg install texinfo
```

**Comment 7**

1. **Joel Sherrill**, Thu, 07 Nov 2019 13:46:24 GMT

Strangely, it looks like the autoconf tests must be passing to detect libiconv but when it comes time to link, the symbols aren't there.

Do you know how to turn on verbose mode so the make shows the real commands? That might help some.

**Comment 8**

1. **Jeff Mayes**, Thu, 07 Nov 2019 15:04:17 GMT

I updated to FreeBSD 12.1 yesterday, but it still fails the same way.

Yes, I have libiconv installed, same version shown above.

However, I didn't have subversion or makeinfo installed. Just installed subversion, so I'll try again and report back. What's up with makeinfo?

```
# pkg install makeinfo
Updating FreeBSD repository catalogue...
FreeBSD repository is up to date.
All repositories are up to date.
pkg: No packages available to install matching 'makeinfo' have been found in the repositories
```

**Comment 9**

1. **Jeff Mayes**, Thu, 07 Nov 2019 16:22:39 GMT

Still fails after subversion install, unsurprisingly.

Does this look correct? I excluded matches in /home directories.

```
# find / -name "libiconv*"
/usr/ports/converters/libiconv
/usr/lib/i18n/libiconv_std.so.4
/usr/lib/i18n/libiconv_none.so
/usr/lib/i18n/libiconv_std.so
/usr/lib/i18n/libiconv_none.so.4
/usr/lib/debug/boot/kernel/libiconv.ko.debug
/usr/local/share/licenses/libiconv-1.14_11
/usr/local/share/doc/libiconv
/usr/local/lib/libiconv.a
/usr/local/lib/libiconv.so.2
/usr/local/lib/libiconv.so.2.5.1
/usr/local/lib/libiconv.so
/usr/lib32/i18n/libiconv_none.so
/usr/lib32/i18n/libiconv_std.so.4
/usr/lib32/i18n/libiconv_std.so
/usr/lib32/i18n/libiconv_none.so.4
/boot/kernel/libiconv.ko
/boot/kernel.old/libiconv.ko
/var/cache/pkg/libiconv-1.14_11-1b77da9274.txz
/var/cache/pkg/libiconv-1.14_11.txz
```

**Comment 10**

1. **Chris Johns**, Thu, 07 Nov 2019 21:29:46 GMT

Replying to Jeff Mayes:

Does this look correct? I excluded matches in /home directories.

```
# find / -name "libiconv*" .. [snip] ...
```

FreeBSD makes a distinction between /usr and /usr/local. Anything under /usr excluding /usr/local is part of the base OS and you should not touch. Additional packages or ports are installed under /usr/local. If you look back at comment 5 by me you will see I have referenced a /usr/local path and not a /usr path like you have.

There are a couple of paths ...

You need to check if you have the libiconv package installed as ask in comment 5. Maybe try `pkg info | grep libiconv` to see. When I originally added libiconv support for FreeBSD the OS versions of the libraries were not up to date and so the libiconv port was needed. The OS versions maybe suitable now, however at a guess I would say they are not as the build fails. You could look closely at the errors and OS provided library to know.

**Comment 11**

1. **Chris Johns**, Thu, 07 Nov 2019 21:32:40 GMT

Replying to Joel Sherrill:

Strangely, it looks like the autoconf tests must be passing to detect libiconv but when it comes time to link, the symbols aren't there.

Do you know how to turn on verbose mode so the make shows the real commands? That might help some.

The log contains all the command and if that is not enough detail try `--trace (1)`

The log will show a shell script is created and I think that script is run with `set -x` which prints the commands. On a failed build the script is left in the build tree.

(1) <https://docs.rtems.org/branches/master/user/rsb/commands.html#set-builder-sb-set-builder>

**Comment 12**

1. **Joel Sherrill**, Thu, 07 Nov 2019 22:04:58 GMT

Replying to Chris Johns:

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Replying to Joel Sherrill:

The log will show a shell script is created and I think that script is run with set -x which prints the commands. On a failed build the script is left in the build tree.

The RSB isn't the problem here. It is the GDB build itself. They have gone to a quiet build which only prints something like "CCLD gdb" which isn't helpful at all.

I think you mentioned that the main libiconv package may be broken and that there is another in ports. Is that correct? If so, should the default one be removed and the ports one used?

### Comment 13

1. **Chris Johns**, Thu, 07 Nov 2019 22:39:43 GMT

I am OK with that change. There is so much rubbish printed that is meaningless. Assuming automake I suggest you have a look at.

[https://www.gnu.org/software/automake/manual/html\\_node/Automake-Silent-Rules.html](https://www.gnu.org/software/automake/manual/html_node/Automake-Silent-Rules.html)

Try adding V=1 to the make command line.

I think you mentioned that the main libiconv package may be broken and that there is another in ports. Is that correct?

I am not sure it is broken, that depends on how it is used and the interfaces provided. Is this library part of a standard? If it is not then I would not use "broken".

If so, should the default one be removed and the ports one used?

No, ports are added. FreeBSD provides the kernel and base user land as a release. This means a libiconv may be provided by the OS base if it is needed that is suitable for the base OS user land executables. A port is also provided so there may be differences other software such as gdb requires.

I feel you are approaching the issue from a Linux point of view which is a kernel as a separate configuration item plus the distro's user land where all the user land is under /usr as one big and hopefully happy family. FreeBSD follows the historical (?) path of the kernel and base user land being a single controlled and released item and so you do not touch it. The benefit is the base OS is tested to work and if you do not touch it no matter what you install you can at least recover back to that base.

### Comment 14

1. **Joel Sherrill**, Sun, 05 Apr 2020 16:24:00 GMT

The only response I got on the gdb list said the person manually overrode where libiconv was located. I can't seem to find that email now. The autoconf is broken, known broken, ...

I have no idea why this works for others. It is still broken as of my overnight build.

<https://lists.rtems.org/pipermail/build/2020-April/012863.html>

If this works for others on FreeBSD 12, I would like to know how.

### Comment 15

1. **Chris Johns**, Mon, 06 Apr 2020 00:04:13 GMT

I recently add this to for 12 ...

<https://git.rtems.org/rtems-source-builder/commit/source-builder/sb/freebsd.py?id=599c4d7c87fab531014a614f2a32b56be0a3ce28> <https://git.rtems.org/rtems-source-builder/tree/source-builder/sb/freebsd.py#n113>

Is there an issue on 12 with this?

### Comment 16

1. **Joel Sherrill**, Mon, 06 Apr 2020 00:12:59 GMT

The failure per <https://lists.rtems.org/pipermail/build/2020-April/012863.html> (sparc) and <https://lists.rtems.org/pipermail/build/2020-April/012855.html> (riscv) is in sis. I have no idea is this is before or after where gdb would be built and trip the iconv issue. Looks like a separate issue.

**Description**

At least, not in some circumstances.

For example, foo/bar.txt untar's just fine, but foo/bar/baz.txt does not. If sub-directory foo/ exists first, then foo/bar/baz.txt does unpack correctly.

We only use the Untar\_\*( ) family during our initial programming workflow, so hacking around this problem wasn't too laborious for us.

**Comment 1**

1. **Chris Johns**, Wed, 20 Nov 2019 22:24:42 GMT

What happens if you add --format=ustar to your tar command ?

**Comment 2**

**Description**

Running top on a Zynq zc706 gives ...

ID	NAME	RPRI	CPRI	TIME	TOTAL	CURRENT
0x0a010008	IRQS	4611686018427388000	4611686018427388000	2.437559	0.000	0.022

The code in question is ... <https://git.rtems.org/rtems/tree/cpukit/libmisc/cpuuse/cpuusagetop.c#n447>

What is best API to show a priority that makes this code robust?

**Comment 1**

1. **Joel Sherrill**, Sun, 24 Nov 2019 23:54:50 GMT

What do you mean by robust?

It is showing score priority so that is clearly confusing for POSIX threads. But a mixed system is also co fusing.

**Comment 2**

1. **Chris Johns**, Mon, 25 Nov 2019 00:04:38 GMT

Replying to Joel Sherrill:

What do you mean by robust?

One that returns "a" priority we can document and is not effected by implementation changes.

It is showing score priority so that is clearly confusing for POSIX threads. But a mixed system is also co fusing.

Yes but that I feel that is a property of top's implementation. For example we could add options to show the score view or we show API priorities etc.

**Comment 3**

1. **Sebastian Huber**, Mon, 25 Nov 2019 06:39:23 GMT

It shows the correct score priority. If you want to show priorities mapped to a specific API, then you have to add this on top of it.

**Comment 4**

1. **Chris Johns**, Thu, 12 Dec 2019 17:57:14 GMT

The code is <https://git.rtems.org/rtems/tree/cpukit/libmisc/cpuuse/cpuusagetop.c#n451>.

It seems `_Thread_Get_unmapped_real_priority` is not clearing the new extra bits used in the priority.

**Comment 5**

1. **Sebastian Huber**, Thu, 12 Dec 2019 18:57:51 GMT

The `Priority_Control` contains 64 bits. The least significant bit is used to indicate if the priority is appended or prepended to its priority group. This bit is removed by the `_Thread_Get_unmapped_real_priority()`. The other 63 bits are defined by a particular scheduler algorithm. The only invariant is the lower values indicate a higher priority (importance).

**Comment 6**

1. **Chris Johns**, Thu, 12 Dec 2019 21:03:19 GMT

How do we take that value and get the actual priority?

**Comment 7**

1. **Chris Johns**, Thu, 12 Dec 2019 21:55:00 GMT

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **duplicate**

Duplicate of #3552.

#### **Description**

I think <https://docs.rtems.org/branches/master/user/hardware/tiers.html> is intended to be the real site of this information. However, <https://devel.rtems.org/wiki/Developer/Architectures> also describes the tiers rules with slightly different language.

I think the Wiki page can be reviewed and removed. But any references and sub-pages should be dealt with at the same time. <https://devel.rtems.org/search?q=Developer%2FArchitectures&noquickjump=1&wiki=on> shows two sub-pages to deal with:

- <https://devel.rtems.org/wiki/Developer/Architectures/ARM> which is one sentence and can be removed.
- <https://devel.rtems.org/wiki/Developer/Architectures/ARM/ARM-EABI> which probably should move to the Users Manual.

This would eliminate a few pages and a point of duplication for a very important concept to the RTEMS Project.

#### **Comment 1**

1. **Sebastian Huber**, Wed, 04 Dec 2019 13:26:37 GMT

I removed both ARM pages. The information was out of date since a couple of years.

#### **Comment 2**

1. **Joel Sherrill**, Wed, 04 Dec 2019 13:28:09 GMT

Thanks. I tripped across this doing the FSW slides. Were there links to these pages?

#### **Comment 3**

1. **Sebastian Huber**, Wed, 04 Dec 2019 13:31:34 GMT

How can we figure out if there are links?

The Developer/Architectures? looks like content which should be synchronized with the user manual and then get deleted.

#### **Comment 4**

1. **Christian Mauderer**, Thu, 05 Dec 2019 14:34:51 GMT

I would interpret the two sources slightly different:

The manual (at docs.rtems.org) sounds like tires are a per commit property. That would mean that every published result tells "The BSP has this Tire on commit/release xyz". That seems like a sane approach. The wiki on the other hand tells something about "all commits". That's a quite inaccurate description. It doesn't tell what the first commit is. So in theory every commit since RTEMS exists has to build and work for that board. That is just impossible. Beneath that the wiki allows simulator results in tire 1. So it's not entirely clear what the difference to tire 2 is.

I would vote for dropping the inaccurate description in the wiki in favor of the more accurate one in the manual.

#### **Comment 5**

1. **Joel Sherrill**, Thu, 12 Dec 2019 17:00:11 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 01be513/rtems-docs:

```
user/hardware/tiers.rst: Merge info from Wiki.
```

```
Tiers had a write up on the Wiki which was similar but different. Merged content from the Wiki which allows the Wiki page to be deleted.
closes #3831.
```

#### **Comment 6**

1. **Joel Sherrill**, Thu, 12 Dec 2019 17:29:08 GMT

Wiki page deleted.

Sebastian: I searched for the Wiki page name in only wiki pages. Maybe there is another way but that confirmed it had no references.

#### **Description**

In SMP configurations, the maximum count of MrsP semaphores must be configured via `CONFIGURE_MAXIMUM_MRSP_SEMAPHORES`. The MrsP semaphore implementation predates the addition of self-contained synchronization objects. At this time, the potential memory reduction was justified considering the more complex configuration and additional use of the workspace. With the availability of self-contained synchronization options, e.g. POSIX mutexes, this is no longer justified. Memory constrained applications should use the self-contained synchronization objects. Remove the `CONFIGURE_MAXIMUM_MRSP_SEMAPHORES` configuration option. This has only an impact on applications which use SMP and a large number of scheduler instances.

#### Description

Use a system initialization handler to initialize the clock driver instead of using a legacy IO driver. This makes the system initialization more modular and removes a bit of overhead introduced by the legacy IO driver dependency.

#### Description

In some applications it is desirable to have statically allocated resources for all operating system objects.

In addition to the thread control block, up to four memory areas are currently allocated by a thread:

- stack area
- TLS area
- FP context
- thread queue heads

Currently the FP context and the TLS area are separately allocated from the workspace. This complicates the workspace size estimate. Add the FP context and TLS size to the stack size and place them in the stack area. This makes it also possible to move the stack area allocation out of `_Thread_Initialize()`. Use a hook to get the thread queue heads which is configured depending on the `unlimited objects` option of the configuration.

Statically allocate the stacks for internal threads (e.g. `idle` and `MPCI receive server`) in a dedicated linker section (similar to the interrupt stacks). Mention this in the `Classic API Guide` configuration chapter.

#### Comment 1

1. **Chris Johns**, Mon, 09 Dec 2019 11:47:18 GMT

Does this assume TLS is a fixed size? I would need to revisit how TLS support would be managed in the dynamic loading situation. At a guess I suspect it will break possible solutions and that concerns me. I would prefer we do not wedge `libdl` in to a corner with change for a use case I do not fully understand. Maybe a detailed use case would help.

#### Comment 2

1. **Sebastian Huber**, Mon, 09 Dec 2019 11:55:41 GMT

Nothing stops you from reallocating the TLS area on demand. In the worst case you waste a bit of memory. I don't think this change here will add constraints to `libdl`.

#### Comment 3

1. **Sebastian Huber**, Mon, 09 Dec 2019 11:58:24 GMT

For clarification, the pointer to the TLS area in the thread control block will remain as is.

#### Comment 4

1. **Chris Johns**, Mon, 09 Dec 2019 12:24:02 GMT

Great, that helps. Thanks.

#### Comment 5

1. **Joel Sherrill**, Mon, 09 Dec 2019 12:38:58 GMT

In at least two applications I have helped with that had custom allocators, this sounds like it might not work. They had special mmu permissions on their stack memory.

#### Comment 6

1. **Sebastian Huber**, Mon, 09 Dec 2019 12:51:01 GMT

I would consider the FP context and the thread-local storage of a thread to be in the same access domain. These data areas should be private to a thread.

#### Comment 7

1. **Sebastian Huber**, Wed, 11 Dec 2019 14:26:21 GMT
2. **blockedby**: set to **3838**

#### Comment 8

1. **Joel Sherrill**, Thu, 12 Dec 2019 18:09:46 GMT

Replying to Sebastian Huber:

I would consider the FP context and the thread-local storage of a thread to be in the same access domain. These data areas should be private to a thread.

I don't know if this was intended to respond to my concern with custom stack allocators or not. In the systems I know have used this, the memory is not available (mapped dynamically) or known statically (RTEMS runs in virtual address space).

How does this work with custom stack allocators?

#### **Comment 9**

1. **Sebastian Huber**, Thu, 12 Dec 2019 18:54:18 GMT

Replying to Joel Sherrill:

Replying to Sebastian Huber:

I would consider the FP context and the thread-local storage of a thread to be in the same access domain. These data areas should be private to a thread.

I don't know if this was intended to respond to my concern with custom stack allocators or not. In the systems I know have used this, the memory is not available (mapped dynamically) or known statically (RTEMS runs in virtual address space).

How does this work with custom stack allocators?

The availability of statically initialized threads doesn't mean that everyone has to use them. They are optional. I also have no intention to remove the custom stack allocator. What changes is that the memory area allocated for the stack is used also to contain the thread-local storage and the FP context. These memory areas are private to a thread and non-executable. I really don't know what a potential problem could be with a custom allocator.

I plan to statically initialize the stacks for the idle threads and the MPCl receive server thread. They will reside in special linker sections so that a BSP or application can control the placement in memory.

In 0e1ac917/rtems:

```
score: Remove _Stack_Ensure_minimum() call
This call is superfluous since _Thread_Initialize() will do this also.
Update #3835.
```

**Comment 15**

1. **Sebastian Huber**, Wed, 12 Feb 2020 15:12:21 GMT

In fc398fd/rtems:

score: Simplify FP context allocation

Use the stack area to allocate the FP context. This considerably simplifies the application configuration since the task count no longer influences the configured work space size. With this change the stack space size is overestimated since an FP context for each thread is accounted. Memory constraint applications can use the stack size for fine tuning.

Update #3835.

**Comment 16**

1. **Sebastian Huber**, Wed, 12 Feb 2020 15:12:24 GMT

In f4dbf37d/rtems:

score: Simplify TLS area allocation

Use the stack area to allocate the TLS area.

Update #3835.

**Description**

The work area initialization is done by the BSP through `bsp_work_area_initialize()`. This approach predates the system initialization through the system initialization linker set. The workspace and C program heap are unconditionally initialized. With the availability of statically initialized threads a system without workspace and C program heap is feasible. Change the work area initialization so that components are initialized on demand. To achieve this:

- Add a Memory Handler which provides support for low level handling of memory areas which are handed over to the higher level Heap Handler.
- Add an implementation of `_Memory_Get()` to each BSP (basically a restructuring of the `bsp_work_area_initialize()` implementations).

See optimization opportunity in #3925.

**Comment 1**

1. **Chris Johns**, Wed, 11 Dec 2019 16:01:24 GMT

This needs to be explained in more detail.

What happens to BSPs that are not in the tree?

**Comment 2**

1. **Sebastian Huber**, Wed, 11 Dec 2019 16:31:41 GMT

I am not sure what needs to be explained in more detail. This is mostly a mechanical change which just rearranges existing things a bit differently.

As usual, maintainers of BSPs which are not in the mainline RTEMS source have to pay a price and have to update their BSPs by themselves. With an updated documentation, this shouldn't be an issue.

**Comment 3**

1. **Chris Johns**, Thu, 12 Dec 2019 18:08:47 GMT

Replying to Sebastian Huber:

I am not sure what needs to be explained in more detail. This is mostly a mechanical change which just rearranges existing things a bit differently.

I think there are somethings, for example take "components are initialized on demand", what is a "component" and what does "initialized on demand" mean?

I am OK with working through the detail but this will have to wait until I find the time. If you do not mind waiting let me know.

As usual, maintainers of BSPs which are not in the mainline RTEMS source have to pay a price and have to update their BSPs by themselves. With an updated documentation, this shouldn't be an issue.

A number of users cannot submit their BSPs and we have attempted to maintain a BSP API. Maybe we should define a formal BSP interface that cannot be touched without careful consideration?

**Comment 4**

1. **Sebastian Huber**, Thu, 12 Dec 2019 18:48:09 GMT

Replying to Chris Johns:

Replying to Sebastian Huber:

I think there are somethings, for example take "components are initialized on demand", what is a "component" and what does "initialized on demand" mean?

The two components are the workspace and the C program heap. On demand means that they are only initialized if functions of these components are used by the application.

I am OK with working through the detail but this will have to wait until I find the time. If you do not mind waiting let me know.

As usual, maintainers of BSPs which are not in the mainline RTEMS source have to pay a price and have to update their BSPs by themselves. With an updated documentation, this shouldn't be an issue.

A number of users cannot submit their BSPs and we have attempted to maintain a BSP API. Maybe we should define a formal BSP interface that cannot be touched without careful consideration?

I do this with careful consideration. This change request is the result of a multi year work consisting of lots of small steps to make it possible to fully statically initialize RTEMS. Yes, it breaks the API, but adopting an existing BSP can be done easily in less than one hour. Also if you use a standard linker command file, then you can use the default implementation in your external BSP.

In 34a7a12f/rtems:

```
bsps: Add RTEMS_SYSINIT_BSP_EARLY
Add new BSP system initialization step for work to be performed before the work areas are initialized.
Update #3838.
```

#### Comment 11

1. **Sebastian Huber**, Tue, 04 Feb 2020 06:03:41 GMT

In c184b0c/rtems:

```
stackchk: Add RTEMS_SYSINIT_ISR_STACK
Use a dedicated system initialization step for the stack checker interrupt stack support.
Update #3838.
```

**Comment 12**

1. **Sebastian Huber**, Tue, 04 Feb 2020 06:03:45 GMT

In 07e2eac/rtems:

bsps: Remove uses of BSP\_GET\_WORK\_AREA\_DEBUG

The code covered by BSP\_GET\_WORK\_AREA\_DEBUG was basically dead code since there was no normal way to activate it (e.g. via a BSP configuration option). A follow up patch will bring back this feature through a CONFIGURE\_VERBOSE\_SYSTEM\_INITIALIZATION configuration option.

Update #3838.

**Comment 13**

1. **Sebastian Huber**, Tue, 04 Feb 2020 06:03:48 GMT

In eea21eac/rtems:

bsps: Rework work area initialization

The work area initialization was done by the BSP through bsp\_work\_area\_initialize(). This approach predated the system initialization through the system initialization linker set. The workspace and C program heap were unconditionally initialized. The aim is to support RTEMS application configurations which do not need the workspace and C program heap. In these configurations, the workspace and C program heap should not get initialized.

Change all bsp\_work\_area\_initialize() to implement Memory\_Get() instead. Move the dirty memory, sbrk(), per-CPU data, workspace, and malloc() heap initialization into separate system initialization steps. This makes it also easier to test the individual initialization steps.

This change adds a dependency to \_Heap\_Extend() to all BSPs. This dependency will be removed in a follow up change.

Update #3838.

**Comment 14**

**Description**

The version embedded in the RTEMS version message is currently the git hash. This breaks in a release where the version is reported as no-repo. The RTEMS version message is embedded in the gcc version string.

**Comment 1**

1. **Chris Johns**, Thu, 12 Dec 2019 16:14:05 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

**Description**

Remove the CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE configuration option. The RTEMS configuration should be done via explicit configuration options to allow more freedom for implementation changes. The CONFIGURE\_HAS\_OWN\_DEVICE\_DRIVER\_TABLE configuration option had no test case. There was an attempt to get user feedback about this option:

<https://lists.rtems.org/pipermail/users/2019-April/033131.html>

<b>Blocked by</b>	

### **Description**

We have currently three Ada related configuration options:

- CONFIGURE\_GNAT RTEMS
- CONFIGURE\_MAXIMUM\_ADA\_TASKS
- CONFIGURE\_MAXIMUM\_FAKE\_ADA\_TASKS

The CONFIGURE\_MAXIMUM\_FAKE\_ADA\_TASKS option has no effect. The CONFIGURE\_GNAT RTEMS is mandatory to use the CONFIGURE\_MAXIMUM\_ADA\_TASKS option. So, if you just use

```
#define CONFIGURE_MAXIMUM_ADA_TASKS 123
```

then you get a re-definition warning and hopefully pay attention to it. This is not very user friendly from point of view.

The CONFIGURE\_MAXIMUM\_ADA\_TASKS just adds the configured count to CONFIGURE\_MAXIMUM\_POSIX\_THREADS.

The original purpose of these was to:

CONFIGURE\_GNAT RTEMS - add in resources required by Ada run-time independent of the number of Ada tasks (e.g. POSIX threads)

CONFIGURE\_MAXIMUM\_ADA\_TASKS - add in POSIX threads, condition variable, and mutex required for each Ada task

CONFIGURE\_MAXIMUM\_FAKE\_ADA\_TASKS - add in condition variables and mutex required by Ada run-time for a task/thread created outside the Ada run-time which invokes Ada code and is thus a user of the run-time.

Given that you can turn on unlimited threads now and condition variables and mutexes are static, I don't think they have a need any longer. Plus it sounds like they bit rotted. If we needed them still, they would have to be fixed.

We still need documentation that Ada tasks are POSIX threads and must be accounted for in configuring the system. So when moving documentation around, please make that point clear in the CONFIGURE\_MAXIMUM\_POSIX\_THREADS description.

**Comment 2**

1. **Chris Johns**, Wed, 04 Mar 2020 11:53:45 GMT

It looks like debugger.h is being installed when there is no support and this is tripping the test in libbsd so it thinks there is libdebugger support.

I attach a patch to add a library check however this fails because of link errors for a BSP that has the library.

It looks like the include install support in RTEMS needs to be fixed.

<b>Type</b>	defect
<b>Component</b>	arch/powerpc
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

b08278e/rtems leads to the following run-time error on PSIM:

```
BATs must not overlap; area 0x08000000..0x09000000 hits DBAT 0
BATs must not overlap; area 0x0c000000..0x0d000000 hits DBAT 0
```

The RAM overlaps with the PCI area:

```
/*
 * Setup BATs and enable MMU
 */
/* Memory */
setdbat(0, 0x0<<28, 0x0<<28, 1<<28, _PAGE_RW);
setibat(0, 0x0<<28, 0x0<<28, 1<<28, 0);
/* PCI */
setdbat(1, 0x8<<24, 0x8<<24, 1<<24, IO_PAGE);
setdbat(2, 0xc<<24, 0xc<<24, 1<<24, IO_PAGE);
```

Increasing the RAM size to 256MiB (0x10000000) on PSIM breaks also the shared memory support:

```
typedef struct {
/* 0x0c000000 - 0x0c007FFF - AMD 29F040 */
volatile uint8_t Flash[ 512 * 1024 ];
/* 0x0c080000 - 0x0c0FFFFFF - NVRAM/NVRAM */
volatile uint8_t nvram[ 512 * 1024 ];
/* 0x0c100000 - 0x0c100007 - NVRAM/RTC */
psim rtc t RTC;
/* 0x0c100008 - 0x0c10000f - NVRAM/RTC */
uint8_t gap1[8];
/* 0x0c100010 - 0x0c10001b - System V IPC Semaphore */
psim sysv sem t Semaphore;
/* 0x0c10001c - 0x0c10001f - NVRAM/RTC */
uint8_t gap2[4];
/* 0x0c100020 - 0x0c10005f - Ethernet */
volatile uint8_t Ethtap[ 64 ];
/* 0x0c100060 - 0x0c10ffff - NVRAM/RTC */
uint8_t gap3[65440];
/* 0x0c110000 - 0x0c12ffff - System V IPC Shared Memory */
uint8_t SharedMemory[ 128 * 1024 ];
/* 0x0c130000 - 0x0c170000 - OpenPIC IRQ Controller */
volatile uint8_t OpenPIC[ 256 * 1024 ];
} psim_registers_t;
```

Proposed solution is to adjust the memory map so that 256MiB of RAM are supported. Probably needs changes in rtems-tools.

### Comment 1

1. **Joel Sherrill**, Thu, 05 Mar 2020 22:58:03 GMT

The code posted here misses the most important part -- the simulator device tree (<https://git.rtems.org/rtems-tools/tree/tester/rtems/testing/bsps/psim-device-tree>). All of the device addresses start with 0x0c000000 which was OK when the RAM was smaller. But increasing the RAM to 256MB (0x10000000) resulted in the RAM overlapping the devices. The simplest option I see is to change the leading 0x0c... to 0xfc... in all device addresses and avoid the conflict.

As best I can tell, the set of changes is pretty small:

Change rtems-tools/tester/testing/bsps/psim-device-tree to use 0xFC for all devices. This reconfigures the "hardware" Change rtems/bsps/powerpc/psim/linkcmds to change new base address of all the devices which are at the symbol PSIM Delete rtems/bsps/powerpc/start/device-tree and update the BSP README to note where the device tree file is. Also update the README to note that you don't need a modified gdb since the modifications have been in since the last century and no one knows the papyrus BSP anymore. I can't even remember it. Change rtems/bsps/start/bspstart.c to fix 0x0c to 0xfc in the PCI setdbat calls. Note: I don't remember how a base address is broken down to be passed in

I think that's it.

```
posix-users/message_passing.rst: Add status for cannot block in ISR
Updates #3857.
```

**Comment 2**

1. **Martin Erik Werner**, Fri, 24 Jan 2020 14:49:35 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In e225545/rtems:

Use EAGAIN for POSIX mq wait in ISR error

Modify the status code returned by `_CORE_message_queue Submit()` when it detects a wait about to happen in an ISR (which would be deadly) to return a status which translated to EAGAIN instead of ENOMEM.

This is only relevant for POSIX message queues, since Classic API message queues cannot block on send.

The motivation is to match the "most related" errno value returned from `mq_send()` and `mq_timedsend()` according to POSIX, via Open Group:

```
[EAGAIN]
```

```
The O_NONBLOCK flag is set in the message queue description associated with mqdes, and the specified message queue is full.
```

or via the RTEMS POSIX users documentation

```
EAGAIN
```

```
The message queue is non-blocking, and there is no room on the queue for another message as specified by the mq_maxmsg.
```

Neither of these matches the case ofi avoided ISR wait perfectly, but they seem to be the closest equivalent, unless it is desirable to keep a new non-standard error for this case. It is presumed that this is not desirable.

The previously returned ENOMEM error value is not documented in either the Open Group or the RTEMS POSIX users documentation. A companion patch corrects the documentation to include this error condition.

Based on the discussion in: <https://lists.rtems.org/pipermail/devel/2020-January/056891.html>

closes #3857.

### Description

Running a joel script in a telnet session results in the output being sent to the global stdout. For example:

```
$ telnet 1.2.3.4
Trying 1.2.3.4...
Connected to 1.2.3.4.
Escape character is '^'.
RTEMS Shell on /dev/pty0. Use 'help' to list commands.
[/] # cat j
#! joel
ls -las /
[/] # ./j
[/] #
```

The bug is a new shell main loop task will default to the global stdout, stdin etc and has no information about the parent's std handles. A joel script runs in it's own work task and does not know the telnet's std handles.

There are a related set of issues in the handling of the shell\_env variable, POSIX key handling and the use of the external call rtems\_shell\_main\_loop.

The telnet example in libbsd has:

```
static void
telnet_shell(char *name, void *arg)
{
    rtems_shell_env_t env;
    memset(&env, 0, sizeof(env));
    env.devname = name;
    env.taskname = "TLNT";
    env.login_check = NULL;
    env.forever = false;
    rtems_shell_main_loop(&env);
}
```

This is problematic as control of the env has been lost and this make backwards comptatable changes difficult. Control of this struct needs to be brought back under the shell code.

Currently the posix key is set in the parent task only when the run entry point is used. The run's created shell\_env is then passed to the shell's main loop task as an argument from which it is cloned. This means an env is malloced in each run call and again in the main loop of the shell.

The current code leaks memory as repeated calls to a joel script in a shell will set the key over and over. The destructor is only called when the task is deleted. We have to assume the cleanup of any shell\_env allocated externally to the shell code has to be handled externally.

Setting the key in the main loop task is problematic because telnet code such as the example in libbsd uses a local stack shell\_env and the key has a destructor that blindly free's the key's memory when a task is released.

Changes:

- Add parent\_stdout, parent\_stdin, and parent\_stderr to the shell\_env and set to the parent's std handles.
- Add a managed flag to shell\_env and only set when allocated by rtems\_shell\_init\_env. Change rtems\_shell\_env\_free to only free the shell\_env if managed.
- Remove all key sets and have only one in the shell's main loop code.
- Change rtems\_shell\_init\_env to get the current tasks key and clone that before cloning the global env.
- Update rtems\_shell\_dup\_current\_env to set the parent std handles.
- Have the main loop use the parent std handles rather than the global handles.
- Check the magic field has been set in the shell's main loop and raise an error if not set. The only code to set this field should reside in shell.c. Code such as libbsd will need to call rtems\_shell\_dup\_current\_env.

### Comment 1

1. **Sebastian Huber**, Tue, 04 Feb 2020 16:25:01 GMT

Sounds that it is currently pretty broken.

What about changing the managed member into a destroy handler which is initialized by the constructor?

### Comment 2

1. **Chris Johns**, Wed, 05 Feb 2020 02:14:46 GMT

Replying to Sebastian Huber:

Sounds that it is currently pretty broken.

There seems to be a few overlapping issues that make things a little confusing.

What about changing the managed member into a destroy handler which is initialized by the constructor?

Yes, my patch I am testing does this. I have an issue on 4.11 where a printf line in changes what happens and I am not sure why. I need to resolve this. I will then create a 4.11 clone of this ticket and post a patch for that branch.

### Comment 3

1. **Chris Johns**, Mon, 10 Feb 2020 21:59:43 GMT

Replying to Chris Johns:

I have an issue on 4.11 where a printf line in changes what happens and I am not sure why. I need to resolve this. I will then create a 4.11 clone of this ticket and post a patch for that branch.

I have chased the issue down to how we set up the re-entrant struct newlib uses in our threads. My changes follow what exists ...

```
FILE *input = fopen(shell_env->input, "r");
if (input == NULL)
    error(..);
stdin = input;
```

The only calls on stdin before the assignment are fileno(stdin) and this does not touch the re-entrant struct so the first call to libc after the assignment is setvbuf(stdout, NULL, \_IONBF, 0); and newlib performs it's lazy initialisation and resets the re-entrant struct.

This issue is present on 4.11 and 5 as far as I can see.

### Comment 4

1. **Chris Johns**, Tue, 11 Feb 2020 00:26:20 GMT
2. **blockedby:** set to **3870**

### Comment 5

1. **Chris Johns**, Mon, 17 Feb 2020 04:51:50 GMT

It is not easy making a joel test because of the way we have used the linker mapped printf to printk.

### Comment 6

1. **Sebastian Huber**, Mon, 17 Feb 2020 06:42:57 GMT

Only printf(), puts(), and putchar() are wrapped. The shell related code should use fprintf() etc. Using printf() would be a bug.

### Comment 7

1. **Chris Johns**, Mon, 17 Feb 2020 20:51:46 GMT

A test is not easy as a shell test cannot use any standard commands, eg echo because these call printf. The post test patch provides a command that uses fprintf and this works enough to test the shell start, main loop, and input and output support.

### Comment 8

1. **Chris Johns**, Tue, 18 Feb 2020 02:55:20 GMT
2. **blockedby:** **3870** deleted

### Comment 9

1. **Sebastian Huber**, Tue, 18 Feb 2020 06:06:14 GMT

It is a bug that the echo command uses putchar(). It should use fputc(c, stdout).

### Comment 10

1. **Chris Johns**, Tue, 18 Feb 2020 06:55:17 GMT

Replying to Sebastian Huber:

It is a bug that the echo command uses putchar(). It should use fputc(c, stdout).

Could you please explain why?

Other commands like ls use printf.

### Comment 11

1. **Sebastian Huber**, Tue, 18 Feb 2020 07:02:47 GMT

Every shell related code which uses printf(), puts(), putchar(), etc. which work on file descriptors is broken. The file descriptors are global. Only the stdin, stdout, and stderr file pointers are thread-specific.

**Comment 12**

1. **Chris Johns**, Tue, 18 Feb 2020 07:09:20 GMT

But it works nicely with telnet, actually all commands I know of work well with the redirection we implement. I am sorry you have lost here with your bug comment. My comments relate to our test suite and the hack we have to switch printf via the linker to keep the tests as small as possible.

**Comment 13**

1. **Sebastian Huber**, Tue, 18 Feb 2020 07:27:06 GMT

Sorry for the confusion. I checked the Newlib code and it actually uses stdout for printf(). I thought it uses directly a file descriptor, but this is not the case. I vaguely remember that Ralf changed some printf() to fprintf(stdout, ...) for whatever reason.

**Comment 14**

1. **Chris Johns**, Thu, 09 Apr 2020 00:21:41 GMT

I have found the default command handler in libbsd needs updating ...

<https://git.rtems.org/rtems-libbsd/tree/rtemsbsd/telnetd/telnetd-service.c#n72>

The input and output fields need to have strings. I will change the shell's handling of NULL to reference the parent descriptors to catch user's code.

**Comment 15**

1. **Chris Johns**, Tue, 14 Apr 2020 22:30:49 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

In d007cc2/rtems:

```
libmisc/shell: Fix the handling of joel scripts in telnet
Fix the passing of std[in/out] to child threads Fix deleting of managed memory in the key destructor Only set the key in the main loop
thread Only allocate a shell env outside of the main loop Fix memory leak if the task start fails Remove error level from shell env, it
cannot be returned this way. Add
exit_code but the API is broken so it cannot be returned.
Closes #3859
```

**Comment 16**

1. **Sebastian Huber**, Thu, 06 Aug 2020 06:47:29 GMT

2. **status**: changed from **closed** to **reopened**

3. **resolution**: **fixed** deleted

The telnet shell

```
static void
telnet_shell(char *name, void *arg)
{
    rtems_shell_env_t env;
    memset(&env, 0, sizeof(env));
    env.devname = name;
    env.taskname = "TLNT";
    env.login_check = NULL;
    env.forever = false;
    rtems_shell_main_loop(&env);
}
```

used in the libbsd test code is now broken:

```
telnet 169.254.140.254
Trying 169.254.140.254...
Connected to 169.254.140.254.
Escape character is '^]'.
invalid shell environment passed to the main loop)
Connection closed by foreign host.
```

How should the code be instead?

**Comment 17**

1. **Sebastian Huber**, Thu, 06 Aug 2020 06:50:18 GMT

2. **severity**: changed from **normal** to **blocker**

**Comment 18**

1. **Sebastian Huber**, Thu, 06 Aug 2020 06:51:07 GMT

There should be an advice in the migration section in the user manual.

**Comment 19**

1. **Chris Johns**, Thu, 06 Aug 2020 10:42:21 GMT

The example code provided is broken and has always been broken. I only know it exists because libbsd had it. The ticket describes the situation and item 7) in the list says how it is to be resolved and that interface has always been there for just this situation.

Please unblock this ticket. Thanks.

#### **Comment 20**

1. **Sebastian Huber**, Thu, 06 Aug 2020 11:17:13 GMT

I have to fix the code in libbsd. This code was also copied to applications which are now also broken. This is definitely something for the migration section.

#### **Comment 21**

1. **Chris Johns**, Thu, 06 Aug 2020 11:51:15 GMT

Thanks and yes something should be added. I will take a look.

#### **Comment 22**

1. **Sebastian Huber**, Thu, 06 Aug 2020 11:58:17 GMT

Replying to Chris Johns:

Thanks and yes something should be added. I will take a look.

<https://lists.rtems.org/pipermail/devel/2020-August/061166.html>

I already fixed libbsd (the commits don't show up in the tickets).

#### **Comment 23**

1. **Sebastian Huber**, Thu, 06 Aug 2020 17:22:46 GMT

The proposed fix doesn't work. If you close a telnet session and try to connect again the target crashes with a NULL pointer access:

```
#0  fileno (f=0x0) at ../../../../../../gnu-mirror-gcc-c72alb6/newlib/libc/stdio/fileno.c:69
#1  0x0042e866 in rtems_shell_main_loop (shell_env=0x0) at ../../../../../../cpukit/libmisc/shell/shell.c:910
#2  0x00104880 in telnet_shell (name=0x774600 "/dev/pty4", arg=0x0) at ../../testsuite/media01/test_main.c:133
#3  0x004113e8 in telnetd_session_task (arg=7816628) at ../../../../../../cpukit/telnetd/telnetd.c:179
#4  0x00425f78 in Thread_Handler () at ../../../../../../cpukit/score/src/threadhandler.c:143
```

#### **Comment 24**

1. **Sebastian Huber**, Fri, 07 Aug 2020 07:10:16 GMT

The following change fixes the NULL pointer access:

```
diff --git a/cpukit/libmisc/shell/shell.c b/cpukit/libmisc/shell/shell.c
index 0b06e8b4d1..72aeb23c43 100644
--- a/cpukit/libmisc/shell/shell.c
+++ b/cpukit/libmisc/shell/shell.c
@@ -234,12 +234,6 @@ static void rtems_shell_clear_shell_env(void)
     eno = pthread_setspecific(rtems_shell_current_env_key, NULL);
     if (eno != 0)
         rtems_error(0, "pthread_setspecific(shell_current_env_key): clear");
-
- /*
-  * Clear stdin and stdout file pointers of they will be closed
-  */
-     stdin = NULL;
-     stdout = NULL;
- }
- /*
```

What is the purpose of this code?

#### **Comment 25**

1. **Chris Johns**, Fri, 07 Aug 2020 07:18:44 GMT

A thread instance that inherits the std\* file handles does not close them, for example a joel script would close the parents session's handles.

#### **Comment 26**

1. **Sebastian Huber**, Fri, 07 Aug 2020 07:25:05 GMT

Setting the stdin and stdout to NULL pointers doesn't look like a good idea to me. I still don't understand what you want to do with this. Which code reads the stdin and stdout pointers and checks them for NULL?

#### **Comment 27**

1. **Chris Johns**, Fri, 07 Aug 2020 07:28:25 GMT

Nothing more than what was in the code before .. <https://git.rtems.org/rtems/tree/cpukit/libmisc/shell/shell.c?h=4.11#n242> Something else must have changed. I had tested it on RTEMS 5.

#### **Comment 28**

1. **Sebastian Huber**, Fri, 07 Aug 2020 07:31:24 GMT

<file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html>

I have this problem on the RTEMS 5 branch using RTEMS 5 tools.

### Comment 29

1. **Chris Johns**, Fri, 07 Aug 2020 07:33:38 GMT

Yes I am seeing it as well. I am little confused.

I am not sure why the closing of a previous session would effect a new session as the parent (telnetd) should be handling this. The new session should have a new set of std\* handles?

### Comment 30

1. **Sebastian Huber**, Fri, 07 Aug 2020 07:42:18 GMT

For my taste the shell code tinkers too much with the std\* handles. I lost track who is responsible for set up and tear down. What is the purpose of the

```
FILE *parent_stdin;
FILE *parent_stdout;
FILE *parent_stderr;
```

Who is the parent?

### Comment 31

1. **Chris Johns**, Fri, 07 Aug 2020 07:49:21 GMT

I have a pretty good handle (hah pun intended) on these handles. I will try and take a look.

The parent handles are the wrapper of the shell env. For example they are global handles for a console shell. With telnetd they are the session handles. If you run a joel script they are ones used:

```
[/] # cat j
#! joel
ls -las /
cat /j
[/] # ./j
total 6
0 drwxr-xr-x 1 root root 6160 Jan 1 1988 dev
0 drwxr-xr-x 1 root root 2240 Jan 1 1988 etc
0 -rwxrwxrwx 1 root root 31 Jan 1 1988 j
1 drwx--x--x 3 root root 512 Jan 1 1988 ram
0 drwxr-xr-x 1 root root 0 Jan 1 1988 tmp
0 drwxr-xr-x 1 root root 280 Jan 1 1988 var
#! joel
ls -las /
cat /j
```

The threads that run the joel script inherit the telnet session handlers.

### Comment 32

1. **Chris Johns**, Sat, 08 Aug 2020 07:45:29 GMT

I have looked into the issue and the reuse of the telnetd session thread is clashing with the way the shell's environment is currently being cleaned up. The telnetd software creates a number of sessions and it reuses these sessions for the incoming connections. This means the pty file handles assigned to each session are reused. Clearing these file handles corrupts the telnetd session.

Setting of stdin, stdout and also stderr to NULL when cleaning up a shell environment is important because thread termination closes those files if present and open and if the file pointers have been inherited from the parent thread the parent can be left without a valid stdin, stdout and stderr. This happens with a joel script. It could also happen with a command that is placed in the background (if we supported this) or a command that dispatches a worker thread.

This ticket was originally about a bug where joel script output was not redirected to the parent thread's stdout. They happened to work for the console because the console shell's standard handles are the global ones. A new thread inherits the global handles and the clean up also manages the closing of those, or the lack of it. However a joel script with telnet was broken.

The solution is to move the setting of stdin, stdout and stderr out of clearing the environment and to only do this when the rtems\_shell\_task exits the rtems\_shell\_main\_loop.

For the record a debug trace from shell.c running a joel script is:

```
shell[0a010001]: run: env: 0x62accd0
shell[0a010001]: run out: 1 (0xbcb028)
shell[0a010001]: run in: 0 (0xbeafa8)

**Description**

The CONFIGURE\_ZERO\_WORKSPACE\_AUTOMATICALLY configuration option is documented to be a boolean feature macro (is defined or undefined). However, in confdefs.h it uses the values TRUE and FALSE. It is the only configuration option implemented like this. Change it to use defined/undefined instead like the other options. This affects existing application configurations which use:

```
#define CONFIGURE_ZERO_WORKSPACE_AUTOMATICALLY FALSE
```

An unintentional zero of the workspace has an effect on the system boot time. This is an acceptable trade-off for the more canonical configuration.

**Comment 1**

1. **Sebastian Huber**, Thu, 06 Feb 2020 14:22:27 GMT

### Description

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Some targets (e.g. 32-bit PowerPC) have a small-data area. Linker set items are not in the small data area. We have to tell this the compiler, otherwise linker error may occur due to a mismatch of relocations. There are two options to do this.

- We can declare items as an array of unspecified size and define items as an array with one element. The problem with this is that it breaks existing code, e.g. an item initializer would have to change.
- We add the section to the declaration. The problem is that in this case we need a dedicated declaration macro for the ordered items.

Since item declarations are rarely used, we select option 2.

#### Comment 1

1. **Sebastian Huber**, Thu, 06 Feb 2020 14:22:17 GMT

In 9fac9f9/rtems:

```
score: Fix linker sets on small data area targets
Update #3865.
```

<b>Blocked by</b>	

#### Description

The following patch in newlib adds links and Windows does not have symlinks and it is emulated as copy. This complicates a bsdtar extraction of source ...

<https://github.com/RTEMS/sourceware-mirror-newlib-cygwin/commit/cfc4955234828881145a20987c8a0a3cd373585c>

I tried the -E option that was added to the RSB to extract the tar file a second time, this has worked with other tar files with symlinks however it does not work. I have no investigated why.

We need Windows building to make a release.

\_\_\_Note, this is in the tools/rsb component however is not an RSB bug. I need input on what the RSB needs to do to fix this issue if that is the path we take. \_\_\_

#### Comment 1

1. **Chris Johns**, Mon, 10 Feb 2020 05:12:53 GMT

Hand testing with MSYS's tar (GNU tar) indicates links are handled with a suitable file copy.

It could be changing the RSB from bsdtar to tar may be a workable solution. The use of bsdtar seems to be before 2012 ...

<https://git.rtems.org/rtems-source-builder/commit/?id=8f84a6b3a0bc7cbce09605f39329d3832682bf63>

I remember there was a number of issues getting the source unpacked on Windows. I can build arm tools with tar.

**Comment 2**

<b>Blocked by</b>	

---

### Description

The `CONFIGURE_HAS_OWN_INIT_TASK_TABLE` and `CONFIGURE_POSIX_HAS_OWN_INIT_THREAD_TABLE` are the last `*_HAS_OWN_*` configuration options. These two options are probably unused, see also:

<https://lists.rtems.org/pipermail/users/2019-April/033129.html> <https://lists.rtems.org/pipermail/users/2019-April/033130.html>

Removing them simplifies the configuration. If there is a real user need which shows up after the removal, we can resurrect them on demand.

Using `CONFIGURE_HAS_OWN_INIT_TASK_TABLE` would have required the use of the undocumented `CONFIGURE_INIT_TASK_TABLE` and `CONFIGURE_INIT_TASK_TABLE_SIZE` configuration options.

### 3875 - Split up confdefs.h in component based header files

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3875">https://devel.rtems.org/ticket/3875</a> ( <a href="https://devel.rtems.org/ticket/3875">https://devel.rtems.org/ticket/3875</a> )
<b>Id</b>	3875

<b>Keywords</b>	qualification
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

The confdefs.h header file is large, complex, and hard to review. Split it up into component header files to make it easier to maintain and review.

The general approach is to place the default configuration of things in librtmscpu.a. The benefit is that the application configuration object file will only include data structures which have a user-defined value.

The component based header files include their dependencies explicitly. It should be possible to include component based header files separately to ease testing. For example we could use this template:

```
#ifndef RTEMS_CONFDEFS_FOOBAR_H
#define RTEMS_CONFDEFS_FOOBAR_H
#ifndef __CONFIGURATION_TEMPLATE_h
#error "Do not include this file directly, use instead"
#endif
#if defined(CONFIGURE_INIT) && \
    defined(CONFIGURE_FOOBAR_STUFF) && \
    defined(CONFIGURE_MORE_FOOBAR_STUFF)
/* Foobar includes */
#ifdef __cplusplus
extern "C" {
#endif /* __cplusplus */
/* Configure foobar. */
#ifdef __cplusplus
}
#endif /* __cplusplus */
#endif /* CONFIGURE_INIT */
#endif /* RTEMS_CONFDEFS_FOOBAR_H */
```

In case CONFIGURE\_INIT is not defined, then including should expose nothing to the C compiler.

Here is a first proposal to group the configuration in components:

```
rtems/
confdefs.h
  This file just includes the component based header files listed below.
confdefs/
bdbuf.h
classicobj.h
  Classic API objects
classictasksinit.h
  Classic initialization task
driverclock.h
  Clock driver and related configuration, e.g. CONFIGURE_MICROSECONDS_PER_TICK
driverconsolesimple.h
  Simple console driver configuration
driverlegacy.h
  Legacy IO driver configuration table
extensions.h
  User extensions, internal extensions
filesystem.h
  Filesystem configuration
general.h
  Basic stuff which is mandatory to configure, e.g. ISR stacks, per-CPU information
libpci.h
  PCI library configuration
malloc.h
  Malloc configuration
mpci.h
  MPCI specific configuration options
msgq.h
  General message queue configuration
obsolete.h
  Warning about the use of obsolete configure options
posixkeys.h
  POSIX keys
posixobj.h
  POSIX objects
posixthreadsinit.h
  POSIX initialization threads
scheduler.h
  Scheduler configuration
support.h
  Support macros for confdefs header files
threads.h
  General thread configuration (e.g. thread control block)
unlimited.h
  Unlimited objects configuration
```

#### Description

Mapping task priorities to/from POSIX thread priorities is probably done in many applications. There seems to be no API to help doing this. Add the following API functions to map a task priority to/from a POSIX thread priority:

```
/**
 * @brief Map a task priority to the corresponding POSIX thread priority.
 *
 * @param scheduler_id Identifier of the scheduler instance.
 * @param priority The task priority to map.
 * @param[out] posix_priority Pointer to a POSIX thread priority value.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ADDRESS The @a posix_priority parameter is @c NULL.
 * @retval RTEMS_INVALID_ID Invalid scheduler instance identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid task priority.
 */
rtems_status_code rtems_scheduler_map_to_posix_priority(
  rtems_id scheduler_id,
  rtems_task_priority priority,
  int *posix_priority
);

/**
 * @brief Map a POSIX thread priority to the corresponding task priority.
 *
 * @param scheduler_id Identifier of the scheduler instance.
 * @param posix_priority The POSIX thread priority to map.
 * @param[out] priority Pointer to a task priority value.
 *
 * @retval RTEMS_SUCCESSFUL Successful operation.
 * @retval RTEMS_INVALID_ADDRESS The @a priority parameter is @c NULL.
 * @retval RTEMS_INVALID_ID Invalid scheduler instance identifier.
 * @retval RTEMS_INVALID_PRIORITY Invalid POSIX thread priority.
 */
rtems_status_code rtems_scheduler_map_from_posix_priority(
  rtems_id scheduler_id,
  int posix_priority,
  rtems_task_priority *priority
);
```

#### **Description**

The IO library uses a POSIX key to store an optional POSIX user environment pointer. This pulls in the POSIX keys support in every application configuration. Add a user environment pointer to the thread control block (TCB) instead. Applications which do not need the POSIX user environment will just get an overhead of one pointer per thread.

## 3885 - Context switch extension is broken in SMP configurations

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3885">https://devel.rtems.org/ticket/3885</a> ( <a href="https://devel.rtems.org/ticket/3885">https://devel.rtems.org/ticket/3885</a> )
<b>Id</b>	3885
<b>Reporter</b>	Sebastian Huber
<b>Created</b>	25 February 2020 17:40:26
<b>Modified</b>	23 June 2021 07:07:55
<b>Owner</b>	Sebastian Huber
<b>Type</b>	defect
<b>Component</b>	score
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	qualification
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

### Description

The context switch extensions are called during `_Thread_Do_dispatch()`:

```
void _Thread_Do_dispatch( Per_CPU_Control *cpu_self, ISR_Level level )
{
  Thread_Control *executing;
  executing = cpu_self->executing;
  ...
  do {
    Thread_Control *heir;
    heir = _Thread_Get_heir_and_make_it_executing( cpu_self );
    ...
    _User_extensions_Thread_switch( executing, heir );
    ...
    _Context_Switch( &executing->Registers, &heir->Registers );
    ...
  } while ( cpu_self->dispatch_necessary );
  ...
}
```

In uniprocessor configurations, the context switch extensions are called for all thread switches except the very first thread switch to the initialization thread. However, in SMP configurations, the context switch may be invalidated and updated in the low-level `_Context_Switch()` routine. See:

[https://docs.rtems.org/branches/master/c-user/symmetric\\_multiprocessing\\_services.html#thread-dispatch-details](https://docs.rtems.org/branches/master/c-user/symmetric_multiprocessing_services.html#thread-dispatch-details)

In case such an update happens, a thread executes on the processor which was not visible to the context switch extensions. This can confuse for example event record consumers which use events generated by a context switch extension.

Fixing this is not straight forward. The context switch extensions call must move after the low-level context switch. The problem here is that we may end up in `_Thread_Handler()`. Adding the context switch extensions call to `_Thread_Handler()` covers now also the thread switch to the initialization thread. We also have to save the last executing thread of the processor. Registers or the stack cannot be used for this purpose. We have to add it to the per-processor information. Existing extensions may be affected, since now context switch extensions use the stack of the heir thread.

Calling the thread switch extensions in the low level context switch is difficult since at this point an intermediate stack is used which is only large enough to enable servicing of interrupts.

### Comment 1

1. **Joel Sherrill**, Tue, 25 Feb 2020 18:34:30 GMT

As I recall, doing this in `_Thread_Handler` is similar to having to restore FPU. Are there other actions with this characteristic?

### Comment 2

1. **Chris Johns**, Wed, 26 Feb 2020 02:55:06 GMT

Is this an issue that needs to be fixed for RTEMS 5?

### Comment 3

1. **Sebastian Huber**, Wed, 26 Feb 2020 08:47:44 GMT

Replying to Chris Johns:

Is this an issue that needs to be fixed for RTEMS 5?

Yes, I think that the thread switch extensions should work in SMP configurations.

### Comment 4

1. **Sebastian Huber**, Wed, 26 Feb 2020 08:49:11 GMT

file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html

Moving the thread switch extension calls into the context of the heir thread breaks for example the stack checker. It checks that the current stack pointer is in the stack area of a thread.

#### **Comment 5**

1. **Sebastian Huber**, Wed, 26 Feb 2020 08:51:14 GMT
2. **description:** modified (diff)

#### **Comment 6**

1. **Chris Johns**, Thu, 27 Feb 2020 00:23:43 GMT

Replying to Sebastian Huber:

Moving the thread switch extension calls into the context of the heir thread breaks for example the stack checker. It checks that the current stack pointer is in the stack area of a thread.

Is a patch to fix the stack checker being worked on?

I know of applications that have this running during development.

#### **Comment 7**

1. **Sebastian Huber**, Thu, 27 Feb 2020 06:58:32 GMT

Replying to Chris Johns:

Replying to Sebastian Huber:

Moving the thread switch extension calls into the context of the heir thread breaks for example the stack checker. It checks that the current stack pointer is in the stack area of a thread.

Is a patch to fix the stack checker being worked on?

I know of applications that have this running during development.

This was easy to fix:

<https://lists.rtems.org/pipermail/devel/2020-February/057759.html>

I just wanted to highlight that this change can easily break existing extensions.

#### **Comment 8**

1. **Chris Johns**, Thu, 27 Feb 2020 22:46:31 GMT

Thanks.

#### **Comment 9**

1. **Sebastian Huber**, Mon, 02 Mar 2020 06:52:07 GMT

In fcb11510/rtems:

score: Fix context switch extensions (SMP)

In uniprocessor and SMP configurations, the context switch extensions were called during `_Thread_Do_dispatch()`:

```
void _Thread_Do_dispatch( Per_CPU_Control *cpu_self, ISR_Level level ) {
```

```
    Thread_Control *executing;
```

```
    executing = cpu_self->executing;
```

```
    ... do {
```

```
        Thread_Control *heir;
```

```
        heir = _Thread_Get_heir_and_make_it_executing( cpu_self ); ... _User_extensions_Thread_switch( executing, heir ); ...
        _Context_Switch( &executing->Registers, &heir->Registers ); ...
```

```
    } while ( cpu_self->dispatch_necessary ); ...
```

```
}
```

In uniprocessor configurations, this is fine and the context switch extensions are called for all thread switches except the very first thread switch to the initialization thread. However, in SMP configurations, the context switch may be invalidated and updated in the low-level `_Context_Switch()` routine. See:

[https://docs.rtems.org/branches/master/c-user/symmetric\\_multiprocessing\\_services.html#thread-dispatch-details](https://docs.rtems.org/branches/master/c-user/symmetric_multiprocessing_services.html#thread-dispatch-details)

In case such an update happens, a thread will execute on the processor which was not seen in the previous call of the context switch extensions. This can confuse for example event record consumers which use events generated by a context switch extension.

Fixing this is not straight forward. The context switch extensions call must move after the low-level context switch. The problem here is that we may end up in `_Thread_Handler()`. Adding the context switch extensions call to `_Thread_Handler()` covers now also the thread switch to the initialization thread. We also have to save the last executing thread (ancestor) of the processor. Registers or the stack cannot be used for this purpose. We have to add it to the per-processor information. Existing extensions may be affected, since now context switch extensions use the stack of the heir thread. The stack checker is affected by this.

Calling the thread switch extensions in the low-level context switch is difficult since at this point an intermediate stack is used which is only large enough to enable servicing of interrupts.

Update master and the 5-freebsd-12 branch.

**Comment 1**

1. **Vijay Kumar Banerjee**, Sat, 04 Apr 2020 12:43:07 GMT

This ticket was referenced in the following commit: <https://git.rtems.org/rtems-libbsd/commit/?h=5-freebsd-12&id=2b9172c9d42d056b6fb16d667091e2ee3ac64009>

But it didn't close. Shall we manually change it to "fixed"?

**Comment 2**

1. **Gedare Bloom**, Mon, 06 Apr 2020 05:13:42 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

**Comment 3**

1. **Gedare Bloom**, Mon, 06 Apr 2020 05:17:57 GMT

I guess it wasn't pushed to master. Chris, reopen if you still need to keep track of this.

**Comment 4**

1. **Zacchaeus Leung**, Wed, 11 Aug 2021 17:03:21 GMT

In 8df5764/rtems:

```
Test needed for timer_create with CLOCK_MONOTONC

the timer_create() method can use CLOCK_MONOTONIC but there was no test for this. Also it implements the functionality to create a
CLOCK_MONOTONIC timer and gettime(). Closes #3888
```

**3893 - RSB staging changes have broken building a 3rd party package**

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3893">https://devel.rtems.org/ticket/3893</a> ( <a href="https://devel.rtems.org/ticket/3893">https://devel.rtems.org/ticket/3893</a> )

**Description**

The staging changes let a fully staged vertical stack to build however building the packages for an installed tool chain and BSP is broken.

```
../source-builder/sb-set-builder --log=bbb-pkg.txt --prefix=/build/rtems/install/5 --host=arm-rtems5 --with-rtems-bsp=beagleboneblack
5/rtems-packages
```

**Comment 1**

1. **Chris Johns**, Tue, 03 Mar 2020 02:01:26 GMT

In 175ce0b/rtems-source-builder:

```
sb/config: Expanded nested shell commands
Updates #3893
```

**Comment 2**

1. **Chris Johns**, Tue, 03 Mar 2020 02:01:28 GMT

In 4295d3d/rtems-source-builder:

```
sb/config: Add paths checks to %{path ...}
Updates #3893
```

**Comment 3**

1. **Chris Johns**, Tue, 03 Mar 2020 02:01:31 GMT

In 96d55ab/rtems-source-builder:

```
sb/pkgconfig: Cache pkgconfig based on a file name not name
Caching on name falsely assumed checks across different config
instances in nested build sets as used in vertical stack
building was valid. This stopped a valid check for a prefix
seeing if a valid BSP config was present.
Updates #3893
```

**Comment 4**

1. **Chris Johns**, Tue, 03 Mar 2020 02:01:33 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In abd98a2/rtems-source-builder:

```
rtems/bsps: Fix building 3rd party packages with various options
Fix locating valid tools and BSP. If either is found in the
staging area use that else use the specific --with-* option
and if not present use the --prefix. Locate the tools by checking if the arch's C compiler is a valid
file. No other checks are made on the tools. Locate a BSB by checking for a valid pkgconfig file for the
BSP. Only filter flags if the BSP is in the staging area
Closes #3893
```

**Comment 5**

1. **Chris Johns**, Tue, 03 Mar 2020 10:39:27 GMT
2. **status**: changed from **closed** to **reopened**

3. **resolution:** fixed deleted

The change is broken on Python 3. This has cause the m2003 snapshot to fail.

#### Comment 6

1. **Chris Johns**, Tue, 03 Mar 2020 23:22:05 GMT
2. **status:** changed from **reopened** to **closed**
3. **resolution:** set to **fixed**

In 9e49d20/rtems-source-builder:

```
sb/pkgconfig: Fix python2 issue with caching changes
Closes #3893
```

## 3894 - Replace the device filesystem with a specialization of the IMFS

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3894">https://devel.rtems.org/ticket/3894</a> ( <a href="https://devel.rtems.org/ticket/3894">https://devel.rtems.org/ticket/3894</a> )
<b>Id</b>	3894
<b>Reporter</b>	Sebastian Huber
<b>Created</b>	3 March 2020 10:49:08
<b>Modified</b>	2 April 2020 09:25:15
<b>Owner</b>	Sebastian Huber
<b>Type</b>	enhancement
<b>Component</b>	fs
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	3898
<b>Blocked by</b>	

#### Description

New device drivers (e.g. Termios, I2C, SPI, libbsd) use IMFS generic nodes to hook into the filesystem. This does not work with the device filesystem enabled by the

```
#define CONFIGURE_USE_DEVFS_AS_BASE_FILESYSTEM
```

configuration option. Replace the device filesystem with a specialization of the IMFS.

#### Comment 1

1. **Chris Johns**, Tue, 03 Mar 2020 21:14:52 GMT

Will the changes include the examples and the devfs hello world example?

How doe the size of this approach compare to the devfs approach?

#### Comment 2

1. **Sebastian Huber**, Wed, 04 Mar 2020 05:48:53 GMT

Replying to Chris Johns:

Will the changes include the examples and the devfs hello world example?

Yes, the aim is to fix this example so that it works with Termios based console drivers.

How doe the size of this approach compare to the devfs approach?

I don't have numbers yet. I guess it will slightly increase.

You can further reduce the code size if you disable the support for the legacy IO drivers and use the new `IMFS_add_node()` instead.

I don't think this matters. If you want a minimal setup, then why do you want to use the POSIX `open/read/write` API to access devices? The POSIX functions pull in `errno` for example which pulls in the re-entrancy support which pulls in a hell of dependencies.

#### Comment 3

1. **Sebastian Huber**, Wed, 04 Mar 2020 08:46:30 GMT

In 0b0cd93/rtems:

```
imfs: Remove IMFS_NODE_FLAG_NAME_ALLOCATED
```

Remove IMFS\_NODE\_FLAG\_NAME\_ALLOCATED and instead replace the node control in rename operations. This avoids a special case in the general node destruction which pulled in free().

Update #3894.

#### Comment 4

1. **Sebastian Huber**, Wed, 04 Mar 2020 08:46:34 GMT

In 13b71f8/rtems:

```
imfs: Simplify IMFS_create_node()
Update #3894.
```

#### Comment 5

1. **Sebastian Huber**, Wed, 04 Mar 2020 08:46:37 GMT

In fa44c39/rtems:

```
imfs: Add IMFS_add_node()
Update #3894.
```

#### Comment 6

1. **Sebastian Huber**, Wed, 04 Mar 2020 08:46:40 GMT

In 7e3b5c0/rtems:

```
console: Use IMFS_add_node() for simple console
Change license to BSD-2-Clause according to file history.
Update #3053. Update #3894.
```

#### Comment 7

1. **Sebastian Huber**, Wed, 04 Mar 2020 08:46:44 GMT

In fa3005f/rtems:

```
console: Use IMFS_add_node() for simple task cons
Change license to BSD-2-Clause according to file history.
Update #3053. Update #3894.
```

#### Comment 8

1. **Sebastian Huber**, Wed, 04 Mar 2020 18:05:38 GMT

2. **blocking**: set to **3898**

#### Comment 9

1. **Sebastian Huber**, Fri, 06 Mar 2020 06:58:06 GMT

Replying to Sebastian Huber:

Replying to Chris Johns:

How doe the size of this approach compare to the devfs approach?

I don't have numbers yet. I guess it will slightly increase.

I checked the code size change of the devfs04 test before and after the change to the IMFS specialization:

size pre/devfs04.exe

text	data	bss	dec	hex	filename
57328	1152	17312	75792	12810	pre/devfs04.exe

size post/devfs04.exe

text	data	bss	dec	hex	filename

```
58384 1152 16096 75632 12770 post/devfs04.exe
```

The code size increases by 1056 bytes on SPARCV8.

In case the support for legacy IO drivers is disabled via

```
#define CONFIGURE_IMFS_DISABLE_MKNOD_DEVICE
#define CONFIGURE_IMFS_DISABLE_MKNOD
```

the code size drops to: `size devfs04.exe`

```
text data bss dec hex filename
```

```
56496 1152 16096 73744 12010 devfs04.exe
```

Using `IMFS_add_node()` gives you access to all file handlers and removes four layers of indirection, e.g.

`read() -> device_read() -> rtems_deviceio_read() -> rtems_io_read() -> _IO_Driver_address_table -> device handler`

compared to

`read() -> device handler.`

#### **Comment 10**

1. **Sebastian Huber**, Mon, 09 Mar 2020 18:00:01 GMT

In 85c9145f/rtems:

```
imfs: Use _IMFS_get_time()
Update #3894.
```

#### **Comment 11**

1. **Sebastian Huber**, Mon, 09 Mar 2020 18:00:04 GMT

In 83994913/rtems:

```
imfs: Constify imfs_memfile_bytes_per_block
The CONFIGURE_IMFS_MEMFILE_BYTES_PER_BLOCK value is validated by . Changing this value during runtime could lead to memory corruption.
Update #3894.
```

#### **Comment 12**

1. **Sebastian Huber**, Mon, 09 Mar 2020 18:00:08 GMT

In 277b9dd/rtems:

```
imfs: Remove unused handlers
Update #3894.
```

#### **Comment 13**

1. **Sebastian Huber**, Mon, 09 Mar 2020 18:00:11 GMT

In 103a371/rtems:

```
imfs: Simplify code generation
Update #3894.
```

#### **Comment 14**

1. **Sebastian Huber**, Mon, 09 Mar 2020 18:00:14 GMT

In 0161b93d/rtems:

```
imfs: Replace devfs with an IMFS specialization
Add a simplified path evaluation function IMFS_eval_path_devfs() for a device only IMFS configuration.
The code size can be further reduced by the application if it disables the support for legacy IO drivers via:
```

```
`#define CONFIGURE_IMFS_DISABLE_MKNOD #define CONFIGURE_IMFS_DISABLE_MKNOD_DEVICE`
```

```
Obsolete CONFIGURE_MAXIMUM_DEVICES. Remove BSP_MAXIMUM_DEVICES.
```

Update #3894. Update #3898.

#### Comment 15

1. **Sebastian Huber**, Wed, 01 Apr 2020 07:05:50 GMT

In 7cec259/rtems:

```
config: Remove CONFIGURE_FILESYSTEM_DEVFS
This filesystem no longer exists.
Remove unused RTEMS_FILESYSTEM_TYPE_DEVFS.
Update #3894.
```

<b>Cc</b>	
<b>Blocking</b>	3836
<b>Blocked by</b>	

**Description**

Change the documentation template for configuration options with a value to:

```
.. _CONFIGURE_XYZ:
CONFIGURE_XYZ
-----
CONSTANT:
  ``CONFIGURE_XYZ``
OPTION TYPE:
  This configuration option is an integer define.
VALUE CONSTRAINTS:
  The specified value must be greater than or equal to X and less than or
  equal to Y.
DEFAULT VALUE:
  The default value is Z.
DESCRIPTION:
  This configuration option defines the ABC.
NOTES:
  Notes for XYZ.
```

Use OPTION TYPE instead of DATA TYPE since we have to characterize the option an not just the value of an option. This is in line with #3900.

Use VALUE RANGE instead of RANGE to be more specific.

The `bsp_fdt_map_intr()` must be provided by the BSP, e.g. `bsps/arm/beagle/start/bspstart.c`.

**Comment 3**

1. **Christian Mauderer**, Sun, 08 Mar 2020 21:16:06 GMT

The same bug happens for libbsd master. Niteesh recently enabled FDT support for this BSP (following my suggestion) to be able to support the console for Pi2 and Pi3. It seems that I missed that libbsd doesn't build anymore when reviewing the patches. So the bug is not in libbsd but in RTEMS.

#### Comment 4

1. **Christian Mauderer**, Sun, 08 Mar 2020 21:50:56 GMT

And of course - like everything else on this chip family - the interrupts can't be simple on RPi. There are at least two groups. Interrupts from the GPU and ones from the normal system.

See <https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/tree/Documentation/devicetree/bindings/interrupt-controller/brcm,bcm2835-armctrl-ic.txt?id=791d3ef2e11100449837dc0b6fe884e60ca3a484> and <https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/tree/Documentation/devicetree/bindings/interrupt-controller/brcm,bcm2836-l1-intc.txt?id=36464580e658019ac7be26a08c4679bee0454d2c>

The interrupts in the device tree look like this:

```
// GPIO - 49 to 52 in RTEMS
interrupts = <2 17>, <2 18>, <2 19>, <2 20>;
// USB - 9 in RTEMS
interrupts = <1 9>;
// Mailbox - most likely 65 in RTEMS
interrupts = <0 1>;
```

So I assume it should be a mapping like follows (in pseudo code):

```
#define MAGIC_OFFSET_FOR_SECOND_LEVEL 32
switch(first_number){
case 0:
return second_number + BCM2835_IRQ_ID_BASIC_BASE_ID;
break;
case 1:
return second_number;
break;
case 2:
return second_number + MAGIC_OFFSET_FOR_SECOND_LEVEL;
break;
default:
/* Handle invalid interrupt */
break;
}
```

#### Comment 5

1. **Sebastian Huber**, Mon, 09 Mar 2020 06:27:45 GMT

At least it looks like the API can handle this.

#### Comment 6

1. **Christian Mauderer**, Tue, 10 Mar 2020 07:51:33 GMT

I created a patch that should work. But I didn't have the time to test it yet. I'll test it in the next few days.

#### Comment 7

1. **Christian Mauderer**, Sat, 04 Apr 2020 10:55:45 GMT

Sorry for the long delay: The patch works and delivers the correct results (tested for the three cases GPIO0, USB and MBOX mentioned above). I'll send it to the mailing list.

**Description**

I'm not sure what to do about this. If building sqlite is a requirement, then host setup instructions, sb-check, etc are impacted. But dtc is a required component for a few things and the RSB deals with it. It is also possible to say that sqlite should not be in the BSP bsets.

This is IMO a blocker at some level for the 5.1 release because it impacts building all bsets.

```
+ make -j 8 sqlite3.h libsqlite3.la

**Comment 1**

1. **Joel Sherrill**, Thu, 02 Apr 2020 19:09:55 GMT

Advice from Jonathan Brandmeyer (<https://lists.rtems.org/pipermail/devel/2020-April/058905.html>).

We just copied the amalgamation's single .c and .h file into our repository and built it as a single object into our application. So the following recommendations come only from an amateur reading of the sources on current rtems-source-builder master.

3.8.8 is pretty old. I'd just jump straight to 3.30.1, the current release.

Instead of downloading the sqlite-src zip, download sqlite-amalgamation or sqlite-autoconf and use that as a base. I think the bset's configuration invocation is OK, except that I would set different CFLAGS as described in the next couple of paragraphs. See also <https://sqlite.org/amalgamation.html>

By default, the SQLite write-ahead-log relies on mmap to share some of its index structures between multiple processes. It looks like the current RTEMS bset disables the WAL entirely. Using the WAL gives much better performance than the rollback journal for write-intensive use cases. We used SQLite to reliably buffer up and stitch together segments of our field software update process, which fits the WAL very well. We set -DSQLITE\_MAX\_MMAP\_SIZE=0 -DSQLITE\_DEFAULT\_LOCKING\_MODE=1 at compile time to avoid mmap's use since RTEMS has neither a VMM nor multiple address spaces. It is still up to the application to choose either the WAL or the rollback journal. See also <https://sqlite.org/wal.html#noshm>

We also added -DSQLITE\_ENABLE\_MEMSYS5 to our build, and used it to give SQLite its own memory spaces to operate on distinct from the rest of our application. We explicitly provided it with its own MEMSYS5 heap, page cache, and lookaside pools. RTEMS just needs to add the correct compile-time option to support this functionality. It is still up to the application to configure and monitor those memory pools at runtime. See also <https://sqlite.org/malloc.html>

```

One option is to disable this test on sparc64.

**Comment 1**

1. **Gedare Bloom**, Mon, 06 Apr 2020 16:15:43 GMT

<file:///opt/work/chris/rtems/releasing/rtems-release.git/5.2/ws-rtems-release-notes/rtems-5.2-release-notes.html>

I'm going to take a brief look today. I haven't been using the sparc64 since 2012 so there is not much motive for me other than keeping it maintained. If it is too much trouble I will let it decay down the tiers toward deprecation.

### Comment 2

1. **Joel Sherrill**, Mon, 06 Apr 2020 16:27:03 GMT

I was disappointed in general when I looked for ABI definitions for TLS for various architectures. I think there is an Ulrich Drepper document describing a few ( <https://akkadia.org/drepper/tls.pdf>) but I think it is undefined for a lot of architectures.

Does GCC have a default mechanism? I couldn't find any hint of architecture specific TLS in the few secondary architectures I looked at. If there is a default way of calling a method for TLS info, it would be great. But at this point, I don't think TLS works from a GCC perspective on maybe half the architectures we support.

sparc64 isn't a secondary gcc architecture so I am sure it works in GCC. Whether we want it around long term is another question entirely.

### Comment 3

1. **Gedare Bloom**, Mon, 06 Apr 2020 17:18:05 GMT

2. **status**: changed from **assigned** to **closed**

3. **resolution**: set to **fixed**

In 2db1fd85/rtems:

```
sparc64: update linkcmds with missing sections for TLS
Closes #3936.
```

## 3938 - Many (~40) BSPs Fail to Link all Tests

#### Comment 1

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:01:25 GMT

I already fixed this in the new build system.

#### Comment 2

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:05:55 GMT

The sparc64 is #3936.

#### Comment 3

1. **Joel Sherrill**, Mon, 06 Apr 2020 19:08:12 GMT

Is this an attempt to avoid fixing it on the master before we cut a release branch? This is a failure for ~25% of the BSPs in the tree.

#### Comment 4

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:08:40 GMT

In c547470e/rtems:

```
tests: Small memory exclude for record02  
Update #3938.
```

#### Comment 5

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:10:10 GMT

Replying to Joel Sherrill:

Is this an attempt to avoid fixing it on the master before we cut a release branch? This is a failure for ~25% of the BSPs in the tree.

No, it is a statement that I work on this!

#### Comment 6

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:22:58 GMT

In 92a3a19c/rtems:

```
tests: Exclude record02 for some BSPs  
Update #3938.
```

#### Comment 7

1. **Sebastian Huber**, Mon, 06 Apr 2020 19:30:50 GMT

I should be fixed.

#### Comment 8

1. **Joel Sherrill**, Mon, 06 Apr 2020 19:44:06 GMT

Thanks. Building with your commit. arm/atsamv fails linking record02.

I will post more as the build progresses or finishes.

#### Comment 9

1. **Sebastian Huber**, Mon, 06 Apr 2020 20:10:32 GMT

The arm/atsamv should be fixed:

<https://git.rtems.org/rtems/diff/bsps/arm/atsam/config/atsamv-testsuite.tcfg?id=92a3a19c757ca0c62eaec2bb55621a562758627b>

#### Comment 10

1. **Joel Sherrill**, Tue, 07 Apr 2020 22:15:03 GMT

In f74d70e6/rtems:

```
lm4f120-testsuite.tcfg: Add psxsignal07
```

```
Updates #3938.
```

#### **Comment 11**

1. **Joel Sherrill**, Tue, 07 Apr 2020 22:15:06 GMT

In fe5d50ed/rtems:

```
lpc1768_mbed_ahb_ram_eth-testsuite.tcfg: Add psxsignal07
```

```
Updates #3938.
```

#### **Comment 12**

1. **Joel Sherrill**, Tue, 07 Apr 2020 22:15:09 GMT

In dcb097a/rtems:

```
lpc2362-testsuite.tcfg: Add psxaoi03 and psxsignal07
```

```
Updates #3938.
```

In f493534/rtems:

```
lpc23xx_tli800-testsuite.tcfg: Add psxaoi03 and psxsignal07
```

```
Updates #3938.
```

#### **Comment 16**

1. **Sebastian Huber**, Wed, 08 Apr 2020 05:19:24 GMT

Sorry for not catching the POSIX tests. I assigned a bit more RAM to my build ramdisk and now it builds with POSIX enabled.

#### **Comment 17**

1. **Joel Sherrill**, Wed, 08 Apr 2020 13:30:22 GMT

I made a series of commits and an overnight build shows this is resolved. The epiphany is the only BSP which doesn't build and that's a GCC ICE.

Thanks.

Closing.

#### **Comment 18**

1. **Joel Sherrill**, Wed, 08 Apr 2020 13:51:02 GMT

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

### 3944 - qoriq\_e500 BSP bset fails

Thread model: rtems
Supported LTO compression algorithms: zlib
gcc version 10.0.1 20200407 (experimental) [master revision fd83c39a6be:52ecef68e56:eed9b787db9ab73968ad4e799de5ce3c2eeb2c6c] (GCC)
configure:3452: $? = 0
configure:3441: powerpc-rtems5-gcc -V >&5
powerpc-rtems5-gcc: error: unrecognized command-line option '-V'
powerpc-rtems5-gcc: fatal error: no input files
compilation terminated.
configure:3452: $? = 1
configure:3441: powerpc-rtems5-gcc -qversion >&5
powerpc-rtems5-gcc: error: unrecognized command-line option '-qversion'; did you mean '--version'?
powerpc-rtems5-gcc: fatal error: no input files
compilation terminated.
configure:3452: $? = 1
configure:3472: checking whether the C compiler works
configure:3494: powerpc-rtems5-gcc -mcpu=8540 -meabi -msdata=sysv -fno-common -mstrict-align -mspe -mabi=spe -mfloat-gpr=double -O2 -g
-ffunction-sections -fdata-sections conftest.c >&5
powerpc-rtems5-gcc: error: unrecognized command-line option '-mspe'
powerpc-rtems5-gcc: error: unrecognized command-line option '-mabi=spe'
powerpc-rtems5-gcc: error: unrecognized command-line option '-mfloat-gpr=double'
```

The build picks up the installed compiler and not the new one of the build set. I think this is a known issue. The compiler is not in my \$PATH. It was picked up by the default prefix. I will try it again with an empty prefix.

#### Comment 2

1. **Sebastian Huber**, Thu, 09 Apr 2020 10:18:04 GMT

The configure check doesn't use the linker garbage collection and this leads to undefined symbols:

```

configure:6802: powerpc-rtems5-gcc -o confstest -qrtems -B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/powerpc-rtems5/lib/ -B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/powerpc-rtems5/qoriq_e500/lib/ --specs bsp specs -mcpu=8540 -meabi -msdata=sysv -fno-common -mstrict-align -mspe -mabi=spe -mfloat-gprs=double -O2 -g -ffunction-sections -fdata-sections -I/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/powerpc-rtems5/qoriq_e500/lib/include -L/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/powerpc-rtems5/qoriq_e500/lib -mcpu=8540 -meabi -msdata=sysv -mstrict-align -mspe -mabi=spe -mfloat-gprs=double -L/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-ftp/curl/build/rtems/bset-test/lib confstest.c -lbsd -lm -lz -lrtemsdefaultconfig >&5

```

**Comment 3**

1. **Sebastian Huber**, Thu, 09 Apr 2020 12:01:34 GMT

I think the root cause for this and similar issues is that we have no reliable way to get the essential tool flags of an installed BSP. The new build system is supposed to fix this.

**Comment 4**

1. **Sebastian Huber**, Sun, 12 Apr 2020 16:13:52 GMT

Why don't we add `-Wl,--gc-sections` to the standard linker flags?

**Comment 5**

1. **Chris Johns**, Tue, 28 Apr 2020 05:13:43 GMT

Replying to Sebastian Huber:

The build picks up the installed compiler and not the new one of the build set. I think this is a known issue. The compiler is not in my \$PATH. It was picked up by the default prefix. I will try it again with an empty prefix.

I am not sure how the PATH is being set. The prepend path is set here ... <https://git.rtems.org/rtems-source-builder/tree/source-builder/sb/setbuilder.py#n422> ... and this is the staging area. The build module does not play with the path and the defaults handles the prepend and postpend and extras ... <https://git.rtems.org/rtems-source-builder/tree/source-builder/defaults.mc#n267> I am confused. Maybe using `--trace` and inspecting the variables would highlight the issue.

Is there something in gcc causing the prefix to be used?

**Comment 6**

1. **Chris Johns**, Tue, 28 Apr 2020 05:15:38 GMT

Replying to Sebastian Huber:

Why don't we add `-Wl,--gc-sections` to the standard linker flags?

Is this issue closed? I have been building the kernel and libbsd with the RSB as separate steps for the e500 and e6500\_32 and did not see any failures.

**Comment 7**

1. **Sebastian Huber**, Tue, 28 Apr 2020 05:29:54 GMT

The error was in curl. I sent a patch to fix this issue: <https://lists.rtems.org/pipermail/devel/2020-April/059305.html>

**Comment 8**

1. **Chris Johns**, Tue, 28 Apr 2020 06:29:26 GMT

Can we close the ticket?

**Comment 9**

1. **Sebastian Huber**, Tue, 28 Apr 2020 06:50:26 GMT

The patch is not checked in, you wanted to adjust it a bit: <https://lists.rtems.org/pipermail/devel/2020-April/059311.html>

**Comment 10**

1. **Sebastian Huber**, Tue, 28 Apr 2020 06:51:40 GMT

I can send also a v2 if you like, I just found it would be easier if you adjust it yourself.

**Comment 11**

1. **Chris Johns**, Tue, 28 Apr 2020 07:35:53 GMT

Oh, I am sorry. I will have a look.

**Comment 12**

1. **Chris Johns**, Tue, 28 Apr 2020 07:50:25 GMT

Does rtems\_waf need the change as well? Is libbsd fixed?

**Comment 13**

1. **Sebastian Huber**, Tue, 28 Apr 2020 07:55:04 GMT

Th rtems\_waf and thus libbsd have another workaround to enable the linker garbage collection.

**Comment 14**

1. **Chris Johns**, Tue, 28 Apr 2020 08:41:36 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 13e4dfd/rtems-source-builder:

```
rtems-bsb: Use linker garbage collection for BSP based builds
Close #3944.
```

**3945 - Update DTC example on rtems-docs/user/rsb/configuration.rst**

**Description**

The DTC example on rtems-docs/user/rsb/configuration.rst should be reviewed and updated in order to be consistent with what is available in the RSB tree.

For instance, the link (<http://www.jdl.com/software>) provided in the webpage is not available anymore and some environment variables described in the text need also to be verified ("DESTDIR" and a "DISTDIR"). Thus, it is needed to review this part of the documentation.

**Comment 1**

1. **Joel Sherrill**, Wed, 08 Apr 2020 17:17:32 GMT
2. **owner**: set to **Chris Johns**
3. **status**: changed from **new** to **assigned**
4. **milestone**: changed from **6.1** to **5.1**

I don't like moving this back to 5.1 but it is wrong and according to git blame was written in 2016. I assigned it back to the author (per git blame). Hopefully a quick review and edit will get this into shape.

**Comment 2**

1. **Chris Johns**, Tue, 28 Apr 2020 06:27:25 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In ccc473b/rtems-docs:

user/rsb: Update the configuration documentation  
Closes #3945

### **Description**

Installing GCC on FreeBSD 12 leads to build issues. This along with the issue that the GCC build should be done with the GNU sed in the \$PATH during the RSB process needs to be added to the documentation here:

<https://docs.rtems.org/branches/master/user/hosts/posix.html#freebsd>

### Comment 1

1. **Chris Johns**, Mon, 27 Apr 2020 00:14:50 GMT

2. **owner:** set to **Chris Johns <chrisj@...>**

3. **status:** changed from **new** to **closed**

4. **resolution:** set to **fixed**

In 7fab12c/rtems-docs:

```
freebsd: Update to reflect the current release 12 requirements
Closes #3960
```

### Comment 2

1. **Joel Sherrill**, Mon, 27 Apr 2020 12:51:10 GMT

I read the change and didn't see sed mentioned. Did you want to make a note about that?

### Comment 3

1. **Sebastian Huber**, Mon, 27 Apr 2020 14:18:21 GMT

The RTEMS 5 build sets contain some workarounds for the GNU sed problem. So, for the RTEMS 5 release it is not necessary to mention the GNU sed.

The RTEMS 6 build sets don't have them, so they don't build all on FreeBSD 12 using the BSD sed.

### Comment 4

1. **Chris Johns**, Tue, 28 Apr 2020 03:57:05 GMT

Replying to Joel Sherrill:

I read the change and didn't see sed mentioned. Did you want to make a note about that?

I added the package to the needed list to install ...

### **3961 - bsps/arm: CPU counter based on arm generic timer doesn't work correctly**

<b>Modified</b>	9 May 2020 12:10:55
<b>Owner</b>	Chris Johns
<b>Type</b>	defect
<b>Component</b>	test
<b>Status</b>	closed
<b>Resolution</b>	fixed
<b>Version</b>	5
<b>Milestone</b>	5.1
<b>Priority</b>	normal
<b>Severity</b>	normal
<b>Keywords</b>	
<b>Cc</b>	
<b>Blocking</b>	
<b>Blocked by</b>	

#### Description

There is a symlink in the RTEMS git repo and source tree. We cannot have symlinks in released tar files because it breaks on Windows and MSYS:

```
$ find . -type l
./testsuites/libtests/tar01/symlink
```

MSYS reports:

```
$ find . -type l
./testsuites/libtests/tar01/symlink
```

The software engineering manual needs an entry stating symlinks cannot appear in the source repo or git in any RTEMS repos. The solution is to create a symlink on suitable hosts, i.e. not Windows when building.

This ticket will address the removal and not state of the effected test. That will be the subject of another ticket if someone creates it.

**Comment 1**

1. **Sebastian Huber**, Thu, 07 May 2020 10:32:14 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

**Description**

Deprecate the use of `_Copyright_Notice` at API level and instead provide a new function `rtems_get_copyright_notice()`.

**Comment 1**

1. **Sebastian Huber**, Wed, 06 May 2020 06:02:47 GMT

In 1af8e45b/rtems:

```
rtems: Add rtems_get_copyright_notice()
Update #3973.
```

**Comment 2**

1. **Sebastian Huber**, Wed, 06 May 2020 06:02:50 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In d30a352/rtems:

rtems: Deprecate \_Copyright\_Notice

Close #3973.

### Comment 3

1. **Sebastian Huber**, Mon, 11 May 2020 06:25:06 GMT

<b>Blocking</b>	3941
<b>Blocked by</b>	

---

### Description

This port has not built in a while and gcc does not appear to be getting fixed. It has been at Tier 4 for a while because of this.

If this port is of interest, work to get gcc fixed and help resurrect this port.

Deprecate for RTEMS 5.x  
Remove in RTEMS 6.x

### Comment 1

1. **Sebastian Huber**, Thu, 07 May 2020 04:36:41 GMT
2. **blocking**: set to **3941**

### Comment 2

1. **Sebastian Huber**, Thu, 07 May 2020 04:37:16 GMT
2. **status**: changed from **new** to **closed**
3. **resolution**: set to **fixed**

It is already in the release notes.

---

**Description**

The RSB attempts to download:

<https://ftp.rtems.org/pub/rtems/releases/5/5.0.0/5.0.0-m2005-2/sources/qemu-git-42d58e7.tar.xz>

and the release process has captured:

```
qemu-4.1.0-leon3.patch
qemu-couverture-03a7fbcc52e0bca7f033ccba79e7856e82bb437.tar.gz
qemu-git-v4.1.0.tar.xz
```

**Comment 1**

1. **Chris Johns**, Wed, 10 Jun 2020 00:32:21 GMT

I have fixed the RSB scripts so the release source is referenced and I am now getting this message from QEMU:

```
+ PKG_CONFIG_DEFAULT_PATH='' PKG_CONFIG_PATH=/build/rtems/releases/build/5.0.0-m2006-1/rtems-source-builder-5.0.0-m2006-1/bare/build/tmp/sb-500/devel/qemu4/build/rtems/releases/install/5.0.0-m2006-1/lib/pkgconfig
PKG_CONFIG_BUILD_TOP_DIR=/build/rtems/releases/build/5.0.0-m2006-1/rtems-source-builder-5.0.0-m2006-1/bare/build/tmp/sb-500/devel/qemu4
LD_LIBRARY_PATH=/build/rtems/releases/build/5.0.0-m2006-1/rtems-source-builder-5.0.0-m2006-1/bare/build/tmp/sb-500/devel/qemu4/build/rtems/releases/install/5.0.0-m2006-1/lib LDFLAGS='-Wl,-rpath -Wl,/build/rtems/releases/install/5.0.0-m2006-1/lib -L/build/rtems/releases/build/5.0.0-m2006-1/rtems-source-builder-5.0.0-m2006-1/bare/build/tmp/sb-500/devel/qemu4/build/rtems/releases/install/5.0.0-m2006-1/lib ' CFLAGS=' ' ../qemu-git-v4.1.0/configure '--prefix=/build/rtems/releases/install/5.0.0-m2006-1' '--make=gmake' --disable-werror --disable-tools --disable-pie --disable-vnc --disable-sdl --disable-gtk --disable-openssl --disable-netmap --disable-nettle
ERROR: missing file /build/rtems/releases/build/5.0.0-m2006-1/rtems-source-builder-5.0.0-m2006-1/bare/build/qemu-v4.1.0-x86_64-freebsd12.1-1/qemu-git-v4.1.0/ui/keycodemapdb/README
This is not a GIT checkout but module content appears to be missing. Do not use 'git archive' or GitHub download links to acquire QEMU source archives. Non-GIT builds are only supported with source archives linked from:
https://www.qemu.org/download/#source
Developers working with GIT can use scripts/archive-source.sh if they need to create valid source archives.
```

This means any build of qemu taken from git will fail as a release. The qemu4 build is qemu-4.1.0 so it may be simpler to move to using the release source than git. I do not think modeling the QEMU source release process in our release process is a good idea.

\_\_NOTE:\_\_ Making the change will require some testing on Linux by Zynq and RISCv core developers before I branch.

**Comment 2**

1. **Chris Johns**, Wed, 10 Jun 2020 05:00:09 GMT

2. **status:** changed from **assigned** to **closed**

3. **resolution:** set to **fixed**

In 42b7e8a/rtems-source-builder:

```
devel/qemu4: Use release source tarball
Git cannot be used for a release as our release process does not package the source in a manner qemu expects.
Closes #3976
```

**3987 - ARMv7-M Exception handler does not store the SP**

---

<b>Link</b>	<a href="https://devel.rtems.org/ticket/3987">https://devel.rtems.org/ticket/3987</a> ( <a href="https://devel.rtems.org/ticket/3987">https://devel.rtems.org/ticket/3987</a> )

#### Description

The Beaglebone and PC BSPs do not build with the RSB master (42b7e8a4faa4a4601a69da78e02092ebdb81b7d9). These are the only two BSPs I have tried.

The build fails on the first package (sqlite). The sqlite standard autoconf configure compiler test fails with a number of missing symbols.

[snip]

```

Removing the -Wl,--gc-sections argument from the command line works.

It seems there is conflict between the flags -Wl,--gc-sections for LibBSD to link and how autoconf link tests are constructed.

I would like this ticket to only be closed when the Beaglebone and PC BSP stacks build with the RSB git master and a release snapshot on Linux and FreeBSD.

**Comment 1**

- 1. Chris Johns, Thu, 11 Jun 2020 22:22:46 GMT
- 2. blocking: set to 3985

**Comment 2**

- 1. Sebastian Huber, Mon, 15 Jun 2020 05:15:20 GMT

I cannot reproduce this problem with the following command:

```
../source-builder/sb-set-builder --prefix=/build/rtems/5.1 --no-clean 5/bsps/pc
...
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-i386-rtems5-1.txt
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-i386-rtems5-1.xml
staging: protobuf-2.6.1-i386-rtems5-1 -> /scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging
Build Set: Time 0:00:41.351672
Build Set: Time 0:03:56.786477
installing: 5/bsps/pc -> /build/rtems/5.1
Staging Size: 1.387GB
Build Set: Time 0:25:46.568974
```

Which command line option did you use? Was something installed in the prefix? Was the build directory clean?

### Comment 3

1. **Sebastian Huber**, Mon, 15 Jun 2020 06:28:23 GMT

This works also:

```
../source-builder/sb-set-builder --prefix=/build/rtems/5.1 --no-clean 5/bsps/beagleboneblack
...
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-arm-rtems5-1.txt
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-arm-rtems5-1.xml
staging: protobuf-2.6.1-arm-rtems5-1 -> /scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging
Build Set: Time 0:00:42.319813
Build Set: Time 0:04:07.640366
installing: 5/bsps/beagleboneblack -> /build/rtems/5.1
Staging Size: 3.267GB
Build Set: Time 0:42:13.692753
```

I have a different Autoconf command line:

```
configure:3322: checking whether the C compiler works
configure:3344: arm-rtems5-gcc -qrtems -B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/lib/ -
B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/beagleboneblack/lib/ --specs bsp specs -mcpu=cortex-a8 -
O2 -g -ffunction-sections -fdata-sections -DSQLITE_MAX_MMAP_SIZE=0 -DSQLITE_DEFAULT_LOCKING_MODE=1 -DSQLITE_ENABLE_MEMSYS5 -
I/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/beagleboneblack/lib/include -L/scratch/git-rtems-source-
builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/beagleboneblack/lib -mcpu=cortex-a8 -Wl,--gc-sections -L/scratch/git-rtems-
source-builder/rtems/build/tmp/sb-10000-databases/sqlite/build/rtems/5.1/lib conftest.c -lbsd -lm -lz -lrtemsdefaultconfig
```

Please note that there is an `-lrtemsdefaultconfig` which I don't see in the original report.

### Comment 4

1. **Chris Johns**, Mon, 15 Jun 2020 06:31:49 GMT

Replying to Sebastian Huber:

I cannot reproduce this problem with the following command:

```
../source-builder/sb-set-builder --prefix=/build/rtems/5.1 --no-clean 5/bsps/pc
...
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-i386-rtems5-1.txt
reporting: net/protobuf-2.6.1-1.cfg -> protobuf-2.6.1-i386-rtems5-1.xml
staging: protobuf-2.6.1-i386-rtems5-1 -> /scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging
Build Set: Time 0:00:41.351672
Build Set: Time 0:03:56.786477
installing: 5/bsps/pc -> /build/rtems/5.1
Staging Size: 1.387GB
Build Set: Time 0:25:46.568974
```

Which command line option did you use?

RTEMS Source Builder - Set Builder, 5 (42b7e8a4faa4 modified)

Command Line: `../source-builder/sb-set-builder --prefix=/opt/work/rtems/5-test --log=i386.txt --trace 5/bsps/pc`

(the modification is unrelated)

Was something installed in the prefix?

Yes and no and both failed.

Was the build directory clean?

Yes.

### Comment 5

1. **Chris Johns**, Mon, 15 Jun 2020 06:33:09 GMT

Replying to Sebastian Huber:

I have a different Autoconf command line:

```
configure:3322: checking whether the C compiler works
configure:3344: arm-rtems5-gcc -qrtems -B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/lib/ -
B/scratch/git-rtems-source-builder/rtems/build/tmp/sb-10000-staging/arm-rtems5/beagleboneblack/lib/ --specs bsp specs -mcpu=cortex-

10000/databases/sqlite/build/rtems/5.1/lib conftest.c -lbsd -lm -lz -lrtemsdefaultconfig
```

Please note that there is an `-lrtemsdefaultconfig` which I don't see in the original report.

Where does that library get inserted into the libraries list for an autoconf test link?

I have an unmodified RSB (cbae90a5817a6b66f8d576b7e95c7df46c5f0833).

**Comment 7**1. **Sebastian Huber**, Mon, 15 Jun 2020 06:43:07 GMT

We have:

```
##
## Check for installed libraries.
##
## - Check is LibBSD is install
## - Add librtemsdefaultconfig so configure scripts work.
##
## Note: default BSP flags include the standard RTEMS libraries.
##
#define rtems-dep-check %({s_bdir}/sb/rtems-build-dep -c %{with tools}/bin/{rtems_bsp_cc}
#define rtems-libbsd %{rtems-dep-check} -L %{rtems_bsp_libpath} -l libbsd.a)
#if %{rtems-libbsd} == found
  %define rtems_bsp_libs %{rtems_bsp_libs} -lbsd -lm -lz
#endif
#define rtems-defaultconfig %{rtems-dep-check} -L %{rtems_bsp_libpath} -l librtemsdefaultconfig.a)
#if %{rtems-defaultconfig} == found
  %define rtems_bsp_libs %{rtems_bsp_libs} -lrtemsdefaultconfig
#endif
```

Maybe there is an issue with the macro evaluation on your system. I don't see the `-lbsd -lm -lz` in your report also.**Comment 8**1. **Chris Johns**, Mon, 15 Jun 2020 06:43:29 GMT

Replying to Sebastian Huber:

10000/databases/sqlite/build/rtems/5.1/lib conftest.c -lbsd -lm -lz -lrtemsdefaultconfig
```

Please note that there is an `-lrtemsdefaultconfig` which I don't see in the original report.

Where does that library get inserted into the libraries list for an autoconf test link?

This library is a requirement for `rtems-libbsd`. The check is in `rtems/rtems-bsp.cfg`. I wonder is this test is broken ...

```
#define rtems-defaultconfig %{rtems-dep-check} -L %{rtems_bsp_libpath} -l librtemsdefaultconfig.a)
#if %{rtems-defaultconfig} == found
  %define rtems_bsp_libs %{rtems_bsp_libs} -lrtemsdefaultconfig
#endif
```

I have an unmodified RSB (cbae90a5817a6b66f8d576b7e95c7df46c5f0833).

The only difference is the RTEMS 6 tools update.

**Comment 9**1. **Chris Johns**, Mon, 15 Jun 2020 06:59:44 GMT

Replying to Chris Johns:

(the modification is unrelated)

I think it is related. The effect of looking for the reason the libcurl does not build for Joel effected the output of the dep check script and that effected this test.

Checking and adding the `-litemsdefaultconfig` is OK for building `rtems-libbsd` dependent packages because any executables created when building those packages cannot and will never run if loaded onto a target.

I am building with the same git hash as you, that is master.

#### Description

Some objects can be created with a local or global scope in a multiprocessing network. In non-multiprocessing configurations setting the scope to local or global had no effect since such a system can be viewed as a multiprocessing system with just one node. One and all nodes is the same in such a system. However, if multiprocessing was configured, creation of a global object in a single node system resulted in an `RTEMS_MP_NOT_CONFIGURED` error. Remove this error condition for symmetry with the non-multiprocessing setup. This is in line with the task affinity behaviour in SMP systems.

#### Comment 1

1. **Sebastian Huber**, Thu, 18 Jun 2020 05:10:06 GMT

In 46c23871/rtems:

```
rtems: Remove RTEMS_MP_NOT_CONFIGURED error
```

Some objects can be created with a local or global scope in a multiprocessing network. In non-multiprocessing configurations setting the scope to local or global had no effect since such a system can be viewed as a multiprocessing network with just one node. One and all nodes is the same in such a network. However, if multiprocessing was configured, creation of a global object in a single node network resulted in an `RTEMS_MP_NOT_CONFIGURED` error. Remove this error condition for symmetry to the non-multiprocessing setup. This is in line with the task affinity behaviour in SMP systems.

Update #4005.

**Description**

In the nominal case checked by spsysinit01, obj\_err in shm\_unlink is unmodified when \_POSIX\_Shm\_Get\_by\_name returns non-NULL. In the case of shm\_unlink, this means an uninitialized value is passed into the switch and it appears this test was passing by virtue of the stack having the right value on it in most cases.

**Comment 1**

**Comment 2**

1. **Kinsey Moore**, Thu, 06 Aug 2020 18:45:47 GMT

The patches to fix this for 5.x and master have been posted to the mailing list for a while now.

**Comment 3**

1. **Chris Johns**, Mon, 10 Aug 2020 05:43:55 GMT

Can you please provide the links to the devel list archive for the post patches?

**Comment 4**

1. **Kinsey Moore**, Mon, 10 Aug 2020 11:47:50 GMT

Sure, this is the first patch posted for master back in January: <https://lists.rtems.org/pipermail/devel/2020-January/056993.html>

And this is the more recent patch posted for 5.x specifically for this issue: <https://lists.rtems.org/pipermail/devel/2020-June/060292.html>

**Comment 5**

1. **Chris Johns**, Mon, 10 Aug 2020 23:26:50 GMT

Thanks. Joel or someone who knows this part of the POSIX code is going to have to review these changes. I am working towards an RC2 so if the review is not done I will be forced to bump then to 5.2.

**Comment 6**

1. **Joel Sherrill**, Tue, 11 Aug 2020 12:33:12 GMT

These are OK to push to the 5 branch and master. According to the mailing list archives, Gedare did review and approve one.

2. **owner:** set to **Kinsey Moore** <[kinsey.moore@...](mailto:kinsey.moore@...)>

3. **status:** changed from **new** to **closed**

4. **resolution:** set to **fixed**

In e95c00a7/rtems:

```
posix: Only check shm_unlink obj_err if necessary
```

In the nominal case checked by spsysinit01, obj\_err is unmodified if \_POSIX\_Shm\_Get\_by\_name returns non-NULL. In the case of shm\_unlink, this means an uninitialized value is passed into the switch and it appears tests using it were passing by virtue of the stack having the right value on it in most cases. This now checks obj\_err only if \_POSIX\_Shm\_Get\_by\_name returns NULL.

Close #4016

**Description**

Deep in the set builder is an old piece of logic to trigger tarballs when in a cross-compile environment. This dates back to cross-compiling tool sets.

The adding the kernel and 3rd party packages means the RSB command line can have the --host and --target options and if the kernel and a package like libbsd are on a single command line the --host and --target trigger a tarball install and this breaks the build.

Fix:

- Remove the tarball trigger.
- Check the kernel and packages are not effected. Having both may break a package build if passed automatically to a configure command line.

**Comment 1**

1. **Chris Johns**, Tue, 30 Jun 2020 07:49:56 GMT
2. **description:** modified (diff)

**Comment 2**

1. **Chris Johns**, Sat, 25 Jul 2020 05:50:55 GMT

There are a number of versions of eieio in RTEMS. The implementation in io.h is:

```
asm volatile ("eieio");
```

and the FreeBSD is:

```
asm volatile ("eieio" : : "memory");
```

I am not sure about the specifics of needing the memory constraint but I wonder if it is something we should do? I do not know the PowerPC well enough to know the effect of having memory as a constraint.

**Comment 3**

1. **Sebastian Huber**, Mon, 27 Jul 2020 04:42:09 GMT

The "memory" clobber is important. Without it this instruction makes little sense.

I think the real issue is the includes .

We also have an `ppc_enforce_in_order_execution_of_io()` in .

**Comment 4**

1. **Chris Johns**, Tue, 28 Jul 2020 05:37:18 GMT

Replying to Sebastian Huber:

The "memory" clobber is important. Without it this instruction makes little sense.

OK. I will add it.

I think the real issue is the includes .

We also have an `ppc_enforce_in_order_execution_of_io()` in .

There are a number of `eieio` instructions in various pieces of code. I have renamed the function in `io.h` and LibBSD builds. Given this is for a release I am looking to only make small changes.

**Description**

During testing the rtems-libbsd examples, we experienced GP exceptions from within the ISR from time to time during initialization.

When the init task is restored for the first time and the a pending interrupt is available, an ISR could overwrite its own return address if it is spawned between restoring the eflags register and restoring the esp register.

**Comment 1**

1. **Jan Sommer**, Wed, 29 Jul 2020 09:41:18 GMT
2. **owner:** set to **Jan Sommer** <jan.sommer@...>
3. **status:** changed from **new** to **closed**
4. **resolution:** set to **fixed**

In 849d7418/rtems:

```
i386: Fix possible race condition on first context restore
Make sure that the esp is restored before the eflags register.
```

```
When the init task is initially restored, system interrupts are activated when the eflags register is loaded. If the esp register still points to an address in the interrupt stack area (from early system initialization) the ISR might overwrite its own stack.
```

```
Closes #4030
```

**4033 - Add rtems\_interrupt\_server\_create() and rtems\_interrupt\_server\_destroy()**

**Description**

Currently, the only way to create interrupt servers is `rtems_interrupt_server_initialize()`. This function creates the default interrupt server and in SMP configurations additional interrupt servers for the additional processors. The interrupt server is heavily used by `libbsd`. This includes the epoch based reclamation which performs time consuming resource and memory deallocation work. This does not work well with time critical services, for example an UART over SPI or I2C. One approach to address this problem is to allow the application to create custom interrupt servers with the right priority and task properties. The interrupt server API accounted for this, however, it was not yet implemented.

Add `rtems_interrupt_server_create()` and `rtems_interrupt_server_destroy()` for this purpose.

**Comment 1**

### Description

The `rtems.git` code assumes `major.minor.revision` and changing it to `version.revision` breaks the configure processing to create the `cpuopts.h` file. For example using `5.1-rc2` as the version string results in:

```

In file included from /build/rtems/releases/build/5.1-rc2/rtems-source-builder-5.1-rc2/rtems/build/arm-rtems5-kernel-beagleboneblack-1/arm-rtems5-kernel-beagleboneblack-1-5.1-rc2/rtems-5.1-rc2/cpukit/include/rtems/score/defs.h:31:0,

```

**Comment 1**

1. **Chris Johns**, Thu, 13 Aug 2020 08:47:07 GMT

The build log is showing:

```
+ cd /build/rtems/releases/build/5.1-rc2/rtems-source-builder-5.1-rc2/rtems/build/rtems-libbsd-
b96abfd647154f10ea8f7fac68e25676636eded5-x86_64-freebsd12.1-1
```

This looks like the wrong branch or version is being packaged.

**Comment 2**

1. **Chris Johns**, Thu, 13 Aug 2020 11:57:05 GMT

2. **component:** changed from **network/libbsd** to **release**

It looks like the release to branch mapping in the release script is broken. This was added to handle the inconsistent branch naming in libbsd:

```
Package rtems-source-builder 5: master
```

The branch should be 5 not master.

### Comment 3

1. **Chris Johns**, Fri, 14 Aug 2020 21:18:29 GMT
2. **status:** changed from **new** to **closed**
3. **resolution:** set to **fixed**

Fix, the right branch is being used.

## **4056 - bsp/xilinx-zynq: Flush TX-Buffer before initializing the zynq-uart (cloned)**

### **Description**

Cloned from #4055:

We experienced that u-boot (at least from Xilinx repositories) does not wait until all its output has left the TX Buffer of the stdout uart, before handing over to the RTEMS application

This causes some garbage output at the begin of the RTEMS application in some cases and corrupts the test begin marker prohibiting rtems-test to recognize the test correctly.

Proposed fix is to let RTEMS wait until the TX Buffer of the uart is empty before configuring and using it.

### Comment 1

1. **Jan Sommer**, Sat, 22 Aug 2020 07:29:38 GMT
2. **owner:** set to **Jan Sommer** <jan.sommer@...>

**Description**

Cloned from #4076:

A note for me (or someone) to make the fix outlined on the mailing list.

```
cpukit/score/cpu/i386/include/rtems/asm.h:157  movb
imps_apic_cpu_map(\REG),\REG    /* CPU ID in REG */
```

The assembler is right to complain. movb has to target one of the 1-byte mnemonics, so this should be %al for the LSB of %eax. One needs to check through this logic carefully, but I think the right thing to do here is:

```
movzbl  imps_apic_cpu_map(\REG),\REG
```

That should do the trick. Can you test it locally?

Sure! Builds fine and testsuite testing reveals:

Joel would like this fixed on 5.

**Comment 1**

1. **Gedare Bloom**, Mon, 21 Sep 2020 17:23:05 GMT
2. **description**: modified (diff)

**Comment 2**

1. **Gedare Bloom**, Fri, 02 Oct 2020 16:40:19 GMT
2. **status**: changed from **assigned** to **closed**
3. **resolution**: set to **fixed**

In 40f23cea/rtems:

```
i386/score: fix assembly mnemonic
```

```
This is a backport for assembler error observed in 6. Although the assembler error does not appear in 5, the backport was requested.
```

```
Closes #4083.
```

**4137 - The select mechanism does not support asynchronous device communication**

#### Description

In order to execute an RTEMS 5.1 image in a Raspberry Pi 2, documentation (<https://ftp.rtems.org/pub/rtems/releases/5/5.1/docs/html/user/bsps/bsps-arm.html#setup-sd-card>) specifies that the boot files can be downloaded from <https://github.com/raspberrypi/firmware/tree/master/boot>

Last commit that I could check is 0c3ecac5... and it does not work.

On the other hand, I could check the version in tag 1.20190718 and it works. <https://github.com/raspberrypi/firmware/tree/1.20190718/boot>

Maybe documentation can be updated to link with the correct version of Raspberry Pi booting.

#### Comment 1

1. **Chris Johns**, Thu, 10 Nov 2022 00:07:39 GMT

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **wontfix**

Please use RTEMS 6 (main branch)

#### Description

The function `genirq_set_active()` can return a value greater than 1 under some conditions

This function is used by `genirq_enable()` and `genirq_disable()` and both of them returns the value returned by `genirq_set_active()`. According to the documentation in `genirq.h`, they should return -1, 0 or 1.

When this issue can happen? If there are 3 entries in the list of IRQ and 2 of them are already enabled, the variable `enabled` would be 2, because of `enabled += isrentry->enabled`.

As a possible solution, the value of `enabled` can be changed to 1 if it's greater than 1.

**Description**

On the 5 branch of the rtems-source-builder, rtems-tools can't be build if the llvm on the host is (for example) version 10 or newer. Reason is that the llvm headers use a newer C++ standard starting from that version.

On the 6 branch there already is a patch for that:

<https://git.rtems.org/rtems-tools/commit/?id=37ad446d9dce3438d6d32e1caf56d3fdccdd2ad0>

**Comment 1**

1. **Christian Mauderer**, Tue, 17 Aug 2021 09:21:59 GMT

In 0a5d205/rtems-tools:

```
trace: Use c++14 instead of c++11 if possible
```

```
llvm version 10 uses features from c++14 standard in the headers. With that, the record/record-main-lttng.cc doesn't build any more. This patch makes sure that c++14 is used if it is available.
```

```
Updates #4495
```

**Comment 2**

1. **Christian Mauderer**, Tue, 17 Aug 2021 10:58:20 GMT
2. **status:** changed from **assigned** to **closed**
3. **resolution:** set to **fixed**

In c7870f6/rtems-source-builder:

```
rtems-tools: Pick up fix for modern llvm
```

```
Closes #4495
```

## Description

Hi, I have found when access global structure without mutex or spinlock about JFFS2. The code in RTEMS5.1 are listed as follows:

```
fs-rtems.c:

1) __Add to the icache __

for (cached_inode = sb->s_root; cached_inode != NULL;
    cached_inode = cached_inode->i_cache_next) {
    if (cached_inode->i_cache_next == NULL) {
        cached_inode->i_cache_next = inode; __ Current last in cache points to newcomer
        inode->i_cache_prev = cached_inode; __ Newcomer points back to last
        break;
    }
}

2) __ Check for this inode in the cache __

for (inode = sb->s_root; inode != NULL; inode = inode->i_cache_next) {
    if (inode->i_ino == ino) {
        inode->i_count++;
        break;
    }
}

when multi-tasks or threads access sb->s_root simultaneously, The behavior is unknown.
```

Thanks for your interest in the RTEMS port of JFFS2. If you have questions, then you could also ask them on the devel@... mailing list. The RTEMS port of JFFS2 does not use a file system internal locking. There is a global lock for each JFFS2 instance:

```
static void rtems_jffs2_do_lock(struct super_block *sb)
{
    rtems_recursive_mutex_lock(&sb->s_mutex);
}
static void rtems_jffs2_do_unlock(struct super_block *sb)
{
    rtems_recursive_mutex_unlock(&sb->s_mutex);
}
```

**Description**

Hi, I have found when access global structure without mutex or spinlock about JFFS2 may cause indetermination. The peice of source code in RTEMS5.1 are listed as follows:

```
fs-rtems.c:

1) __Add to the icache __

for (cached_inode = sb->s_root; cached_inode != NULL;
    cached_inode = cached_inode->i_cache_next) {
    if (cached_inode->i_cache_next == NULL) {
        cached_inode->i_cache_next = inode; __ Current last in cache points to newcomer
        inode->i_cache_prev = cached_inode; __ Newcomer points back to last
        break;
    }
}

2) __ Check for this inode in the cache __

for (inode = sb->s_root; inode != NULL; inode = inode->i_cache_next) {
    if (inode->i_ino == ino) {
        inode->i_count++;
        break;
    }
}

when multi-tasks or threads access sb->s_root simultaneously, The behavior is unknown.
```

It is not a high performance approach, but it works. See `testsuites/fstests/fsjffs2gc01/init.c`.

### Description

Hi, I have found when call `jffs2_new_inode` to create inode. the `f->sem` is not initialized and lock, but it is be unlocked. The peice of source code is as follows:

```
struct _inode *jffs2_new_inode (struct _inode *dir_i, int mode, struct jffs2_raw_inode *ri)
{
    struct _inode *inode;
    struct super_block *sb = dir_i->i_sb;
    struct jffs2_sb_info *c;
    struct jffs2_inode_info *f;
    int ret;
```

```
D1(printk(KERN_DEBUG "jffs2_new_inode(): dir_i %ld, mode 0x%x\n", dir_i->i_ino, mode));
c = JFFS2_SB_INFO(sb);
```

```
inode = new_inode(sb);
```

```
if (!inode)
```

```
return ERR_PTR(-ENOMEM);
```

```
f = JFFS2_INODE_INFO(inode);
jffs2_init_inode_info(f);
```

```
memset(ri, 0, sizeof(*ri));
/* Set OS-specific defaults for new inodes */
ri->uid = cpu_to_je16(geteuid());
ri->gid = cpu_to_je16(getegid());
ri->mode = cpu_to_jemode(mode);
ret = jffs2_do_new_inode(c, f, mode, ri);
if (ret) {
```

```
    /* forceful evict: f->sem is locked already, and the ___ inode is bad.
    if (inode->i_cache_prev)
```

```
        inode->i_cache_prev->i_cache_next = inode->i_cache_next;
```

```
    if (inode->i_cache_next)
```

```
        inode->i_cache_next->i_cache_prev = inode->i_cache_prev;
```

```
        mutex_unlock(&(f->sem));
        jffs2_clear_inode(inode);
        memset(inode, 0x6a, sizeof(*inode));
        free(inode);
        return ERR_PTR(ret);
    }
```

```
inode->i_nlink = 1;
inode->i_ino = je32_to_cpu(ri->ino);
inode->i_mode = jemode_to_cpu(ri->mode);
inode->i_gid = je16_to_cpu(ri->gid);
inode->i_uid = je16_to_cpu(ri->uid);
inode->i_atime = inode->i_ctime = inode->i_mtime = get_seconds();
ri->atime = ri->mtime = ri->ctime = cpu_to_je32(inode->i_mtime);
inode->i_size = 0;
return inode;
}
```

```
}
```

### Comment 1

1. **Joel Sherrill**, Wed, 27 Oct 2021 18:38:19 GMT

The code in this file is related to similar code for ports of JFFS2. Can you compare this to the current code for Linux and other ports to see what they do? That might significantly ease the analysis for all these issues.

### Comment 2

#### Description

Hi, I have found when call `jffs2_read_inode` to read inode. the `f->sem` is not initialized and locked, but it is unlocked. The peice of source code is as follows:

```
static int jffs2_read_inode (struct _inode *inode)
{
```

```
    struct jffs2_inode_info *f;
    struct jffs2_sb_info *c;
    struct jffs2_raw_inode latest_node;
    int ret;
```

```
    D1(printk(KERN_DEBUG "jffs2_read_inode(): inode->i_ino == %lu\n", inode->i_ino));
```

```
    f = JFFS2_INODE_INFO(inode);
    c = JFFS2_SB_INFO(inode->i_sb);
```

```
    jffs2_init_inode_info(f);
    ret = jffs2_do_read_inode(c, f, inode->i_ino, &latest_node);
```

```
    if (ret) {
```

```
        __mutex_unlock(&f->sem); __return ret;
```

```
    }
```

```
    inode->i_mode = jemode_to_cpu(latest_node.mode);
    inode->i_uid = je16_to_cpu(latest_node.uid);
    inode->i_gid = je16_to_cpu(latest_node.gid);
    inode->i_size = je32_to_cpu(latest_node.isize);
    inode->i_atime = je32_to_cpu(latest_node.atime);
    inode->i_mtime = je32_to_cpu(latest_node.mtime);
    inode->i_ctime = je32_to_cpu(latest_node.ctime);
```

```
    inode->i_nlink = f->inocache->pino_nlink; __mutex_unlock(&f->sem);
```

```
    D1(printk(KERN_DEBUG "jffs2_read_inode() returning\n"));
    return 0;
```

```
}
```

#### Comment 1

2. **status:** changed from **new** to **closed**
3. **resolution:** set to **invalid**
4. **component:** changed from **admin** to **fs/jffs2**

Thanks for your interest in the RTEMS port of JFFS2. If you have questions, then you could also ask them on the `devel@...` mailing list. The RTEMS port of JFFS2 does not use a file system internal locking. There is a global lock for each JFFS2 instance:

```
static void rtems_jffs2_do_lock(struct super_block *sb)
{
    rtems_recursive_mutex_lock(&sb->s_mutex);
}
static void rtems_jffs2_do_unlock(struct super_block *sb)
{
    rtems_recursive_mutex_unlock(&sb->s_mutex);
}
```

#### Comment 2

1. **chenjin\_zhong**, Thu, 28 Oct 2021 14:40:25 GMT

{
    rtems_recursive_mutex_unlock(&sb->s_mutex);
}
```

I have compared it with Linux JFFS2. The peice of source code in Linux is as follows,As shown in black-body section, the `f->sem` is not be initialized and locked in RTEMS.

```

struct jffs2_sb_info *c;
struct jffs2_raw_inode latest_node;
union jffs2_device_node jdev;
struct inode *inode;
dev_t rdev = 0;
int ret;
jffs2_dbg(1, "%s(): ino == %lu\n", func, ino);
inode = iget_locked(sb, ino);
if (!inode)
return ERR_PTR(-ENOMEM);
if (!(inode->i_state & I_NEW))
return inode;
f = JFFS2_INODE_INFO(inode);
c = JFFS2_SB_INFO(inode->i_sb);
jffs2_init_inode_info(f);
mutex_lock(&f->sem);
ret = jffs2_do_read_inode(c, f, inode->i_ino, &latest_node);
if (ret)
goto error;
inode->i_mode = jemode_to_cpu(latest_node.mode);
i_uid_write(inode, je16_to_cpu(latest_node.uid));
i_gid_write(inode, je16_to_cpu(latest_node.gid));
inode->i_size = je32_to_cpu(latest_node.isize);
inode->i_atime = ITIME(je32_to_cpu(latest_node.atime));
inode->i_mtime = ITIME(je32_to_cpu(latest_node.mtime));
inode->i_ctime = ITIME(je32_to_cpu(latest_node.ctime));
set_nlink(inode, f->inocache->pino_nlink);
inode->i_blocks = (inode->i_size + 511) >> 9;

```

**Description**

Hi, when the macro `__CONFIGURE_APPLICATION_DISABLE_FILESYSTEM__` is defined, `rtems_filesystem_table` is undefined during linking process.

**Comment 1**

1. **Joel Sherrill**, Fri, 29 Oct 2021 13:34:40 GMT

Do you have a simple test case to let us see what is happening for you? There are 6 tests in the RTEMS Test Suite which use `CONFIGURE_APPLICATION_DISABLE_FILESYSTEM` so I suspect you have used something which implicitly requires a file system. Perhaps your application needs a minimal file system for device nodes.

**Comment 2**

1. **chenjin\_zhong**, Tue, 02 Nov 2021 06:38:37 GMT

I just compile sp01 with `__CONFIGURE_APPLICATION_DISABLE_FILESYSTEM__`. I rechecked the source code in RTEMS5.1. I found that `rtems_filesystem_table` is only be defined in `confdefs/libio.h`. the global variable `rtems_filesystem_table` is used by `rtems_filesystem_iterate__` in `libcsupport/src/mount-mgr.c`. Therefore, the undefined error may bu caused by `__CONFIGURE_APPLICATION_DISABLE_FILESYSTEM__`.

**Comment 3**

**Description**

Hi, the dir `i->i_mode` must be `S_IFDIR` in this situation.therefore, I want to know when the dir `i->i_mode` is `S_IFREG`? this function can it be optimized? the code is listed below.

```

static int rtems_jffs2_rmdir(
{
    const rtems_filesystem_location_info_t *parentloc,
    const rtems_filesystem_location_info_t *loc)
{
    struct _inode *dir_i =
    rtems_jffs2_get_inode_by_location(parentloc);
    struct _inode *entry_i = rtems_jffs2_get_inode_by_location(loc);
    char *name;
    size_t namelen;
    int eno = rtems_jffs2_cache_fd_name(entry_i, &name, &namelen);
    if (eno == 0) {
        switch (dir_i->i_mode & S_IFMT) {
            __case S_IFDIR:
                eno = -jffs2_rmdir(dir_i, entry_i, name,
                namelen);
                break;
            case S_IFREG:
                eno = -jffs2_unlink(dir_i, entry_i,
                name, namelen);
                break;
            default:
                eno = EINVAL;
                break;
        }
    }
}

return rtems_jffs2_eno_to_rv_and_errno(eno);
}

```

#### Description

Adapted the patch applied to master to fix mail support for rtems-tools so that it works with the 5 branch.

#### Comment 1

1. **Ryan Long**, Wed, 01 Dec 2021 16:27:41 GMT
2. **summary**: changed from **Adapt improved mailer.py** to **Adapt improved mailer.py for rtems-tools**

#### Comment 2

1. **Ryan Long**, Wed, 01 Dec 2021 16:36:11 GMT
2. **summary**: changed from **Adapt improved mailer.py for rtems-tools** to **Adapt improved mailer.py for rtems-tools 5 branch**

#### Comment 3

1. **Alex White**, Thu, 16 Dec 2021 21:26:51 GMT

In 56779ec/rtems-tools:

```
rtemstoolkit/mailler.py: Return full smtp-host arg value
This fixes mail.smtp_host() so that it returns the full argument value rather than just the second character.
Updates #4553
```

#### Comment 4

1. **Alex White**, Thu, 16 Dec 2021 21:26:53 GMT

In 6759c3c/rtems-tools:

```
rtemstoolkit: Filter mail options from log output
This filters mail-related options out before logging the command line options. This is needed to prevent leaking potentially sensitive information via logs and emails.
Updates #4553
```

#### Comment 5

1. **Alex White**, Thu, 16 Dec 2021 21:26:56 GMT

In a7efe4a/rtems-tools:

```
rtemstoolkit/mailler.py: Add SMTP login options
This adds more options so that the user can authenticate with the SMTP server.
Updates #4553
```

#### Comment 6

1. **Alex White**, Thu, 16 Dec 2021 21:26:59 GMT

In f7f1a3e/rtems-tools:

```
rtemstoolkit/mailler.py: Add --use-gitconfig option
This adds the option to pull mail-related configuration values from the user's git configuration.
```

Updates #4553

**Description**

Python 3.8 introduces a new warning: using the "is" operator as an equality operation is incorrect (although it works by chance on CPython). To compare for equality, the "==" operator must be used.

Warnings popped up when I called rtems-tester.

Attached please find patches for this case.
